no. 1.

PUBLISHERS' PREFACE

AFTER a wide experience in selling single-volume reference works, the publishers planned the production of The Standard Dictionary of Facts by an entirely new method, the success of which is now a notable achievement in twentieth century book making. Instead of assuming to know exactly what the public desired in a quick reference manual, or of taking for granted that any editor we might employ would possess such knowledge, we went to the only infallible source of information,—the people themselves.

Through our large force of expert salesmen, men and women of education, culture and experience, who had been in personal contact with tens of thousands of reference book users throughout the country, we secured first hand knowledge of what the average person desired above all else to find in a handy single volume. By carefully classifying the results of this extensive inquiry—representing hundreds of thousands of visits to parents, pupils, teachers, professional and business men, artisans and farmers—a definite working plan for the contents was evolved and placed in the hands of the editorial staff with explicit instructions to build the work strictly in accordance with this unique method.

In other words, The Standard Dictionary of Facts is not the product of an editor, or of a corps of editors, in the customary sense. The sole function of its editors has been to embody as completely as possible from available material the subject matter which had been specifically indicated by a vast number of reference book users.

But in the mind of the publishers this working plan embraced another fundamental constructive idea,—that of generous revision and improvement, to be made in quick response to discovered needs. In consequence the text of the work from the first has been subjected to repeated improvements some of which have involved much greater labor and expense than the original edition. A single revision has included changes on upwards of 500 pages; and the index, now the most comprehensive ever placed in a work of like magnitude, has been repeatedly made anew. Since the publication of the original edition in 1908, no less than fourteen separately copyrighted revised editions have been made, so that it is now substantially a new work.

At this point it is fitting to state that the appreciation of the public has been most generous. We are gratified to be able to say that our expensive policy of improvement has been rewarded by the largest patronage ever extended to a single-volume reference work. We, therefore, feel peculiarly indebted to hundreds of thousands of subscribers for their constructively helpful support, without which the phenomenal development and popularity of this manual would have been impossible.

Hundreds of special reference works together with the resources of large libraries have been drawn upon to secure the vast range of information now contained in this volume. In addition, much special aid has been furnished by many persons throughout the United States and Canada. The valuable departments of Literature and Language are almost entirely due to the efforts of Miss Susan F. Chase, M. A., Pd. D., and of Miss Helen L. Dunston, of the Buffalo State Normal School. The increasingly popular section on Natural History was rewritten and enlarged with the addition of many new subjects by Professor Irving P. Bishop, for twenty-five years a successful teacher of natural science.

Notwithstanding the great expense and labor necessary to correct the defects of the first edition and despite the fact that the present edition embodies the closest approach to up-to-dateness yet attained by an American reference work, our standard demands a still higher degree of accuracy and perfection. We, therefore, shall welcome in the future, as always in the past, any intelligent criticism, information or suggestion that will assist us in making the work still more useful.

THE FRONTIER PRESS COMPANY.

TABLE OF CONTENTS

FIRST BOOK

HISTORY

DICTIONARY OF HISTORY — Concise Histories of Countries and States: Alabama — Argentine Republic — Arizona — Arkansas — Austria-Hungary — Belgium — Brazil — California — Canada — Chile — China — Colorado — Connecticut — Cuba — Delaware — Denmark — England — Florida — France — Georgia — German Empire — Greece — Idaho — Illinois — Indiana — Iowa — Ireland — Italy — Japan — Kansas — Kentucky — Maine — Maryland — Massachusetts — Mexico — Michigan — Minnesota — Mississippi — Missouri — Montana — Nebraska — Nevada — New Hampshire — New Jersey — New Mexico — New York — North Carolina — North Dakota — Norway — Ohio — Oklahoma — Oregon — Pennsylvania — Persia — Portugal — Rhode Island — Russia — Scotland — South Carolina — South Dakota — Spain — Sparta — Sweden — Switzerland — Tennessee — Texas — Turkey — United States — Utah — Vermont — Virginia — Washington — West Virginia — Wisconsin — Wyoming — EVENTS OF HUMAN PROGRESS — GREAT BATTLES — GREAT WARS - IMPORTANT TREATIES — OUTLINES OF AMERICAN HISTORY — BISHOPS AND POPES OF ROME — RUINS — RULERS OF THE PRINCIPAL NATIONS, PAST AND PRESENT — HISTORICAL ALLUSIONS AND TABULATIONS.

SECOND BOOK

LANGUAGE

The English Language — Use of Capital Letters — Punctuation — Right Use of Words — Figures of Speech — Synonyms — Letter Writing — Words and Phrases from the Classic and Modern Languages — Abbreviations — Mispronounced Words — Forms of English Composition — Travels — Memoirs — Biography — History — News — Fiction — Short Story — Parables — Allegories — Description — Exposition — Essays — Editorials — Reviews — Criticisms — Argument — Addresses — Lectures — Orations — Sermons.

THIRD BOOK

LITERATURE

Preliminary View of Literature — Oriental Literature — Literature of India — Persia — China — The Hebrews — Egypt — Phenica — Assyria — Arabia — Greece — Rome — Scandinavia — Germany — France — Italy — Spain — Russia — England — America — List of Books for Children's Library — Family Libraries — Books and Authors, Classified — Famous Poems, Authors and First Lines — Pen Names of Noted Writers — Mythology — Names in Fiction, Literary Plots, and Allusions.

FOURTH BOOK

BIOGRAPHY

Great Men and Women of the Past — Great Men and Women of the Present — Authors — Statesmen — Warriors — Rulers — Jurists — Lawyers — Physicians — Scientists — Educators — Sculptors — Painters — Architects — Preachers — Inventors — Discoverers — Patriots — Editors — Philanthropists — Actors — Musicians — Financiers — Religious Leaders — Philosophers — Mathematicians — Astronomers — Artisans — Orators — Engineers — Merchants — Geniuses — Savants — and Others.

FIFTH BOOK

GEOGRAPHY, TRAVEL, ARCHITECTURE

Selected Topics in Physical, Descriptive, and Political Geography — Continents — Oceans — Rivers — Mountains — Lakes — Countries — States — Cities — Battlefields — Castles — Cathedrals — Churches — Monuments — Obelisks — Palaces — Shrines — Museums — Art Galleries — Historic Buildings — Historic Ruins — Fashionable Resorts — Architectural Structures — Theaters — Tabulations.

SIXTH BOOK

GOVERNMENT AND POLITICS

GOVERNMENT OF THE PRINCIPAL COUNTRIES OF THE WORLD — GOVERNMENT OF THE STATES OF THE UNION — GOVERNMENT OF TERRITORIAL AND INSULAR POSSESSIONS — GOVERNMENT OF CITIES — ABYSSINA — AFGHANISTAN — ALABAMA — ARGENTINE REPUBLIC — ARIZONA — ARKANSAS — AUSTRIA-HUNGARY — BELGIUM — BOLIVIA — BRAZIL — BRITISH EMPIRE — BULGARIA — CALIFORNIA — CHILE — CHINA — COLOMBIA — COLORADO — CONNECTICUT — COREA — CUBA — DELAWARE — DENMARK — DISTRICT OF COLUMBIA — DOMINICAN REPUBLIC — ECUADOR — FLORIDA — FRANCE — GEORGIA — GERMAN EMPIRE — GREECE — HAYTI — IDAHO — ILLINOIS — INDIA, EMPIRE OF — INDIANA — IOWA — IRELAND — ITALY — JAPAN — KANSAS — KENTUCKY — LIBERIA — LOUISIANA — MAINE — MARYLAND — MASSACHUSETTS — MEXICO — MONTANA — MONTENEGRO — MOROCCO — NEBRASKA — NETHERLANDS — NEVADA — NEW HAMPSHIRE — NEW JERSEY — NEW MEXICO — NEW YORK — NEW ZEALAND — NORTH CAROLINA — NORTH DAKOTA — NORWAY — OHIO — OKLAHOMA — OMAN — OREGON — PANAMA — PARAGUAY — PENNSYLVANIA — PERSIA — PERU — PORTUGAL — PRUSSIA — RHODE ISLAND — ROUMANIA — RUSSIA — SCOTLAND — SERVIA — SIAM — SOUTH CAROLINA — SOUTH DAKOTA — SPAIN — SWEDEN — SWITZERLAND — TENNESSEE — TEXAS — TURKEY — UNITED STATES OF AMERICA — URUGUAY — UTAH — VENEZUELA — VERMONT — VIRGINIA — WASHINGTON — WEST VIRGINIA — WISCONSIN — WYOMING — ZANZIBAR — TABULATIONS AND STATISTICS.

SEVENTH BOOK

INDUSTRY, INVENTION, COMMERCE

AGRICULTURE — BANKS — CANALS — COMMERCE — COMMERCIAL PRODUCTS — FINANCE — FORESTRY — IMPORTS AND EXPORTS — INSURANCE — INVENTIONS — IRON AND STEEL — LABOR ORGANIZATIONS — LIVE STOCK INDUSTRY — MANUFACTURES — MERCHANT MARINE — MINING — MONEY — OCCUPATIONS — RAILROADS — TRANSPORTATION — TRUSTS — WORLD MARTS — WORLD'S STAPLES — TABULATIONS AND STATISTICS.

EIGHTH BOOK

SCIENCE, EDUCATION, RELIGION

BRANCHES OF HUMAN KNOWLEDGE — COLLEGES AND UNIVERSITIES — EDUCATIONAL SYSTEMS AND TOPICS — FINE ARTS — LEARNED SOCIETIES — MUSIC — RELIGIONS AND RELIGIOUS DENOMINATIONS — ELECTRICITY — TOPICS IN PHYSICAL SCIENCE, MEDICAL SCIENCE, BIOLOGICAL SCIENCE, ELECTRICAL AND MECHANICAL SCIENCE — SCIENTIFIC, EDUCATIONAL AND RELIGIOUS STATISTICS.

NINTH BOOK

NATURAL HISTORY

ANIMAL KINGDOM: BIRDS, INSECTS, MAMMALS, REPTILES — MINERAL KINGDOM: COALS AND CLAYS, GASES, FOSSILS, LIQUIDS, METALS, PRECIOUS STONES, ROCKS, SOILS — VEGETABLE KINGDOM: CEREALS AND BULBS, GRASSES, FLOWERS, FORESTS, FRUITS — CURIOSITIES AND WONDERS.

TENTH BOOK

MISCELLANY

CURIOUS TITLES — NOTABLE BRIDGES — CHEMICAL SUBSTANCES — POPULAR NAMES OF CITIES — EARTHQUAKES — FRATERNAL ORGANIZATIONS — HOLIDAYS — DEATH RATES — MOURNING CUSTOMS — NAMES AND NAME ORIGINS — NAVIES OF THE WORLD — STATE MOTTOES AND POPULAR NAMES — ARITHMETICAL PRINCIPLES — WEIGHTS AND MEASURES — DISTANCES.

HOW TO USE
The Standard Dictionary of Facts

In these swift-moving times the best informed win, the uninformed fail. Exceptions have become so few that everyone nowadays desires to be better informed.

This handbook of ready reference will give correct answers to more than a hundred thousand questions,—a remarkable number for a single volume. More noteworthy still, it has been found to answer ninety-five out of every hundred questions that come up in the average person's life and affairs. This significant fact has been proved by over fifteen years of testing in the hands of nearly two million users. Most important of all, it will perform an equally helpful service for everyone who will faithfully follow a few very simple rules.

First of All, this book must be kept where it can be *quickly* used; not stored in a closet, hidden on a high shelf, or locked behind glass doors to keep it clean. Place this book on the home reading table, the child's study table, the workshop bench, or the office desk, and see to it that it is always within easy reach. In the home and school further encourage its use by frequent personal example and by assisting those who have not yet formed the habit of looking up answers to daily questions.

The Working Plan. The arrangement of the information is very simple and is as easily understood as reading time by the clock. The Table of Contents on pages 4 and 5 indicates its wide range. The keys to this great array of facts are found in the cross-reference Index (pages 867 to 908), by far the largest and most valuable yet placed in a single volume of similar scope. *To learn how to use this index is to learn how to reach the facts in the volume.*

Finding Facts. Most users desire immediate information on single points which arise from time to time. In all such cases one should turn at once to the Index. Suppose one wishes to find which territory had the largest population when admitted to the Union. Turning to the index under T, one finds, page 904, the entry "Territories" in the third column. Note that immediately under the word, and set over a little to the right (sub-indexed), is a group of points about "Territories." Passing down this list to the second entry one finds "Population," followed by a dotted line leading to the figures 625, which is the number of the page where the information may be found. But instead of "territory," suppose one first thought of the word "state." Turning to S in the index, one finds, page 896 second column, the entry "States." Set over to the right beneath it is a sub-indexed list of points about "States." Passing down the column one finds the entry "Population," and is here also referred to page 625. But suppose at the outset one had in mind the word "population" instead of "territory" or "state." Upon turning to the index under P one finds, page 891, the entry "Population" and, sub-indexed under it in proper order, the entries about both "States" and "Territories" with references likewise to page 625 where, in a well arranged table, correct answers to hundreds of similar questions may be found.

The foregoing example is merely one of scores of thousands which may be as readily found by means of the carefully constructed cross-reference Index, making fact finding a keen pleasure to those who wish to be well informed.

If, in any case, the name, subject, or title looked for is not found in the Index, do not conclude that the information sought for is not given. Try other related words, names, subjects or terms. Then, if not successful, read the explanatory Note at the beginning of the Index, page 867, and in case the subject sought for seems related to any of the special dictionaries, continue search among them. Each of about twenty special dictionaries such as Names and Name Origins, Pen Names of Noted Writers, Famous Poems, Mythology, etc., is self indexed in its proper place in the text.

A brief period of earnest practice will enable an inexperienced beginner in the use of reference books to make good progress in finding information.

Form the Right Habit. This work contains vastly more information and will answer an immensely greater number of questions than many purchasers at first realize. Consequently, never hesitate to test the work for points concerning any question that may arise. The result will be a source of increasing satisfaction and surprise at its unexpected range and resources. One will not find answers to merely trivial and nonsensical questions, but as a furnisher of authentic information on matters of consequence, the more thoroughly it is used the more highly it will be prized.

Further, seekers for information sometimes are not aware at the outset that they have started on the wrong track. Yet discoveries are made only by those who seek them, and while seeking one often finds greater things than those which he set out to find. Columbus was looking for the Indies when he discovered America. Likewise, tens of thousands of users have achieved an education and formed the habit of self information as the result of systematically searching this volume.

Finally, remember that this book is designed and planned to be used. By being worn, soiled, and cover-scarred from constant handling it will fulfill its real purpose and repay the owner a thousand fold for his purchase and his pains. To be kept in an unhandled and spotless condition would be the worst fate that could befall it.

CONCORD BRIDGE

HISTORY

Abdication is the act of giving up an office. It is sometimes compulsory, and sometimes the result of vexation and disappointment. The following monarchs have abdicated:

Abbas II. of Egypt,	1914
Abdul-Hamid II. (forced),	1909
Amadeus I. (duke of Aosta) of Spain,	1873
Boris of Bulgaria,	1918
Charles Albert of Sardinia (forced),	1849
Charles Emmanuel of Sardinia,	1802
Charles I. of Austria-Hungary,	1918
Charles IV. of Spain (forced),	1808
Charles V. of Spain and Germany,	1556
Charles X. of France (forced),	1830
Christina of Sweden,	1654
Constantine I. of Greece (forced),	1917
Diocletian and Maximian,	305, 308
Edward II. of England (forced),	1327
Ferdinand of Austria,	1848
Ferdinand of Bulgaria,	1918
Francis II. of the Two Sicilies (forced),	1860
Henry VI. of England (forced),	1471
James II. of England (forced),	1689
Lidj Jeassu of Abyssinia,	1916
Louis Philippe of France (forced),	1848
Ludwig of Bavaria (forced),	1848
Manuel II. of Portugal (forced),	1910
Milan of Servia,	1889
Napoleon I. of France (forced),	1814
Napoleon III. of France (forced),	1870
Nicholas I. of Montenegro,	1918
Nicholas II. of Russia (forced),	1917
Otho of Greece (forced),	1862
Pedro II. of Brazil (forced),	1889
Poniatowski of Poland (forced),	1795
Pu-Yi of China (Hsüan Tung),	1912
Richard II. of England (forced),	1399
Victor Amadeus of Sardinia,	1730
Victor Emmanuel,	1821
William I. of Holland,	1840
William II. of Germany,	1918

Abyssinia. The oldest accounts of the Abyssinians are full of fables, but seem sufficient to prove that they attained some degree of civilization even in remote antiquity. Christianity was introduced about the middle of the Fourth Century, and soon prevailed extensively. Axum was at that time the capital. Two centuries later the Abyssinians were powerful enough to invade Arabia, and conquer part of Yemen. In the Tenth Century a Jewish Princess overthrew the reigning dynasty, the surviving representative of which fled to Shoa. After three centuries of confusion the empire was restored under Icon Amlac, and some progress was made in improvement. Early in the Fifteenth Century the Abyssinians entered into close relations with the Portuguese. Under the influence of the Portuguese missionaries the royal family adopted the Roman Catholic faith, and the old Coptic Church was formally united to the See of Rome. The people and ecclesiastics obstinately resisted the innovation; the emperor gave way; and ultimately, in 1632, the foreign priests were expelled or put to death. Though Christianity is still the professed religion of Abyssinia, it exists only in its lowest form, and is little more than ceremonial. The Church is national and independent, but the visible head, or *Abuna* ("our father"), is ordained by the Coptic Patriarch of Alexandria. The doctrines of the Abyssinian coincide with those of the Coptic Church, especially in the monophysite heresy. While the oldest Abyssinian churches were hewn out of rocks, the modern churches are mostly round or conical buildings, thatched with straw and surrounded by pillars of cedar. In 1860, King Theodore (born 1818, crowned 1855) felt himself insulted by the British Consul, whom he imprisoned, with some missionaries. A large English force under Lord Napier then came to Abyssinia and captured the strong fortress of Magdala in April, 1868. On this occasion Theodore committed suicide. After an interval of anarchy Prince Kassai assumed power as Johannes II., in 1872. He died in 1889, and was succeeded by Menelik II. Abyssinia then practically became an Italian protectorate. During 1895 a war broke out between Abyssinia and Italy, which was closed in 1896. In 1906, an agreement was concluded between Great Britain, France, and Italy, as to their interests in Abyssinia. Upon the death of Menelik, 1913, Lij Yasu became ruler, but was deposed, 1916, when Zauditu, daughter of Menelik, was made empress. A railway from the Gulf of Aden to Adis Abeba, the capital, was completed in 1917. During the World War Abyssinian troops cooperated with the British forces in Africa.

Abyssinian War, The. Between the British and Theodore, King of Abyssinia. This expedition (for the release of missionaries, Captain Crawford, and others) was under Sir R. Napier, who joined the army at Senafé, January, 1868. On April 10th, Colonel Phayre defeated Theodore at Magdala, which was bombarded and taken on April 13th. The return of the British army commenced April 18th, 1868.

Achæan League, The. A confederacy of the twelve towns of Achæa. It was dissolved by Alexander the Great, but reorganized B. C. 280, and again dissolved B. C. 147. The second of these leagues, founded at Megalopŏlis, contained all the chief cities of Peloponnesus. It contended with the Macedonians and the Romans for the liberty of Greece; but, being beaten at Scarphēa by Metellus, and at Leucopĕtra by Mummius, it dissolved soon after the taking of Corinth. The twelve cities of Achæa, in Ionia, were founded by the Heraclidæ.

Achæan War, The. Roman ambassadors at Corinth enjoin the dismemberment of the Achæan League and are insulted (B. C. 147). Kritolāos, general of the league, at once besieged Heracleia (B. C. 146), but was defeated at Scarphēa by Metellus, and slew himself. Diæos, successor of Kritolāos, was defeated at Leucopĕtra by Mummius (B. C. 146). Corinth was then destroyed, and all Greece was erected into a Roman Province, September, 146.

Actiac War, The. This arose out of the rupture between Octavian and Antony, two of the Triumvirs (B. C. 33). Octavian declared war against Cleopatra, Queen of Egypt, and de-

feated Antony at Actium, 2d September, B. C. 31. Both Cleopatra and Antony killed themselves. Alexandria was taken by Octavian, August 30th (B. C. 33), and Egypt was made a Roman Province, B. C. 30.

Ætolian Confederacy, The, B. C. 323, called into existence by the Lamian War. The states used to assemble annually in the autumn at Thermum, and the assembly was called the Panætolicon. B. C. 189, the Ætolian states were subjected to the Romans.

The object of the Lamian War was (on the death of Alexander the Great) to liberate Greece from Macedonia. The Athenians were the principal insurgents, but were defeated in 322 at Cranon, by Antipater.

Afghanistan. The history of Afghanistan belongs almost to modern times. The collective name of the country itself is of modern and external origin (Persian). In 1738, the country was conquered by the Persians under Nadir Shah. On his death, in 1747, Ahmed Shah, one of his generals, obtained the sovereignty of Afghanistan, and became the founder of a dynasty which lasted about eighty years. At the end of that time Dost Mohammed, the ruler of Cabul, had acquired a preponderating influence in the country. On account of his dealings with the Russians the British resolved to dethrone him and restore Shah Shuja, a former ruler. In April, 1839, a British army under Sir John Keane entered Afghanistan, occupied Cabul, and placed Shah Shuja on the throne, a force of 8,000 being left to support the new sovereign. Sir W. MacNaghten remained as envoy at Cabul, with Sir Alexander Burnes as assistant envoy. The Afghans soon organized a wide-spread insurrection, which came to a head on November 2, 1841, when Burnes and a number of British officers, besides women and children, were murdered, MacNaghten being murdered not long after. The other British leaders now made a treaty with the Afghans, at whose head was Akbar, son of Dost Mohammed, agreeing to withdraw the forces from the country, while the Afghans were to furnish them with provisions and escort them on their way. On January 6, 1842, the British left Cabul and began their most disastrous retreat. The cold was intense, they had almost no food — for the treacherous Afghans did not fulfill their promises — and day after day they were assailed by bodies of the enemy. By the 13th, 20,000 persons, including camp-followers, women, and children, were destroyed. Some were kept as prisoners, but only one man, Dr. Brydon, reached Jelalabad, which, as well as Kandahar, was still held by British troops. In a few months General Pollock, with a fresh army from India, retook Cabul and soon finished the war. Shah Shuja having been assassinated, Dost Mohammed again obtained the throne of Cabul, and acquired extensive power in Afghanistan. He joined with the Sikhs against the British, but afterward made an offensive and defensive alliance with the latter. He died in 1863, having nominated his son Shere Ali his successor. Shere Ali entered into friendly relations with the British, but in 1878, having repulsed a British envoy and having refused to receive a British mission (a Russian mission being meantime at his court), war was declared against him, and the British troops entered Afghanistan. They met with comparatively little resistance; the emir fled to Turkestan, where he soon after died. His son Yakoob Khan having succeeded him concluded a treaty with the British (at Gandamak, May, 1879), in which a certain extension of the British frontier, the control by Britain of the foreign policy of Afghanistan, and the residence of a British envoy in Cabul, were the chief stipulations. The members of the mission were again treacherously attacked and slain, and troops were sent into the country. Cabul was occupied, Kandahar and Ghazni were relieved, and Yakoob Khan was sent to imprisonment in India. In 1880, Abdur-Rahman, a grandson of Dost Mohammed, was recognized by Britain as emir of the country. Until his death in 1901 he was on friendly terms with the British, by whom he was subsidized. Encroachments by the Russians on territory claimed by Afghanistan threatened a rupture between Britain and Russia in 1885, and led to the delimitation of the frontier of Afghanistan on the side next the territory now occupied by Russia. In 1897, a punitive expedition was again sent against the tribes around the Khyber Pass, who disregarded their pledges. In 1905, the Emir Habibullah, son of Abdur-Rahman, ratified a treaty with Great Britain agreeing to accept the advice of the British Government in regard to his foreign relations, and was guaranteed against unprovoked aggressions on his dominions. Afghanistan is divided into four provinces, Cabul, Turkistan, Herat, and Kandahar, each under a hakim or governor.

Alabama. The name, derived from the Indians, denotes "Here we rest." Originally a part of Georgia, the country included in Alabama and Mississippi was organized as a Territory in 1798. In 1812, that part of Florida, then belonging to Spain, lying between the Perdido and Pearl rivers on the Gulf Coast, was seized by the United States troops and annexed to the Territory. Alabama remained a Territory after the western portion was admitted as a State under the name of Mississippi, and was itself admitted as a State in 1819. On January 11, 1861, the Ordinance of Secession was adopted by the Secession Convention, and in February a provisional congress met at Montgomery and organized the Government of the Confederate States. Jefferson Davis was inaugurated President of the Confederacy at Montgomery, February 18, 1861, and the government seat was moved from Montgomery to Richmond in July, 1861. Mobile was finally captured by the Federals, April 12, 1865, and on May 4th the State was included in the surrender made by General Richard Taylor. After the Confederate surrender, the State passed under the phases of provisional and military government until 1868, when it was regularly reconstituted as a State in the Union. In 1901, a Constitutional Convention, called to regulate negro suffrage, was in session from May 21st to September 2d at Montgomery. On November 11, 1901, the new constitution was ratified by popular vote. In 1911 the legislature passed a bill providing for the adoption of a commission form of government by

the municipalities of the State. In January, 1915, the legislature enacted a statutory law enforcing state-wide Prohibition, which took effect July 1, 1915.

Alabama Claims. A series of claims for indemnity made upon Great Britain by the United States, based upon alleged failure of Great Britain to observe certain obligations of international law. These claims chiefly arose from damages inflicted by vessels in the Confederate service which had been fitted out or built in English waters. The history of the Confederate cruiser *Alabama* is typical of the more flagrant cases. This vessel was built at Birkenhead, England, and, although the attention of the British government was repeatedly called to suspicious circumstances, "No. 290," as the ship was called, sailed July 29, 1862, without register or clearance papers. After taking on equipment in the Azores from two English vessels, she assumed the name *Alabama* and began her famous career of destruction. Before being sunk by the *Kearsarge* on June 19, 1864, the *Alabama* is said to have destroyed 70 vessels. The determination of the extent to which Great Britain was responsible for this was the most important problem of diplomacy resulting from the Civil War. By the important treaty of Washington, 1871, it was stipulated that the *Alabama* claims should be submitted to the decision of five arbitrators, — one named by England, one by the United States, and one each by the king of Italy, the emperor of Brazil, and the president of Switzerland. The arbitrators met at Geneva Dec. 15, 1871, and on Sept. 14, 1872, signed the final award in which it was decreed by unanimous vote that England was responsible for the depredations of the cruiser *Alabama* and, in full satisfaction of this and all other claims, was directed to pay an indemnity of $15,500,000. This decision greatly strengthened the principle of arbitration as a means of settling serious international differences.

Alamo, The, a mission church at San Antonio, in what is now Bexar County, Texas, converted into a fort. In 1836 it was occupied by about 150 of the revolutionists in the Texan War of Independence. Though attacked by 4,000 Mexicans under Santa Ana, the Texans held it from February 23d to March 6th, when Santa Ana took it by storm. All but seven of the garrison perished, six of these being murdered after their surrender, and one man escaping to report the affair. In this garrison were the celebrated David Crockett, and Colonel James Bowie, inventor of the bowie-knife. The memory of this massacre became an incitement to the Texans in subsequent encounters, and "Remember the Alamo!" became a war-cry in their struggle for freedom.

Alsace-Lorraine. Originally a part of Roman Gaul and inhabited by Celtic tribes. In the fourth and fifth centuries it was overrun by Teutonic tribes who largely supplanted the older inhabitants so that by the tenth century portions of the country were extensively Germanized. However, in the latter middle ages Lorraine became more and more distinctively French. In 1552 Lorraine became a part of France, not by conquest but by a treaty, signed by all the Protestant princes of Germany, the text of which states that the German language had never been used in the towns of Toul, Verdun, and Metz. Alsace proper became the possession of the Habsburgs and in 1648 was ceded to France by the emperor of Austria who stated in the treaty that "no other emperor, in the future, will ever have any power in any time to affirm any right on these territories." Southern Alsace, including Mülhausen, formerly belonged to Switzerland but during the French revolution decided by popular vote to become a part of the French republic. In 1870, following the defeat of France by the Prussians, Bismarck made the surrender of Alsace-Lorraine a principal condition of peace. Notwithstanding the opposition of the inhabitants and a unanimous protest of their deputies that "Europe cannot allow a people to be seized like a flock of sheep," Alsace-Lorraine was made an imperial territory of Germany under the direct control of the kaiser. Despite strenuous opposition, met by alternating policies of military severity and mildness, the complete Germanization of the provinces was steadily aimed at.

In 1918, following the defeat of Germany in the World War, the French reoccupied the territory. By the Treaty of Versailles, 1919, Alsace-Lorraine was restored to France.

AMERICAN BATTLES, TABULATED

Naval engagements are indicated by *italics;* * means that it was a drawn battle; † means a general estimate.

Date	Name of Battle	Opponent	Victor	Casualties			
				United States		Opponents	
				Killed	Wo'nd'd	Killed	Wo'nd'd

Arabia. The history of Arabia before the time of Mohammed is involved in mystery. The aborigines of Arabia were probably Cushites, most of whom passed over into Abyssinia. A few, however, remained, who inhabited the west coasts. Subsequently another Semitic race, descended from Abraham, settled in the land. The oldest Arabian tribes are now extinct, and only a traditional memory even of their names exists; but the Semitic chiefs, Joktan, or Kahtan, and Ishmael, are generally considered to be the fathers of the present inhabitants. Christianity found an early entrance into Arabia. The Jews, in considerable numbers, migrated into Arabia after the destruction of Jerusalem, and made many proselytes. The great diversity of creeds in the peninsula was favorable to the introduction of the doctrine of Mohammed, which forms the grand epoch in Arabian history, and brings it into close connection with the general history of civilization. Now, for the first time, the people of Arabia became united, and powerful enough to erect new empires in the three quarters of the world. The dominion of the Arabs, from the time of Mohammed to the fall of the caliphate of Bagdad in 1258, or even to the expulsion of the Moors from Spain in 1492, is an important period in the history of civilization. But the movements which had such great effect on the destinies of other nations produced but little change in the interior of Arabia; and after the brilliant career of conquest was ended the peninsula was left in an exhausted condition. Then

followed the subjugation of Yemen by the Turks in the 16th century; their expulsion in the 17th century; the dominion of the Portuguese over Muscat, 1508-1659; the conquests of Oman at the close of the 16th century; and, lastly, the appearance of the Wahhabees, 1770, who became influential in political affairs. Mehemet Ali, the pasha of Egypt, after subjugating the coasts of Hejaz and Yemen, gained a further advantage by the victory of Ibrahim Pasha, 1818. In 1840 events in Syria compelled Mehemet to withdraw from Arabia. From that time until the World War, Hejaz, Yemen, and El Hasa were really Turkish provinces. Oman, in alliance with England, was practically independent, while the Sinaitic peninsula fell to Egyptian hands. In 1916 the Grand Sherif of Mecca, or "Keeper of the Holy Places," proclaimed the independence of Hejaz, and assumed the title of King. His troops cooperated with the British forces under General Allenby against the Turks in Syria.

The new Kingdom of Hejaz extends from Asir northward to Palestine and Syria, and from the Red Sea, the Gulf of Akaba, and Palestine eastward to the boundaries of Central Arabia.

Argentina, Republic of. In 1515, Juan Diaz de Solis, while searching for a passage into the Great South Sea newly seen by Balboa, entered the Rio de La Plata. In 1526, Sebastian Cabot, son of the discoverer of Newfoundland, penetrated nearly to the confluence of the Parana and the Paraguay, being arrested by the rapids, which afterwards gave name to Corrientes. In 1535, Buenos Ayres was founded, to command the only outlet of the country. In conjunction with its own colony of Montevideo, on the opposite bank, it has virtually monopolized the history of a region equal in extent to Western Europe. Gradually other cities were planted, partly by colonists from Spain, and partly by adventurers from Peru, each city generally giving its own name to its own province. The chief staples of the country — horses and cattle — had been largely introduced before 1552. Down to 1775, the basin of the Rio de La Plata was a dependency of the viceroyalty of Peru. In that year, however, was erected the viceroyalty of Buenos Ayres, which, to the basin in question, added Bolivia, under the name of Upper Peru, thus embracing the headwaters of the Amazon, and also most of the plateau of Titicaca. The year 1806 ushered in a new order of things. Spain, as an ally of France, being then at war with England, both Buenos Ayres and Montevideo were occupied by the English — a change which, brief as was its duration, virtually sowed the seeds of revolution. The colonists had felt the inconvenience of belonging to a state which left them, in a great measure, to defend themselves; they had successfully tried their strength against a foe more powerful than their own masters; and they had been encouraged not less by the sayings than by the doings of their invaders to assert their independence. The triumphant militia, after deposing and expelling the legitimate viceroy for cowardice, elected in his stead the French officer who had led them to victory. Thus had the viceroyalty of Buenos Ayres become peculiarly ripe for taking its share in the outbreak which Napoleon's dethronement of the Bourbons, in 1808, almost immediately occasioned throughout Spanish America. The constituents of the Argentine Republic did not, however, submit to the sovereignty of Joseph Bonaparte when he was shuffled on to the Spanish throne to replace Ferdinand VII. In 1810, they organized a government in the name of Ferdinand. After a short and inglorious period, this arrangement ended in utter confusion. In 1816, a General Congress declared the independence of the "United Provinces of Rio de La Plata"; but those provinces, in 1827, returned once more to a state of isolation. In 1831, Buenos Ayres, Entre Rios, Corrientes, and Santa Fé, sometimes classed as the coast or riverine states, entered into a federal compact, and invited the others to form a voluntary alliance with them. This Argentine Confederation led to little but anarchy till 1835, when General Rosas was elected captain general or governor of it, with all but absolute power. He secured quiet and order for a time; but his struggles to achieve the military and commercial supremacy of Buenos Ayres led to his overthrow in 1851. Buenos Ayres, refusing to submit to Urquiza, the next governor of the Argentine Republic, declared itself independent in 1854, but was compelled by a signal defeat at Cepeda in 1859 to reënter the confederation. Continuing restless, however, another war placed that province in the position of supremacy which it still holds. In 1881, the Argentine Republic, in conjunction with Chile, came into possession of Patagonia and Tierra del Fuego. A financial crisis in 1890 did much to temporarily retard the industrial progress of the republic. In 1906–07, immigration was encouraged on an extensive scale, and railroad building received a renewed impetus. The immigration law of 1911 excluded all but able-bodied immigrants. In 1912 Argentina spent more money on education than on her army and navy combined.

Arizona. Evidence contained in numerous ruins indicates Arizona was the home of a highly civilized race before it was visited by Europeans. It was entered by Fray Marcos, a Spanish friar from Mexico, in 1539, and first extensively explored by Coronado in 1540. Indian missions and military posts were from time to time temporarily established but the first permanent settlement dates from the founding of the presidio at Tucson in 1776.

Arizona originally formed a part of Mexico and was ceded to the United States along with New Mexico, February 2, 1848. It was separated from New Mexico and made a territory, February 24, 1863. Indian troubles in some measure hindered the development of the country, but the population of the territory steadily increased in proportion as larger tracts of desert land were reclaimed by irrigation, and the mineral resources of the region were utilized. Arizona was admitted to the Union, February 14, 1912, being the 48th state and last territory admitted. In the same year suffrage was granted to women, and in 1914 state-wide Prohibition was adopted.

Arkansas. The name, derived from the Indian, signifies "smoky water," with a French prefix meaning "bow." The State was originally a portion of the Louisiana Territory purchased from the French in 1803. When the

State of Louisiana was admitted, in 1812, the remaining portion was organized as Missouri Territory, which name it held till 1819, when Missouri formed a State Constitution, and Arkansas became a Territory under its present name. It became a State in 1836. The people passed the ordinance of secession on May 6, 1861. During the Civil War the principal battles fought within the State boundaries were Pea Ridge, Prairie Grove, Arkansas Post, and Helena. Arkansas was temporarily reorganized as a State in the Union in 1864, but it was relegated to military government under the reconstruction acts of 1867. The new constitution was adopted in 1868, and the State resumed permanent federal relations. On February 6, 1915, the legislature, by an overwhelming vote, adopted a statutory enactment enforcing state-wide Prohibition, which took effect January 1, 1916.

Armada. A Spanish word, signifying generally an *armed force*, but applied specially to the great naval expedition sent out against England by Philip of Spain, A. D. 1588. The object of the expedition was to strike a decisive blow at the Protestant interest. The expedition had been long in preparation, and consisted of no fewer than 132 vessels, chiefly galleons, which carried, besides 8,000 sailors and the galley-slaves, an army of 20,000 men. These were destined for the coast of Flanders, where Alexander Farnese, Prince of Parma, was to embark with 35,000 men in addition. The news of these hostile preparations aroused all the enthusiasm of England. Her navy, which had been reduced to thirty-six ships, was rapidly increased until 191 vessels were ready for sea. These were placed under the command of Lord Howard of Effingham, under whom served Drake, Hawkins, Frobisher, and others. The command of the army was given to the Earl of Leicester. The main body of the ships was stationed off Plymouth, while a squadron, under Lord Seymour, was ordered to cruise off the coast of Flanders. The Armada set out from the Tagus on the 29th of May. On the 19th of July, the fleet (which had been delayed by storms) was observed entering the Channel. On the 23d there was a whole day's fighting off Portland, and the 25th saw a similar scene with a similar result — the capture or crippling of Spanish ships — off the Isle of Wight. On the 27th, the fleet anchored off Calais. Two nights later, eight small vessels, daubed with pitch and resin, and filled with explosive substances, were drifted down with the tide towards the floating castles, and were set on fire. In the panic which the fire and the frequent crashes struck through the Spanish fleet, many vessels cut their cables and cleared off from the shore, while others were disabled or seriously injured. Next morning the scattered vessels of the Armada fell an easy prey to the English ships, which, being much smaller than those of the Spaniards, had been more easily maneuvered. Four thousand Spaniards were killed. Many of their vessels were either taken, sunk, or driven ashore. The rest fled northward at the bidding of their admiral, who saw no way home but round the northern coast of Scotland; and, at the end of September, fifty-three weather-beaten and mutilated ships, all that remained of "The Invincible Armada," were brought to anchor in Santander Bay.

Assembly. The four great legislative bodies which succeeded each other during the period of the first French revolution are usually termed: (1) The *National* or *Constituent Assembly*, commenced June 17, 1789, by the resolution of the deputies of the communes in the States-General, constituting themselves a national assembly, to which the deputies of the nobles and clergy afterwards adhered; termed Constituent Assembly from having framed a constitution; dissolved on the acceptance of the constitution by the king, September 30, 1791. (2) The *Legislative Assembly.* It commenced its sittings October 1, 1791; suspended the royal authority by its decree of August 10, 1792; and was dissolved September 21, 1792. (3) The *Convention.* It commenced its sittings September 21, 1792, with a proclamation of the Republic; was dissolved 4 Brumaire, fourth year of the Republic (October 26, 1795). (4) Two-thirds of this assembly were then included in the new body of the *Corps Législatif*, which commenced its sittings October 27, 1795, forming the *Council of the Five Hundred* (des Cinq-Cents), and the *Council of the Ancients* (des Anciens), 250 in number. The latter body was named the *Directory.* This assembly subsisted until the dissolution of the Directory by Bonaparte, 17 Brumaire, eighth year of the Republic (November 10, 1799). The term *Assemblée Nationale* was revived by the legislative body under the second Republic, 1848, and again in 1870.

Assyria (*a-sĭr'-ĭ-a*). We first hear of Assyria as a northern province of the Babylonian Empire in the 19th century B. C. It gradually grew in power, until about 1100 B. C. its king, Tiglath-Pileser I, made himself master of the empire. After his death, however, the realm fell apart. In 745 B. C. an adventurer, Pul, who had been a gardener, seized authority and, as Tiglath-Pileser II, established the strongest empire the world had yet seen. Sargon II, the next great king, used the favorite plan of the Assyrians for subduing rebellious people, when he carried the tribes of Northern Israel into captivity, 723-722 B. C. Sennacherib, son of Sargon, in the course of extending his power westward, met disaster in a siege of Jerusalem, celebrated in Byron's poem beginning, "The Assyrian came down like a wolf on the fold." His son, Esarhaddon, conquered Egypt in 672 B. C. But the slaughterous cruelty and oppressive taxation of this great empire roused hatred among its subject people. Egypt and Babylon revolted, the Scythians invaded from the north, and finally the Medes and Babylonians conquered Nineveh, the capital.

Augur (*au'gŭr*). A public officer appointed to interpret the will of the gods, as expressed by signs or omens, for national or individual guidance. Their office was one of great importance in the state, as no enterprises or ceremonies were performed unless they declared the omens favorable. Accordingly, the members of their college were always elected from the most honorable citizens. Their divinations were called *auguries* or *auspices*, between which there is sometimes a distinction made, the latter meaning such as

were derived from the inspection of birds, the former being extended to all omens or prodigies whatever. The Augurs bore a staff or wand as the ensign of their authority. Their office was suppressed, 390 A. D.

Austria-Hungary. The history of Austria is the history of the House of Habsburg. When Rudolph of Habsburg became Emperor of Germany, and Ottokar, King of Bohemia and Duke of Austria, Styria, and Carinthia, refused to take the oath of allegiance, the emperor succeeded in dispossessing him of his fiefs (1278), and subsequently conferred them on his son (1282). Thus the dynasty of Habsburg was founded. In the first half of the Sixteenth Century, Duke Ferdinand of Austria was elected King of Hungary by one party, John Zapolya of Transylvania by another. After several wars, in which John was supported by the Turks, Ferdinand came out victorious and united Hungary to Austria. Possessed of a large territory, fertile and densely peopled, the House of Habsburg was for several centuries the richest and most powerful family in Europe. But humiliations came with Napoleon. Driven out of Germany, the Emperor Francis assumed, August 11, 1804, the title of Emperor of Austria. After the fall of Napoleon, Austria was restored to its former size, and under the administration of Metternich it also regained its prestige in European politics. But its internal weakness became apparent, first by the revolution of 1848, when only the support of Russia prevented the whole fabric from falling to pieces, and then after the battle of Sadowa, 1866, when, for the second time, it was driven out of Germany, and lost its hold on Italy. The empire was then constituted as a double state — Austria and Hungary. In 1878 the administration of Bosnia and Herzegovina was given to Austria. In 1882 the dual kingdom entered into the Triple Alliance with Germany and Italy. Thereafter the policy of the Habsburg rule became more and more identified with the Hohenzollern ambition for world domination. In 1909 Austria annexed Bosnia and Herzegovina in defiance of Russia. With Germany's support in 1913, Austria, by securing a protectorate over Albania and by denying Servia access to the sea, prevented the Balkan allies from realizing the fruits of their victory over the Turks.

Francis Ferdinand, Austrian heir apparent, was assassinated at Serajevo, June 28, 1914. Accusing Servia of complicity, Austria-Hungary demanded that Servia punish the accomplices and suppress anti-Austrian influence. Rejecting Servia's reply, Austria declared war on Servia, July 28, 1914. Russian mobilization in behalf of Servia began at once. Austria declared war on Russia Aug. 6. Germany supported Austria. Great Britain and France, supporting Russia, declared war upon Austria Aug. 13. The Austrian attack on Servia in 1914 failed. The Russians, invading Galicia, took Lemberg, Sept. 22. March 22, 1915, Przemysl fell to the Russians but, June 3, was retaken. Austria regained Lemberg and in May, 1915, drove the Russian forces out of the Carpathians. Italy, May 23, 1915, declared war on Austria. In Oct., 1915, Austria completely occupied Servia.

Emperor Francis Joseph died, 1916, and was succeeded by Charles I. During the year the Teutonic armies conquered Rumania. In 1917 Austro-German forces advanced to the Piave river in Italy. But, in June, 1918, the Austrian offensive failed, and, in October following, the Austrian armies were utterly defeated. On Nov. 11, Charles I. abdicated, ending more than 600 years of Habsburg rule. By the Treaty of Versailles, 1919, the empire of Austria-Hungary was dismembered. Portions were awarded to Poland, Rumania, and Italy, and to the new states of Czecho-Slovakia and Jugoslavia. This left Austria and Hungary completely separated and greatly reduced in size.

Battles (*The fifteen decisive*), according to Professor Creasy: (1) *Marăthon* (B. C. 490), in which the Greeks, under Miltiădês, defeated Darius, the Persian, and turned the tide of Asiatic invasion. (2) *Syracuse* (B. C. 413), in which the Athenian power was broken, and the extension of Greek domination was prevented. (3) *Arbēla* (B. C. 331), by which Alexander overthrew Darius, and introduced European habits into Asia. (4) *Metaurus* (B. C. 207), in which the Romans defeated Hannibal, and Carthage was brought to ruin. (5) *Arminius* (A. D. 9), in which the Gauls overthrew the Romans under Varus, and established their independence. (6) *Châlons* (A. D. 451), in which Attila, "the Scourge of God," was defeated by Aëtius, and Europe saved from utter devastation. (7) *Tours* (A. D. 732), in which Charles Martel overthrew the Saracens, and broke from Europe the Mohammedan yoke. (8) *Hastings* (A. D. 1066), by which William of Normandy became possessed of the English Crown. (9) *Orléans* (A. D. 1429), by which Jeanne d'Arc raised the siege of the city, and secured the independence of France. (10) *Armada* (*The*), (A. D. 1588), which crushed the hopes of Spain and of the papacy in England. (11) *Blenheim* (A. D. 1704), in which Marlborough, by the defeat of Tallard, broke the ambitious schemes of Louis XIV. (12) *Pultowa* (A. D. 1709), in which Charles XII. of Sweden was defeated by Peter the Great of Russia, and the stability of the Muscovite Empire was established. (13) *Saratoga* (A. D. 1777), in which General Gates defeated Burgoyne, and virtually decided the fate of the American Revolution. (14) *Valmy* (A. D. 1792), in which the allied armies, under the Duke of Brunswick, were defeated by the French revolutionists, and the Revolution was suffered to go on. (15) *Waterloo* (A. D. 1815), in which Wellington defeated Napoleon, and rescued Europe from French domination.

Belgium. The territory now known as Belgium formed only a section of that known to Cæsar as the territory of the Belgæ, extending from the Seine to the Rhine, and to the ocean. This district continued under Roman sway till the decline of the empire; subsequently formed part of the Kingdom of Clovis; and then of that of Charlemagne. After the breaking up of Charlemagne's empire, Belgium formed part of the Kingdom of Lotharingia under Charlemagne's grandson, Lothaire; Artois and Flanders, however, belonged to France by the treaty of Verdun.

For more than a century this kingdom was contended for by the kings of France and the emperors of Germany. In 953, it was conferred by the Emperor Otto upon Bruno, archbishop of Cologne, who assumed the title of archduke, and divided it into two duchies: Upper and Lower Lorraine. In the frequent struggles which took place during the eleventh century, Luxemburg, Namur, Hainaut, and Liége usually sided with France, while Brabant, Holland, and Flanders commonly took the side of Germany. The contest between the civic and industrial organizations and feudalism, which went on through the twelfth and thirteenth centuries, and in which Flanders bore a leading part, was temporarily closed by the defeat of the Ghentese under Van Artevelde in 1382. In 1384, Flanders and Artois fell to the House of Burgundy, which, in less than a century, acquired the whole of the Netherlands. The death of Charles the Bold at Nancy, in his attempt to raise the duchy into a kingdom (1477), was followed by the succession and marriage of his daughter, Mary of Burgundy, by which the Netherlands became an Austrian possession. With the accession, however, of the Austrian House of Habsburg to the Spanish throne, the Netherlands became the scene of increasingly severe persecution under Charles V. and Philip II. of Spain. Driven to rebellion, the seven northern states under William of Orange, the Silent, succeeded in establishing their independence, but the southern portion, or Belgium, continued under the Spanish yoke.

From 1598 to 1621, the Spanish Netherlands were transferred as an independent kingdom to the Austrian branch of the family by the marriage of Isabella, daughter of Philip II., with the Archduke Albert of Austria. He died childless, and they reverted to Spain. Twice conquered by Louis XIV., conquered by Marlborough, coveted by all the powers, deprived of territory by Holland and by France, the Southern Netherlands in 1714, by the peace of Utrecht, again came under the dominion of Austria, with the name of the Austrian Netherlands. During the Austrian war of succession the French, under Saxe, conquered nearly the whole country, but restored it in 1748 by the peace of Aix-la-Chapelle. Belgium regained much of her prosperity under Maria Theresa and Charles of Lorraine. On the succession of Joseph II. a serious insurrection occurred, the Austrian army being defeated at Turnhout, and the provinces forming themselves into an independent state as United Belgium (1790). Scarcely subdued by Austria, they were conquered by the revolutionary armies of France. The Austrian rule practically ended with the battle of Fleurus (1794), and the French possession was confirmed by the treaties of Campo Formio (1797) and Lunéville (1801).

In 1815 Belgium was united by the Congress of Vienna to Holland, forming the Kingdom of the Netherlands. In 1830 a revolution resulted in the separation of the two countries. In 1831 Leopold, Prince of Saxe-Coburg, became king of Belgium. Upon the withdrawal of the Dutch claims in 1839, the neutrality and independence of Belgium were guaranteed by a treaty signed by Great Britain, France, Prussia, and Russia. After a prosperous reign of thirty-four years, Leopold was succeeded by his son Leopold II. in 1865. At the outbreak of the Franco-Prussian war in 1870, Great Britain signed a separate treaty with France and with Prussia, agreeing, in case either belligerent should violate the neutrality of Belgium, to aid the other in upholding the treaty of 1839.

In 1885 the Congress of Berlin constituted the Congo Free State and invited Leopold II. to become its sovereign. In 1890 the Congo Free State passed under the suzerainty of Belgium, and in 1908 was annexed to Belgium. In 1909 Leopold died and was succeeded by his nephew Albert I.

On Aug. 2, 1914, Germany demanded free passage of German troops through Belgium to attack France. Belgium refused, and a German invasion began in direct violation of Germany's own signed guarantees. Liége fell Aug. 7. Belgian forces were defeated and compelled to retreat. Louvain was burned Aug. 27. On Aug. 20 the Germans took Brussels, levying a war tax of $40,000,000. Ghent and other cities were occupied. On Oct. 8 Antwerp fell. Hundreds of thousands of refugees found shelter in England, Holland, France, and America, many countries contributing millions of dollars to their relief. The remaining population was subjected to barbaric indignities and atrocities. Cities and towns were fined, their treasuries looted, their inhabitants shot and imprisoned, and their homes despoiled. The machinery of factories was removed or destroyed and Belgian citizens deported for enforced labor in Germany. But Teutonic frightfulness failed to crush the national spirit. The army continued to fight heroically in the allied lines. The patriotism of the king and the loyalty of the people was unwavering. Finally, the invaders were forced out of the country. On Nov. 22, 1918, King Albert reentered Brussels at the head of the victorious army, and Belgium was proclaimed a free and independent nation.

Blue Laws. The code of 1660, a compilation of the earliest laws and customs of Connecticut. It is almost verbally copied from the Mosaic Law. After the restoration of Charles II. "Presbyterian true blue" became a term of derision applied to anything which smattered of Puritanism, and "blue laws" simply meant puritanical laws, or laws with a blue tinge. These laws inflicted the penalty of death for worshiping any god but the God of the Bible; for speaking disrespectfully of the Bible, Christ, or the Holy Ghost; also for witchcraft, adultery, theft, false-swearing, and disobedience to parents. Said to have been drawn up by the Rev. Samuel Peters, but generally supposed to be apocryphal.

Boer War, The. The reinforcing of the British troops in South Africa, along the borders of the Transvaal Republic, together with differences on the franchise question, coupled with grim recollections of former armed clashes between Great Britain and the sturdy, patriotic Boers, all tended to hasten the conflict of 1899-1900, one of the most sanguinary in the world's history. As an effort to avert war, a conference was held May 31, 1899, between Sir Alfred Milner, Governor of Cape Colony, and the Presidents of the Dutch Republics at Bloemfontein, in which terms for the adjustment of the claims of the Outlanders were discussed, but no agreement was reached. Between June 1 and October 10, negotiations proceeded between the governments of Great Britain and the Transvaal, while the legislature of the latter adopted franchise laws which were not acceptable to Great Britain. In the meantime, both countries made energetic preparations for war, and the Orange Free State announced that in case of hostilities it would support the Transvaal.

On October 10th, the Transvaal sent to the British Government an ultimatum demanding: That all points of mutual difference be regulated by friendly recourse to arbitration; that all British troops on the border of the Transvaal Republic should be instantly withdrawn; that Great Britain should withdraw all reinforcements of troops landed in South Africa since June 1, 1899, with assurance that during further negotiations the Republic would not attack any British possessions, and that upon compliance with the ultimatum the Republic would be prepared to withdraw from the borders the armed burghers of the Transvaal; that the British troops then on the high seas should not be landed in any part of Africa; that an answer to the ultimatum be received by the Republic not later than 5 o'clock P. M. on October 11th; that an unsatisfactory answer would be regarded by the Republic as a formal declaration of war by Great Britain.

On October 12, 1899, the reply of the British having been unsatisfactory, the Transvaal Boers invaded Natal, advancing toward Newcastle, which was defended by the British generals White and Symons. The British evacuated Newcastle and fell back on Ladysmith, where, on October 13th, there was a strong British force. On October 20th, the Boers began the siege of Kimberley, and on the same day in Natal was fought the battle of Dundee, in which the British repulsed the Boers, suffering a loss of 215 in killed and wounded. On October 21st, General French captured the Boers' position at Elandslaagte after a hard battle, with a British

loss of 257 killed and wounded. General White repulsed a Free State force at Rietfontein, near Ladysmith, October 24th. Five days later the Boers began the siege of Ladysmith. On October 30th, in a sortie near Ladysmith, the British were entrapped and defeated, and the Boers captured 870 prisoners. Communication with Ladysmith was cut off by the Boers on November 2d, and the next day the British evacuated Colenso, in Natal. The Boers shelled Mafeking November 6th, but were repulsed in an attack on the British position. The first British transport carrying reinforcements reached Cape Town on November 9th, and proceeded to Durban. The Boers wrecked a British armored train near Eastcourt, Natal, on November 16th, capturing fifty-six prisoners, including Winston Churchill. On November 23d, near Gras Pan, Lord Methuen attacked the Boers and drove them from their position, and on November 26th the British won a sanguinary victory at Modder River. A series of Boer successes then followed. On December 10th, the British, under General Gatacre, were led into a Boer ambuscade near Stormberg Junction and lost 1,000 men, including 672 captured, while on the same and following day Lord Methuen failed to take the Boer position at Spytfontein after desperate fighting and heavy losses, General Wauchope being killed. On December 15th, General Buller was severely defeated while attempting to force the Tugela River, near Colenso, he losing 1,000 men and eleven guns. The British losses to this date were 7,630 men killed, wounded, and missing, and the attention of the civilized world was riveted upon the war. After Buller's signal defeat, Field Marshal Lord Roberts was ordered, December 18th, to South Africa, to take command of military operations, with Lord Kitchener as chief of staff, and with a reinforcement of 100,000 men.

General French captured Colesburg on New Year's Day, 1900. On January 6th, Roberts and Kitchener arrived in South Africa, and on the same date the Boers were repulsed with heavy loss in an attack on Ladysmith. On January 23–25th, occurred some of the most desperate and famous fighting of the war, when a British storming party under General Warren captured Spion Kop, but, after heavy losses, withdrew. General Buller made a third attempt to relieve Ladysmith, but failed, February 9th, and Lord Roberts began an invasion of the Orange Free State on February 12th. General French relieved Kimberley on February 15th. On February 22–27th there was severe fighting between Roberts and Cronje, terminating with the capitulation of the latter, with 4,600 men and six guns. Lord Dundonald entered Ladysmith on February 28th, and General Gatacre occupied Stormberg on March 5th. On March 7th, Lord Roberts turned the Boer position near Modder River and advanced triumphantly on Bloemfontein, capital of the Orange Free State, which surrendered to the British on March 13th. The Boer Commander-in-Chief, General Joubert, died on March 27th, and Colonel de Villebois Mareuil, French officer with the Boers, was killed in a skirmish on April 5th. General Cronje and the other Boer prisoners were sent to St. Helena, where they arrived April 14th, and the demoralization of the Boers seemingly began. On April 20th, Mr. Pettigrew, in the United States Senate, introduced a resolution of sympathy with the Boers, but it was voted down, 29 to 20. On May 3d, Lord Roberts began his advance on Pretoria.

The Boers now turned to the United States and Europe for intervention, but the United States was the only government in the world of all those approached by the South African Republic which tendered its good offices to either of the combatants in the interest of the cessation of hostilities.

So the war continued. On May 10th, the British crossed the Zand River and occupied Kroonstad, and on May 15th, General Buller occupied Dundee. The Boer envoys to the United States reached New York on May 16th, the day that Mafeking was relieved, after a siege of 217 days. President McKinley received the envoys unofficially, but they were officially informed by Secretary of State Hay that the United States could not intervene in the war. The end of the struggle was not yet, however, in sight. On May 28th, Lord Roberts proclaimed the annexation of the Orange Free State to the British Empire. The British entered Johannesburg on May 30th, and on the same day President Kruger retired from Pretoria, which city surrendered on June 5th to the British army. General Prinsloo and 3,348 Boers surrendered at Naauwpoort, and Harrismith surrendered to General Macdonald on August 4th. Several conspirators against the life of Lord Roberts were tried at Pretoria August 17th, and their leader was executed. Machadodorp, Kruger's new capital, was occupied by General Buller August 28th. On September 1st, the Transvaal was proclaimed a part of the British Empire by Lord Roberts. Guerilla warfare, which had begun July 1st, was now general in the Transvaal, and the Boer Generals DeWet and Botha continued to harass the British by sporadic raids. Ex-President Kruger, abandoning the Transvaal, began his journey to Europe September 12th. He arrived at Marseilles on November 22d, and had an ovation from the French people, the demonstrations of welcome continuing through his journey to Paris, while the National French Assembly adopted resolutions of sympathy. On November 30th, the supreme military command in South Africa was turned over to Lord Kitchener by Lord Roberts, who departed for home, sailing for England from Cape Town on December 12th. In the meantime, the German Government intimated to Mr. Kruger on December 1st, that a visit by him to Berlin would be inopportune. Queen Wilhelmina of the Netherlands, on the contrary, welcomed Mr. Kruger at a dinner on December 15th. The British met with a severe reverse at Nooltgedacht December 13th, Colonel Legge being killed. On December 14th, Sir Alfred Milner was appointed Administrator of the Orange River and Transvaal colonies, and the year closed with both sides grimly determined to continue the terrible warfare to a definite conclusion.

The first battle of 1901 was at Lindley,

Orange River Colony, where forty British officers and men were killed or wounded. On January 7th, the British position along Delagoa Bay Railway was unsuccessfully attacked by the Boers, who were also driven back on January 17th near Standerton, when they attacked a British column under General Colville. On January 18th, New Zealand troops and Bushmen, under Colonel Gray, routed 800 Boers near Veutersburg. On January 30th, the Bloemfontein-Ladybrand line was crossed by DeWet near Israel's Poort, and the Boers captured the British post at Modderfontein in the Transvaal on February 3d, at about which time the British War Office decided to reinforce Kitchener with 30,000 additional mounted troops. General Smith-Dorrien was attacked by Louis Botha with 2,000 men at Orange Camp February 6th, but repulsed him. On the same date the Boers cut the Delagoa Bay Railroad, near Lorenzo Marques; ten days later DeWet crossed the railroad at Bariman's Siding and was engaged by Crabbe and an armored train, and on February 19th the Boers blew up a supply train at Clip River. Four severe Boer reverses then followed in quick succession. The Boers, 5,000 strong, were defeated by General French at Piet Retief, February 22d; DeWet's force was scattered by Colonel Plummer at Disselfontein, Orange River, February 23d; General French captured 300 Boers, ammunition, cattle, and supplies at Middleburg, February 26th; Lord Kitchener drove DeWet north of the Orange River, with a loss of 280 men captured, March 1st. Lord Kitchener then granted General Botha a seven days' armistice to make communication with other Boer leaders, after which truce hostilities were resumed. The Boers captured a British supply train near Viaklaagte March 22d, but were defeated three days later near Vryheid by General French. On March 27th, Fourie's commando and Bruce Hamilton's command held a running fight for twenty miles. Commandants Prinsloo and Englebrecht surrendered to the British March 30th, and the British reoccupied Pietersburg on April 9th, on which date the Boers captured seventy-five men of the Fifth Infantry and Imperial Yeomanry. General Botha, on April 10th, renewed negotiations for peace. Sir Alfred Milner, returning home from South Africa, was received by the king and created a peer May 21st. The Boers, again for a time, rejoiced over successes. They attacked and partially destroyed the convoy of General Plummer's column May 25th, captured a British post of forty-one men near Maraisburg, May 27th, and attacked General Dixon's brigade of the Seventh Yeomanry near Vlakfontein, May 29th, causing a heavy British loss. On June 3d, an attack by 700 Boers under Scheeper upon Willomore, Cape Colony, was repulsed after a nine hours' fight. The British and Boers lost heavily in an engagement between Elliot and DeWet near Reitz, June 6th, and on the same day Colonel Wilson, with 240 men, routed 400 Boers under Bever, near Warm Baths. The Boers captured 200 members of the Victoria Mounted Rifles at Steenkoolsprint, June 12th, and the Midland Mounted Rifles were overpowered by Commandant Malan at Waterkloof, June 20th.

President Schalk-Burger, of the South African Republic, and President Steyn, of Orange Free State, issued a proclamation for "no peace without independence," June 20th, and on August 7th, Lord Kitchener issued a proclamation of banishment against all Boers in South Africa not surrendering by September 15th. In the meantime, General Benson repulsed the Boers in a mountain pass near Dullstroem, and, though the inevitable end of the warfare was becoming daily more apparent, fighting was continued. Fifty of General French's scouts were captured in Cape Colony August 16th; three officers and sixty-five British, north of Ladybrand, were captured August 21st; the Boers attacked a convoy near Kooipopje and killed nine men of the Seventy-fourth Yeomanry, wounding twenty-three, on August 24th; Colonel Vandeleur and nine men were killed and seventeen wounded by the blowing up of a train in the Transvaal, August 31st; Von Tonder and Delarey engaged General Methuen in the Great Maries valley, September 8th. Then, on September 16th, the British troops captured Lotter's entire command south of Pietersburg, and on the following day the Boers partially evened matters by ambushing and capturing three companies of British mounted infantry under Major Gough, near Scheeper's Nek, and also by capturing a company of mounted British infantry and two guns at Vlakfontein, September 20th. Two Boer commandos were captured September 21st, near Adenburg, and Colonel the Hon. A. Murray and Captain Murray, his adjutant, were killed in a fight with Krintzsinger, who crossed the Orange River. On September 29th, Commandant Delarey attacked Colonel Kekewich's camp at Moedwill, with loss on both sides.

Martial law was declared throughout Cape Colony on October 9th. The following day General Sir Redvers Buller admitted, in a speech, that he advised the surrender of Ladysmith, and was severely criticised for his utterances. Commander Scheeper was captured October 12th, and Captain Bellew and four others were killed in a fight, October 16th, at Twenty-four Streams. On November 1st, in a heavy Boer attack on Colonel Benson's column near Brakenlaagte, the British lost twenty-five officers and 214 men in killed and wounded. During the next sixty days numerous small skirmishes were reported, and during the first three months of 1902 the war was more or less of a desultory character. Negotiations for peace between the Boer leaders and the British Government began on March 23d, the latest notable Boer accomplishment having been the capture of General Methuen and 200 men, forty-one British being killed, on March 11th.

On May 31, 1902, Lord Kitchener announced that a peace treaty had been signed between Great Britain and the Boers, Commandant-General Louis Botha, assisted by General Delarey and Chief Commandant DeWet, acting for the Boers.

Bohemia. The *Boii*, from whom Bohemia derives its name, settled in the country in the Second Century B. C., but were expelled by the Marcomanni about the beginning of the Christian era. The victors themselves soon gave place to

others, and as early as the Fifth Century A. D. we find Bohemia peopled by the Czechs, a Slavic race. In the latter part of the Ninth Century, Swatopluk, the King of Moravia, subjugated Bohemia and introduced Christianity. After his death, the Dukes of Prague, who, in 1061, had the title of king conferred on them by the Emperor Henry IV., ruled the country as a state in the German Empire, until 1306, when the last of the dynasty was assassinated. From 1310 to 1437, Bohemia was ruled by kings of the House of Luxembourg. In the time of Wenzel IV. (Wenceslas), a reformation of religion took place under John Huss and Jerome of Prague. After the death of Wenzel IV., the imprudent measures adopted by the Emperor Sigismund excited in Bohemia a war of sixteen years' duration, which ended in making Bohemia an elective kingdom. In 1458, the shrewd and able Protestant noble, George von Podiebrad, ascended the throne. His successor, Ladislaus (1471–1516), was elected (1490) to the throne of Hungary. After the death of his son and successor, Louis (1516-26), in battle against the Turks at Mohacz (1526), Bohemia and Hungary passed into the hands of Ferdinand I. of Austria. Thenceforth until the World War, 1914-1918, Bohemia remained under Habsburg rule. By the Treaty of Versailles, 1919, Bohemia became a part of Czecho-Slovakia.

Boii. A Celtic people, who emigrated from Transalpine Gaul into Italy, where they occupied the old seat of the Umbrians, between the Po and the Apennines. In B. C. 283, the Boii were defeated by the Romans at the Vadimonian Lake, and thereafter prolonged through numerous campaigns, especially in support of Hannibal, but sometimes single-handed, their resistance to the Roman arms, till their complete defeat by Scipio Nasica, B. C. 191. They were subsequently compelled to recross the Alps, and dwelt for more than a century in a part of modern Bohemia (which derives its name from them), but were ultimately exterminated by the Dacians.

Bonaparte's Egyptian Campaign (1799). Alexandria fell into his hands; he won the great battle of the Pyramids; completed the subjugation of Egypt; passed into Syria, made himself master of Gaza and Jaffa; won the battle of Mount Tabor; returned to Egypt, attacked the Turks at Aboukir, and utterly destroyed their whole army, June 25, 1799.

Bonaparte's Forty Days' Campaign. He left Paris May 6, 1800; marched over the Alps, and reached Aosta May 23d; he entered Milan June 2d; won the battle of Montebello over the Austrians, June 9th, and the great battle of Marengo, June 14th; returned to Paris, July 2d. The forty days count from his arrival at Aosta, May 23d, to his return to Paris, July 2d.

Bonaparte's Italian Campaign (1796-97). He was 27 years of age. April 11th, he defeated Beaulieu, the Austrian general, at Montenotte, in Sardinia; April 14th, he won the battle of Millesimo; April 15th, he won the battle of Dego; April 22d, he won a victory over the Piedmontese at Mondŏvi; May 10th, he defeated the Austrian general, Beaulieu, at the Bridge of Lodi, and entered Milan; June 19th, he occupied Bologna, Ferrara, and Ancona; August 3d, he defeated the Austrian general, Würmser, at Lonato; August 5th, he defeated the same general at Castiglione; September 8th, he defeated him again at Bassano; November 17th, he won the great battle of Arcōla over Alvinzi, the Austrian general; January 14, 1797, he won the battle of Rivoli over Alvinzi and Würmser; January 15th, he won a battle at the faubourg of St. George, near Mantua; January 16th, he won a battle near the palace called The Favorite; March 16th, he defeated the Austrians, led by the Archduke Karl, at Tagliamento; October 17th, the treaty of Campo Formio, and in December he returned to France. He had won fifteen battles; added Savoy and Nice to France, the Netherlands, and Italy; had obtained vast money compensations, and returned to France laden with treasures of art.

Boxer Rebellion, The. The causes of the Boxer outbreak in China were cumulative. For three years prior to the enforced occupation of China by the powers, in 1900, a number of acts of foreign countries had a disquieting effect upon the empire. Since 1898, Russia had taken Port Arthur and the adjacent harbor of Talienwan. Germany had leased Kiaochau and gained great concessions in the province of Shang Tung. France had suggested privileges in portions of Chinese territory adjacent to the French possessions of Tonquin. Great Britain, to cap the climax, had obtained from China a lease of Wei-Hai-Wei, on the south shore of the Gulf of Pechili, opposite Port Arthur, and thus commanded the entrance to the gulf and the water approach to Peking. Many Chinese were resentful of these encroachments by foreigners, but the Dowager Empress did not oppose them, and hence she was bitterly arraigned by her people.

The leader of this opposition was Prince Tuan, the sixth son of the Emperor Kwang-Su's grandfather. Prince Tuan had long been an athlete and had a following of many athletic young men in the kingdom, who, because of their ability in sports, were known as boxers, a name which Tuan's recruits adopted. Tuan proclaimed his nine-year-old son heir presumptive to the throne. The emperor, then but a figurehead, dominated by the Dowager Empress, had little popular support. The Boxers revolted, massacred missionaries at many interior points of the empire, and finally made a concerted attack upon the foreign legations in Peking, in which movement the imperial troops eventually participated.

The Chinese Tsung-li-Yamen, the equivalent to a responsible government ministry in Europe, was in sentiment hostile to foreigners, and hence either would not, or could not, protect the legations or escort them safely from the country. The civilized world received distressing reports of massacres and outrages, and was for several weeks in suspense as to the fate of the foreign ministers in China, their families, legation attaches, and converted Chinese under foreign protection. The offended powers decided upon concerted action and hurried vessels and troops to the ports nearest to the danger points. Upon Chinese resistance to the landing

of marines at Taku, the forts were shelled by all the allies except Americans, and on June 17th, while the Chinese shelled the allies' fleet, the allied troops landed and captured the Taku forts, after a sanguinary conflict. On June 18th the Ninth United States Regiment was ordered from Manila to China, other troops following. On June 20th, German fury and general international indignation was aroused when Baron von Ketteler, the German Minister, while proceeding on a diplomatic mission to the Tsung-li-Yamen in Peking, was beset by Chinese soldiers and butchered. On the same day an allied expedition under Vice-Admiral Seymour, of the British Navy, began a march upon Peking for the relief of the British legationers. Such countless hordes of Chinese opposed him that he was obliged to turn back, suffering casualties of 374. The allied warships shelled Tien-tsin on June 21st, and the combined forces, two days later, occupied the foreign quarters of that city. The Chinese, on June 23d, requested an armistice through Minister Wu at Washington. The United States promptly replied that free communication must first be allowed with the legations, and on July 4th, Secretary of State Hay outlined to the powers the American policy.

On July 13-14th, occurred one of the noted conflicts of history, when the allied forces stormed the Chinese port of Tien-tsin, which they captured with a loss of 800 killed and wounded. Colonel E. H. Liscum, commanding the United States contingent, was among the slain. On July 19th, the Emperor of China appealed to President McKinley for peace. The advance of the allies upon Peking began August 4th, under command of Field Marshal von Waldersee, of the German army, who was unanimously selected to command the allied forces.

The first news from the beleaguered foreigners reached the United States in the form of a cipher message from Minister Conger. It read: "Still besieged. Situation more precarious. Chinese Government insisting on our leaving Peking, which would be certain death. Rifle firing upon us daily by imperial troops. Have abundant courage, but little ammunition or provisions. Two progressive Yamen ministers beheaded. All connected with the legation of the United States well at present moment." The receipt of this message caused intense excitement throughout the United States, for, though it broke the long suspense, it added to public fury and anxiety. On August 8th, Li Hung Chang was appointed Envoy Plenipotentiary to propose to the several powers for the immediate cessation of hostile demonstrations. On August 14th, Peking was captured by the allied forces of the Americans, British, Germans, French, Austrians, Italians, and Japanese. The American troops were the first to enter the city, and Captain Reilly was the first victim. The emperor and empress had fled. The legationers were promptly relieved and told thrilling stories of their danger and distress during the long siege. The Chinese, on August 16th, asked for an armistice, which was refused. Li Hung Chang's appeal was rejected by the United States, and China was informed that the demands of this Government must be complied with. At the same time General Chaffee was given full power to act. The American refugees from Peking reached Tien-tsin safely on August 25th.

On November 19th, the negotiations between the allies and the Chinese authorities for terms of peace and compensation, which were begun when the allies took full possession of Peking, had progressed so far that the German Imperial Chancellor in the Reichstag announced that the allies had unanimously agreed upon the following as their demands upon China:

First. China shall erect a monument to Baron von Ketteler on the site where he was murdered and send an Imperial Prince to Germany to convey an apology. She shall inflict the death penalty upon eleven princes and officials already named, and suspend provincial examinations for five years where the outrages occurred.

Second. In future all officials failing to prevent anti-foreign outrages within their jurisdiction shall be dismissed and punished.

Third. Indemnity shall be paid to states, corporations and individuals. The Tsung-li-Yamen shall be abolished and its functions vested in a Foreign Minister. Rational intercourse shall be permitted with the emperor, as in civilized countries.

Fourth. The forts at Taku and other forts on the coast of China shall be razed, and the importation of arms and war material prohibited.

Fifth. Permanent legation guards shall be maintained, and also guards of communication between Peking and the sea.

Sixth. Imperial proclamations shall be posted for two years throughout the empire suppressing Boxers.

Seventh. Indemnity is to include compensation for Chinese who suffered by being employed by foreigners, but not compensation for native Christians.

Eighth. China shall erect expiatory monuments in every foreign or international burial ground where the graves have been profaned.

Ninth. The Chinese Government shall undertake to enter upon negotiations for such changes in existing treaties regarding trade and navigation as the foreign governments deem advisable, and with reference to other matters having in view the facilitation of commercial relations.

In December, 1900, the Chinese authorities had accepted all the foregoing conditions imposed by the allies, and the preliminary note of the demands of the powers was signed by Li Hung Chang and Prince Ching. Peking was evacuated by the American cavalry and artillery May 5th, and General Chaffee embarked for the Philippines May 18th. The powers, on May 9th, demanded of China a formal indemnity of 450,000,000 taels (about $300,000,000), which was agreed to by China, and the powers, on July 26th, formally accepted China's offer to pay the sum named on time at 4½ per cent. interest. Prince Chun, at Berlin, September 4th, formally apologized to Emperor William for the insult to German honor in the murder of Baron von Ketteler. On September 17th, the American and Japanese troops in Peking handed over the Forbidden City to the Chinese.

Brazil. It was only in 1531 that the Portuguese, busy as they were in India, here planted their first settlement. In 1578, Brazil fell with Portugal, under the power of Spain, and became a prey to the Dutch; and, though Portugal regained its own independence in 1640, it was not until 1654 that Brazil was entirely recovered from the Hollanders. In 1807, the royal family of Portugal fled to Brazil; in 1815, the colony was declared "a kingdom"; and the Portuguese court having returned to Europe in 1821, a national congress assembled at Rio de Janeiro, and on May 13, 1822, Dom Pedro, eldest son of King João VI. of Portugal, was chosen "Per-

petual Defender" of Brazil. He proclaimed the independence of the country on September 7, 1822, and was chosen "Constitutional Emperor and Perpetual Defender" on October 12th, following. In 1831, he abdicated in favor of his only son, Dom Pedro II., who reigned until November 15, 1889, when he was dethroned, exiled, and Brazil declared a republic under the title of the United States of Brazil. A new constitution was adopted in 1891, and Fonseca elected first president. Admirals Mello and Da Gama rebelled, 1893, but their revolt was soon suppressed. In 1906-07, Brazil took the lead in an effort to reach a better understanding among the countries of North and South America. After continued sinkings of Brazilian ships by German submarines, Brazil seized all German vessels in her harbors, June 28, 1917, and formally declared war against Germany, Oct. 26, 1917. A notable exposition was held at Buenos Ayres, 1922, in celebration of the centenary of Brazilian independence.

Brunswick, The House of. The Duchy of Brunswick, in Lower Saxony, was conquered by Charlemagne, and governed afterward by counts and dukes. Albert-Azzo, Marquis of Italy and Lord of Este, died in 1097, and left by his wife, Cunegonde (the heiress of Guelph, Duke of Carinthia in Bavaria), a son, Guelph. This son was invited into Germany by Imitza, his mother-in-law, and invested with all the possessions of his wife's stepfather, Guelph of Bavaria. His descendant, Henry the Lion, married Matilda, daughter of Henry II. of England, and is always looked upon as the founder of the Brunswick family. His dominions were very extensive; but, having refused to assist the Emperor Frederick Barbarossa in a war against Pope Alexander III., through the emperor's resentment he was proscribed at the Diet at Würzburg, in 1180. The Duchy of Bavaria was given to Otho, from whom is descended the family of Bavaria; the Duchy of Saxony to Bernard Ascanius, founder of the House of Anhalt; and his other territories to different persons. He then retired to England; but, at the intercession of Henry II., Brunswick and Lüneburg were restored to him. The House of Brunswick, in 1409, divided into several branches. Brunswick was included by Napoleon in the Kingdom of Westphalia in 1806, but was restored to the duke in 1815.

Buccaneers. A celebrated association of piratical adventurers, who, from the commencement of the second quarter of the Sixteenth Century to the end of the Seventeenth, maintained themselves in the Caribbean seas, at first by systematic reprisals on the Spaniards, latterly by a less justifiable and indiscriminate piracy. The name is derived from the Caribbee *boucan*, a term for preserved meat, smoke-dried in a peculiar manner. The Buccaneers were also sometimes called "Brethren of the Coast." The assumption by the Spaniards of an exclusive right, based upon the broad claim of initial discovery, to the whole of the New World was stoutly resisted by the enterprising mariners of England and France. The cruelties inflicted by the Spaniards upon all foreign interlopers, of which the history of that time is full, naturally led to an association for mutual defense among the adventurers of all other nations, but particularly among the English and French. The fundamental principles of the policy were close mutual alliance and war with all who were Spanish. The center of their predatory life was Tortuga. Their last great exploit was the capture of Carthagena, 1697.

Bull Run, or Bull's Run. A stream in Virginia, dividing Fairfax and Prince William counties, in the northeastern part of the State, and flowing into the Occoquan River, fourteen miles from the Potomac. On its banks were fought two of the most memorable battles during the Civil War. After a series of heavy skirmishes, July 16–19, 1861, the Union army, under General McDowell, was on the 21st utterly routed by the Confederates, under the command of Generals Beauregard and J. E. Johnston. The Union loss was about 3,000 men, while that of the Confederates was estimated at nearly 2,000 men. The former lost, in addition, twenty-seven guns, besides an immense quantity of small arms, ammunition, stores, provisions, and accoutrements. On August 30, 1862, another great battle was fought here between the Union forces, commanded by General Pope, and the Confederates, under Generals Lee, Longstreet, and "Stonewall" Jackson, when the former were again defeated with heavy loss. The three battles of Groveton, Bull's Run, and Chantilly, fought in three successive days, cost the Union cause about 14,500 men in killed, wounded, missing, and prisoners, thirty guns, and 30,000 small arms. The first battle of Bull Run is sometimes known as the Battle of Manassas.

Bunker Hill, Battle of. A famous engagement between American and British troops, June 17, 1775. The former were commanded by Colonel Prescott and General Putnam, and the latter by General Howe. The British loss in killed and wounded was 1,054; that of the Americans, 450. Although the latter were driven from their position after their powder was exhausted, and the victory remained with the British, the moral effect of this first battle on the Americans, and the heavy loss to the enemy, made it equivalent to a victory for the Continentals. On the ground where the hottest of the battle was fought a granite obelisk, 221 feet in height, has been erected at a cost of $100,000, raised by popular subscriptions. The corner stone was laid by General Lafayette, when on his visit to this country in 1825; it was completed July, 1842, and, on the occasion of its dedication, Daniel Webster delivered his famous oration, generally regarded as his best effort.

Burmah. The Burmese Empire was founded in the middle of the Eighteenth Century by Alompra, the first sovereign of the dynasty, which fell in the person of King Theebaw in 1886. In 1824, the British commenced hostilities against Burmah, and captured Rangoon on May 11th. Successive victories led to the cession of Arracan in 1826. In 1852, further complications resulted in the cession of Pegu to the British Indian Empire. In 1885, King Thcebaw, relying upon French assistance, interfered with a British trading company. The British Gov-

ernment took up the case, and demanded of the Burmese monarch security for his future good behavior. Theebaw rejected these demands, whereupon the queen declared war on November 10th. On November 28th, General Prendergast entered Mandalay, the Burmese capital. The king surrendered on the following day, and was immediately deported to British territory. The government was thenceforth administered by a British resident, and on December 31, 1885, Burmah was formally annexed to British India, thus closing the history of Burmah as an independent kingdom.

Cade's Rebellion. In June, 1450, Jack Cade, an Irishman who called himself Mortimer, with 15,000 or 20,000 armed men of Kent, marched on London and encamped at Blackheath whence he kept up a correspondence with the citizens, many of whom were favorable to his enterprise. The court sent to inquire why the good men of Kent had left their homes. Cade, in a paper entitled "The Complaint of the Commons of Kent," replied that the people were robbed of their goods for the king's use, that the men of Kent were especially ill-treated and overtaxed, and that the free election of knights of their shire had been hindered. The court sent its answer in the form of an army, before which Cade retreated to Sevenoaks, where he awaited the attack of a detachment which he defeated. The royal army now objected to fight against their countrymen; the court made some concessions, and Cade entered London on the 3d of July. For two days he maintained the strictest order; but he forced the mayor and judges to pass judgment upon Lord Say, one of the king's hated favorites, whose head Cade's men immediately cut off in Cheapside. A promise of pardon now sowed dissension among his followers, who dispersed, and a price was set upon Cade's head. He attempted to reach the Sussex coast, but was followed by an esquire, named Alexander Iden, who fought and killed him July 11th. His head was stuck upon London Bridge as a terror to traitors, 1450.

Calendar. A systematic division of time into years, months, weeks, and days, or a register of these or similar divisions. The present calendar was adopted in the Sixteenth Century, the Julian, or old Roman calendar, having become grossly erroneous.

Luigi Lilio Ghiraldi, frequently called Aloysius Lilius, a physician of Verona, projected a plan for amending the calendar, which, after his death, was presented by his brother to Pope Gregory XIII. To carry it into execution, the pope assembled a number of prelates and learned men. In 1577, the proposed change was adopted by all the Catholic princes; and in 1582, Gregory issued a brief abolishing the Julian calendar in all Catholic countries, and introducing in its stead the one now in use, under the name of the Gregorian or reformed calendar, or the "new style," as the other was now called the "old style." The amendment ordered was this: Ten days were to be dropped after the 4th of October, 1582, and the 15th was reckoned immediately after the 4th. Every 100th year, which, by the old style was to have been a leap year, was now to be a common year, the fourth excepted; that is, 1600 was to remain a leap year, but 1700, 1800, 1900, to be of the common length, and 2000 a leap year again. In this calendar the length of the solar year was taken to be 365 days, 5 hours, 49 minutes, and 12 seconds, the difference between which and subsequent observations is immaterial. In Spain, Portugal, and the greater part of Italy, the amendment was introduced according to the pope's instructions. In France, the ten days were dropped in December, the 10th being called the 20th. In Catholic Switzerland, Germany, and the Netherlands, the change was introduced in the following year; in Poland, in 1586; in Hungary, in 1587. Protestant Germany, Holland, and Denmark accepted it in 1700, and Switzerland in 1701. In the German Empire a difference still remained for a considerable time as to the period for observing Easter. In England the Gregorian calendar was adopted in 1752, in accordance with an act of Parliament passed the previous year, the day after the 2d of September becoming the 14th. Sweden followed in 1753. The change adopted in the English calendar in 1752 embraced another point. There had been previous to this time, various periods fixed for the commencement of the year in various countries of Europe. In France, from the time of Charles IX., the year was reckoned to begin from the 1st of January; this was also the popular reckoning in England, but the legal and ecclesiastical year began on March 25th. The 1st of January was now adopted as the beginning of the legal year, and it was customary for some time to give two dates for the period intervening between January 1st and March 25th, that of the old and that of the new year, as January 175⅔. Russia alone retains the old style, which now differs twelve days from the new.

California. The name, signifying "hot furnace," is derived from the Spanish. Though discovered by Sir Francis Drake in 1578, it was first settled by the Spaniards in 1768, at San Diego. Lower California, however, was settled by the Jesuit missionaries in 1683. Spanish power was overthrown by the Mexican Revolution of 1822. By the treaty of peace which followed the Mexican War, California was ceded to the United States for $15,000,000 in 1848. At this time the white population was 15,000. In January, 1848, gold was discovered at Sutter's mill by J. W. Marshall, a verification of Humboldt's prophecy more than a dozen years before. The immigration from all parts of the world soon increased the population to a quarter of a million. The State was admitted to the Union on September 9, 1850.

The history of the Chinese in California has been more remarkable than that of any other foreign element. By 1860, the number of Chinese had reached 34,933; by 1870, 49,310; and by 1880, 75,218. A plebiscitum was taken, and the people of California voted with remarkable unanimity in favor of the restriction of Chinese immigration. In 1882, Congress passed the restriction law which, by successive renewals, has been kept in force till the present time. The Chinese population of California, by 1890, had declined to 71,066; and by 1900, to 45,753.

In 1900, the Japanese numbered 10,151; in 1910, 41,356. They have largely superseded the Chinese as agricultural laborers and domestic servants.

In 1906, the state suffered from one of the most destructive earthquakes of modern times. In 1911 California adopted equal suffrage; also an amendment putting into force the initiative, referendum, and recall. In 1913, the California legislature passed an anti-alien land bill.

The Panama-Pacific international exposition celebrating the opening of the Panama canal was held at San Francisco, Feb. 20-Dec. 4, 1915. Forty-five foreign nations, forty-three states and three territories were represented. More than 18,000,000 people attended.

Caliph, Kalif, or Khalif (*Kāl'ĭf*). The chief sacerdotal dignity among the Saracens or Mohammedans, vested with absolute authority in all matters relating both to religion and political affairs. The government of the original caliphs continued from the death of Mohammed till the 655th year of the Hegira, that is, from A. D. 632 to 1277. The Fatimite caliphs of Africa and the Ommiad sovereigns of Spain, each professed to be the only legitimate successors of Mohammed, in opposition to the Abbasside caliphs of Bagdad, which latter caliphate reached its zenith of power and splendor under Haroun-al-Raschid, in the Ninth Century. The title is now one assumed by the Turkish Sultans, as successors to the Prophet, and also by the Persian Sophis, as successors of Ali.

Campus Martius (Lat., *The field of Mars*). In ancient times, a field by the side of the Tiber, where the Roman youth practiced themselves in warlike exercises. It was consecrated to Mars, god of war, and a temple of that deity stood on it. During the earlier days of the Roman Republic, it was also used for holding the *comitia*, or assemblies of the people; later it was adorned with many fine statues. It constitutes the main part of the modern city of Rome.

Canada. In 1534, Jacques Cartier, a French navigator, entering the St. Lawrence on the festival of the saint of that title, took nominal possession of North America in the name of his king, Francis I. In 1608, Quebec was founded by De Champlain; and here, fifteen years later, he built Fort St. Louis, from which stronghold France ruled for 150 years a vast region extending eastward to Acadia (now Nova Scotia), westward to Lake Superior, and ultimately down the Mississippi as far as Florida and Louisiana. The Recollet and Jesuit missionaries traversed the country in all directions, and underwent incredible hardships in their zeal for the conversion of the Indians. These fearless priests were the pioneers of civilization in the far West, and to one of the most intrepid — La Salle—is due the discovery of the Mississippi valley. In 1670, Charles II. granted to Prince Rupert and his company, known ever since as the Hudson Bay Company, the perpetual exclusive right of trading in the territory watered by all the streams flowing into Hudson Bay. Garrisoned forts were now raised at suitable points, and the bitter enmity between the French and the English traders frequently led to bloody struggles, in which sometimes the Indians also took a part. The most warlike native tribe was that of the Iroquois, who were persistent enemies of the French, while the peaceful Hurons were steady allies. Meanwhile, the wars on the American continent followed the course of the wars in Europe, until the long struggle between France and England for the supremacy in America came to a close on the "Plains of Abraham," in 1759, when General Wolfe defeated Montcalm. This victory opened the gates of Quebec. The capitulation of Montreal next year brought to a close the era of French dominion in Canada. The people of the conquered country were secured, by the terms of the treaty agreed to, in the free exercise of their religion; and peace was concluded between Britain and France, 1763, when Canada was formally ceded to England, and Louisiana to Spain. In the same year a small portion of the recently acquired territory was, by royal proclamation, organized under English laws. In 1774, the new province was extended by parliamentary enactment, under French laws, down the Ohio to its confluence with the Mississippi, and up the latter stream to its source. Finally, Canada receded to its present limits in 1783, giving up to the American Republic, at the close of the Revolutionary War, the sites of six States: Minnesota, Wisconsin, Michigan, Ohio, Indiana, and Illinois. In 1791, Canada was divided under separate legislatures into two sections—the eastern retaining French institutions, the western receiving those of England; these sections, after discontent had ripened into armed insurrection, were again reunited for legislative purposes in 1841.

In 1867, March 28, the British North America act for confederation of the colonies passed the imperial parliament. It united Upper Canada, or Ontario, Lower Canada, or Quebec, New Brunswick, and Nova Scotia, into one territory, to be named the Dominion of Canada. Newfoundland declared against joining the confederation, but with that exception all the British territory north of the United States was gradually included within the Dominion — the Hudson Bay Company territory by purchase in 1868, British Columbia in 1871, Prince Edward Island in 1873. In 1870, an insurrection of the Red River settlers, who were under apprehensions as to how their titles to their lands might be affected by the cession of the Hudson Bay Company's rights, took place under the leadership of Louis Riel, and had to be suppressed by a military expedition under Colonel (later Viscount) Wolseley. To reassure the settlers, a part of the newly-purchased territory was erected into an independent province under the name of Manitoba, the unorganized territory beyond receiving the name of the Northwestern Territory. In 1871, the Washington Treaty arranged that the fisheries of both Canada and the United States should be open to each country for the next twelve years, Canada receiving a compensation, afterwards fixed at five and a half million dollars, for the superior value of its fisheries. In 1884, considerable disaffection was caused amongst the half-breeds and Indians in the Saskatchewan and Assiniboia districts, on account of the difficulty of obtaining valid titles to their lands. The discontent at length took shape in an insurrection, which Louis Riel was invited to head.

The rebels seized the government stores at Duck Lake. Some Indian tribes coöperating with them massacred the settlers at Frog's Lake. General Middleton with several thousand volunteers suppressed the rebellion. Riel was tried and executed at Regina on July 28, 1885. After 1883, when the Washington Treaty expired, disputes between American and Canadian fishermen became frequent, and several American fishing vessels were seized on the British North American coasts. For the adjustment of the differences over fisheries a joint British and American commission was instituted in 1887. A treaty was signed in February, 1888, but was rejected by the United States Senate. In 1887, an arbitration board was appointed to settle a dispute with the United States concerning the Bering Sea seal fisheries, and ten years later made an award in favor of the Canadians' claims. Another commission, sitting in London (1903), decided the Alaskan boundary controversy in favor of the United States. In September, 1907, a serious riot, directed against the Japanese and Chinese, broke out in Vancouver, largely organized by the American labor agitators, but supported by the local rowdies of the city. The Dominion authorities at once suppressed the outbreak. In 1910, the Newfoundland fisheries controversy was arbitrated at The Hague. On September 21, 1911, reciprocity of trade with the United States was defeated by Canada, resulting in the downfall of the liberal ministry and the election of Robert Laird Borden as premier at the head of the first conservative ministry in Canada since 1896.

During the World War, 1914-1918, Canada mustered for overseas service more than a half million men, and kept a steady stream of troops, supplies, and munitions passing across the Atlantic. After heavy sacrifices, Canada emerged from the conflict with a new status, both as a dominion within the empire and as a nation before the world. A department of external affairs was added and it was agreed that Canada might have a diplomatic representative at Washington. By various enactments, made chiefly during the war, all of the provinces adopted some form of Prohibition. In 1920 Arthur Meighen became premier, succeeding Sir Robert Laird Borden. Growing criticism of the Conservative government led to the elections of December, 1921. In these the Liberals won a majority, and their leader, W. L. Mackenzie King, became premier. The new Farmers' or Progressive party was second, and the Conservatives, who were overwhelmingly defeated, third.

Carthage (called *Carthago* by the Romans, and by the Greeks, *Karchēdōn*). One of the most celebrated cities of the ancient world, situated on the north coast of Africa, on a peninsula in what is now the state of Tunis. It was founded by the Phœnicians of Tyre, about 100 years before the building of Rome, or, according to tradition, 853 B. C. The builder of the city was said to be Dido. It became the seat of a powerful kingdom; maintained three wars against Rome, which are usually called the three *Punic Wars*, and in the third of these wars was totally destroyed by Scipio Æmilianus, 146 B. C. The greatness of the city at this time may be judged from the fact that it took seventeen days to burn. It is said to have been twenty-three miles in circumference, and to have contained within its walls a population of 700,000. Cæsar afterwards planted a colony on the site, which he called *Colonia Carthago*. It became again the first city in Africa, and occupied an important part in ecclesiastical as well as in civil history.

Charter Oak, a tree which formerly stood in Hartford, Conn., in the hollow trunk of which the colonial charter is said to have been hidden. The story is that when Governor Andros went to Hartford in 1687, to demand the surrender of the charter, the debate in the Assembly was prolonged until dark, when the lights were extinguished, and Captain Wadsworth escaped with the document and hid it in the oak. The venerable tree was preserved with great care until 1856, when it was blown down.

Chile. Chile originally belonged to the Incas of Peru, from whom it was wrested by the Spaniards under Pizarro and Almagro, in 1535. From this period Chile continued a colony of Spain until 1810, when a revolution commenced, which terminated in 1818 in the independence of Chile. Several internal commotions have since occurred; but the country has been free from these compared with other South American States. A war begun with Spain, in 1865, led to the blockade of the coast by the Spanish fleet, and the bombardment of Valparaiso in 1866. In 1879, a war broke out with Bolivia and Peru in reference to the rights of Chile in the mineral district of Atacama. This war was virtually finished in 1881, and the victorious Chileans gained a large accession of territory from both Bolivia and Peru. In 1891, an insurrection caused by dissatisfaction with President Balmaceda's administration resulted in his overthrow. In 1907, a number of labor disturbances in the mining regions called for armed intervention.

China. The early history of the Chinese is shrouded in fable, but it is certain that civilization had advanced much among them when it was only beginning to dawn on the nations of Europe. The Chow dynasty, which was founded by Woo-wang and lasted from about 1100 B. C. to 258 B. C., is perhaps the earliest that can be regarded as historic. Under Ling-wang, one of the sovereigns of this dynasty, Confucius is said to have been born, some time in the sixth century B. C. During the latter half of the Chow dynasty there appear to have been a number of rival kings in China. Chow-siang, who was the founder of the Tsin dynasty, from which China takes its name, gained the superiority over his rivals, and died in 251 B. C. His great-grandson, a national hero of the Chinese, was the first to assume the title of "Hoang" (emperor), and called himself Che-Hoang-ti. In his reign, the great wall, which was designed as a protection against marauding Tartars, was begun about 214 B. C. Buddhism was introduced in 65 A. D. Subsequently, the empire broke up into three or more states, and a long period of confusion and weak government ensued. In 960, a strong ruler managed to consolidate the empire, but the attacks of the Tartars were now causing much trouble. In the thirteenth century the Mongols, under Jenghis

Khan and his son, Ogdai, conquered China, and in 1259 the celebrated Kublai Khan, a nephew of the latter, ascended the throne and founded the Mongol dynasty. His ninth descendant was driven from the throne, and a native dynasty, called Ming, again succeeded in 1368, in the person of Hungwu. A long period of peace ensued, but was broken about 1618, when the Manchus gained the ascendency, and, after a war of twenty-seven years, founded the Tartar dynasty in the person of Tungchi, establishing their capital in the northern city of Peking, which was nearer their native country than the old capital Nanking. The earliest authentic accounts of China are those of Marco Polo, who visited the country in the Thirteenth Century. The first British intercourse was attempted under Queen Elizabeth, in 1596, and a trade was subsequently established by the East India Company, but no direct intercourse between the governments took place till the embassy of Lord Macartney, in 1792. A second embassy in 1816, by Lord Amherst, was treated with insolence. In 1840, the British, on being refused redress for injuries partly real and partly alleged, proceeded to hostilities, and, after scattering every force which was opposed to them, were preparing to lay siege to Nanking when the Chinese sued for peace. A treaty was then concluded (1842) by which the five ports of Canton, Amoy, Foo-chow-foo, Ningpo, and Shanghai were opened to British merchants, the island of Hong-Kong ceded to the British in perpetuity, and the payment of $21,000,000 agreed to be made by the Chinese. In 1850, an insurrection broke out in the provinces adjoining Canton, with the object of expelling the Manchu dynasty from the throne, as well as of restoring the ancient national religion of Shan-ti, and of making Tien-te the founder of a new dynasty, which he called that of Tai-ping, or Universal Peace. After a long period of civil war, the Tai-ping rebellion was at length suppressed in 1865, chiefly by the exertions of General Gordon and other British and American officers at the head of the Chinese army. In October, 1856, the crew of a vessel belonging to Hong-Kong were seized by the Chinese. The men were afterwards brought back, but all reparation or apology was refused. In consequence of this, a war with China commenced, in which the French took part with the British. Peking had to be taken (in 1860) before the Chinese Government finally gave way, and granted a treaty securing important privileges to the allies. The child emperor, Tsaitien, succeeded in 1875, but only assumed the reins of government in 1887, on reaching the age of sixteen. War was declared between China and Japan on July 31, 1894. Japan, by a series of brilliant victories, both on land and sea, brought the war to an end in April, 1895. Corea was declared independent, Formosa ceded to Japan, and China was forced to pay a very large war indemnity. The following succinct statement of recent progress in China was lately made by a missionary who has labored in that country since 1863: "Who among us, ten years ago, would have dared to imagine that to-day China would have (1) a national fleet; (2) the telegraph radiating to the most distant provinces; (3) government colleges for engineering, navigation, military tactics, electricity, and medicine; (4) the Kai-ping mines supplying steamers and the north ports with excellent and cheap coal?" During 1898, both Russia and Germany had taken possession of certain provinces of China. In 1900, the Boxers rose against the foreigners (See Boxer Rebellion). A punitive war by the powers followed; indemnity and future guarantees and punishment of the principals were demanded and paid.

In 1903, insurrection and rebellion occurred in several provinces. Rebels in North China proclaimed Pu Chun, Prince Tuan's son, as emperor, but the movement was quickly suppressed. In 1907-08, edicts were issued looking to the extension of self-government in the cities and a larger degree of civil liberty.

A dispute over the employment of a foreign loan for railway building, in 1911, led directly to the revolution of 1912, which swept the Manchu dynasty from power. In reality, this change had long been planned, under the leadership of Dr. Sun Yat Sen. He became provisional president of the new government, but in March, 1912 he was succeeded by Yuan Shih-kai. Under Yuan, however, the influence of North China, monarchist in sentiment, was strong, and the government was republican only in name. In consequence, friction between the North and the republican South increased.

On the death of Yuan in 1916, Li Yuan Hung was made president. Meanwhile, Japan, having seized the German base at Kiaochow, forced China to concede to her actual control of Shantung province. In 1917, China entered the war on the side of the Allies. Her representatives refused to sign the Treaty of Versailles because it recognized Japan's right in Shantung. By treaty negotiated at the Washington Arms Conference, 1921-22, Japan agreed to evacute Shantung, and fulfilled her agreement in December, 1922.

In October, 1918, Li Yuan Hung was succeeded as president by Hsü Shih-chang. Li reassumed the presidency in 1922, but was forced to resign in the summer of 1923. At this time, in the South, Sun Yat Sen's program of constitutional government appeared to be strengthening.

Cisalpine Republic. A former political division of Italy, embracing portions of Mantua, Milan, the Valtellina, Venetia west and south of the Adige, Modena, and the northern Pontifical States. Inaugurated by Napoleon I. in 1797, it was named the *Italian Republic* in 1802, and three years later constituted the principal part of the Italian Kingdom.

Colorado. Colorado was first organized as a territory in 1861, from parts of Kansas, Nebraska, New Mexico, and Utah. A portion of it was derived from the Louisiana purchase of 1803, and a part from the Mexican cession of 1848. This region was first settled by Coronado in 1540. It was thoroughly explored by expeditions sent out by the government, under Major Zebulon M. Pike, in 1806; under Colonel S. H. Long, in 1819; and under Colonel J. C. Frémont, in 1842-44. The first American settlements were made by mining parties in 1858-59, since which time Colorado has become even

more prolific than California in its yield of the precious metals. The State was admitted August 1, 1876. The famous Leadville mines were opened in 1879, and the same year saw the Ute uprising. In 1891 the Cripple Creek gold discoveries were made. In 1893 the legislature passed a bill, making equal suffrage for men and women a law. The Gunnison tunnel, the largest single irrigation project ever undertaken by the United States government, was opened by President Taft, Sept., 1909. In 1909 the state adopted the initiative and referendum and in 1914 a Prohibition amendment which took effect in 1916.

Committee of Public Safety. A committee of nine created by the French Convention, April 6, 1793, to concentrate the power of the executive, "the conscience of Marat, who could see salvation in one thing only, in the fall of 260,000 aristocrats' heads."

Confederation of the Rhine. During the war of 1805, so disastrous for Austria, several German princes, too weak to remain neutral, were forced to ally themselves with France. The first to do so were the Electors of Bavaria and Württemberg, who, in recompense of their services, were elevated to the dignity of kings by the Peace of Pressburg, December 26, 1805. Some months after (May 28, 1806), the archchancellor of the empire announced at the Diet that he had chosen as his coadjutor and successor Cardinal Fesch, the uncle of Napoleon, a thing entirely contrary to the constitution of the Germanic Empire. Finally, at Paris, on the 12th of July, 1806, sixteen German princes formally signed an act of confederation, dissolving their connection with the Germanic Empire, and allying themselves with France. These sixteen princes were: the kings of Bavaria and Württemberg, the archchancellor, the Elector of Baden, the new Duke of Cleves and Berg (Joachim Murat), the Landgraf of Hesse-Darmstadt, the princes of Nassau-Usingen, Nassau-Weilburg Hohenzollern-Hechingen, Hohenzollern-Sigmaringen, Salm-Salm, Salm-Kyrburg, the Duke of Arenberg, the princes of Isenburg-Birstein and Lichtenstein, and the Count of Leyen.

Connecticut. One of the thirteen original States. Its name was derived from the Indian, and signifies "Long River." The territory, originally claimed by the Dutch of New Netherlands by right of prior exploration, was finally acquired by the English under a patent granted to Lord Say and Sele, and Brooke and associates, in 1631. Permanent settlements were made, 1633–36, by colonists from Massachusetts, at Hartford, Windsor, and Wethersfield. In 1638, New Haven was settled by a distinguished company of emigrants from England. The first constitution was adopted in 1639, being the first time in history when a government was organized and defined by a written constitution. Its leading features were afterward copied in the constitutions of the other States and of the United States, and it was the basis of the charter of 1662. The attempt to revoke and supersede this charter by James II. through his representative, Sir Edmund Andros, in 1687, led to what might be called the first colonial act of rebellion against royal authority. During the Civil War, 54,882 men were furnished by the State.

Consul. The title of the two chief magistrates of Rome, whose power was in a certain degree absolute, but who were chosen for only one year; they were instituted B. C. 509. The authority of the two consuls was equal; yet the Valerian law gave the right of priority to the elder, and the Julian law to him who had the greater number of children; and this one was generally called *Consul major* or *prior*. In the first ages of the republic, they were elected from patrician families; but in the year of Rome, 388, the people obtained the privilege of electing one of the consuls from their own body, and sometimes both were plebeians. After the establishment of the empire in 91, the office of consul became merely honorary; the last holder of the dignity at Rome was Decimus Theodorus Paulinus, A. D. 536; at Constantinople, Flavius Basilius Junius, 541.

Consulate. A body of three persons, to whom, after the dissolution of the French Directory in 1799, the provisional government was intrusted. Napoleon, Cambacérès, and Lebrun, were elected as first, second, and third consuls, respectively, with different degrees of authority, 1800; but the influence of the first becoming gradually augmented, the transition to imperial dignity became easy to him. On August 4, 1802, he was made consul for life, and on May 18, 1804, the title of emperor was substituted for that of consul.

Continental System. A plan devised by Napoleon to exclude Britain from all intercourse with the continent of Europe. It began with the decree of Berlin of November 21, 1806, by which the British Islands were declared to be in a state of blockade; all commerce, intercourse, and correspondence were prohibited; every Briton found in France, or a country occupied by French troops, was declared a prisoner of war; all property belonging to Britons, fair prize; and all trade in goods from Britain or British colonies entirely prohibited. Britain replied by orders in council prohibiting trade with French ports, and declaring all harbors of France and her allies subjected to the same restrictions as if they were closely blockaded. Further decrees on the part of France, of a still more stringent kind, declared all vessels of whatever flag, which had been searched by a British vessel or paid duty to Britain, denationalized, and directed the burning of all British goods, etc. These decrees caused great annoyance, and gave rise to much smuggling, till annulled at the fall of Napoleon, 1814.

Convention, National. A revolutionary convention in France, which, on September 20, 1792, succeeded the Legislative Assembly, proclaimed the republic, and condemned the king to death. It succeeded in crushing the royalists of La Vendée and the south, in defeating all Europe leagued against France, and in founding institutions of benefit to France to this day. It was dissolved on October 26, 1795, to make way for the Directory.

Corea or Korea. The seeds of Christianity were sown in Corea in 1592, by the invading army, composed chiefly of Christian converts of the Japanese usurper, Tiacosama. Hamel, a Dutch sailor, was wrecked here and

detained for thirteen years; from his narrative it was that, till very recently, most of our scanty knowledge of Corea was obtained. In 1784, Jesuit missionaries found their way into Corea and had great success among the people. From 1835 till 1860, several intrepid and devoted French missionaries contrived to find shelter, and, in spite of incessant persecutions, the Christian community continued rather to increase, rising in 1852 to 11,000 souls. The massacre of nine missionaries, in 1866, led to an invasion of Corea by a small French force, but without success. Nor did two successive American expeditions, provoked by attack on an American vessel, succeed in breaking down the barriers that separated the Coreans from the rest of the world. The pseudonym of "Hermit Nation" has attached to Corea, not because of vast deserts and deadly jungles which interposed as physical barriers to constitute the Nile sources a region of myths and mysteries — for Corea, situated in the open sea, had none of these to bar ingress — but because of a persistent policy of isolation which, consecrated by time, became in fact, a sort of Corean religion. To be let alone by the *So Yang Saram* ("men from the Western Ocean"), this was the policy of government until our own day. About 1881, however, Corea made a treaty with Japan, and, later on, through Admiral Shufeldt, U. S. N., with the United States—followed by others with England, Russia, France, Germany, and Italy. After Japan's victory over China, in 1895, Corea was made independent. In 1907, Corea practically passed under a Japanese protectorate and, in 1910, was annexed to that empire.

Covenanters. In Scottish history, the name given to the party which struggled for religious liberty from 1637 on to the revolution; but more especially applied to the insurgents who took up arms in defense of the Presbyterian form of church government. The Presbyterian ministers who refused to acknowledge the bishops were ejected from their parishes and gathered around them crowds of their people on the hillsides to attend their ministrations. The first outbreaks took place in the hill country on the borders of Ayr and Lanark shires. The murder of Archbishop Sharp, on Magus Moor, and a skirmish near there alarmed the government, who sent troops to put down the insurgents, who had increased in number rapidly. The two armies met at Bothwell Bridge, when the Covenanters were totally defeated, June 22, 1679.

In consequence of the rebellious protest, called the "Sandquhar Declaration," put forth in 1680, by Cameron, Cargill, and others, as representing the more irreconcilable of the Covenanters, and a subsequent proclamation in 1684, the government proceeded to more severe measures. An oath was now required of all who would free themselves of suspicion of complicity with the Covenanters; and the dragoons, who were sent out to hunt down the rebels, were empowered to kill anyone who refused to take the oath. After the accession of William, some of the extreme Covenanters refused to acknowledge him, owing to his acceptance of Episcopacy in England, and formed the earliest dissenting sect in Scotland.

Crimean War. In 1854, the Crimea became the theater of a sanguinary war, undertaken by England, France, Turkey, and Sardinia in support of the integrity of the sultan's power and to check the growing ascendency of Russia on the Black Sea. The allies landed near Eupatoria, and defeated the Russians at the River Alma, September 20, 1854; at Balaklava, October 25th; at Inkerman, November 5th; at the River Tchernaya, August 16, 1855. The siege of Sebastopol continued from October 9, 1854, to September 8, 1855, when the important fortresses known as the Malakoff and the Redan were stormed by the French and English, and the Russians evacuated the city. An armistice was concluded February 26, 1856, and peace was proclaimed in April of the same year. The British loss, during the war, was nearly 24,000, of which number, however, 16,500 died of disease and privation. The French lost about 63,500. The Russian loss was estimated at 500,000.

Crusades (Lat. *crux*, a cross). The name given to the religious wars which were carried on during the middle ages between the Christian nations of Western Europe and the Mohammedans of Eastern Europe and Western Asia. Originally, the object of the Crusades was to obtain free access for pilgrims to the Holy Sepulchre, but they afterwards developed into a contest for the possession of Jerusalem itself. The Crusades lasted for nearly two centuries. They are usually divided into eight, as follows: First (1096–1100), led by Godfrey of Bouillon, and preached up by Peter the Hermit; second (1147–1149), led by Louis VII. and the Emperor Konrad, at the instigation of St. Bernard; third (1189–1193), led against Saladin, the Sultan of Syria and Egypt, by Richard the Lion-hearted of England and Philip Augustus of France; fourth (1202–1204), led by Baldwin of Flanders and the Doge of Venice; fifth (1217), led by John Brienne, titular sovereign of Jerusalem; sixth (1228–1229), led by Frederick II. of Germany; seventh and eighth (1248–1254 and 1268–1270), to satisfy the religious scruples of Louis IX. of France. Although the Crusades did not accomplish their main object, and the "Holy City" remained finally in the hands of the "Infidels," they yet called forth an amount of enterprise that has exerted a powerful influence upon modern civilization. On the other hand, they cost many millions of lives, and the deeds that were done during the Crusades in the sacred name of Christ would be altogether repugnant to all modern ideas of religion or even of humanity. The name *Crusades* was derived from the symbol of the cross, which the warriors engaged in them wore over their armor.

Cuba, spoken of as the "Queen of the Antilles," was discovered by Columbus in 1492, the discoverer calling it "the most beautiful land that eyes ever beheld." It was first settled by Spaniards at Baracoa in 1511. Havana, first settled in 1519, was reduced to ashes by the French in 1538, and again in 1554. For about one and a half centuries, Cuba was in constant danger from French, Dutch, English, and West Indian filibusters. In 1762, the English, under Lord Albemarle, took Havana,

which, however, was by the treaty of Paris next year restored to Spain. From 1789 to 1845, the island was a vast slave-trading center. Negro insurrections occurred in 1845 and 1848. In the latter year the United States offered $100,000,000 to Spain for the island. Rebellions against Spanish rule broke out in 1849 and in 1868. They were put down after long campaigns; another insurrection, begun in 1895, gained formidable proportions by 1898. The United States battleship "Maine," while on a friendly visit, was blown up in Havana harbor, February 15, 1898, and on April 19th, the Congress of the United States adopted resolutions declaring Cuba independent. War with Spain began at once. Cervera's Spanish fleet was destroyed at Santiago de Cuba, July 3d, and Santiago and its large army were surrendered on July 17th. The leading military events of the war, so far as Cuba was concerned, were the fights at El Caney and San Juan, the battle at Santiago, and the destruction of Cervera's fleet. A Constitutional Convention assembled in November, 1900, and adopted a constitution providing for a republican form of government, with a president, vice-president, senate, and house of representatives. Thereupon, the United States Congress authorized the transfer of the government to the people of Cuba on condition that: (1) No treaty should be made with any other foreign power impairing the independence of Cuba, or allowing military or naval occupation of the island; (2) the United States should have the right to intervene for the discharge of her obligations under the Treaty of Paris; (3) the United States should have certain naval stations (at Bahia Honda and Guantanamo). These conditions were included in the Law of Constitution, and confirmed in the permanent treaty between Cuba and the United States, which was signed in May, 1903.

The formal transfer of the government to the Cuban authorities took place on May 20, 1902. Tomas Estrada Palma was elected first president, and Luis Esteves, vice-president. An insurrection in 1906 led to American intervention and the appointment of Charles E. Magoon as provisional governor. Cuban Government again became independent in 1909, with José Gomez as president. In 1913 Gomez was succeeded by Mario Menocal, who was re-elected in 1917. On the eve of the election a revolt broke out among the troops. The government, with the moral support of the United States, acted with decision and promptly suppressed the disturbance. Following the lead of the United States, Cuba declared war on Germany, April 7, 1917, and cooperated effectively with the Allies throughout the final period of the World War. In 1921 Alfredo Zayas was elected president. Under the stabilizing influence of the United States, Cuba has made notable progress.

Decemviri (*de-sĕm've-re*). A body of men who were elected by the patricians, B. C. 451, for the purpose of drawing up a body of laws, founded on the most approved institutions of Greece. They compiled a code, which they inscribed on ten tables, and stated that their labors were not yet complete. Next year, therefore, another body of ten, which probably included some of the patricians, was appointed with the same powers; and these added two more tables, altogether making the famous *Twelve Tables*, which were from that time the foundation of all Roman law. The second body of decemvirs attempted to prolong their period of office, committed some acts of violence, and altogether gave such dissatisfaction that they were dissolved. The traditionary history of the decemviri is, however, very doubtful. There were other decemvirs, who were appointed for judicial and other purposes.

Defenestration of Prague, The (May 23, 1618). That is, the ejection out of windows by the Bohemians. The Bohemians had two Protestant churches, one in the diocese of Prague, and the other in the territory of the abbot of Braunau. The Archbishop of Prague and the abbot pulled down these reformed churches, and when the Protestants remonstrated they were told it was the king's pleasure. So Count Thurn of Bohemia headed a deputation, which went to the royal castle of Prague to lay their grievance before the king. Being admitted into the council hall, they were so insolently received that they *threw* two of the councillors and the king's private secretary *out of the windows* into the moat. This was the beginning of the Thirty Years' War.

Delaware. Though the State was first discovered by the Dutch in 1609, Lord Delaware, Governor of Virginia, who visited it the following year, and afterward gave name to it, claimed it on behalf of England. In 1637, colonies were planted near Wilmington by the Swedish East India Company, which brought on a conflict with the Dutch and led to the expulsion of the Swedes in 1655. When New Netherlands was conquered by the English, this territory went with it. William Penn, having received the Pennsylvania grant, secured, also, from the Duke of York rights over Delaware by patent, and until the Revolution the territory was governed under the same proprietary. In 1776, the people declared themselves an independent State, and as such fought in the Continental ranks. Delaware was the first State to ratify the Federal Constitution, and its own constitution, adopted in 1792, still forms the fundamental law.

Deluge. The Deluge was threatened in the year of the world 1536, and began December 7, 1656, and continued 377 days. (*Genesis* vi, vii, viii). The ark rested on Mount Ararat, May 6, 1657, and Noah left the ark December 18th, following. The year corresponds with that of 2348 B. C. The following are the epochs of the Deluge, according to Dr. Hales:

	B. C.		B. C.
Septuagint, . . .	3246	Clinton, ...	2482
Jackson, ...	3170	Playfair, ...	2352
Hales, ...	3155	Usher and E.Bible,	2348
Josephus, ...	3146	Marsham, . . .	2344
Persian, ...	3103	Petavius, . . .	2329
Hindoo, ...	3102	Strauchius, . .	2293
Samaritan, . . .	2998	Hebrew, . . .	2288
Howard, ...	2698	Vulgar Jewish, .	2104

In the reign of Ogyges, King of Attica, 1764 B. C., a deluge so inundated Attica that it lay waste for nearly 200 years. Buffon thinks that the Hebrew and Grecian deluges were the same,

and arose from the Atlantic and Bosporus bursting into the Valley of the Mediterranean.

The deluge of Deucalion in Thessaly is placed 1503 B. C. according to *Eusebius*. It was often confounded by the ancients with the general flood but considered to be merely a local inundation occasioned by the overflowing of the River Pineus whose course was stopped by an earthquake between the Mounts Olympus and Ossa. Deucalion, who then reigned in Thessaly, with his wife Pyrrha and some of their subjects, are stated to have saved themselves by climbing up Mount Parnassus.

Denmark. The Kymri were the earliest known inhabitants of Scandinavia and made themselves formidable to the Romans 100 years B. C. To them succeeded the Goths who, under their mythical leader, Odin, established their rule over the Scandinavian lands. Odin's son, Skjold, is reputed to have been the first ruler of Denmark; but the little that is known of Danish history in these remote ages seems to indicate that the country was split up into many small territories, whose inhabitants lived by piracy. The people were divided into "Bönder" and "Trælle," freemen and bondmen. The former busied themselves with war and "Vikingetog," or piracy, and the government of the land; while to the latter were left the peaceful pursuits of hunting, fishing, and tilling the soil. The mission of Ansgarius the Apostle of the North to South Jutland, in 826, when he baptized Harald Klak, one of the Smaa Kongar, or the little kings of Denmark, was the means of first opening the Danish territories to the knowledge of the more civilized nations. The country was soon torn by civil dissensions between the adherents of the ancient and modern faith. Gorm the Old, the first authentic King of Denmark, the bitter enemy of Christianity, died in 935, after having subjugated the several territories to his sway; and, although his death gave fresh vigor to the diffusion of the new faith, paganism kept its ground for 200 years longer, and numbered among its adherents many of those half-mythical heroes, whose deeds are celebrated in the Eddas and the Kæmpeviser of the Middle Ages. The success that attended the piratical incursions of the Northmen drew them from their own homes; and, while Gorm's descendants, Svend and Knud, were reigning in England, Denmark was left a prey to anarchy. On the extinction of Knud's dynasty, in 1042, his sister's son, Svend Estridsen, ascended the throne. Internal dissensions and external wars weakened the country, and the introduction of a feudal system raised up a powerful nobility and ground down the once free people to a condition of oppressed serfage. Valdemar I., by the help of his great minister, Axel Hvide, known in history as Bishop Absalon, subjugated the Wends of Rügen and Pomerania, and forced them, in 1168, to renounce the faith of their god, Svantevit, and accept Christianity. During the time of Knud VI., and in the early part of the reign of Valdemar II.— sons of Valdemar I. — the conquest of Denmark extended so far into German and Wendic lands that the Baltic was little more than an inland Danish sea. The jealousy of the German princes and the treachery of his vassals combined to rob Valdemar II. of these brilliant family conquests. His death, in 1241, was followed by a century of anarchy and inglorious decadence of the authority of the crown, during which the kingdom was brought to the brink of annihilation under the vicious rule of his sons and grandsons. Under his great-grandson, Valdemar IV., the last of the Estridsen line, Denmark made a quick but transient recovery of the conquests of the older Valdemars, and the national laws were collected into a well-digested, comprehensive code. From his death, in 1375, till 1412, his daughter, the great Margaret, first as regent for her only and early lost son, Olaf, and later as sole monarch, ruled, not only Denmark, but, in course of time, also Sweden and Norway, with such consummate tact, and with so light yet firm a hand, that, for once in the course of their history, the three rival Scandinavian kingdoms were content to act in harmony. Margaret's successor, Erik, the son of her niece, for whose sake she had blended the three sovereignties into one, undid her glorious work with fatal rapidity, and after an inglorious war of twenty-five years with his vassals, the Counts-dukes of Schleswig-Holstein, he lost the allegiance and the crowns of his triple kingdom, and ended his disastrous existence in misery and obscurity. After the short reign of his nephew, Christopher of Bavaria, the Danes, on the death of the latter in 1448, again exercised their long-dormant right of election to the throne, and chose for their king Christian of Oldenburg, a descendant of the old royal family through his maternal ancestress, Rikissa, the great-granddaughter of Valdemar II. Christian I., the father of the Oldenburg line, which continued unbroken until the death of the King of Denmark, Frederick VII., in 1863, laid the foundation of the Schleswig-Holstein troubles which, after maturing for centuries, have ended in our own day in dismembering the Danish monarchy. The insane tyranny of the otherwise able and enlightened Christian II. cost him his throne. Christian III., in whose reign the Reformation was established, united the Schleswig-Holstein duchies in perpetuity to the Crown in 1533. Frederick II., who increased the embarrassments connected with the crown appanages, by making additional partitions in favor of his brother (the founder of the Holstein-Sonderburg family), was succeeded by Christian IV., 1588, who was the ablest of Danish rulers. His liberal policy was, however, cramped by the nobles, by whose supineness Denmark lost all the possessions she had hitherto retained in Sweden. The national abasement which followed led, in 1660, under Christian's son, Frederick III., to the rising of the people against the nobles, and their surrender into the hands of the king of the supreme power. For the next 100 years the peasantry were kept in serfage and the middle classes depressed. The abolition of serfage was begun by Christian VII. in 1767; it was extended to the duchies in 1804. The reign of Christian's son, Frederick VI., brought the country to the verge of ruin. On the accession of Frederick VII. half his subjects were in open rebellion against him. Prince Christian of Schleswig-Holstein-Glücksborg ascended the

throne as Christian IX. in 1863 and was succeeded by his son, Frederick VIII. in 1906. On the death of Frederick VIII. in 1912, Christian X. became king. In December, 1916, the sale of the Danish West Indies to the United States for the sum of $25,000,000 was approved by a referendum vote.

Deposed Kings of England. (1) *Before the Conquest:* Sigebert of Wessex, A. D. 755; Alcred of Northumbria, 774; Ethelred I., 779; Eardwulf and Ethelwulf, 857; Edwy, 957; Ethelred II., 1013; Hardicanute, son of Canute, 1037. (2) *Since the Conquest:* Edward II., 1327; Richard II., 1399; Henry VI., 1461; James II., 1688. Euphemistically called his "abdication," Charles I. was not only deposed but tried for treason against his parliament and beheaded; Charles II. was not exactly deposed, but he was kept from the crown during the Commonwealth. The most absolute and tyrannical of British sovereigns have been the Welsh and Scotch dynasties, but Wales and Scotland are eminently democratic. The Stuarts claimed the "right divine" of kings, but James I. and Charles II. did no honor to the claim.

Deposed Kings of France. Louis XVI., like Charles I., was not only deposed but executed, 1793; Napoleon I. (emperor) was twice deposed, 1814, 1815; Charles X. (1830), like James II., is said to have "abdicated"; Louis-Philippe (1848), also said to have "abdicated"; Napoleon III., 1870, by act of the Corps Legislatif following his surrender at Sedan.

Dictator (*dĭk-tā'tŭr*). A magistrate appointed in times of exigency and peril, and invested with extraordinary powers. They acted as generals-in-chief of the army, and could declare war or make peace at their pleasure. They were originally selected from the patrician order, the first having been Titus Laertius, B. C. 501. In B. C. 356, however, the office of dictator was thrown open to the plebeians, and Marcius Rutilus, one of that class, received the appointment. For 400 years this office was regarded with veneration, until Sulla and Cæsar, by becoming perpetual dictators, converted it into an engine of tyranny, and rendered the very name odious. Hence, it became extinguished by decree of Mark Antony, B. C. 44.

Directory, The. "Le Directoire," the executive of the Constitution of Year III. (October 27, 1795—November 9, 1799). The legislature consisted of two houses, the Council of Elders and the Council of 500. The number of the directors was five, named by the two councils, and they were elected for five years, without power of reëlection. They appointed the ministers and les généraux-en-chef. Abolished by Napoleon in November, 1799.

The military glory of France was never greater than in the Directory. It had for its commanders, Bonaparte, Kléber, Desaix, Masséna, and Moreau.

District of Columbia. The region of the Potomac River was originally a favorite camping and fishing ground of several Indian tribes who lived in its vicinity, and was called by them the "River of Swans." As early as 1660 a portion of the tract was purchased by an Englishman named Pope, who named the whole tract Rome, a stream running through it, the Tiber, and the principal eminence, on which the capitol now stands, Capitoline Hill, and signed all his letters and documents "The Pope of Rome." Some thirty years prior to this, the Potomac had been explored as far as Little Falls, beyond the limits of the District of Columbia, by an Indian trader named William Fleet, with whom Leonard Calvert treated, 1634. The Colonial Congress, for a number of years following its organization, had no permanent seat. The session of 1783 was begun in Philadelphia, but, being disturbed by a riotous demand of the soldiers for their overdue pay, Congress adjourned first to Princeton, thence to Annapolis, and, subsequently, to New York. The question of a permanent seat of government, to be entirely under federal authority, which had been broached several times, was then considered to be urgent; and when the proposed Federal Constitution was being drafted (1787) a clause was inserted in Art. I, Sec. 8, establishing the power of Congress to exercise exclusive legislation over such a district as might subsequently be ceded to the government by particular States for a seat of the Government of the United States. As soon as the intention of Congress to select a site was known, the State of Maryland ceded sixty square miles on one side of the river, and the State of Virginia forty square miles on the other, to constitute the federal district. The site of the national capital was selected in 1790, and the first stone to mark the boundaries of the District of Columbia was set at Jones's Point below Alexandria, April 15, 1791. The commissioners appointed to lay out the district agreed that it should be called "The Territory of Columbia," and the federal city "The City of Washington." The city was laid out in accordance with the plans of Major L'Enfant, a French officer and engineer who had been wounded at Savannah, and who was one of Washington's favorite officers. Public buildings were erected, and official possession was taken, 1800, when Congress removed from Philadelphia and began holding its sessions there. Subsequently, the whole territory was styled the District of Columbia, in memory of Christopher Columbus. In 1846, the area of 100 square miles was reduced to sixty-four square miles by retrocession to Virginia of the section previously included within the bounds of that State. Previous to 1871, legislative power was exercised directly by Congress. An act adopted that year established a territorial form of government, and gave the citizens representation in Congress for the first time. The charters of Georgetown, incorporated December 25, 1789, and Washington, incorporated May 3, 1802, were repealed by the act, though both were allowed to bear the name of "city," and the corporations of the cities as well as that of Washington County, were merged into the new government. Alexander R. Shepherd became president of the Citizens' Reform Association, 1870, vice-president of the Board of Public Works under the new government, 1871, and governor of the district, 1873. In 1874, the territorial government was abolished, and since then all the public affairs of the district have been managed by a

board of three commissioners acting directly under the legislation of Congress.

Divine Right of Kings, The. A Seventeenth Century dogma, implying the belief that kings hold their office by divine appointment, and are the earthly representatives of Deity. The dogma was sanctioned in the Canons of Convocation, 1604; but in the English Bill of Rights, 1689, the right of the people to depose the monarch and to confer the throne on whom they think proper is distinctly set forth.

Dominican Republic, or Santo Domingo. A state formed by the Spanish or eastern section of Hayti. Spain, in 1697, surrendered to France, by the Treaty of Ryswick, the western part of the island, retaining the remainder down to 1795. In the year last mentioned, however, the Spanish portion became nominally French. In 1814, the West having vindicated its independence, France formally relinquished, in favor of Spain, all claim to the East. In 1822, the colony, in imitation of the continental possessions, threw off the yoke of the mother-country, to link itself, more or less closely, with its African neighbors. But in the year 1844 it assumed a separate standing as the Dominican Republic, the anarchy of which it exchanged in 1861 for the despotism of its former masters. In 1863, it again revolted, and Spain gave up the possession.

By a treaty, ratified in 1907, the United States was virtually granted the powers of a protectorate over the affairs of the unstable republic. In 1916, 2000 American marines were landed to guarantee free elections. After these had suppressed the revolutionists, order was maintained under the control of an American military governor. In June, 1921, the United States offered to withdraw within eight months under certain safeguarding conditions.

Dorr Rebellion. In 1840, Connecticut and Rhode Island were the only States that were still governed by their colonial charters. The charter of the latter State, imposing, as it did, a property qualification so high as to disfranchise two-thirds of the citizens, was extremely unpopular. A proposition of Thomas W. Dorr, of Providence, to extend the franchise was voted down. Dorr then took to agitation, and finally a convention prepared a constitution and submitted it to a popular vote. Its supporters claimed a majority for it, which its opponents, known as the law and order party, denied. Nevertheless, in 1842, the constitution was proclaimed to be in force. An election was held under it, only the suffrage party participating. Dorr was elected governor. The suffrage legislature assembled at Providence with Thomas W. Dorr as governor; the charter legislature at Newport, with Samuel W. King as governor. After transacting some business the suffrage legislature adjourned. The charter legislature authorized the governor to take energetic steps, and an appeal for aid was made to the National Government. The suffragists attempted armed resistance, but were dispersed. Dorr fled, but soon returned and gave himself up. He was convicted of high treason in 1844, and sentenced to imprisonment for life, but was pardoned in 1847, and in 1852 was restored to his civil rights. The charter party soon after the rebellion proposed a new constitution, largely extending the suffrage, which was carried and went into effect in May, 1843.

Druids. The priests of the Celts of Gaul and Britain. According to Julius Cæsar, they possessed the greatest authority among the Celtic nations. They had some knowledge of geometry, natural philosophy, etc., superintended the affairs of religion and morality, and performed the office of judges. They had a common superior, who was elected by a majority of votes from their own number, and who enjoyed his dignity for life. They took unusual care to fence themselves round with mysteries, and it is probable that they cherished doctrines unknown to the common people; but that they had a great secret philosophy which was handed down by oral tradition is very unlikely. Of their religious doctrines little is known. Human sacrifice was one of their characteristic rites, the victims being usually prisoners of war.

Eastern Empire. Commenced under Valens, A. D. 364, and ended in the defeat and death of Constantine XIII., the last Christian emperor, in 1453. Mahomet II. resolved to dethrone him and possess himself of Constantinople; he laid siege to that city both by sea and land, and took it by assault after it had held out fifty-eight days. The unfortunate emperor, seeing the Turks enter by the breaches, threw himself into the midst of the enemy, and was cut to pieces; the children of the imperial house were massacred by the soldiers, and the women reserved to gratify the lust of the conqueror; and thus terminated the dynasty of the Constantines, and commenced the present empire of Turkey, May 29, 1453.

Ecuador. After the conquest of the Inca dominions, the Kingdom of Quito was made a presidency of the viceroyalty of Peru, and remained under Spanish rule from 1533 to 1822. In 1809, it revolted, and after many fruitless struggles achieved its independence by the battle of Pichincha, May 22, 1822. The territory was incorporated into the Republic of Colombia, on the disruption of which, in 1830, it became an independent republic under the name of Ecuador. But a series of civil wars ensued, lasting almost without intermission for more than twenty years. From 1852 to 1858, desultory hostilities existed with Peru. War was declared against New Granada, November 20, 1863, and the Ecuadorian army was routed. In August, 1868, a very destructive earthquake occurred. In 1869, Garcia Moreno, the head of the clerical party, overthrew the government. He was assassinated in 1875, and Dr. Antonio Borrero, the candidate of the non-official party, was elected president. A constitution was adopted and a president elected, and until 1884 the republic enjoyed a reasonably peaceable government. In 1884, another constitution was formed, which, with modifications, in 1887 and 1897, has since been in force.

Edict of Nantes (*năntz, Fr. nŏnt*). This was the celebrated edict by which Henry IV. of France granted toleration to his Protestant subjects, in 1598. It was revoked by Louis XIV., October 24, 1685. This bad and unjust policy lost to

France 800,000 Protestants, and gave to England (part of these) 50,000 industrious artisans. Some thousands, who brought with them the art of manufacturing silks, settled in Spitalfields, where their descendants yet remain: others planted themselves in Soho and St. Giles's, and pursued the art of making crystal glasses, and various fine works in which they excelled; among these, jewelry, then little understood in England.

Egypt. The Egyptians are the earliest people known to us as a nation. When Abraham entered the Delta from Canaan, they had been long enjoying the advantages of a settled government. They had built cities, invented hieroglyphic signs, and improved them into syllabic writing, and almost into an alphabet. They had invented records, and wrote their kings' names and actions on the massive temples which they raised. The arrangement of Egyptian chronology is still a much-disputed point amongst scholars. A list of the kings of Egypt, arranged in thirty dynasties, was given by the Priest Manetho (about 250 B. C.), and this division is still used. His list, however, is in a very corrupt condition and his method is not strictly chronological. Hence, in the various systems of chronology adopted by Egyptologists the dates assigned to Mena (or Menes) vary from 5702 to 2440 B. C. According to tradition, Mena formed the old Empire of Egypt and founded its capital Memphis. The Fourth Dynasty is distinguished as the "Pyramid Dynasty." Three of its kings, Khufu, Khafra, and Menkaura (according to Herodotus, *Cheops*, *Chephren*, and *Mykerinos*), built the largest pyramids. The date assigned to these kings in the chronology of Lepsius is 2800–2700. About 2400 the government of the empire seems to have been transferred from Memphis to Thebes, and with the beginning of Dynasty Twelve, the Theban line was firmly established. The chief princes of this dynasty are Amenemhat I. (2380), who seems to have extended the power of Egypt over a part of Nubia; Usurtasan I., who made further conquests in this direction; and Amenemhat III. (2179), who constructed Lake Meri (Mœris), a large reservoir for regulating the water supply of the Nile. About 2100, Egypt was conquered by the Hyksos, or shepherd kings, who invaded Egypt from the east and established their capital at Tanis (Zoan). The Theban princes seem, however, to have preserved a state of semi-independence, and at last a revolt commenced which ended by the shepherd kings being completely driven out of Egypt by King Aahmes (Amāsis) of Thebes (about 1600), the first of the Eighteenth Dynasty. With Aahmes and the expulsion of the shepherd kings began the reigns of those great Theban kings who built the magnificent temples and palaces at Thebes. The kings of the other parts of Egypt sank to the rank of sovereign priests. Thutmes (or Thothmosis II.) added Memphis to his dominions by his marriage with Queen Nitocris. Under Thutmes III. and his successors there were successful expeditions against the Syrians and the Ethiopians. Amenhotep III. set up his two gigantic statues in the plain of Thebes, one of which the Greeks called the musical statue of Memnon. The Rameses form the Nineteenth Dynasty. They commence with Ramses I., who seems to have been of Lower Egyptian extraction. His grandson, the great Ramses II., or Sesostris, was successful against the neighboring Arabs, and covered Egypt with magnificent buildings. Ramses II. was probably the Pharaoh who oppressed the Hebrews, and the exodus may have occurred under his successor, Meneptah, or Merenptah. Under the later Ramessides the Egyptian Empire began to decay. A new dynasty, Twenty-first, came to the throne with King Hirhor. The seat of their power was Tanis in the Delta. During this period a great number of foreigners, Libyans as well as Asiatics, established themselves in Egypt. About 961, Sheshenk I., the Shishak of the Bible, of a Shemite family from Bubastis, established a new dynasty (Twenty-second). He attempted to restore Egyptian rule in the East, and conquered and plundered Jerusalem. After his death, Egypt was torn by civil wars, and eventually the Ethiopians under Shabak (Sabako) conquered it (Twenty-fifth Dynasty). For a time it was subject alternately to Ethiopian and Assyrian princes, but in the Seventh Century the kings of Sais once more restored its independence and prosperity to Egypt. Psamethik I. (Psammetichus) warred successfully in Syria and Palestine. King Nekho (610–594) defeated Josiah, King of Judah, but his further progress was checked by Nebuchadnezzar. His sailors circumnavigated Africa. Uahbra (the Greek Apries, the Hophrah of the Bible) and Aahmes II. (Greek Amāsis) followed. About 523, Cambyses, King of Persia, overran Egypt and made it a Persian province. During the reign of Cambyses the Egyptians suffered much oppression. After the Persian defeat at Marathon, the Egyptians rose and recovered their independence for a short time, but were again subdued, and, in spite of two other revolts, Egypt remained a Persian province till Persia itself was conquered by Alexander the Great, B. C. 332. Egypt now became a Greek state, many Greeks having been already settled in the country, and the Egyptians were treated as an inferior race. Alexandria was founded as the new Greek capital. On Alexander's death, his general, Ptolemy, took possession of the throne and became the first of a Greek Dynasty that for three hundred years made Egypt one of the chief kingdoms of the world. The Ptolemies were magnificent patrons of letters and arts. Theocritus, Callimachus, Euclid the geometrician, the astronomers Eratosthenes and Aratus, etc., flourished under their rule. But while the Alexandrian Greeks managed to keep down the native Egyptians, they were themselves sinking under the Romans. Ptolemy Auletes went to Rome to ask help against his subjects, and the famous Cleopatra maintained her power only through her personal influence with Julius Cæsar and Mark Antony. On the defeat of Mark Antony by Augustus, B. C. 30, Egypt became a province of Rome. It was still a Greek state, and Alexandria was the chief seat of Greek learning and science. On the spread of Christianity the old Egyptian doctrines lost their sway. Now arose in Alexandria the Christian catechetical school, which produced Clemens and

Origen. The sects of Gnostics united astrology and magic with religion. The school of Alexandrian Platonics produced Plotinus and Proclus. Monasteries were built all over Egypt; Christian monks took the place of the pagan hermits, and the Bible was translated into Coptic.

On the division of the great Roman Empire (A. D. 364), in the time of Theodosius, into the Western and Eastern Empires, Egypt became a province of the latter, and sank deeper and deeper in barbarism and weakness. It was conquered in 640 A. D. by the Saracens under Caliph Omar. As a province of the caliphs it was under the government of the celebrated Abbasides—Harun-al-Rashid and Al-Mamun—and that of the heroic Sultan Saladin. The last dynasty was, however, overthrown by the Mamelukes (1250); and the Mamelukes in their turn were conquered by the Turks (1516-17). The Mamelukes made repeated attempts to cast off the Turkish yoke, and had virtually done so by the end of the 18th century, when the French conquered Egypt and held it till 1801, when they were driven out by the British.

On the expulsion of the French a Turkish force under Mehemet Ali Bey took possession of the country. Mehemet Ali was made pasha, and administered the country vigorously, greatly extending the Egyptian territories. At length he broke with the Porte, and after gaining a decisive victory over the Ottoman troops in Syria, in 1839, he was acknowledged by the sultan as viceroy of Egypt, with the right of succession. Mehemet Ali died in 1849, having survived his son Ibrahim, who died in 1848. He was succeeded by his grandson, Abbas, who, dying in 1854, was succeeded by his uncle, Säid, son of Mehemet. Under his rule railways were opened, and the cutting of the Suez canal commenced. After Säid's death, Ismail Pasha, a grandson of Mehemet Ali, obtained the government in 1863. His administration was vigorous but extravagant, and brought the finances of the country into disorder. In 1866, he obtained a firman from the sultan, granting him the title of khedive. In 1879 he was forced to abdicate under pressure of the British and French governments, and was replaced by his son, Tewfik. In 1882 the "national party" under Arabi Pasha revolted and forced the khedive to flee. On July 11th, a British fleet bombarded Alexandria and restored the khedive, and at Tel-el-Kebir Arabi's forces were totally crushed on September 13. A rebellion in the Sudan, under the leadership of Mohammed Ahmed, the so-called mahdi, now gave the government trouble. In 1883 the mahdi's forces annihilated an Egyptian force under Hicks Pasha in Kordofan. British troops were despatched to Suakin and inflicted two severe defeats on the mahdi's followers. The British cabinet resolved to abandon the Sudan; General Gordon was sent to effect the safe withdrawal of the garrisons (1884). However, the mahdi's forces were strong enough to shut the general up in Khartoum for nearly a year. He perished (January, 1885) before the relief expedition could reach him. Since then Anglo-Egyptian troops have reoccupied it. Prince Abbas succeeded as khedive in 1892—the British still retaining control. The predominant position of Great Britain in Egypt was formally recognized by France under the Anglo-French agreement of 1904.

Egypt was declared a British protectorate, Dec. 17, 1914. The English House of Commons, in 1922, approved the establishing of the independent state of Egypt, and, on March 16, Ahmed Fuad Pasha was proclaimed king.

El Caney (*el-cä'-nā*), a fortified town of Cuba, on the main road, four miles northeast of Santiago. During the Spanish-American war it was the scene of a decided American victory. At 6 A. M. on July 1, 1898, Captain Capron's battery of four guns opened fire on El Caney from an elevation about a mile and a half distant. The guns were not heavy enough to destroy the enemy's works, and at eight o'clock General Lawton's infantry of Chaffee's brigade, consisting of the 7th, 12th, and 17th United States Infantry, assaulted and captured the hill with many prisoners. In 1901 the United States Government purchased the battlefield and approaches for a public reservation.

Electors, The, or Kurfürsts, of Germany, German princes who enjoyed the privilege of disposing of the imperial crown, ranked next the emperor, and were originally six in number, but grew to eight, and finally nine; three were ecclesiastical — the Archbishops of Mayence, Cologne, and Treves, and three secular—the Electors of Saxony, the Palatinate, and Bohemia, to which were added at successive periods the Electors of Brandenburg, of Bavaria, and Hanover.

Emancipation Proclamation, a proclamation providing for the emancipation of the slaves in certain parts of the Confederate States, issued as a war measure by President Lincoln, January 1, 1863. The number of slaves emancipated by this proclamation was, taking the census of 1860 as a basis, as follows:

Alabama,	435,080
Arkansas,	111,115
Florida,	61,745
Georgia,	462,198
Louisiana,	247,715
Mississippi,	436,631
North Carolina,	331,059
South Carolina	402,046
Texas,	182,566
Virginia,	450,000
Total,	3,120,515

The number of slaves not affected by its provisions was about 832,000. The full text of the proclamation is as follows:

Whereas, on the twenty-second day of September, one thousand eight hundred and sixty-two, a proclamation was issued by the President of the United States, containing, among other things, the following, to-wit:

That on the first day of January, in the year of our Lord one thousand eight hundred and sixty-three, all persons held as slaves within any State, or designated part of State, the people whereof shall be in rebellion against the United States, shall be then, thenceforth and forever free, and the Executive Government of the United States, including the military and naval officers thereof, will recognize and maintain the freedom of such persons, and will do no act or acts to repress such persons, or any of them, in any efforts they may make for their actual freedom.

That the Executive will, on the first day of January aforesaid, by proclamation, designate the States and parts of States, if any, in which the people thereof shall

be in rebellion against the United States, and the fact that any State, or the people thereof, shall, on that day, be, in good faith, represented in the Congress of the United States, by members chosen thereto at elections wherein a majority of the qualified voters of such State shall have participated, shall, in the absence of strong countervailing testimony be deemed conclusive evidence that such State and the people thereof are not then in rebellion against the United States.

Now, therefore, I, Abraham Lincoln, President of the United States, by virtue of the power in me vested as Commander-in-chief of the Army and Navy of the United States in time of actual armed rebellion against the authority and Government of the United States, and as a fit and necessary war measure for suppressing said rebellion, do on this first day of January, in the year of our Lord one thousand eight hundred and sixty-three, and in accordance with my purpose so to do, publicly proclaim for the full period of one hundred days from the day of the first above-mentioned order, and designate, as the States and parts of States wherein the people thereof respectively are this day in rebellion against the United States, the following, to-wit: Arkansas, Texas, Louisiana (except the parishes of St. Barnard, Plaquemines, Jefferson, St. John, St. Charles, St. James, Ascension, Assumption, Terre Bonne, Lafourche, St. Mary, St. Martin, and Orleans, including the City of New Orleans), Mississippi, Alabama, Florida, Georgia, South Carolina, North Carolina, and Virginia (except the forty-eight counties designated as West Virginia, and also the counties of Berkeley, Accomac, Northampton, Elizabeth City, York, Princess Anne, and Norfolk, including the cities of Norfolk and Portsmouth), and which excepted parts are, for the present, left precisely as if this proclamation were not issued.

And by virtue of the power and for the purpose aforesaid, I do order and declare that all persons held as slaves within said designated States and parts of States are, and henceforth shall be, free; and that the Executive Government of the United States, including the military and naval authorities thereof, will recognize and maintain the freedom of said persons.

And I hereby enjoin upon the people so declared to be free to abstain from all violence, unless in necessary self-defense, and I recommend to them that, in all cases, when allowed, they labor faithfully for reasonable wages.

And I further declare and make known, that such persons, of suitable condition, will be received into the armed service of the United States, to garrison forts, positions, stations, and other places, and to man vessels of all sorts in said service.

And upon this act, sincerely believed to be an act of justice, warranted by the Constitution, upon military necessity, I invoke the considerate judgment of mankind and the gracious favor of Almighty God.

In testimony whereof, I have hereunto set my name, and caused the seal of the United States to be affixed.

[L. S.] Done at the City of Washington, this first day of January, in the year of our Lord one thousand eight hundred and sixty-three, and of the Independence of the United States the eighty-seventh.

By the President ABRAHAM LINCOLN.

WILLIAM H. SEWARD,
Secretary of State.

England. The history of England proper begins when it ceased to be a Roman possession. On the withdrawal of the Roman forces, about the beginning of the Fifth Century A. D., the South Britons, or inhabitants of what is now called England, were no longer able to withstand the attacks of their ferocious northern neighbors, the Scots and Picts. They applied for assistance to Aetius, but the Roman general was too much occupied in the struggle with Attila to attend to their petition. In their distress they appear to have sought the aid of the Saxons; and according to the Anglo-Saxon narratives three ships, containing 1,600 men, were dispatched to their help under the command of the brothers Hengest and Horsa. Vortigern, a duke or prince of the Britons, assigned them the isle of Thanet for habitation, and, marching against the northern foe, they obtained a complete victory. The date assigned to these events by the later Anglo-Saxon chronicles is 449 A. D., the narratives asserting further that the Saxons, finding the land desirable, turned their arms against the Britons, and, reinforced by new bands, conquered first Kent and ultimately the larger part of the island. Whatever the credibility of the story of Vortigern, it is certain that in the middle of the Fifth Century the occasional Teutonic incursions gave place to persistent invasion with a view to settlement. These Teutonic invaders were Low German tribes from the country about the mouths of the Elbe and the Weser, the three most prominent being the Angles, the Saxons, and the Jutes. Of these, the Jutes were the first to form a settlement, taking possession of part of Kent, the Isle of Wight, etc.; but the larger conquests of the Saxons in the south and the Angles in the north gave to these tribes the leading place in the kingdom. The struggle continued 150 years, and at the end of that period the whole southern part of Britain, with the exception of Strathclyde, Wales, and West Wales (Cornwall), was in the hands of the Teutonic tribes. This conquered territory was divided among a number of small states or petty chieftaincies, seven of the most conspicuous of which are often spoken of as the *Heptarchy*. These were: (1) The Kingdom of Kent; founded by Hengest in 455; ended in 823. (2) Kingdom of South Saxons, containing Sussex and Surrey; founded by Ella in 477; ended in 689. (3) Kingdom of East Angles, containing Norfolk, Suffolk, Cambridge, Ely (Isle of); founded by Uffa in 571 or 575; ended in 792. (4) Kingdom of West Saxons, containing Devon, Dorset, Somerset, Wilts, Hants, Berks, and part of Cornwall; founded by Cedric 519; swallowed up the rest in 827. (5) Kingdom of Northumbria, containing York, Durham, Cumberland, Westmoreland, Northumberland, and the east coast of Scotland to the Firth of Forth; founded by Ida 547; absorbed by Wessex in 827. (6) Kingdom of East Saxons, containing Essex, Middlesex, Hertford (part); founded by Erchew in 527; ended in 823. (7) Kingdom of Mercia, containing Gloucester, Hereford, Worcester, Warwick, Leicester, Rutland, Northampton, Lincoln, Huntingdon, Bedford, Buckingham, Oxford, Stafford, Derby, Salop, Nottingham, Chester, Hertford (part); founded by Cridda about 584; absorbed by Wessex in 827. Each state was, in its turn, annexed to more powerful neighbors; and at length, in 827, Egbert, by his valor and superior capacity, united in his own person the sovereignty of what had formerly been seven kingdoms, and the whole came to be called England, that is Angle-land.

While this work of conquest and of intertribal strife had been in progress towards the establishment of a united kingdom, certain important changes had occurred. The conquest had been the slow expulsion of a Christian race by a purely heathen race, and the country had returned to something of its old isolation with regard to the rest of Europe. But before the close of the Sixth Century Christianity had secured a footing in the southeast of the island. Ethelbert, king of Kent and suzerain over the kingdoms south of the Humber, married a Christian wife, Bertha, daughter of Charibert of Soissons, and this event indirectly led to the coming of St. Augustine. The conversion of Kent, Essex, and East Anglia was followed by that of Northumberland and

then by that of Mercia, of Wessex, of Sussex, and lastly of Wight, the contest between the two religions being at its height in the Seventh Century. The legal and political changes immediately consequent upon the adoption of Christianity were not great, but there resulted a more intimate relation with Europe and the older civilizations, the introduction of new learning and culture, the formation of a written literature, and the fusion of the tribes and petty kingdoms into a closer and more lasting unity than that which could have been otherwise secured.

The kingdom, however, was still kept in a state of disturbance by the attacks of the Danes, who had made repeated incursions during the whole of the Saxon period, and about half a century after the unification of the kingdom became for the moment masters of nearly the whole of England. But the genius of Alfred the Great, who had ascended the throne in 871, speedily reversed matters by the defeat of the Danes at Ethandune (878). Guthrum, their king, embraced Christianity, became the vassal of the Saxon king, and retired to a strip of land on the east coast including Northumbria and called the Danelagh. The two immediate successors of Alfred, Edward (901–925) and Athelstan (925–940), the son and grandson of Alfred, both vigorous and able rulers, had each in turn to direct his arms against these settlers of the Danelagh. The reigns of the next five kings, Edmund, Edred, Edwy, Edgar, and Edward the Martyr, are chiefly remarkable on account of the conspicuous place occupied in them by Dunstan, who was counsellor to Edmund, minister of Edred, treasurer under Edwy, and supreme during the reigns of Edgar and his successor. It was possibly due to his policy that from the time of Athelstan till after the death of Edward the Martyr (978 or 979) the country had comparative rest from the Danes. During the Tenth Century many changes had taken place in the Teutonic constitution. Feudalism was already taking root; the king's authority had increased; the folkland was being taken over as the king's personal property; the nobles by birth, or ealdormen, were becoming of less importance in administration than the nobility of thegns, the officers of the king's court. Ethelred (978–1016), who succeeded Edward, was a minor, the government was feebly conducted, and no united action being taken against the Danes, their incursions became more frequent and destructive. Animosities between the English and the Danes who had settled among them became daily more violent, and a general massacre of the latter took place in 1002. The following year Sweyn invaded the kingdom with a powerful army and assumed the crown of England. Ethelred was compelled to take refuge in Normandy; and though he afterwards returned, he found in Canute an adversary no less formidable than Sweyn. Ethelred left his kingdom in 1016 to his son Edmund, who displayed great valor, but was compelled to divide his kingdom with Canute; and when he was assassinated in 1017, the Danes succeeded to the sovereignty of the whole.

Canute (Knut), who espoused the widow of Ethelred, that he might reconcile his new subjects, obtained the name of Great, not only on account of his personal qualities, but from the extent of his dominions, being master of Denmark and Norway as well as England. In 1035 he died, and in England was followed by two other Danish kings, Harold and Hardicanute, whose joint reigns lasted till 1042, after which the English line was again restored in the person of Edward the Confessor. Edward was a weak prince, and in the latter years of his reign had far less real power than his brother-in-law Harold, son of the great earl Godwin. On Edward's death in 1066 Harold accordingly obtained the crown. He found, however, a formidable opponent in the second-cousin of Edward, William of Normandy, who instigated the Danes to invade the northern counties, while he, with 60,000 men, landed in the south. Harold vanquished the Danes, and hastening southward met the Normans near Hastings, at Senlac, afterwards called Battle. Harold and his two brothers fell (October 14,1066), and William (1066–87) immediately claimed the government as lawful King of England, being subsequently known as William I., the Conqueror. For some time he conducted the government with great moderation; but being obliged to reward those who had assisted him, he bestowed the chief offices of the government upon Normans, and divided among them a great part of the country. The revolts of the native English which followed were quickly crushed, continental feudalism in a modified form was established, and the English Church reorganized under Lanfranc as Archbishop of Canterbury.

At his death, in 1087, William II., commonly known by the name of Rufus, the conqueror's second son, obtained the crown, Robert, the eldest son, receiving the duchy of Normandy. In 1100, when William II. was accidentally killed in the New Forest, Robert was again cheated of his throne by his younger brother Henry (Henry I.), who in 1106 even wrested from him the duchy of Normandy. Henry's power being secured, he entered into a dispute with Anselm the primate, and with the pope, concerning the right of granting investure to the clergy. He supported his quarrel with firmness, and brought it to a not unfavorable issue. His reign was also marked by the suppression of the greater Norman nobles in England, whose power (like that of many continental feudatories) threatened to overshadow that of the king, and by the substitution of a class of lesser nobles. In 1135 he died in Normandy, leaving behind him only a daughter, Matilda.

By the will of Henry I. his daughter Maud or Matilda, wife of Geoffrey Plantagenet, Count of Anjou, and frequently styled the Empress Matilda, because she had first been married to Henry V., Emperor of Germany, was declared his successor. But Stephen, son of the Count of Blois, and of Adela, daughter of William the Conqueror, raised an army in Normandy, landed in England, and declared himself king. After years of civil war and bloodshed an amicable arrangement was brought about, by which it was agreed that Stephen should continue to reign during the remainder of his life, but that

he should be succeeded by Henry, son of Matilda and the Count of Anjou. Stephen died in 1154, and Henry Plantagenet ascended the throne with the title of Henry II., being the first of the Plantagenet or Angevin kings. A larger dominion was united under his sway than had been held by any previous sovereign of England, for at the time when he became King of England he was already in the possession of Anjou, Normandy, and Aquitaine.

Henry II. found far less difficulty in restraining the license of his barons than in abridging the exorbitant privileges of the clergy, who claimed exemption not only from the taxes of the state, but also from its penal enactments, and who were supported in their demands by the primate Becket. The king's wishes were formulated in the Constitutions of Clarendon (1164), which were first accepted and then repudiated by the primate. The assassination of Becket, however, placed the king at a disadvantage in the struggle, and after his conquest of Ireland (1171) he submitted to the Church, and did penance at Becket's tomb. Henry was the first who placed the common people of England in a situation which led to their having a share in the government. The system of frank-pledge was revived, trial by jury was instituted by the Assize of Clarendon, and the Eyre courts were made permanent by the Assize of Nottingham. To curb the power of the nobles he granted charters to towns, freeing them from all subjection to any but himself, thus laying the foundation of a new order in society.

Richard I., called Cœur de Lion, who in 1189 succeeded to his father, Henry II., spent most of his reign away from England. Having gone to Palestine to join in the third crusade he proved himself an intrepid soldier. Returning homewards in disguise through Germany, he was made prisoner by Leopold, duke of Austria, but was ransomed by his subjects. In the meantime John, his brother, had aspired to the crown, and hoped, by the assistance of the French, to exclude Richard from his right. Richard's presence for a time restored matters to some appearance of order; but having undertaken an expedition against France, he received a mortal wound at the siege of Chalons, in 1199.

John was at once recognized as King of England, and secured possession of Normandy; but Anjou, Maine, and Touraine acknowledged the claim of Arthur, son of Goeffrey, second son of Henry II. On the death of Arthur, while in John's power, these four French provinces were at once lost to England. John's opposition to the pope in electing a successor to the See of Canterbury in 1205 led to the kingdom being placed under an interdict; and the nation being in a disturbed condition, he was at last compelled to receive Stephen Langton as archbishop, and to accept his kingdom as a fief of the papacy (1213). His exactions and misgovernment had equally embroiled him with the nobles. In 1213 they refused to follow him to France, and on his return, defeated, they at once took measures to secure their own privileges and abridge the prerogatives of the crown. King and barons met at Runnymede, and on June 15, 1215, the Great Charter (Magna Charta) was signed. It was speedily declared null and void by the pope, and war broke out between John and the barons, who were aided by the French king. In 1216, however, John died, and his turbulent reign was succeeded by the almost equally turbulent reign of Henry III.

During the first years of the reign of Henry III. the abilities of the Earl of Pembroke, who was regent until 1219, retained the kingdom in tranquillity; but when, in 1227, Henry assumed the reins of government he showed himself incapable of managing them. The Charter was three times reissued in a modified form, and new privileges were added to it, but the king took no pains to observe its provisions. The struggle, long maintained in the great council (henceforward called Parliament) over money grants and other grievances reached an acute stage in 1263, when civil war broke out. Simon de Montfort who had laid the foundations of the house of Commons by summoning representatives of the shire communities to the Mad Parliament of 1258, had by this time engrossed the sole power. He defeated the king and his son Edward at Lewes in 1264, and in his famous parliament of 1265 still further widened the privileges of the people by summoning to it burgesses as well as knights of the shire. The escape of Prince Edward, however, was followed by the battle of Evesham (1265), at which Earl Simon was defeated and slain, and the rest of the reign was undisturbed.

On the death of Henry III., in 1272, Edward I. succeeded without opposition. From 1276 to 1284 he was largely occupied in the conquest and annexation of Wales, which had become practically independent during the barons' wars. In 1292 Balliol, whom Edward had decided to be rightful heir to the Scottish throne, did homage for the fief to the English king; but when, in 1294, war broke out with France, Scotland also declared war. The Scots were defeated at Dunbar (1296), and the country placed under an English regent; but the revolt under Wallace (1297) was followed by that of Bruce (1306), and the Scots remained unsubdued. The reign of Edward was distinguished by many legal and legislative reforms, such as the separation of the old king's court into the Court of Exchequer, Court of King's Bench, and Court of Common Pleas, the passage of the Statute of Mortmain, etc. In 1295 the first perfect parliament was summoned, the clergy and barons by special writ, the commons by writ to the sheriffs directing the election of two knights from each shire, two citizens from each city, two burghers from each borough. Two years later the imposition of taxation without consent of parliament was forbidden by a special act (De Tallagio non Concedendo). The great aim of Edward, however, to include England, Scotland, and Wales in one kingdom proved a failure, and he died in 1307 marching against Robert Bruce.

The reign of his son, Edward II., was unfortunate to himself and to his kingdom. He made a feeble attempt to carry out his father's last and earnest request to prosecute the war with Scotland, but the English were almost constantly unfortunate; and at length, at Bannockburn (1314), they received a defeat from Robert Bruce which ensured the independence of Scot-

land. The king soon proved incapable of regulating the lawless conduct of his barons; and his wife, a woman of bold, intriguing disposition, joined in the confederacy against him, which resulted in his imprisonment and death in 1327.

The reign of Edward III. was as brilliant as that of his father had been the reverse. The main projects of the third Edward were directed against France, the crown of which he claimed in 1328 in virtue of his mother, the daughter of King Philip. The victory won by Edward III. at Crecy (1346), the capture of Calais (1347), and the victory of Poitiers (1356), ultimately led to the Peace of Brétigny in 1360, by which Edward III. received all the west of France on condition of renouncing his claim to the French throne. Before the close of his reign, however, these advantages were all lost again, save a few principal towns on the coast.

Edward III. was succeeded in 1377 by his grandson Richard II., son of Edward the Black Prince. The people of England now began to show, though in a turbulent manner, that they had acquired just notions of government. In 1380 an unjust and oppressive poll-tax brought their grievances to a head, and 100,000 men under Wat Tyler, marched toward London (1381). Wat Tyler was killed while conferring with the king, and the prudence and courage of Richard appeased the insurgents. Despite his conduct on this occasion Richard was deficient in the vigor necessary to curb the lawlessness of the nobles. In 1398 he banished his cousin, Henry Bolingbroke; and on the death of the latter's father, the Duke of Lancaster, unjustly appropriated his cousin's patrimony. To avenge the injustice Bolingbroke landed in England during the king's absence in Ireland, and at the head of 60,000 malcontents compelled Richard to surrender. He was confined in the Tower, and despite the superior claims of Edmund Mortimer, Earl of March, Henry was appointed king (1399), the first of the House of Lancaster. Richard was, in all probability, murdered early in 1400.

The manner in which the Duke of Lancaster, now Henry IV., acquired the crown rendered his reign extremely turbulent, but the vigor of his administration quelled every insurrection. The most important—that of the Percies of Northumberland, Owen Glendower, and Douglas of Scotland—was crushed by the battle of Shrewsbury (1403). During the reign of Henry IV. the clergy of England first began the practice of burning heretics under the act *de hæretico comburendo*, passed in the second year of his reign. The act was chiefly directed against the Lollards, as the followers of Wickliffe now came to be called. Henry died in 1413, leaving his crown to his son, Henry V., who revived the claim of Edward III. to the throne of France in 1415, and invaded that country at the head of 30,000 men. The disjointed councils of the French rendered their country an easy prey; the victory of Agincourt was gained in 1415; and after a second campaign a peace was concluded at Troyes in 1420, by which Henry received the hand of Katherine, daughter of Charles VI., was appointed regent of France during the reign of his father-in-law, and declared heir to his throne on his death. The two kings, however, died within a few weeks of each other in 1422, and the infant son of Henry thus became King of England (as Henry VI.) and France at the age of nine months.

England during the reign of Henry VI. was subjected, in the first place, to all the confusion incident to a long minority, and afterwards to all the misery of a civil war. Henry allowed himself to be managed by anyone who had the courage to assume the conduct of his affairs, and the influence of his wife, Margaret of Anjou, a woman of uncommon capacity, was of no advantage either to himself or the realm. In France (1422–1453) the English forces lost ground, and were finally expelled by the celebrated Joan of Arc, Calais alone being retained. The rebellion of Jack Cade in 1450 was suppressed, only to be succeeded by more serious trouble. In that year Richard, duke of York, the father of Edward, afterwards Edward IV., began to advance his pretentions to the throne which had been so long usurped by the house of Lancaster. His claim was founded on his descent from the third son of Edward III., Lionel, duke of Clarence, who was his great-great-grandfather on the mother's side, while Henry was the great-grandson on the father's side of John of Gaunt, duke of Lancaster, the fourth son of Edward III. Richard of York was also grandson on the father's side of Edmund, fifth son of Edward III. The wars which resulted, called the Wars of the Roses, from the fact that a red rose was the badge of the house of Lancaster and a white one that of the house of York, lasted for thirty years, from the first battle of St. Albans, May 22, 1455, to the battle of Bosworth, August 22, 1485. Henry VI. was twice driven from the throne (in 1461 and 1471) by Edward of York, whose father had previously been killed in battle in 1460. Edward of York reigned as Edward IV. from 1461 till his death in 1483, with a brief interval in 1471; and was succeeded by two other sovereigns of the house of York, first his son Edward V., who reigned for eleven weeks in 1483; and then by his brother Richard III., who reigned from 1483 till 1485, when he was defeated and slain on Bosworth field by Henry Tudor, of the house of Lancaster, who then became Henry VII.

Henry VII. was at this time the representative of the house of Lancaster, and in order at once to strengthen his own title, and to put an end to the rivalry between the houses of York and Lancaster, he married, in 1486, Elizabeth, the sister of Edward V. and heiress of the house of York. His reign was disturbed by insurrections attending the impostures of Lambert Simnel (1487), who pretended to be a son of the Duke of Clarence, brother of Edward IV., and of Perkin Warbeck (1488), who affirmed that he was the Duke of York, younger brother of Edward V.; but neither of these attained any magnitude. The king's worst fault was the avarice which led him to employ in schemes of extortion such instruments as Empson and Dudley. His administration throughout did much to increase the royal power and to establish order and prosperity. He died in 1509.

The authority of the English crown, which had been so much extended by Henry VII.,

was by his son Henry VIII. exerted in a tyrannical and capricious manner. The most important event of the reign was undoubtedly the Reformation; though it had its origin rather in Henry's caprice and in the casual situation of his private affairs than in his conviction of the necessity of a reformation in religion, or in the solidity of reasoning employed by the reformers Henry had been espoused to Catharine of Spain, who was first married to his elder brother Arthur, a prince who died young. Henry became disgusted with his queen, and enamored of one of her maids of honor, Anne Boleyn. He had recourse, therefore, to the pope to dissolve a marriage which had at first been rendered legal only by a dispensation from the pontiff; but failing in his desires he broke away entirely from the Holy See, and in 1534 got himself recognized by act of parliament as the head of the English Church. He died in 1547. He was married six times, and left three children, each of whom reigned in turn. These were: Mary, by his first wife, Catharine of Aragon; Elizabeth, by his second wife, Anne Boleyn; and Edward, by his third wife, Jane Seymour. Edward, who reigned first, with the title of Edward VI., was nine years of age at the time of his succession, and died in 1553, when he was only sixteen. His short reign, or rather the reign of the Earl of Hertford, afterwards Duke of Somerset, who was appointed regent, was distinguished chiefly by the success which attended the measures of the reformers, who acquired great part of the power formerly engrossed by the Catholics. The intrigues of Dudley, Duke of Northumberland, during the reign of Edward, caused Lady Jane Grey to be declared his successor; but her reign, if it could be called such, lasted only a few days. Mary, daughter of Henry VIII., was placed upon the throne, and Lady Jane Grey and her husband were both executed. Mary, a zealous Catholic, seems to have wished for the crown chiefly to aid in reëstablishing the Roman Catholic faith. Political motives had induced Philip of Spain to accept of her as a spouse; but she could never prevail on her subjects to allow him any share of power. She died in 1558.

Elizabeth, who succeeded her sister Mary, was attached to the Protestant faith, and found little difficulty in establishing it in England. Having concluded peace with France (1559), Elizabeth set herself to promote the confusion which prevailed in Scotland, to which her cousin Mary had returned from France as queen in 1561. In this she was so far successful that Mary placed herself in her power (1568), and after many years imprisonment was sent to the scaffold (1587). As the most powerful Protestant nation, and as a rival to Spain in the New World, it was natural that England should become involved in difficulties with that country. The dispersion of the Armada by the English fleet under Howard, Drake, and Hawkins was the most brilliant event of a struggle which abounded in minor feats of valor. In Elizabeth's reign London became the center of the world's trade, the extension of British commercial enterprise being coincident with the ruin of Antwerp in 1585. The parliament was increased by the creation of sixty-two new boroughs, and its members were exempted from arrest. In literature not less than in politics and in commerce the same full life displayed itself, and England began definitely to assume the characteristics which distinguish her from the other European nations of to-day.

To Elizabeth succeeded (in 1603) James VI. of Scotland and I. of England, son of Mary Queen of Scots and Darnley. His accession to the crown of England in addition to that of Scotland did much to unite the two nations, though a certain smoldering animosity still lingered. His dissimulation, however, ended in his satisfying neither of the contending ecclesiastical parties—the Puritans or the Catholics; and his absurd insistance on his divine right made his reign a continuous struggle between the prerogative of the crown and the freedom of the people. His extravagance kept him in constant disputes with the parliament, who would not grant him the sums he demanded, and compelled him to resort to monopolies, loans, benevolences, and other illegal methods. The nation at large, however, continued to prosper through the whole of this inglorious reign. His son, Charles I., who succeeded him in 1625, inherited the same exalted ideas of royal prerogative, and his marriage with a Catholic, his arbitrary rule, and illegal methods of raising money, provoked bitter hostility. Under the guidance of Laud and Strafford things went from bad to worse. Civil war broke out in 1642 between the king's party and that of the parliament, and, the latter proving victorious, in 1649 the king was beheaded.

A commonwealth or republican government was now established, in which the most prominent figure was Oliver Cromwell. Mutinies in the army among Fifth-monarchists and Levellers were subdued by Cromwell and Fairfax, and Cromwell in a series of masterly movements subjugated Ireland and gained the important battles of Dunbar and Worcester. At sea Blake had destroyed the Royalist fleet under Rupert, and was engaged in an honorable struggle with the Dutch under Van Tromp. But within the governing body matters had come to a deadlock. A dissolution was necessary, yet parliament shrank from dissolving itself, and in the meantime the reform of the law, a settlement with regard to the Church, and other important matters remained untouched. In April, 1653, Cromwell cut the knot by forcibly ejecting the members and putting the keys of the house in his pocket. From this time he was practically head of the government, which was vested in a council of thirteen. A parliament—the Little or Barebones Parliament—was summoned and in December of the same year Cromwell was installed Lord Protector of the Commonwealth of England, Scotland, and Ireland. With more than the power of a king, he succeeded in dominating the confusion at home and made the country feared throughout the whole of Europe. Cromwell died in 1658, and the brief and feeble protectorate of his son Richard followed.

There was now a widespread feeling that the country would be better under the old form of government, and Charles II., son of Charles I., was called to the throne by the Restoration of

1660. He took complete advantage of the popular reaction from the narrowness and intolerance of Puritanism, and even latterly endeavored to carry it to the extreme of establishing the Catholic religion. The promises of religious freedom made by him before the Restoration in the Declaration of Breda were broken by the Test and Corporation Acts, and by the Act of Uniformity, which drove two thousand clergymen from the Church and created the great dissenting movement of modern times. The Conventicle and Five-mile Acts followed, and the "Drunken Parliament" restored Episcopacy in Scotland. At one time even civil war seemed again imminent. The abolition of the censorship of the press (1679) and the reaffirmation of the habeas corpus principle are the most praiseworthy incidents of the reign.

As Charles II. left no legitimate issue, his brother, the Duke of York, succeeded him as James II. (1685–88). An invasion by an illegitimate son of Charles, the Duke of Monmouth, who claimed the throne, was suppressed, and the king's arbitrary rule was supported by the wholesale butcheries of such instruments as Kirke and Jeffreys. The king's zealous countenance of Roman Catholicism and his attempts to force the Church and the universities to submission provoked a storm of opposition. Seven prelates were brought to trial for seditious libel, but were acquitted amidst general rejoicings The whole nation was prepared to welcome any deliverance, and in 1688 William of Orange, husband of James's daughter Mary, landed in Torbay. James fled to France, and a convention summoned by William settled the crown upon him, he thus becoming William III. Annexed to this settlement was a Declaration of Rights circumscribing the royal prerogative by depriving him of the right to exercise dispensing power, or to exact money, or maintain an army without the assent of parliament. This placed henceforward the right of the British sovereign to the throne upon a purely statutory basis. A toleration act, passed in 1689, released dissent from many penalties. An armed opposition to William lasted for a short time in Scotland, but ceased with the fall of Viscount Dundee, the leader of James's adherents; and though the struggle was prolonged in Ireland, it was brought to a close before the end of 1691. The following year saw the origination of the national debt, the exchequer having been drained by the heavy military expenditure. A bill for triennial parliaments was passed in 1694, the year in which Queen Mary died. For a moment after her death William's popularity was in danger, but his successes at Namur and elsewhere, and the obvious exhaustion of France, once more confirmed his power. The treaty of Ryswick followed in 1697, and the death of James II. in exile in 1701 removed a not unimportant source of danger. Early in the following year William also died, and by the act of settlement Anne succeeded him.

The closing act of William's reign had been the formation of the grand alliance between England, Holland, and the German Empire, and the new queen's rule opened with the brilliant successes of Marlborough at Blenheim (1704) and Ramillies (1706). Throughout the earlier part of her reign the Marlboroughs practically ruled the kingdom, the duke's wife, Sarah Jennings, being the queen's most intimate friend and adviser. In 1707 the history of England becomes the history of Britain, the Act of Union passed in that year binding the parliaments and realms of England and Scotland into a single and more powerful whole.

The measure which declared the parliaments of England and Scotland united, and the two countries one kingdom, known as the United Kingdom of Great Britain, was passed, after violent opposition, in the reign of Queen Anne, 1st of May, 1707. This union, however, much it was opposed by the prejudices and interest of particular men or classes at the time, has contributed very much to the prosperity of both countries. The Grand Alliance, which it had been the aim of William's later years to form between Holland, Austria, and England against the threatening growth of French power, now held the field against the armies of France, and the victories of Marlborough at Blenheim and Ramillies, and the taking of Gibraltar and Barcelona, ended in the Treaty of Utrecht in 1713, by which the British right of sovereignty over Hudson's Bay, Newfoundland, Nova Scotia, Minorca, and Gibraltar was acknowledged, and the foundation of Britain's imperial and colonial power securely laid. The remainder of Anne's reign was distracted by the never-ending altercations of domestic parties. She died on the 1st of August, 1714; and with her ended the line of the Stuarts, who had held the scepter of England 112, and that of Scotland 343 years.

At her death, George I., elector of Hanover, maternally descended from Elizabeth, daughter of James I., according to the Act of Settlement, ascended the throne of Britain. The Whigs under this prince regained that superiority in the national councils of which they had long been deprived, and this, along with the suspension of the Habeas Corpus Act and some other extreme precautionary measures, increased the irritation of the Tory and Stuart party. In 1715 the Earl of Mar in Scotland and the Earl of Derwentwater in England raised the standard of rebellion and proclaimed the Chevalier St. George (the Old Pretender) king. But the insurrection, feebly supported by the people, was soon suppressed. In 1716 the Septennial Act was passed, making parliament of seven instead of three years duration. In 1720 occurred the extraordinary growth and collapse of the South Sea Company. From this date till 1742 the government was virtually in the hands of Sir Robert Walpole, the first, we might say, of modern premiers, governing the cabinet and chiefly responsible for its doings. Walpole had great sagacity, prudence, and business ability, and could manage dexterously the king, the parliament, and the people alike. It is true that in the case of the parliament he achieved this by undue influence in elections and a scandalous use of bribery. But the power he thus acquired was generally wisely used. The failure of the war with Spain into which he had reluctantly entered drove him from office, and in 1742 his long ministry came to an end. In 1743, George II., frightened at the dangers to Hanover,

dragged Britain into the wars between France, Prussia, and Austria, regarding the succession of the Emperor Charles. George himself fought at the head of his troops at Dettingen (1743), where he obtained a complete victory over the French, which was balanced, however, later on by the defeat at Fontenoy (1745).

A fresh attempt was now made to restore the Stuart family to the throne of Britain. Charles Edward, son of the Old Pretender, having been furnished by France with a small supply of money and arms, landed on the coast of Lochaber, in the Western Highlands, in 1745, and was joined by a considerable number of the people. Marching southwards with 1,500 Highlanders, his forces increasing as he advanced, he entered Edinburgh without opposition; and having defeated Sir John Cope near Prestonpans he marched into England. He now took Carlisle, and advanced through Lancaster, Preston, and Manchester, to Derby, within 100 miles of London; but finding himself disappointed of expected succors from France, and the English Tories, contrary to his expectations, keeping aloof, he commenced his retreat into Scotland, closely pursued by the king's troops, whom he again defeated at Falkirk. With this victory his good fortune terminated. The Duke of Cumberland having arrived from the continent put himself at the head of the forces which were destined to check the rebels; and the armies having met at Culloden, near Inverness, Charles was completely defeated. After lurking for six months amidst the wilds of Invernesshire, he at length, with much difficulty, escaped to France.

The war of the Austrian succession, which still continued and which was the cause of the hostilities between the French and British in India as well as elsewhere, was terminated by the treaty of Aix-la-Chapelle in 1748. During most of this period Pelham and his brother, the Duke of Newcastle, had been the ruling ministers, and in their hands the art of government had reached a low level both as regards morality and ability. In 1752, the *New Style* of reckoning time was introduced, and the *Old Style* being eleven days behind, the 3d of September, 1752, was called the 14th. At the same time the 1st of January was fixed as the opening day of the year, instead of the 25th of March.

Soon after, the French, uneasy at the growing colonial power of Britain, made a determined effort against the British Colonies and possessions in North America and the East Indies, and at first the British met with several disasters in America. In 1756 the Seven Years' War broke out, Austria and France being allied on the one side, and Prussia and England on the other, and ill success attended the British arms in Europe also. Fortunately, a great war minister, William Pitt, now took the helm of the state. In 1758 the British made themselves masters of several French settlements in North America, while the attack made by Wolfe on Quebec in 1759 was completely successful, and gave Britain the whole of Canada. The same year the British and their allies defeated the French at Minden in Prussia. In the East Indies the French were even less successful than in America. Clive's victory at Plassey (1757) and Coote's at Wandewash (1760) secured the British empire in the east, and together with the naval feats of Hawke and Boscawen made England the greatest of maritime and colonial powers.

On the accession of George III. in 1760 hostilities were still carried on, generally to the advantage of the French as far as the theater of war in Germany was concerned, but still more to their loss in the other quarters of the world where they were engaged with the British in a struggle for supremacy, and this notwithstanding that Spain had now joined her forces to those of France. At length the success of the British arms induced France and Spain to accede to terms, and the war ended by the Treaty of Paris in 1763. The French relinquished nearly all their possessions in North America; Minorca was restored to Britain; in the East Indies they got back their factories and settlements, on condition that they should maintain neither forts nor troops in Bengal; Cuba and Manila were resigned to the Spaniards. In Europe everything was restored to the *status quo*.

The expenses of this war, which had been undertaken partly for the defense of the American Colonies, had added upwards of £72,000,000 to the national debt. It seemed to the British people to be just that the Americans should be taxed to assist in the payment of the interest. The Americans did not deny the justice, but replied that if they were to be taxed they had a right to be represented in parliament, in order that, like other British subjects, they might be taxed only in consequence of their own consent. Grenville, then the prime-minister, stood to his purpose, however, and introduced a bill for imposing certain stamp duties on the American Colonies. The Americans protested and resisted, and partly by the influence of the great Pitt, who had steadily opposed the measure, the bill was withdrawn. On the illness of Pitt, now Lord Chatham, in 1767, Townshend became premier, and again revived the project of taxing the Americans by imposing duties on tea; and in 1770, Lord North, as his successor, set himself to carry it out. The result was that in 1775 the Colonies were declared in a state of rebellion and a war began, in which both France and Spain joined the revolted Colonies, and of which the result was the recognition of the independence of the United States. On the American side of this struggle the great name is that of George Washington. On the British side the war was unskillfully conducted, and though they gained some successes these were more than counterbalanced by such blows as the capitulation of Burgoyne with nearly 6,000 men at Saratoga (1777), and of Cornwallis at Yorktown with 7,000 (1781). Against their European foes the British could show such successes as that of Admiral Rodney off Cape St. Vincent (1780); the brilliant defense of Gibraltar by General Eliott (1779–82); and Admiral Rodney's victory over the French fleet in the West Indies (1782). The war closed with the Peace of Versailles in 1783. Britain finally acquired several West Indian Islands; Spain got Florida and Minorca, France Pondicherry and Chandernagore in India. The struggle had added over £100,000,000 to the British national debt.

From 1783 to 1801 the government of Britain was directed by William Pitt, the younger son of Lord Chatham, who when only twenty-four years of age was placed as first lord of the treasury and chancellor of the exchequer. The affairs of Ireland and India, and the impeachment of Warren Hastings, were among the first subjects which occupied the attention of Pitt's ministry. In 1782, the Irish had been able to extort from Britain, then engaged in her struggle with the American Colonies, the right to establish an independent parliament, so that from this year there were two independent governments in the British Isles till 1800, when Pitt, who had in the interval experienced some of the difficulties arising out of two coördinate legislatures, contrived once more to unite them.

In 1789, the French Revolution was begun. For a time there was considerable sympathy in England with this movement; but as the revolutionaries proceeded to extreme measures there was a reaction in English feeling, of which Edmund Burke became the great exponent, and the execution of Louis XVI. gave rise to diplomatic measures, which finally terminated in the National Convention declaring war against Britain, on the 1st of February, 1793. At first Britain coöperated with Prussia, Austria, etc., against France, and successes were gained both by sea and land; but latterly on the Continent the armies of the French Republic were everywhere triumphant, and in 1797 Britain stood alone in the conflict, and indeed soon found a European coalition formed against her. The war was now largely maritime, and the naval successes of Jervis off St. Vincent and Duncan off Camperdown were followed (when Bonaparte led an expedition to Egypt, having India as its ultimate object) by the victories of Nelson in Aboukir Bay, and Abercromby at Alexandria. In 1798, a rebellion in Ireland had to be crushed. Peace was made in 1802 by the Treaty of Amiens, only to be broken by another declaration of war in 1803, as the ambitious projects of Napoleon became evident. In spite of the efforts of Pitt (who died in 1806) in the way of forming and supporting with funds a new coalition against France, the military genius of Napoleon swept away all opposition on land, though the naval victory of Trafalgar (1805) established England's supremacy on the seas. Napoleon, who had assumed the title of Emperor of the French in 1805, and was now virtually the ruler of Europe, put forth his Berlin decrees (1806), prohibiting all commerce with Great Britain wherever his power reached, set his brother Joseph on the throne of Spain, and occupied Portugal. But the spirit of resistance had now taken deep root in the British people, and in 1808 troops were sent into Spain under Sir John Moore, and a year later Wellington, then General Wellesley, landed in Portugal. Then began that famous series of successful operations (the Peninsular War) which drove back the French into their own country, and powerfully contributed to undermine the immense fabric of Napoleon's conquests. The other chief European powers having united, Paris was occupied in 1814, Napoleon was deposed and exiled to Elba, and Louis XVIII. placed on the throne of France. Escaping in 1815, Napoleon appeared once more in the field with a large army. Wellington and Blücher hastened to oppose him, and at Waterloo Napoleon's long career of conquest ended in a crushing defeat. The restoration of Louis followed, and Napoleon was sent to the island of St. Helena. Of her conquests Britain retained Tobago, St. Lucia, Mauritius, the Cape of Good Hope, Demerara, Essequibo, Berbice, Heligoland, and Malta. Ceylon and Trinidad had been gained in 1802, and Britain emerged from this long struggle with a very great increase of territorial possessions and political importance.

After the termination of the wars with Napoleon many things concurred to make a troublous era in the home administration. The new burden of debt which the wars had left on the nation, the bad harvests of 1816 and 1817, a succession of governments which had no idea but that of absolute resistance to all reforms, etc.; all these contributed to increase discontent. The result was a strong Radical agitation, accompanied often by serious riots throughout the country, more especially in the large towns, and loud demands for reform in parliament and the system of representation. The death of George III. and accession of George IV. in 1820 made little change in this respect. From 1822 a succession of able statesmen, Canning, Peel, and Lord Grey, gave the government a more liberal turn, and did much to satisfy the popular demands. The Catholics were admitted to parliament; the severity of the old restrictions on commerce was relaxed; and in the face of a determined opposition Earl Grey carried the Reform Bill of 1832 (two years after the accession of William IV.), which gave large manufacturing towns a voting power in some proportion to their importance, and practically transferred the center of political power from the aristocratic to the middle classes. The next great public measure was the abolition of negro slavery in every British possession in 1834.

William IV. died June 20, 1837, and was succeeded by Victoria. The year following is notable as that in which the Chartists began their movement for reform, which continued more or less active, with popular assemblies, presentations of monster petitions, and occasional tumults, till 1848, when it was without much trouble suppressed. The same years saw the struggle of the Anti-Corn-law League, of which Cobden and Bright were the chiefs, and which were finally successful, Sir Robert Peel, the leader of the Tory party, himself proposing the repeal of the corn duties (1846). The principle of free-trade had further victories in the repeal of the navigation laws, and in the large abolition of duties made during Lord Aberdeen's ministry (1853).

In 1852–53, dissension arose between Russia and Turkey regarding the rights of the Latin and Greek Churches to preferable access to the "holy places" in Palestine. The Emperor of Russia, resenting concessions made to French devotees, sent Prince Menschikoff to Constantinople to demand redress, and not being satisfied, war was declared, June 26, 1853. On the plea that it was impossible to leave Russia a free hand

in dealing with Turkey, France and Great Britain formed an alliance against Russia, March 28, 1854. Invasion of the Crimea followed; peace was signed in 1856 at Paris.

Immediately after the Crimean war came the mutiny of the sepoys in India. In 1858, sovereignty over the British possessions was transferred by parliament from the East India company to the crown. Wars with China (1858 and 1860) opened up five new Chinese ports to trade. The Fenian movement (1861-7) occasioned some excitement.

In 1867 parliament passed a measure establishing the principle of household suffrage. The same year the Dominion of Canada was constituted. In 1867, the Abyssinian expedition set out, and relieved the English captives in 1868. In the same year Lord Derby was succeeded by Disraeli as leader of the Conservative party. The year put the Liberals in power. In 1869, Gladstone's administration passed a bill for the disestablishment of the Irish church. In 1870, an Irish land law bill, for the regulation of relations between landlord and tenant, became law; and a national system of education for England was established. In 1871, the purchase of commissions in the army was abolished. Next followed the ballot act and the Scotch education act. Early in 1874, Gladstone dissolved parliament, and a large Conservative majority being returned, Disraeli again became premier. The Ashantee war, begun the previous year, ended early in 1874. In 1876, the title of Empress of India was added to the titles of the queen. During the Russo-Turkish war of 1877-78 Britain remained neutral, but took an important part in the settlement by the Berlin congress, and acquired from Turkey the right to occupy and administer Cyprus. Then followed war in Afghanistan, war with the Kaffirs of Zululand, and a brief war with the Boers of the Transvaal.

In 1880, Gladstone again became premier. This parliament passed a land-act for Ireland (1881), an act for putting down crime in Ireland (1882), a reform act equalizing the borough and county franchise (1884), and a redistribution of seats act (1885)—all important. The intervention of Britain in Egyptian affairs led to the bombardment of Alexandria by the British fleet (July, 1882) and the sending of an army into Egypt to quell rebellion; the rising in the Sudan caused British troops to be despatched to Suakim and another force to be sent by way of the Nile to relieve General Gordon at Khartoum. For a brief period Lord Salisbury was premier in 1885, but in February, 1886, he made way for Gladstone. In April, Gladstone proposed a bill which would establish a separate Irish legislative body. A determined opposition was organized and the bill was thrown out on its second reading. A general election followed, in which those opposed to the bill had a great majority. The Conservative party assumed office, with the marquis of Salisbury as head. A criminal law amendment act for Ireland (1887) and a local government act for England (1888) were passed. In 1887 the jubilee of the queen was celebrated. The Liberals won in the elections in 1892, Gladstone becoming premier. In 1893, Lord Salisbury was returned to power. October 11, 1899, war was declared by the Boers of the Transvaal and Orange Free State, aiming to destroy British paramountcy in South Africa; those states were annexed by the British, in 1900. In 1900, a new parliament was elected, with a slightly increased Conservative majority. Victoria died January 22, 1901, and was succeeded by Edward VII.

In 1902, a new ministry was formed, with A. J. Balfour as premier. The Balfour ministry was succeeded in 1905 by that of Sir Henry Campbell-Bannerman, which, in turn, was succeeded by the Asquith ministry in 1908. The complete autonomy of Australia was recognized in 1907. In 1908, the old age pensions act was passed. The rejection by the lords of important measures led, however, to demands for the curtailment of the powers of the upper house. Parliament was prorogued in January, 1910, and in the new election the Liberals were returned with one vote over the Unionists. The death of Edward, May 6th, interrupted the political warring of the parties only temporarily, and George V. dissolved parliament in November and summoned a new parliament (elected in December).

The Welsh disestablishment bill, the first bill to become a law without the consent of the house of lords, passed the house of commons the third time in May, 1914. The Irish home rule bill similarly passed; both became law with operation suspended for at least one year. In August, 1914, Germany entered into war with Russia. England, France and Russia were allied by an agreement known as the triple entente. Upon the invasion of Belgium by the Germans, Aug. 4, 1914, Great Britain declared war upon Germany. British troops were landed in France, Aug. 8. Great Britain declared war upon Austria, Aug. 12, and upon Turkey, Nov. 5.

In 1915 Germany declared the waters around the British Isles a war zone. With the sinking of the Lusitania, May 7, by a German submarine, 1152 lives were lost. On Oct. 15 Great Britain declared war on Bulgaria. In December the army was increased to 4,000,000. The compulsory service bill became a law, Feb. 10, 1916. On May 31, the German fleet was defeated off Jutland. Lloyd George became prime minister, Dec. 7, forming a new cabinet.

Woman suffrage was adopted Jan. 10, 1918. On Mar. 21-23 the Germans crushed Gough's army in France. During August the British won the great battles of Amiens and Bapaume. Allenby routed the Turks, Sept. 18-22. The British armies broke the Hindenburg line, Sept. 27. On Nov. 21, the German fleet surrendered to Admiral Beatty. Jan. 18, 1919, Lloyd George headed the British delegation at the Peace Conference. Sinn Fein activities in Ireland, continuing throughout 1920-21, resulted in a treaty creating the Irish Free State. Dissatisfaction with British policy in the Near East brought about the resignation of Lloyd George, who was succeeded in 1922 by Andrew Bonar Law. On the latter's retirement, 1923, Stanley Baldwin became prime minister. His government, appealing to the electors on a platform of protection, met defeat and was succeeded in 1924 by Britain's first Labor government, headed by Ramsay MacDonald.

EVENTS OF HUMAN PROGRESS

I. Period of Unrecorded Events — Prehistoric Times.

II. From the Dawn of History to the Birth of Christ — B. C.

III. From the Birth of Christ to the Present Time — A. D.

Our present knowledge of human progress is of two kinds: *First*, that which earlier generations have handed down in the form of written records, and, *Second*, that which is assumed by inference from various relics and tokens of ancient peoples, sometimes found buried in the earth or otherwise preserved. The first of these kinds of knowledge constitutes *history*; the second has to do with unrecorded stages in the life of the human race and is called *prehistoric*. Dates and events at the dawn of history are involved in much doubt. At best the earliest assigned dates are merely approximations and must in every case be so interpreted. All dates earlier than 1000 B. C. are to be regarded as comparative rather than as exact.

PERIOD OF UNRECORDED ACHIEVEMENT — PREHISTORIC TIMES

The Prehistoric Period, the length of which it is impossible to estimate with even approximate correctness, is divided into two parts, the *Paleolithic* or *Old Stone Age* and the *Neolithic* or *New Stone Age*. Before the Paleolithic age, however, there was a period in the life of man during which his progress was so slight that he did not attain even the primitive stage of development which crude flint weapons indicate. In the remote epochs designated by the terms Old Stone Age and New Stone Age, the progenitors of the now dominant peoples struggled upwards toward civilization by successive conquests of nature and of natural forces.

The chief factors in their advance were the acquisition of weapons and tools, the use of fire, the cultivation of plants, and the domestication of animals. Many of their achievements were relatively more important than the harnessing of steam and other great inventions of modern times. Yet when, where, and by whom these progress-shaping things were done seems forever hidden in the voiceless past. The men of those times had not yet invented the alphabet or learned how to preserve the records of their deeds in any form of written language. The mute surviving relics of these periods tell nothing of the story of those who toiled to fashion them, they mention neither persons nor events, they define no periods of time.

I. The Paleolithic Age. This period, called the *Old Stone Age*, is characterized by remains of rough flint and other stone weapons, implements, and utensils found all over the world. These primeval tools and weapons of flint were followed by others made from bone, horn, and ivory, and included daggers, fish hooks, heads of harpoons, needles, and awls, which were ornamented in some cases with crude designs and drawings.

II. The Neolithic Age. Most students of the remains of prehistoric peoples hold to the view that the Neolithic or *New Stone Age* ensued upon the *Old Stone Age* only after a long interval of time. Instead of leaving their chipped flint weapons rough, the men of this period polished their surfaces and ground them to keen cutting edges. They produced fire by striking flint or by rubbing wood. They developed the art of making pottery and of weaving fabrics. They erected various memorials to the dead, including what are known as barrows, cairns, cromlechs, and dolmens. Some primitive peoples, such as the lake dwellers of Switzerland, built rude dwellings. In this period the dog, cat, camel, horse, ox, sheep, pig and goat were widely domesticated. Prehistoric peoples of India tamed the elephant and the humped ox as did the ancient Peruvians the llama, alpaca, and guinea-pig. A large proportion of the cultivated plants still of supreme importance to mankind were in extensive cultivation long before the dawn of history, including wheat, rice, maize, barley, millet, sorghum cane, cabbage, turnip, pea, bean, apple, peach, banana, date, olive, fig, hemp, and flax.

What is defined as *Prehistoric Time* has terminated at widely different periods in different countries. The peoples of the Nile valley and of the Tigris-Euphrates region emerged from the total darkness of the unrecorded past about 5000 B. C. Yet the inhabitants of America remained in the prehistoric period until the discovery of the New World by Columbus in 1492 A. D.

FROM EARLIEST RECORDS TO TIME OF MOSES

B. C.	Arts of Civilization	Babylonia and Assyria	Egypt
5000 (about)	At this date flourishing city-states appear in Mesopotamia, evidencing great antiquity for Babylonian civilization which recent research indicates may be carried back to approximately 8000 or 9000 B. C. Late investigations tend to place the beginning of Egyptian history at about 6000 B. C.	5000 (about). Babylonia peopled by the Sumerians. Well advanced in civilization. Temple of Nippur built.	5000 (about). Predynastic age. Small local Kingdoms in the Nile valley. The Kingdoms of the North and of the South.
			4777. Menes founds first dynasty; builds Memphis. Tombs at Abydos filled with objects inscribed to Menes.
4700	Hieroglyphic writing in Egypt.		
		4500. Kingdom of Shirlpurla in full power.	4650. Uenefes builds pyramid near Kokhome.
4150	Copper tools introduced into Egypt. Stone architecture begun.	4400. E-anna-tum erected the famous stele of the vultures.	4400. Apis, the sacred bull, worshiped at Memphis.
		4000. Nippur the religious center of Babylonia.	
3700	Wheat, barley, and millet grown in Egypt. Ox, goat, cat, greyhound, goose, pictured on early monuments. Figs depicted on pyramid at Gizeh. Mummies wrapped in linen cloth.	3800. Sargon I. greatly extended the empire; built temple to Bel at Nippur.	3900. Khufu (Cheops) builds the Great Pyramid at Gizeh.
			3500. Pyramids built at Sakkarah.
3300	Canal cut at Asyut. Irrigation established.	3300. Temples erected at Agade and Sippar.	
3000	Pigeon domesticated in Egypt.	3000. Gudea builds palaces at Tel-lo.	3000. Capital removed from Memphis to Herakleapolis.
		2800. Urgur and Dungi, Kings of Ur, enlarge temples.	2800. Vigorous reign of Amenemhat.

Earl of Minto, Governor-General.	1898. Invasion of Cuba and Porto Rico by United States. Completion of great Mexican drainage canal.	1898. Argentina provides for a complete network of railways.
1899	Aguinaldo foments the Philippine War. Appointment of the First Philippine Commission. General Wood, Governor of Cuba.	1899. Adjournment of the Joint High Commission.	1899. Cuba and Porto Rico pass to United States by Treaty of Paris.	1899. Venezuelan boundary tribunal meets in Paris.
1900	Civil government established in the Philippines under act of Congress. Galveston flood and hurricane. Civil government in Alaska. American forces sent to China under General Chaffee.	1900. Great fire in Ottawa. Parliamentary elections sustain the Liberal ministry in power.	1900. Cuba constitutional convention meets.	
1901	**McKinley re-elected;** Theodore Roosevelt, Vice-President. Pan-American Exposition. Platt Amendment relating to Cuban independence passed. President McKinley shot at Buffalo, N. Y., September 6th; **Theodore Roosevelt,** President, September 14th.	1901. Population of Canada, 5,338,883. Toronto Exhibition opened.		1901. War declared between Venezuela and Colombia.
1902	President recommends Panama canal purchase. Civil government established in the Philippines. Decision of United States Supreme Court in Northern Securities case.	1902. Canadian-Australian cable laid. Treaty between Newfoundland and U. S.	1902. Revolution in Santo Domingo. Eruption of Mt. Pelée, St. Pierre.	1902. Gen. Uribe, Colombian insurgent leader, surrenders. End of revolution in Venezuela.
1903	Department of Commerce and Labor. Pacific cable completed. Canal treaty with Panama. Cuban Reciprocity Treaty ratified. Alaskan boundary dispute decided.	1903. University of Ottawa founded.	1903. West Indian hurricane destroyed many lives.	1903. The republic of Panama proclaimed. Canal treaty with U. S.
1904	Commercial treaty with China. Arbitration treaty with France. Great fire in Baltimore.	1904. Earl Grey, Governor-General.		1904. Venezuelan diplomatic difficulties with United States.
1905	**Theodore Roosevelt,** President; C. W. Fairbanks, Vice-President.	1905. Decennial census act.		
1906	Destruction of San Francisco by earthquake and fire. Riot at Brownsville, Texas.	1906. British preferential tariff debated.	1906. Revolutions in Central America.	1906. Pan-American conference at Rio de Janeiro.
1907	Pure Food Law became effective. Jamestown Exposition opened. Oklahoma admitted as a State.	1907. Riots against Japanese.	1907. Tehuantepec National Railway opened.	1907. Notable impulse given to trade.
1908	The Aldrich Currency bill introduced in the U. S. Senate.	1908. Tercentenary held at Quebec.	1908. Alexis flees from Hayti.	1908. Labor riot at Chilean mines.

A. D.	FROM THE ADOPTION OF THE CONSTITUTION OF UNITED STATES, 1789 A. D., TO THE PRESENT TIME			
	United States of America	**Canada**	**Spanish North America**	**Spanish South America**
1909	**William H. Taft,** President; James S. Sherman, Vice-President. Payne-Aldrich tariff. Alaska-Yukon-Pacific Exposition. Peary discovers North Pole.	1909. Unusual immigration from United States. Railway development.	1909. Earthquakes in Mexico. Meeting of Taft and Diaz at El Chamizal.	1909. Anarchist uprisings in Argentina suppressed.
1910	Commerce Court created. Postal Savings Banks established.	1910. Death of Goldwin Smith.	1910. President Diaz reëlected.	1910. Mutiny of Brazilian navy.
1911	Postal deficit wiped out. Trust trials before United States Supreme Court; dissolution of Standard Oil Company ordered. Arbitration treaties with Great Britain and France.	1911. Duke of Connaught, Governor-General. Reciprocity with United States defeated.	1911. Diaz forced to resign. Francisco I. Madero, president.	1911. The Rivadavia, largest battle-ship in the world, launched for Argentine navy.
1912	Nation-wide investigation of dynamite conspiracy. Arizona and New Mexico admitted.	1912. Duke of Connaught visits United States.	1912. Insurrection in Mexico.	1912. Railroad across Andes completed.
1913	Parcel Post established. XVI amendment adopted. **Woodrow Wilson,** President; Thomas R. Marshall, Vice-Pres. XVII amendment adopted. California anti-alien land law. Underwood-Simmons tariff law. Glass-Owen currency law.	1913. Unusual prosperity throughout the dominion. Notable extension of Rural Free Delivery system.	1913. Madero, president of Mexico, resigns; is later assassinated. Huerta, leader of insurrection in Mexico.	1913. Development of Amazon valley. Roosevelt visits South America.
1914	Neutrality of United States in European war proclaimed. Nicaragua canal treaty. Federal reserve banks established.	1914. Death of Lord Strathcona. Empress of Ireland sinks.	1914. Revolution in Hayti. U. S. troops at Vera Cruz.	1914. Argentina, Brazil, Chile delegates at Niagara Falls conference.
1915	Federal trade commission. Pan-American financial conference at Washington. Naval advisory board established. Government railroad in Alaska begun.	1915. Canada sends troops and supplies to Europe.	1915. Carranza recognized president of Mexico.	1915. South American delegates at scientific congress, Washington.
1916	Military expedition in Mexico. Purchase of Danish islands approved. Workman's compensation act.	1916. Duke of Devonshire, Governor-General.	1916. Villa's raid on Columbus, N. M.	1916. Irigoyen elected President of Argentina.
1917	Diplomatic relations with Germany severed. **Woodrow Wilson, reelected.** T. R. Marshall, Vice-President. Senate adopts cloture rule. Congress declares war on Germany. Selective Conscription Bill. Government takes over railways.	1917. Woman suffrage granted. Conservatives win election. Terrific explosion wrecks Halifax.	1917. Cuba declares war on Germany. Other states break off relations with Germany.	1917. Brazil declares war on Germany. Argentina, Bolivia, Ecuador, Peru, and Uruguay sever relations with Germany.
1918	Federal fuel administration. War Finance Corporation bill. Daylight saving bill. Man-power registration exceeds 23,000,000. Two million American troops overseas. Republicans win elections.	1918. Prohibition adopted in all provinces. Dominion troops win distinction in France.	1918. Guatemala, Nicaragua, Costa Rica, Honduras, and Hayti declare war on Germany.	1918. Brazil gives Allies interned German ships. General strike in Argentina. Territorial dispute between Peru and Chile.
1919	Death of Theodore Roosevelt. President Wilson heads American delegation to Peace Conference. League of Nations formulated. Prohibition amendment ratified.	1919. Premier Borden delegate at Peace Conference. Death of Laurier.	1919. Tension over foreign concession in Mexico.	1919. Great marine workers strike in Argentina. Brazil excludes German banks.
1920	Railways returned to private management. Army reorganization bill. Woman suffrage amendment ratified.	1920. Premier Borden retires, Arthur Meighen premier.	1920. Carranza overthrown in Mexico by Obregon and de la Huerta.	1920. Argentine-American bank formed.
1921	**Warren G. Harding,** President; Calvin Coolidge, Vice-President. Temporary restriction of immigration act. Disturbances in West Virginia coal fields. Reduction in regular army. Revision of income tax.	1921. Liberals, led by W. L. M. King, win parliamentary elections. Queenston hydro-electric power plant opened.	1921. Central American federation. Revolution in Guatemala. Mexico agrees to protect foreign oil and mining rights.	1921. Chile and Peru bring Tacna-Arica controversy before League of Nations.
1922	Ratification of Washington Conference treaties. General coal strike. Fordney-McCumber tariff law enacted.	1922. Coal strike. Large increase in Canadian foreign trade.	1922. Nicaragua, Honduras, Salvador, renew treaty with United States.	1922. Tacna-Arica dispute submitted to President Harding for arbitration.
1923	Florida abolishes flogging in convict camps. Large movements of Negro population from the South to the North. President Harding dies, August 2; **Calvin Coolidge,** President.	1923. Commercial treaty negotiated with Italy.	1923. United States resumes diplomatic relations with Mexico.	1923. Fifth Pan-American Conference at Santiago, Chile. Brazil crushes local rebellion.
1924	Death of Woodrow Wilson. Congressional investigation of Teapot Dome oil lease. Soldier bonus law enacted. Further exclusion of immigration.	1924. Liquor treaty with the United States ratified.	1924. Dictatorship in Honduras. U.S. dispatches marines.	1924. Constitutional curb placed on power of presidency in Chile.

Feudal System. The name generally given to the system of land tenure and social arrangements which prevailed in Europe during the period commonly known as the Middle Ages. Its essence lay in the close connection which existed under it between social status and the ownership of land. The man who held land from another was looked upon as the dependent and subordinate of the latter. Under the Feudal System both spear and plough helped to pay the rent. *Knight Service* and *Socage* were required from every tenant — the former obliging him to serve, at the call of his landlord, for so many days each year in the field of battle; the latter to give occasional days of labor on the castle grounds, or to send fixed supplies of such things as beef or poultry, meal or honey, to the castle larder. Numbers of serfs, called *Villeins*, tilled little patches of ground under certain conditions, and these were held nominally to be freemen; but the lowest class of serfs took rank with the oxen and the swine which they tended, being, like them, the property of the master. The Feudal System still survives as the basis of many laws relating to land.

Flags, Historic American. According to the historian Lossing the battle-flag of Bunker Hill was the time-honored flag of New England. It had a blue field with the upper inner quarter containing the red cross of St. George, in one section of which was the emblematic pine tree.

The Pine Tree Flag, under which the first naval vessels of the colonists sailed in October, 1775, contained a green pine tree in the center of a white field surmounted by the words "An Appeal to Heaven."

The Rattlesnake Flag, one of the earliest emblems of the colonies, was hoisted by Paul Jones on the ship of war *Alfred* in December, 1775. It was a yellow flag with a rattlesnake in the center coiled over the motto "Don't Tread on Me."

The Continental Flag, raised on Prospect Hill, Cambridge, Mass., January 2, 1776, by General Washington contained the thirteen stripes, one for each colony as in the present flag, but in place of the stars it displayed the crosses of St. George and St. Andrew. This was the first occasion when thirteen alternating stripes of white and red were made the foundation of a national standard.

The Betsy Ross Flag, the first combining the stars and stripes, contained thirteen five-pointed stars arranged in a circle on a blue field. This was made the official flag by the Continental Congress. (*See* United States Flag)

Commodore Perry's Flag at the battle of Lake Erie contained the words of the dying Lawrence, "Don't give up the ship," which have become the watchword of the American navy.

The Flag of Fort McHenry which inspired Francis Scott Key to write "The Star-Spangled Banner," September 14, 1814, contained fifteen stripes and fifteen stars.

The inspiring name *Old Glory* was given to the American flag by Captain William Driver of Salem, Mass., in 1831. It was his salute to a beautiful new flag presented to his ship when starting on a voyage around the world.

Flanders. An ancient country of Europe which comprised the present provinces of East and West Flanders in Belgium, the southern part of the province of Zealand in Holland, and the department of Nord with portions of Pas-de-Calais in France. During the Middle Ages the Flemish cities became very important and the counts of Flanders, though nominally subject to France, were more wealthy and powerful than many European kings. In 1384 Flanders was united to Burgundy. A part of Flanders was transferred to Holland, 1648, and various portions were acquired by France, 1659-1713. The remainder then fell under the rule of Austria. In 1795 Flanders became a part of the French republic. At the Congress of Vienna, 1815, Belgium was joined to Holland to form the Netherlands, but in 1832 Belgium became an independent state. Flanders has been styled the "cockpit of Europe." From the period of the medieval struggles between the French and English to the titanic battles following the German invasion of Belgium and France in 1914, this region has been the scene of sanguinary conflicts.

Florida. The name Florida, derived from a Spanish word meaning "flowery," or perhaps because it was first visited on "Pascua Florida," or Easter Sunday, was originally applied to a much larger region than the present State, its boundaries extending to the Mississippi, and on the north indefinitely. It was first discovered by Ponce de Leon in 1512, who landed near St. Augustine. Spain had no permanent footing till 1565, when the fort was built at St. Augustine. Pensacola was settled in 1696. In 1763, Florida was ceded to the English in exchange for Cuba, but by the treaty of 1783 it was retroceded to Spain. A portion of Florida was seized by the United States in 1803, and in 1819 was purchased from Spain for $5,000,000. Florida was admitted as a State in 1845.

Forum (*fō'rŭm*). In Roman cities, a public place where causes were judicially tried, and orations made to the people. It was a large, open parallelogram, surrounded by porticos. There were six of these forums, viz: the *Romanum*, *Julianum*, *Augustum*, *Palladium*, *Trajanum*, and *Sallustii forums*. The chief was the *Romanum*, called *the* forum.

France. Gallia was the name under which France was designated by the Romans, who knew little of the country till the time of Cæsar. In the Fifth Century it fell completely under the power of the Visigoths, Burgundians, and Franks. In 486 A. D., Clovis, a chief of the Salian Franks, raised himself to supreme power in the North. His dynasty, known as the Merovingian, ended in 752. The accession of Pepin gave new vigor to the monarchy, which, under his son and successor, Charlemagne (768-814), rose to the rank of the most powerful empire of the West. On the death of Louis V. the Carlovingian Dynasty was replaced by that of Hugues, Count of Paris, whose son, Hugh Capet, was elected king by the army, and consecrated at Rheims, 987.

Louis le Gros (1108-37) waged war against Henry I. of England; and when the latter allied himself with the Emperor Henry V. of Germany against France he brought into the field an army of 200,000 men. The *oriflamme* is said to have

been borne aloft for the first time on this occasion as the national standard. Louis VII. (1137-80) was almost incessantly engaged in war with Henry II. of England. His son and successor, Philippe Auguste (1180-1223), recovered Normandy, Maine, Touraine, and Poitou from John of England. He took an active personal share in the Crusades. Philippe was the first to levy a tax for the maintenance of the standing army. Many noble institutions date their origin from this reign, as the University of Paris, the Louvre, etc. St. Louis IX. effected many modifications in the fiscal department, and, before his departure for the Crusades, secured the rights of the Gallican Church by special statute, in order to counteract the constantly increasing assumptions of the papal power. Philippe IV. (1285–1314), surnamed *Le Bel*, acquired Navarre, Champagne, and Brie by marriage. Charles IV. (*Le Bel*) (1321–28) was the last direct descendant of the Capetian line. Philippe VI., the first of the House of Valois (1328–50), succeeded in right of the Salic law. His reign, and those of his successors, Jean (1350–64) and Charles V. (*Le Sage*) (1364–80), were disturbed by constant wars with Edward III. of England. Hostilities began in 1339; in 1346 the battle of Crécy was fought; at the battle of Poitiers (1356) Jean was made captive; and before the final close, after the death of Edward (1377), the state was reduced to bankruptcy. During the regency for the minor, Charles VI. (*Le Bien Aime*) (1380–1422), the war was renewed with increased vigor on the part of the English nation. The signal victory won by the English at Agincourt in 1415 aided Henry in his attempts upon the throne. But the extraordinary influence exercised over her countrymen by the Maid of Orleans aided in bringing about a thorough reaction, and, after a period of murder, rapine, and anarchy, Charles VII. (*Le Victorieux*) (1422–61) was crowned at Rheims. His successor, Louis XI. (1461–83), succeeded in recovering for the crown the territories of Maine, Anjou, and Provence, while he made himself master of some portions of the territories of Charles the Bold, Duke of Burgundy. Charles VIII. (1483–98), by his marriage with Anne of Brittany, secured that powerful state. With him ended the direct male succession of the House of Valois. Louis XII. (1498–1515) (*Le Père du Peuple*) was the only representative of the *Valois-Orleans* family; his successor, Francis I. (1547), was of the *Valois-Angoulême* branch. The defeat of Francis at the battle of Pavia, in 1525, and his subsequent imprisonment at Madrid, threw the affairs of the nation into the greatest disorder. In the reign of Henri II. began the persecutions of the Protestants. Henri III. (1574–89) was the last of this branch of the Valois. The massacre of St. Bartholomew (1572) was perpetrated under the direction of the queen-mother, Catharine de' Medici, and the confederation of the League, at the head of which were the Guises. The wars of the League, which were carried on by the latter against the Bourbon branches of the princes of the blood-royal, involved the whole nation in their vortex. The succession of Henri IV. of Navarre (1589–1610), a Bourbon prince, descended from a younger son of St. Louis, allayed the fury of these religious wars, but his recantation of Protestantism in favor of Catholicism disappointed his own party. During the minority of his son, Louis XIII. (1610–43), Cardinal Richelieu, under the nominal regency of Marie de' Medici, the queen-mother, ruled with a firm hand. Cardinal Mazarin, under the regency of the queen-mother, Anne of Austria, exerted nearly equal power for some time during the minority of Louis XIV. (1643–1715). The wars of the Fronde, the misconduct of the parliament, and the humbling of the nobility gave rise to another civil war, but with the assumption of power by young Louis a new era commenced, and till near the close of his long reign the military successes of the French were most brilliant. Louis XV. (1715–75) succeeded to a heritage whose glory was tarnished, and whose stability was shaken to its very foundations during his reign. The Peace of Paris, 1763, by which the greater portion of the colonial possessions of France were given up to England, terminated an inglorious war, in which the French had expended 1,350 millions of francs. In 1774 Louis XVI., a well-meaning, weak prince, succeeded to the throne. The American war of freedom had disseminated republican ideas among the lower orders, while the Assembly of the Notables had discussed and made known to all classes the incapacity of the government and the wanton prodigality of the court. The nobles and the *tiers état* were alike clamorous for a meeting of the states, the former wishing to impose new taxes on the nation, and the latter determined to inaugurate a thorough and systematic reform. After much opposition on the part of the king and court the *États Généraux*, which had not met since 1614, assembled at Versailles on May 25, 1789. The resistance made by Louis and his advisers to the reasonable demands of the deputies on the 17th of June, 1789, led to the constitution of the National Assembly. The consequence was the outbreak of insurrectionary movements at Paris, where blood was shed on the 12th of July. On the following day the national guard was convoked, and on the 14th the people took possession of the Bastile. The royal princes and all the nobles who could escape sought safety in flight. The royal family, having attempted in vain to follow their example, tried to conciliate the people by the feigned assumption of republican sentiment; but on the 5th of October the rabble, followed by numbers of the national guard, attacked Versailles, and compelled the king and his family to remove to Paris, whither the Assembly also moved. A war with Austria was begun in April, 1792; and the defeat of the French was visited on Louis, who was confined in August with his family in the Temple. In December the king was brought to trial. On January 20, 1793, sentence of death was passed upon him, and on the following day he was beheaded. Marie Antoinette, the widowed queen, was guillotined; the dauphin and his surviving relatives suffered every indignity that malignity could devise. A reign of blood and terror succeeded. The brilliant exploits of the young general, Napoleon Bonaparte, in Italy.

turned men's thoughts to other channels. In 1795, a general amnesty was declared, peace concluded with Prussia and Spain, and the war carried on vigorously against Austria. The Revolution had reached a turning-point. A directory was formed to administer the government. In 1797, Bonaparte and his brother-commanders were omnipotent in Italy. Austria was compelled to give up Belgium, accede to peace on any terms, and recognize the Cisalpine republic. Under the pretext of attacking England a fleet of 400 ships and an army of 36,000 picked men were equipped. The directory sent Bonaparte with them to Egypt; but he resigned the command to Kléber, landed in France in 1799, supplanted the directory, and secured his own nomination as consul. In 1800, a new constitution was promulgated, vesting executive power in Bonaparte. Rejoining his army, he crossed the Alps, and defeated the Austrians at Marengo. In 1804, Bonaparte was proclaimed emperor. The disastrous Russian campaign was soon followed by the falling away of his allies. The defeat of Leipzig compelled the French to retreat beyond the Rhine. The Swedes reinforced his enemies on the east, while the English pressed on from the west; Paris, in the absence of the emperor, capitulated after a short resistance, March 30, 1814. Napoleon retired to the island of Elba. On the 3d of May, Louis XVIII. (the brother of Louis XVI.) made his entry into Paris. On March 1, 1815, Napoleon left Elba, and landed in France. Crowds followed him; the soldiers flocked around his standard; the Bourbons fled, and he took possession of their lately deserted palaces. The news spread terror through Europe; on the 25th of March a treaty of alliance was signed at Vienna between Austria, Russia, Prussia, and England, and preparations made to restore the Bourbon dynasty. At first success seemed to attend Napoleon; but on the 18th of June he was defeated at Waterloo. Placing himself under the safeguard of the English, he was sent to the island of St. Helena, where, on May 5, 1821, he died.

In 1824, Louis XVIII. died and his brother succeeded to the throne as Charles X. reigning until the revolution of 1830, and the election to the throne of Louis Philippe as king, by the will of the people. Louis Philippe abdicated (February 24, 1848) and a republic was proclaimed. Louis Napoleon was elected president in December, 1848; but by the famous *coup d'état* of December 2, 1851, he violently set aside the constitution, and assumed dictatorial powers. A year later he was raised to the dignity of emperor as Napoleon III. The course of events in the short but terrible Franco-German war of 1870-71 electrified Europe by its unexpected character. On September 2, 1870, Napoleon, with 90,000 men, surrendered at Sedan. A republic was proclaimed, and the first national assembly met at Bordeaux in February, 1871. The assembly organized a republican government, and nominated Thiers president of the French republic, but with the condition of responsibility to the national assembly. In 1873, Thiers resigned, and was succeeded by Marshal MacMahon, who resigned in 1879, and was succeeded by Jules Grévy. In 1887, Sadi-Carnot was chosen president. He was assassinated June 24, 1894. His successor was Casimir-Perier, who resigned January 15, 1895, and was succeeded by François Félix Faure. President Faure was assassinated in 1899, and his successor was Emile Loubet, during whose administration the famous Dreyfus case was reopened. During the term of Armand Fallières, who was chosen president in 1906, occurred the enforced separation of church and state. On Jan. 17, 1913, Raymond Poincaré was elected president.

On Aug. 3, 1914, Germany declared war on France, and by Aug. 12 troops were engaged along a battlefront extending from Holland to Switzerland. After advancing to within 20 miles of Paris, the Germans turned eastward, Sept. 4, to attack the main French army commanded by Gen. Joffre. In the ensuing battle of the Marne, Sept. 6-10, the Germans were defeated, and retreated to the Aisne.

Following the battle of the Aisne, September 12-28, the Germans established defensive lines from Belfort to the sea, from which they launched powerful thrusts toward Paris and the English Channel. While there was continuous fighting along the whole front, and many tremendous battles, such as Ypres, Artois, and Loos, 1915, Verdun and the Somme, 1916, and Arras and Cambrai, 1917, with some local gains for each opponent, the whole situation remained practically at a deadlock until March, 1918. The Germans, by powerful attacks, then menaced Paris and Calais. In this crisis, Gen. Foch was placed in supreme command of the allied armies. By a counter offensive, he brought the great German advance to a complete halt near the Marne, July 18, and instantly began a campaign of unremitting attacks which ended in the submission of Germany to the Allies under the terms of the armistice of November 11, 1918.

By the Treaty of Versailles, 1919, Alsace-Lorraine was restored to France. In January, 1920, Deschanel was chosen president. Following his resignation in September, Premier Millerand was made president with Leygues as premier. Leygues was succeeded in January, 1921, by Briand. Resenting criticism of his foreign policy, Briand resigned in January, 1922. Raymond Poincaré was then made premier.

In January, 1923, French troops occupied the Ruhr valley, Germany's greatest industrial district, with the purpose of forcing Germany to make reparations payments. Elections held in 1924 resulted in the defeat of Poincaré and in the increased influence of the various Socialist groups.

French Revolution, The First. From May 5, 1789, to July 27, 1794. *Chief Leaders of the First French Revolution:* Comte de Mirabeau, 1789-1791; Danton, from the death of Mirabeau to 1793; Robespierre, from June, 1793, to July 27, 1794. Next to these three were St. Just, Couthon, Marat, Carrier, Hébert, Santerre, Camille Desmoulins, Roland and his wife, Brissot, Barnave, Sieyès, Barras, and Tallien.

Great Days of the First French Revolution: June 17, 1789, the *Tiers État* constituted itself into the "National Assembly"; June 20th, the day of the *Jeu de Paume*, when the Assembly took an oath not to separate until it had given

France a constitution; July 14th, Storming of the Bastille; October 5th and 6th, the king and National Assembly transferred from Versailles to Paris. This closed the ancient *régime* of the court. June 20, 21, 1791, flight and capture of the king, queen, and royal family. June 20, 1792, attack on the Tuileries by Santerre; August 10th, attack on the Tuileries and downfall of the monarchy; September 2d, 3d, and 4th, massacre of the state prisoners. January 21, 1793, Louis XVI. guillotined; May 31st, commencement of the Reign of Terror; June 2d, the Girondists proscribed; October 16th, Marie Antoinette guillotined; October 31st, the Girondists guillotined. April 5th, 1794, downfall of Danton; July 27th, downfall of Robespierre.

Frisians or Frisii (later called Frisones). An ancient Germanic people, who inhabited the extreme northwest of Germany, between the mouths of the Rhine and Ems, and were subjected to the Roman power under Drusus. They were subdued by the Franks, and, on the division of the Carlovingian Empire, their country was divided into West Frisian (West Friesland) and East Frisian (East Friesland). The language of the Frisians is intermediate between the Anglo-Saxon and the Old Norse. Our knowledge of the old Frisian is derived from certain collections of laws; as the "Asegabuch," composed about 1200; the "Brockmerbrief," in the Thirteenth Century; the "Œpnsiger Domen," about 1300, and some others.

Fronde, a name given to a revolt in France opposed to the Court of Anne of Austria and Mazarin during the minority of Louis XIV. The war which arose, and which was due to the despotism of Mazarin, passed through two phases; it was first a war on the part of the people and the parliament, called the Old Fronde, which lasted from 1648 till 1649, and then a war on the part of the nobles, called the New Fronde, which lasted till 1652, when the revolt was crushed by Turenne to the triumph of the royal power. The name is derived from the mimic fights with slings in which the boys of Paris frequently indulged, and which even went so far as to beat back at times the civic guard sent to suppress them.

Garde Nationale, a guard of armed citizens instituted in Paris, July 13, 1789. At first it numbered 48,000 men, but was increased to 300,000 when it was organized throughout the whole country. Marquis de Lafayette was its first commander. It was reorganized by the Directory and by Napoleon, and again under the Bourbons and was dissolved in 1827. Under Louis Philippe it was resuscitated and contributed to his overthrow. In 1851, the national guard was again reorganized, but in 1855 dissolved. In 1870, the national guard of Paris was formed for the defense of the city against the Prussians. The resistance of a section of the guard to the decree of disarmament led to the communal war, at the close of which the guard was declared dissolved by the National Assembly (1871).

Geneva Convention, a convention signed by the chief European continental powers in 1864, providing for the succor of the sick and wounded in war. It has since been ratified by the United States, Great Britain, Japan, and about forty other nations. The chief provisions are: (1) The neutrality of ambulances and military hospitals. (2) The personnel of such ambulances and hospitals, including sanitary officers and naval and military chaplains, to be benefited by the neutrality. (3) The inhabitants of a country, rendering help to the sick and wounded, are to be respected and free from capture. (4) No distinction to be made between the sick and wounded, on account of nationality. (5) A flag and uniform to be adopted, and an armlet for the personnel of ambulances and hospitals. The flag and armlet to consist of a red Greek cross on a white ground. The Turks use a red crescent in place of the cross. Other provisions have since been added intended to mitigate the severity of naval combat, and cover cases of capture and sinking of vessels. To carry out the terms of this convention, the International Society for the Aid of the Sick and Wounded has been organized, with committees in the chief towns in the United States and in Europe. It first played an important part in the Franco-German War, every nation sending its contingent of ambulances, surgeons, etc. In the Spanish-American War the Cuban Central Relief Committee used the Red Cross Society as an agency in the distribution of relief.

Georgia. Named after King George II. of England. Georgia was the latest settled of the thirteen colonies, which first formed the United States. The country was originally included in the charter of Carolina. In 1732 the territory was granted to a corporation, which sent out the first colony under Sir James Oglethorpe the same year. In 1733 Savannah was founded. General Oglethorpe commanded the forces of Carolina and Georgia in the unsuccessful expedition against St. Augustine in 1740. In 1752, Georgia became a royal government under regulations similar to those of the other colonies. During the Revolution Georgia was overrun by the British, and Savannah captured in 1778. The Constitution of the United States was ratified January 2, 1788. The State seceded January 19, 1861. The principal military events were those about Atlanta, resulting in its evacuation, and Sherman's March to the Sea, all in 1864. Georgia was formally readmitted to the Union July 15, 1870. An International Cotton Exposition was held at Atlanta in 1881, which gave a pronounced impulse to that industry in the South. The State enacted a law in prohibition of the liquor traffic in 1907.

Germany. After the gradual retirement of the Romans from Germany the country became divided into petty states and governments, where the influence of France was soon made apparent on both sides of the Rhine, asserting supremacy over the whole of the west of Germany. Charlemagne, extending his conquests from the North Sea to the Alps, and from the Rhine to Hungary, laid the foundation of that long line of emperors and kings who occupied the German throne for upward of 1,000 years. On the extinction, in 911, of the Carlovingian dynasty, the archbishops, bishops, and abbots arrogated to themselves the right of electing their sovereign, who could not, however, assume the imperial title till he was crowned

by the pope. At this period there were in Germany five nations—the Franks, Saxons, Bavarians, Swabians, and Lorrainers. Their choice of a ruler fell upon the Count of Franconia, who, under the title of Conrad I., reigned King of Germany from 911-18. He was succeeded by Henry, Duke of Saxony, who gained conquests over the Danes, Slavs, and Magyars, which was confirmed and extended by his son and successor, Otho I. (936-73), who carried the boundaries of the empire beyond the Elbe and Saale. In 1039-56 Henry III. extended German supremacy over Hungary. In 1125 the male line of the Franconian dynasty became extinct by the death of Henry V.; Lothaire of Saxony occupied the throne till 1138; when the reins of power were assumed by Conrad III., Duke of Franconia, in whose reign the civil wars of the Guelphs and Ghibellines began. He was the first of the Hohenstauffen dynasty. He was succeeded by the famous Frederick I., surnamed Barbarossa, who, with the flower of his chivalry, perished in the Crusades. In 1273 Rudolf I., the first of the Habsburg line, which still reigns in Austria, began his reign, and restored order by destroying the strongholds of the nobles. For the next 200 years, counting from 1292, the period of the accession of Adolphus, the history of the German Empire presents few features of interest. In 1493 Maximilian I., succeeded his father, Frederick III., married Mary, daughter of Charles the Bold of Burgundy, and became, consequently, involved in the general politics of Europe, while his opposition to the reformed faith preached by Luther embittered the religious differences which marked the close of his reign. He was succeeded by Charles V., who, although opposed to the Reformation, left the princes of Germany to settle their religious differences among themselves, and to quell the insurrection of the peasants in 1525, which threatened to undermine society. He abdicated in favor of his brother Ferdinand in 1556, who granted entire toleration to the Protestants. Ferdinand's reign was disturbed by domestic and foreign aggressions. Anarchy, both civil and religious, now obtained in his dominions to such an extent as to culminate in the Thirty Years' War, which closed under Ferdinand III. by the treaty of Westphalia, 1648. This terrible war depopulated the rural districts of Germany, destroyed its commerce, crippled the powers of the emperors, burdened the people with taxes, and cut up the empire into a multitude of petty states, whose rulers exercised almost absolute power. The male line of the Habsburg dynasty expired with Charles VI., 1740. The reign of this potentate and that of his predecessor, Joseph I., were signalized by the victories won by the imperialist general, Prince Eugene, and Marlborough, over the French. During the Seven Years' War Frederick the Great, of Prussia, maintained his character for skillful generalship at the expense of Austria. During the life-time of Maria Theresa she retained her authority over all the Christian states, but on her death her son, Joseph II., was little more than nominal sovereign. In 1792 Francis II. was crowned Emperor of Germany; in 1804 he assumed the title Francis I. Emperor of Austria; in 1806 he resigned the German crown and assumed the title of Emperor of Austria, having suffered a series of defeats by the armies of the French Republic. From this period till 1814-15 Germany was almost wholly at the mercy of Napoleon, who deposed the established sovereigns, and dismembered the states in the interest of his own favorites. Of the 300 states into which the empire was divided there remained only forty—a number subsequently reduced to thirty-five. The Diet was now reorganized by all the allied states as the legislature and executive organ of the Confederation. The French Revolution of 1830 reacted sufficiently to constrain the rulers of some of the German states to give written constitutions to their subjects. In 1848 insurrectionary movements compelled the convocation of a natural congress of representatives of the people. The Archduke John of Austria was elected vicar of the newly organized government. The refusal of the King of Prussia to accept the imperial crown which was offered him by the parliament was followed by a provisional regency of the empire. In 1850 the Diet was restored by Austria and Prussia. In 1859 the federal army was mobilized, and the Prussian prince regent made commander-in-chief. By the treaty of Gastein, Austria and Prussia agreed to a joint occupation of the Elbe duchies; but to prevent collision it was judged prudent that Austria should occupy Holstein and Prussia Schleswig. Prussia was believed to have the intention of annexing the duchies, while Austria began to favor the claims of Prince Frederick of Augustenburg. In 1866 Austria, disregarding the convention of Gastein, placed the whole matter at the disposal of the Bund. Prussia protested, declared war, and quickly defeated Austria. Austria then gave up all claims to Schleswig-Holstein, and also restored Venetia to Italy.

In 1870 the Franco-Prussian war resulted in the utter humiliation of the French arms, and the cession of Alsace-Lorraine, containing 5,605 square miles of territory, together with the payment of five billion francs as additional indemnity. The German empire, reconstructed in 1870, as a result of this conflict, grew out of the North German Confederation established in 1866. On January 18, 1871, King William of Prussia received at Versailles the title of German emperor. He was succeeded in 1888 by his son Friedrich III. who reigned three months.

Friedrich III. was succeeded by his son William II., whose early reign was marked by the formation of the Triple Alliance, with Austria and Italy, by the acquisition of foreign dependencies, and by rapid industrial and commercial progress. His later reign witnessed an enormous and ever increasing expansion of military and naval armament to keep pace with a colossal ambition for world conquest and world power. In furtherance of these aims, Germany supported Austria against Russia in the Balkans, formed an alliance with Turkey to gain access to Asia, and made bold demands for French and Belgian territory in Africa.

All these plans for vast military conquests were brought to a head when Austria-Hungary, with the approval of Germany, declared war on

Serbia, July 28, 1914. Russia, to aid Servia, began mobilization. This led Germany to declare war on Russia, Aug. 1, and upon France, as an ally of Russia, Aug. 3. Upon Belgium's refusal to grant passage of troops to invade France, German forces stormed Liége, Aug. 4-7, whereupon England declared war on Germany. The Germans took Louvain, Brussels, and Ghent. Defeating the British at Mons and the French at Charleroi, they forced the allied armies back into France. After following the British southward, nearly to Paris, the Germans turned eastward in an attempt to crush the main French armies. Severely defeated in the ensuing battle of the Marne, Sept. 6-10, the Germans retreated and fought an indecisive struggle on the Aisne, Sept. 12-28. Establishing defensive lines from Switzerland to the sea, the German armies maintained their positions on the Franco-Belgian front essentially unchanged for nearly four years, despite terrific battles with huge losses for both sides.

On Feb. 1 , 1917, Germany began unrestricted submarine warfare, which led the United States to declare war on Germany, Apr. 6. On Mar. 3, 1918, the Russian Bolsheviki signed at Brest-Litovsk a separate peace with Germany. Mar. 21, 1918, Ludendorff began a series of tremendous attacks to separate and destroy the British and French armies in France before the arrival of effective American aid. After achieving marked local success and approaching within 40 miles of Paris, the German armies were thrown back by allied counter attacks, July 18, and steadily defeated until November. William II. abdicated and fled to Holland upon the signing of the armistice of Nov. 11, 1918, the terms of which included the surrender of the German fleet and the occupation of the east bank of the Rhine by the Allies. On Nov. 24, American troops entered Rhenish Prussia.

A new government was proclaimed, with Friedrich Ebert as provisional chief executive. In the parliamentary election held Jan. 19, 1919, the moderate socialists prevailed. On Feb. 11, 1919, a provisional republican constitution was adopted and Ebert became president of the new German state. By the Treaty of Versailles, Germany restored Alsace-Lorraine to France and agreed to make substantial reparations.

The amount of the reparations, to be fixed by a commission, remained in dispute. Meanwhile, despite apparent industrial activity, the continued depreciation of the mark wrought havoc with the economic interests of the middle classes in Germany. At length, the reparations commission declared Germany in voluntary default in deliveries of coal and wood, under the Peace Treaty. France thereupon occupied the Ruhr valley in January, 1923. Backed by the German government, the Ruhr inhabitants opposed the French with a policy of passive resistance.

Gettysburg, Battle of, fought July 1-3, 1863, between the Union Army under General Meade, and the Confederates under General Lee. During May the armies lay fronting each other upon the Rappahannock. Early in June Lee began his movement for the invasion of Pennsylvania, crossing the Potomac on the 24th and 25th, and reaching Chambersburg, Pa., on the 27th. General Hooker, then in command of the Army of the Potomac, moved in the same general direction, but on the 28th was relieved, and the command given to Meade. In order to prevent his communications from being severed, Lee turned back toward Gettysburg to give battle. Meade had intended to give battle at a spot several miles from Gettysburg, near which was, however, a small portion of his army. This came into collision about 8 A. M. on July 1st, with the advance of Lee, and was forced back, taking up a strong position on Cemetery Hill, in the rear of Gettysburg. Hancock, who had been sent forward to examine the position reported that Gettysburg was the place at which to receive the Confederate attack, and Meade hurried his whole force to that point. The action on the second day, July 2d, began about 4 P. M. with an attempt made by Lee to seize Round Top, a rocky hill from which the Union position could be enfiladed. When this day's fighting closed Lee was convinced that he had greatly the advantage, and he resolved to press it the next day. On the morning of July 3d, an attempt was made upon the extreme Union right, but repelled. The main attack on the center was preluded by a cannonade from 150 guns, which was replied to by eighty, little injury being inflicted by either side. About noon the Union fire was slackened in order to cool the guns, and Lee, thinking that the batteries were silenced, launched a column of 15,000 or 18,000 against the Union lines. Some of this column actually surmounted the low works, and a brief hand-to-hand fight ensued. But the column was practically annihilated. No official report of the Confederate loss was ever published; the best estimates put it at about 18,000 killed and wounded, and 13,600 missing, most of them prisoners. The Union loss was 23,187, 16,543 of whom were killed and wounded.

Ghibellines (*gĭb'ĕl-lēnz*). The name of a celebrated political faction which existed in Italy during the Thirteenth Century and sprung out of the disputed succession to the imperial throne of Germany, vacated in 1137 by the death of Lothaire II. Conrad of Hohenstaufen, his elected successor, found his claim disputed by Henry of Guelph (surnamed the Proud), Duke of Saxony and Bavaria. At the latter's death his pretentions became personified in his son Henry the Lion, Duke of Brunswick, whose adherents called themselves *Guelphs* after his patronymic, in distinction from the *Ghibellines*, who derived their cognomen from Conrad's lordship of *Weiblingen*, 1140. Their feud after a while extended to Italy, over which the German emperors claimed supremacy against the popes, the *Guelphs* becoming there the supporters of the latter. This strife did not terminate until the French invasion of Charles VIII. in 1495.

Girondists (*ji-ron'dists*), the name given to the moderate Republicans in the first French Revolution. The name was derived from the department of Gironde, which chose for its representatives in the Legislative Assembly five men who greatly distinguished themselves by their oratory, and who, being joined by Condorcet, Brissot, and the moderate Republicans who were the adherents of Roland, formed a powerful

Conservative party. They fell during the Reign of Terror, and most of them perished on the scaffold.

Gladiators, in *Ancient Rome,* professional combatants, who fought in the arena for the amusement of the people. They were at first slaves, prisoners, or convicts; but afterwards freemen fought in the arena, either for hire or from choice. When a gladiator was severely wounded, so as to be unable to fight any longer, his antagonist stood over him with his sword lifted, and looked up to the assembly for its fiat. If the majority turned their thumbs downwards, that was the signal of death. The practice was defended, even by Cicero, as serving to keep up a martial spirit and a contempt of death among the people. Constantine prohibited gladiators' fights by an edict (A. D. 325), but the practice was not wholly extinct till the time of Theodoric (A. D. 500).

God's Truce, or The Truce of God. A singular institution of the Middle Ages, which originated in a council assembled at Limoges at the end of the Tenth Century, and in the council of Orléans, 1016. It consisted in the suspension for a stated time, and at stated seasons and festivals, of that right of private feud for the redress of wrongs, which, under certain conditions, was recognized by mediæval law or usage. It prevailed chiefly in France and the German Empire; and fell gradually into disuse when the right of private redress was restricted, and at last entirely abolished by laws.

Goths. A powerful German people, who originally dwelt on the Prussian coast of the Baltic, at the mouth of the Vistula, but afterwards migrated south. About the beginning of the Third Century we find them separated into two great divisions, the Ostrogoths or Eastern Goths, and the Visigoths or Western Goths. The former were settled in Mœsia and Pannonia, while the latter remained north of the Danube. At the beginning of the Fifth Century, the Visigoths, under their King Alaric, invaded Italy, and took and plundered Rome (A. D. 410). A few years later they settled in the southwest of Gaul, and thence invaded Spain, where they founded a kingdom which lasted for more than two centuries. Meantime, the Ostrogoths extended their dominion almost up to the gates of Constantinople, and, under their King Theodoric (A. D. 489) obtained possession of the whole of Italy. Their dominion over Italy lasted, however, only till 554, when it was overthrown by Narses, the general of Justinian. From this time, the Goths figure no longer in Western Europe, except in Spain, from which they were finally driven by the Arabs. But their name was perpetuated long after in Scandinavia, where a Kingdom of Gothia existed till 1161, when it was absorbed in that of Sweden. Of Gothic literature, in the Gothic language, we have the translation of the Scriptures by Ulphilas, which belongs to the Fourth Century, and some other religious writings and fragments.

Greece. Prior to the first recorded Olympiad, B. C. 776, little is certain in Greek history. Long anterior to this the country had been inhabited, but fact and fable are so mingled in the accounts that have come down to us that it is impossible to distinguish the true from the false. Starting, then, from the period above indicated, we shall give a brief *résumé* of the chief historic events up to the conquest of Greece by the Turks in 1456 A. D.— Olympic Games revived at Elis, 884 B. C.; the first Olympiad dates from 776 B. C.; the Messenian Wars occurred from 743–669; the first sea-fight on record, between the Corinthians and the inhabitants of Corcyra, 664; Byzantium built, 657; the seven sages of Greece (Solon, Periander, Pittacus, Chilo, Thales, Cleobulus, and Bias) flourished about 593; Persian conquests in Ionia occurred in 544; Sybaris in Magna Græcia destroyed, and 100,000 Crotonians under Milo defeat 300,000 Sybarites, 508; Sardis burned by the Greeks, which causes an invasion by the Persians, 504; Thrace and Macedonia are conquered, 496; Athens and Sparta defy the Persians, 490; the Persians are defeated at Marathon, 491; Xerxes invades Greece, but is repulsed at Thermopylæ by Leonidas, 480; battle of Salamis occurs, 480; Mardonius is defeated and slain at Platæa, and the Persian fleet is destroyed at Mycale, 479; battle of Eurymedon, which ends the Persian War, 466; Athens attempts to obtain an ascendency over the rest of Greece, 459; the first "sacred war" begun, 448; Corinth and Corcyra involved in war, 435, which leads to the Peloponnesian War, lasting from 431–404; the Athenian expedition to Syracuse ends disastrously, 415–413; the retreat of the 10,000 under Xenophon occurs, 400; Socrates dies, 399; great sea-fight at Cnidas, 394; the peace of Antalcidas, 387; Thebes arrives at the height of its power in Greece between the years 370–360; the battle of Mantinea, and death of Epaminondas, 362; Philip of Macedon reigns, 353; the sacred war is stopped by Philip, who captures all the towns of the Phocæans, 348; battle of Chæroneia, 338; Alexander enters Greece, conquers the Athenians, and destroys Thebes, 335; he conquers the Persian Empire, 334–331; Greece invaded by the Gauls, 280; they are defeated at Delphi, 279; and finally expelled, 277; internal feuds lead to interference by the Romans, 200; Mummius conquers Greece, and makes it a Roman province, 147-146. Under Augustus and Hadrian Greece was prosperous, 122–133 A. D.; Alaric invades Greece, 396; it is plundered and ravaged by the Normans from Sicily, 1146; conquered by the Latins, 1204; the Turks under Mohammed II. conquer Athens and part of Greece, 1456; thence, till 1822, the country was a province of Turkey. The revolt of the Greeks from Turkish rule took place March 6, 1821, under Alexander Ypsilanti, and on January 1, 1822, they declared their independence. In 1825, the Turks partially reoccupied the country, but were finally forced to evacuate in 1828. At last, on February 3, 1830, a protocol of the allied powers declared the independence of Greece, which was recognized by the Porte on the 25th of April, of this year. The crown was offered to Leopold, Prince of Saxe-Coburg, and when he refused it, to Otho, a young prince of Bavaria, who was proclaimed king of the Hellenes at Nauplia in 1832. But his arbitrary measures, and the preponderance which he gave to Germans in the government, made him unpopular, and, although

after a rebellion in 1843, a constitution was drawn up, he was compelled by another rebellion in 1862 to abdicate. A provisional government was then set up at Athens, and the national assembly offered the vacant throne in succession to Prince Alfred of England and Prince William George of Denmark. The latter accepted it, and on March 30, 1863, was proclaimed as King George I. In 1864, the Ionian islands were annexed to Greece.

Greece long sought to extend its frontier northwards, to include the large Greek population in Thessaly and Epirus. In 1878 Greek troops were moved into Thessaly and Epirus, but were withdrawn on the remonstrance of Britain. The persistence of Greece led, in 1881, to the cession to her of Thessaly and part of Epirus, about one-third less than the territory promised by the Berlin congress. The union of Eastern Rumelia with Bulgaria, in 1885, gave rise to a demand for a rectification of frontiers, and war with Turkey was prevented only by the great powers, who enforced peace by blockading the Greek ports. In 1896 war was declared against Turkey when the people of Crete demanded their right to become a portion of Grecian territory. The result was a disastrous defeat.

In 1912, disputing Turkish boundaries and authority, Greece, Bulgaria, Servia, and Montenegro declared war on Turkey. By treaties which closed the war in 1913, Greece acquired Crete, Thessaly, and parts of Epirus, Macedonia, and Thrace, including the ports of Saloniki and Kavala. Upon the assassination of King George, 1913, his son Constantine I., brother-in-law of the German kaiser, became king.

When the World War began, in 1914, Greece remained neutral. The king, Constantine, was pro-German; the premier, Venizelos, was pro-Ally. In March, 1915, the Venizelist ministry fell. In 1917, Constantine was forced to abdicate in favor of his son Alexander. Greece then joined the Allies. Upon the death of Alexander, Constantine was recalled in December, 1920. After the disastrous result of his campaigns in Asia Minor, he was forced to abdicate in 1922, in favor of his son George II. Greece was compelled to surrender eastern Thrace to Turkey, and to consent to deportation of Greeks from Anatolia in exchange for Turkish nationals in Greece. After serious dissensions, a referendum was held in 1924, by which the people declared for the establishment of a republic.

Gunpowder Plot, The. The name given to a conspiracy projected by Guy Fawkes and some revolutionary associates against James I. and the members of the two Houses of Parliament, with a design to their destruction by undermining the building in which they were expected to assemble, placing there charges of gunpowder, and firing the same, November 5, 1605. The plot, however, proved abortive, and the conspirators met the penalty of their crime.

Hanse Towns. The name given to certain towns in Germany, so called from the Hanseatic League, which was formed in 1241, for the protection of the ports against the piracies of the Swedes and Danes. At first the League consisted only of towns situated on the coast of the Baltic; but it became so powerful, and exercised so many privileges, that ultimately it included many of the principal cities of Europe. The League consisted, in 1370, of sixty-six cities and forty-four confederate towns. The Thirty Years' War in Germany (1618-48) broke up the association. The only towns now known as Hanse Towns are Hamburg, Lübeck, and Bremen.

Habsburg, or Hapsburg (properly Habichtsburg or Habsburg, the hawk's castle). A small place in the Swiss Canton of Aargau, on the right bank of the Aar. The castle was built about 1027 by Bishop Werner of Strassburg. Werner II., who died in 1096, is said to have been the first to assume the title of Count of Habsburg. After the death, about 1232, of Rudolf II., the family divided into two branches the founder of one of which was Albert IV. In 1273, Rudolf, son of Albert IV., was chosen Emperor of Germany, and from him descended the series of Austrian monarchs, all of the Habsburg male line, down to Charles IV. inclusive. After that the dynasty, by the marriage of Maria Theresa to Francis Stephen of Lorraine, became the Habsburg-Lorraine. Francis II., the third of this line, was the last of the so-called "Holy Roman Emperors," this old title being changed by him for that of Emperor of Austria. From the Emperor Rudolf was also descended a Spanish dynasty which began with the Emperor Charles V. (Charles I. of Spain), and terminated with Charles II. in 1700.

Helvetii. A powerful Celtic people, who dwelt in what is now the west of Switzerland. Their chief town was *Aventicum*. About 58 B. C. they resolved, on the advice of Orgetorix, one of their chiefs, to migrate from their country with their wives and children, and to seek a new home in Gaul. They were, however, defeated by Cæsar, and driven back into their own territories, which became thenceforth a Roman colony. In the commotions that followed the death of Nero (A. D. 63) they were almost extirpated.

Holland was an independent country from 863 to 1433, when Philippe of Burgundy united it to his vast estates. In 1477 Mary of Burgundy married Maximilian, and Holland was united to Austria. After Karl V. it passed into Spanish control. In 1579 Holland united with six other provinces in the "Union of Utrecht," and became a republic, called "The Seven Provinces," with William of Orange as stadtholder. In 1806 it was given by Napoleon I. to his brother, Louis Bonaparte. In 1810 it was united to France, but, 1815, it was united to Belgium and formed "The Kingdom of the Netherlands" under William I. In 1830 Holland and Belgium were divided. William II. became king in 1840 and William III. in 1849. William III. was succeeded by Wilhelmina in 1890.

Holland ordered mobilization of troops, July 31, 1914, and, to preserve neutrality in the war of the nations, blocked her roads with barbed wire and barricades, patroled her borders, and refused to export food to Germany. In 1915 the army was increased to 550,000.

Holy Alliance. The name given to a treaty between the Emperors of Russia and Austria and the King of Prussia, ratified in Paris after the fall of the Emperor Napoleon (Septem-

ber 26, 1815), the object of which was professedly to pledge the respective monarchs to conduct their relations to each other under the guidance of Christian principles, but really to pledge each other to the maintenance of their respective dynasties. By the terms of this alliance, no member of the family of Napoleon was ever to occupy a European throne.

Holy Roman Empire, The. The western part of the old Roman Empire, which was severed from the eastern part in 800, and was given by the pope to Charlemagne, who was crowned "Emperor of the Romans." When Charlemagne's empire was divided, Ludwig the German became kaiser; but on the death of Karl the Fat the title fell into abeyance for seventy years. In 962, John XII. gave the title to Otto I. the Great, and changed it into "The Holy Roman Empire." Francis II. renounced the titles of King of the Romans and Emperor of the Romans in 1806, and Napoleon added the Italian states to France, May, 1809.

Home Rule League (1870). Projected by Mr. Butt, who stoutly opposed the repeal of the Union, but agitated for an Irish parliament which should have no power to touch upon imperial matters, but should be empowered to deal with matters of Ireland of a purely local character. On the death of Mr. Butt, in 1879, his scheme passed into the hands of the Land League, and their watchword, "Ireland for the Irish," meant separation from Great Britain. The term Home Rule survived the death of Mr. Butt, and in 1886, Mr. Gladstone, then prime minister, brought in a bill to give Ireland Home Rule, and exclude Irish members from Westminster. The measure broke up the great Whig party under the leadership of Lord Hartington, supported by Mr. Chamberlain (a Radical), Mr. Goschen, and others, who called themselves Unionists, and joined the great Tory party under the government of Lord Salisbury.

Huguenots. A name formerly given to the Protestants in France. The story of the persecutions of the Huguenots is one of the saddest in history. In 1561 they took up arms against their persecutors; the struggle continued until the Edict of Nantes, establishing the rights of the Protestants, was signed by Henry of Navarre, April 13, 1598. The massacre of St. Bartholomew, in which, according to various authorities, from 2,000 to 100,000 Huguenots were murdered throughout the kingdom by secret orders from Charles IX., at the instigation of his mother, Catherine de' Medici, began on the night of August 24, 1572.

Hundred Years' War, The (1337–1453). A war between England and France, caused by Edward III.'s claim to the crown of France. When Charles IV. of France died, without male issue, his cousin Philip of Valois succeeded him as Philip VI., the French law excluding females from the throne. Edward III. of England claimed the crown because through his mother Isabella he was nephew to King Charles IV. The French replied that his claim was worthless since he could not inherit from one who could not herself have ascended the throne. After a long series of contests lasting more than a century, the war closed with the result that England lost all her possessions in France except Calais, which she retained for about a century longer.

Hungary. The Magyars, an Asiatic people of Turanian race, allied to the Finns and the Turks, dwelt in what is now Southern Russia before they descended under Arpád into the plain of the Danube, towards the end of the Ninth Century, and conquered the whole of Hungary and Transylvania. During the first half of the Tenth Century their invasions and incursions spread terror throughout Germany, France, and Italy; but at length their total defeat by Otho I. of Germany put an end to their maraudings, and under their native dynasty of Arpáds they settled down to learn agriculture and the arts of peace. Stephen I. (997–1030) was the first who was successful in extending Christianity generally amongst the Hungarians, and was rewarded by a crown from Pope Sylvester II. and with the title of *apostolic king* (1000). Stephen encouraged learning and literature, and under him Latin became not only the official language of the government, but the vehicle of Hungarian civilization, which it unfortunately continued to be for the next 800 years. In 1089 King Ladislaus extended the boundaries of Hungary by the conquest of Croatia and Slavonia, and King Coloman by that of Dalmatia in 1102. During the Twelfth Century the Hungarians first attained, through French connections, a certain refinement of life and manners. About the middle of the Thirteenth Century King Bela induced many Germans to settle in the country which had been depopulated by the Mongol invasions. With Andrew III. (1290–1301) the male line of the Arpád Dynasty became extinct, and the royal dignity now became purely elective. Charles Robert of Anjou was the first elected (1309). Louis I. (1342–82) added Poland, Red Russia, Moldavia, and a part of Servia, to his kingdom. The reign of Sigismund (1387–1437), who was elected Emperor of Germany, is interesting from the invasion of Hungary by the Turks (1391), and the war with the Hussites. Sigismund introduced various reforms, and founded an academy at Buda. Matthias Corvinus (1458–90), combining the talents of a diplomatist and general, was equally successful against his enemies at home and abroad, and is even yet remembered by the popular mind as the ideal of a just and firm ruler. He founded a university at Pressburg. During the reigns of Ladislaus II. (1490–1516) and Louis II. (1516–26) the rapacity of the magnates and domestic troubles brought the power of Hungary low, and the battle of Mohacs (1526) made a great part of the country a Turkish province for 160 years. The rest was left in dispute between Ferdinand of Austria and John Zapolya; but eventually, by the help of the Protestants, passed to the former, and has since remained under the scepter of the Habsburgs. In 1686 Leopold I. took Buda and recovered most of Hungary and Transylvania. In 1724 Charles VI. secured by the Pragmatic Sanction the Hungarian Crown to the female descendants of the House of Habsburg, and the loyalty of the Hungarians to his daughter, Maria Theresa, saved the dynasty from ruin. Maria

Theresa did much for the improvement of Hungary by the promulgation of the rural code called Urbarium, and by the formation of village schools. On the advent of the French revolution, and during the wars which ensued, the Hungarians once more played a prominent part in support of the Habsburg Crown. Napoleon fell, but the revolution had given an impetus to ideas of national and popular rights which the Hungarians, long stifled under the Germanic traditions and tendencies of their rulers, were amongst the first to feel. For a time Francis I. and Metternich stood stiffly out against all concessions, and tried to govern by pure absolutism, but ended by summoning in 1825 a new diet. The diet distinguished itself by adopting the Magyar language in its debates instead of the Latin to which it had been accustomed. Succeeding diets in 1830 and 1832 made new demands in the direction of religious equality, a popular suffrage, and abrogation of the privileges of the nobles. The Austrian Government attempted to repress the Hungarian national movement by imprisoning Deák, Kossuth, and others of the leaders. The struggle continued till 1848, when the French Revolution of that year gave the impulse for a similar rising in Vienna. Prince Metternich fled to London, and the Viennese court made a formal concession of all important demands; but these had no sooner been granted than the government began secretly to work against their being put in operation. The dependencies of the Hungarian Crown, the Croats and the Wallachians of Transylvania, were privately encouraged to revolt, and in December of the same year an Austrian army took the field with the avowed object of annihilating the independence of Hungary; but a series of pitched battles resulted on the whole so much in favor of the Hungarians that Austria was obliged to call in the aid of Russia, which was at once granted. After a heroic struggle the Hungarians had to succumb. But the struggle was continued by the Hungarians in the form of a constitutional agitation. At last, in 1867, a separate constitution and administration for Hungary was decreed, and on June 8th the emperor and empress were crowned king and queen of Hungary. The dualism of the Austrian Empire was thus finally recognized and constituted.

At the close of the World War the Austro-Hungarian Empire was dismembered. Hungary was greatly reduced in size, portions of the former kingdom becoming parts of Rumania, Poland, Czecho-Slovakia, and Jugoslavia. In 1919 the soviet rule established by Bela Kun was overthrown and a more conservative government took charge of the new Hungarian state. In 1921 an attempt by the former Emperor Charles to seize control was quickly defeated.

Huns. The name given to several nomadic Scythian tribes, which devastated the Roman Empire in the Fifth Century. They inhabited the plains of Tartary, near the boundaries of China, many centuries before the Christian era; and they were known to the Chinese by the name of Hiongun, and also Han. It was in order to put a stop to the continual aggressions of the Huns that the great wall of China was built; and after this the Huns split up into two separate nations, named respectively the Northern and the Southern Huns. The first-mentioned of these gradually went west to the Volga, where they encountered the Alanni, whom they defeated. Here the Huns remained for about two centuries; but, under the Emperor Valens, they crossed the Bosphorus; afterward invading Rome, under their leader Attila. In 451 he was defeated by the Goths and Romans at the terrible battle of Chalons, on the plain of the Marne in France, where 300,000 dead were left upon the field. Attila, however, continued to menace Rome until his death in 453. The Huns then broke up into separate tribes and were finally driven eastward across the Don. So fearful were the devastations of Attila that the western Christians called him the "scourge of God," and the term "Hun" became synonymous with the worst known extremes of barbaric cruelty and wanton destruction. Hence its universal application to the Germans consequent upon the atrocities perpetrated by them during the world war.

Hussites (*hŭs'ītz*). The followers of John Huss (*q. v.*), who avenged his death by one of the fiercest and most sanguinary civil wars ever known. They took the field under Ziska, 1418, gained the battle of Prague, July 14, 1420, and nearly annihilated the Imperialists at Deutschbrod, January 8, 1422. After occupying the whole of Bohemia and Moravia, they threatened Vienna, and in 1426 gained the victories of Aussig and Mies. The Emperor Sigismund was at length too glad to come to terms with the Hussites, and the Treaty of Iglau, in 1436, terminated hostilities between Catholic and Protestant for the time being.

Hyksos, The, or Shepherd Kings of Lower Egypt. A race of Arabs which invaded ancient Egypt, and continued dominant, according to Manĕtho, for 500 years (B. C. 2085-1575), but according to Breasted only about a century (B. C.1657-1557). They formed or were contemporary with the Fifteenth, Sixteenth, and Seventeenth Dynasties of Upper Egypt. It is supposed that Abraham went to Egypt while the Sixteenth Dynasty was regnant; and that Joseph was viceroy about B. C. 1715, in the same dynasty.

Idaho. The region within the present limits of the State was included in the Louisiana Purchase of 1803. Idaho was included first in Oregon and subsequently in Washington. The first settlement of consequence was the Cœur d'Alene Mission, which was established in 1842. The permanent settlement of the territory did not begin until the discovery of gold in 1860.

Idaho was made a Territory in 1863 and was admitted to statehood in 1890. The state granted suffrage to women in 1896; enacted statutory Prohibition in 1915; and adopted constitutional Prohibition in 1916.

Illinois. The name is derived from that of an Indian tribe, Illini, signifying superior men. First explored in 1673 by Marquette, and in 1679 by La Salle. French settlements were formed at Crevecœur, Kaskaskia, and Cahokia in 1682. With the subjugation of Canada, in 1763, the French dominion east of the Mississippi became English. In 1783 Illinois was

ceded to the United States by England and became part of the Northwest Territory in 1787. After the successive severance of Ohio in 1800, of Indiana in 1805, and of Michigan in 1809, the remainder of the Northwest Territory was reconstituted as Illinois Territory, then embracing Wisconsin and part of Minnesota. On December 13, 1818, Illinois with its present limits was admitted as a State, being the eighth adopted under the Federal Constitution. The early history was an unbroken contest with the savages, the most notable incidents being the Fort Dearborn Massacre, August 15, 1812, and the Black Hawk War, 1831 to 1832. In 1913 partial suffrage was granted to women by legislative enactment.

Incas. A Peruvian Dynasty (1130–1571) which succeeded the Aymara Dynasty, and was reigning when (in 1533) Pizarro conquered Peru. The Incas called themselves descendants of the Sun. The first Inca was Manco-Capac, 1130. Atahualpa was taken prisoner by the Spaniards and put to death in 1533. Tupac-Amaru was beheaded in 1571.

India. The country was entered and partly subdued by Alexander the Great. About 126 B. C. it was also invaded by the Tartars, or Scythians of the Greeks, and Sakas of the Hindus. From the Tenth to the Twelfth Century of the Christian era the Mohammedans overran and conquered considerable portions of Hindustan, and subsequently the Mogul Empire was formed. In 1498, India was first visited by Vasco da Gama, and later the Portuguese and Dutch established settlements on the peninsula; but the former never acquired more than a paltry territory on the west coast, and the latter a few commercial factories. The French influence in India, at one time considerable, also yielded to the superior enterprise of the British, and finally the French relinquished the field. In 1625, the first English settlement was made by a company of merchants in a small spot of the Coromandel coast, of five square miles, transferred in 1653 to Madras. A short time previous a settlement had also been obtained at Hooghly, which afterward became the Calcutta station. In 1687, Bombay was erected into a presidency. In 1773, by act of the British Legislature, the three provinces were placed under the administration of a governor-general, and Calcutta was made the seat of a supreme court of judicature. Hitherto the affairs of India had been managed by the East India Company, but in 1784 a board of control was appointed, the president of which became secretary of state for India. From the year 1750, when the warlike acquisition of territory commenced under Lord Clive, a succession of conquests, almost forced upon the British contrary to their inclinations, placed nearly all India under their sway.

During the World War India furnished several hundred thousand troops for service chiefly on various Asiatic fronts. The dismemberment of Turkey, at the close of the World War, caused dissatisfaction among the Mohammedan population. The activities of the nationalist party increased the unrest. During 1920-21 serious uprisings against British rule occurred in various parts of India.

Indiana. Originally settled by the French at Vincennes in 1702, but little is known of its early history. In 1763, it became a British possession, and in 1783, by treaty with Great Britain, it became part of the United States. In 1787, it was made part of the Northwest Territory, this term being applied to all the public domain north of the Ohio River. This region was much devastated from 1788 to 1791 by the Indians, but their defeat in the latter year gave the settlers peace for a time. Indiana was organized territorially July 4, 1800. In 1811, an Indian war, instigated by Tecumseh, broke out, but the power of the savages was broken at Tippecanoe. Hostilities did not entirely cease till 1815. The State was admitted December 11, 1816. In 1827, the Erie Canal opened an outlet for the produce of the West, and the national road was commenced. These stimulated immigration, and the new State grew rapidly. A new constitution was adopted in 1851. Statutory Prohibition was enacted to take effect April 2, 1918.

Indians, American. According to the estimate of James Mooney, United States government expert, the total Indian population north of Mexico at the date of the discovery of America in 1492 was 1,115,000. In 1920 the Indian population of the United States, Alaska, and Canada was, in round numbers, 450,000. For a long period there was such a constant and rapid decrease in the number of Indians in the United States that many anthropologists predicted their early extinction. The low point in Indian population, however, was reached in 1900 when the census showed a total of only 237,000 within the boundaries of the United States. In 1920 this Indian population had risen to 336,000.

In 1910 there were living representatives in the United States of 280 tribes, and in Alaska of 21 tribes. In addition, there were remainders of 45 Eskimo tribes. It is estimated that there were survivors of about 150 tribes in Canada, making a total representation of approximately 500 tribes. About 100 tribes are supposed to have become extinct since Columbus discovered America. The following table shows the present distribution of Indians in the United States:

State	Area of Indian Lands Acres	Income of Indians Dollars	Population (1920)
Alaska	. . . . .	. . . . .	18,398
Arizona	18,653,014	5,482,039	42,400
California	517,118	1,586,226	16,241
Colorado	468,874	153,264	796
Florida	23,542	5,900	454
Idaho	682,939	1,491,630	4,048
Iowa	3,251	58,667	345
Kansas	272,519	629,086	1,466
Michigan	153,418	63,789	7,510
Minnesota	1,508,553	2,313,449	12,681
Montana	6,053,673	4,290,484	12,374
Nebraska	359,542	1,021,234	2,461
Nevada	740,635	609,133	5,900
New Mexico	4,697,224	2,196,417	21,530
New York	87,677	33,198	6,432
North Carolina	63,211	198,042	8,268
North Dakota	2,105,320	1,586,205	9,018
Oklahoma	19,551,890	39,393,608	119,255
Oregon	1,718,006	1,739,595	6,629
South Dakota	6,685,734	4,331,940	23,010
Utah	1,641,307	400,148	3,057
Washington	2,718,886	2,408,685	11,114
Wisconsin	590,111	1,646,960	10,319
Wyoming	2,102,286	886,536	1,748
All Other States	. . . . .	. . . . .	9,281
Total	71,398,730	72,526,235	354,735

Iowa. The name of the State, originally applied to the river so called, is derived from the Indian. It was a part of the Louisiana Purchase, acquired in 1803. It was first visited by a Frenchman, who gave his name, Dubuque, to the place where he settled in 1788. In 1834 the territory now included in Iowa was placed under the jurisdiction of Michigan, and in 1836 under that of Wisconsin. In 1838 Iowa became a separate territory, including also the greater part of Minnesota and the whole of Dakota. The delimitation of the State occurred when it was admitted as such in 1846. Immigration was rapid and continued in spite of a bloody massacre of pioneer settlers at Spirit Lake in March, 1857. In the same year the original constitution of 1846 was revised and the state capital was removed from Iowa City to Des Moines. In 1915 Iowa reenacted statutory Prohibition to take effect January 1, 1916.

Ireland. According to ancient native legends, Ireland was in remote times peopled by tribes styled Firbolgs and Danauns, eventually subdued by Milesians or Gaels, who acquired supremacy in the island. The primitive inhabitants of Ireland are now believed to have been of the same Indo-European race with the original population of Britain. Although Ireland, styled *Iernis,* is mentioned in a Greek poem five centuries B. C., and by the names of *Hibernia* and *Juverna* by various foreign pagan writers, little is known with certainty of her inhabitants before the Fourth Century after Christ, when, under the appellation of *Scoti,* or inhabitants of *Scotia,* they became formidable by their descents upon the Roman Province of Britain. These expeditions were continued and extended to the coasts of Gaul till the time of Laogaire McNeill, monarch of Ireland, 430 A. D., in whose reign St. Patrick attempted the conversion of the natives. From the earliest period each province of Ireland appears to have had its own king, subject to the *Ard-Righ,* or monarch, to whom the central district called Meath was allotted and who usually resided at Tara. Each clan was governed by a chief selected from its most important family, and who was required to be of mature age, capable of taking the field efficiently when occasion required. The laws were peculiar in their nature, dispensed by professional jurists styled *Brehons,* who, as well as the poets and men of learning, received high consideration, and were endowed with lands and important privileges. Cromlechs, or stone tombs and structures, composed of large uncemented stones, ascribed to the pagan Irish, still exist in various parts of Ireland; lacustrine habitations, or stockaded islands, styled *Crannogs* or *Crannoges,* in inland lakes, also appear to have been in use there from early ages. It is remarkable that a greater number and variety of antique golden articles of remote ages have been found in Ireland than in any other part of northern Europe; and the majority of the gold antiquities illustrative of British history now preserved in the British Museum are Irish. In the Sixth Century extensive monasteries were founded in Ireland, in which religion and learning were zealously cultivated. From these establishments numerous missionaries issued during the succeeding century, carrying the doctrines of Christianity under great difficulties into the still pagan countries of Europe, whose inhabitants they surprised and impressed by their self-devotion and asceticism. Among the eminent native Irish of these times were Columba, or Colum Cille, founder of the celebrated monastery of Iona; Comgall, who established the convent of Bangor, in the County of Down; Ciaran of Clonmacnoise; and Adamnan, Abbot of Iona and biographer of Columba. Of the Irish missionaries to the continent the more distinguished were Columbanus, founder of Bobio; Gallus of St. Gall, in Switzerland; Dichuill, patronized by Clotaire; and Ferghal, or Virgilius, the evangelizer of Carinthia. The progress of Irish civilization was checked by the incursions of the Scandinavians, commencing towards the close of the Eighth Century, and continued for upward of 300 years. From the close of the Eighth to the Twelfth Century Ireland, although harassed by the Scandinavians, produced many writers of merit, among whom were Ængus, the hagiographer; Cormac McCullenan, King of Munster and Bishop of Cashel, the reputed author of *Cormac's Glossary;* Cuan O'Lochain; Gilla Moduda; Flan of Monasterboice; and Tighernach, the annalist. Of the Irish architecture of the period examples survive at Cashel. The well-known round towers of Ireland are believed to have been erected about this era as belfries, and to have served as places of security for ecclesiastics during disturbances. But this is mere surmise, the date of their erection having never been established nor their use satisfactorily explained. The skill of the Irish musicians in the Twelfth Century is attested by the enthusiastic encomiums bestowed by Giraldus Cambrensis upon their performances.

The first step toward an Anglo-Norman descent upon Ireland was made by Henry II. in 1155. The chief Anglo-Norman adventurers, Fitz Gislebert, Le Gros, De Cogan, and De Curci, encountered formidable opposition before they succeeded in establishing themselves on the lands which they thus invaded. The government was committed to a viceroy, and the Norman legal system was introduced into such parts of the island as were reduced to obedience to England. The country was wholly subdued in 1210; in 1315, it was invaded by Edward Bruce, who was crowned king 1316, and slain 1318. Richard II. landed at Waterford with a large army, and gained the adherence of the people. In 1494 was passed Poyning's Law, making the Irish Parliament subject to the English Council. In 1542, Henry VIII. assumed the title of *king,* instead of *lord* of Ireland.

The attempts of the English Government to introduce the Reformed faith and English institutions stirred up great dissensions in Ireland. In 1601-02 occurred the famous but unsuccessful insurrection of Tyrone. In consequence of repeated rebellions, over 500,000 acres of land in Ulster became forfeited to the English Crown, and James I. divided his land among such of his English and Scottish subjects as chose to settle there. In 1641 occurred More and Maguire's Rebellion, which was an endeavor to expel the Protestant settlers in Ulster. Be-

tween the years 1649-56, Cromwell reduced the whole island to subjection.

In the Revolution of 1688, the native Irish generally took the part of James II., and the English and Scotch "colonists" that of William and Mary. The war was kept up until William defeated James at the battle of the Boyne, 1692. In 1778 the penal laws against the Catholics were made much more lenient. On Jan. 1, 1801, the legislative union of Great Britain and Ireland was consummated. As a result of O'Connell's agitation, Parliament passed, in 1829, the Catholic Emancipation Bill. A terrible famine, 1845-46, caused hundreds of thousands of Irish to emigrate to America.

The period 1860-90 was marked by the suppression of the Fenian movement, 1864; by the activities of the Land Leaguers, "moonlighters," and "boycotters," 1880-85; by the Phoenix Park murders, 1882; and by forced evictions resulting in riots, 1886, all leading to the stringent Crimes Act of 1887 and to increased agitation for home rule. In 1903 a liberal Land Act enabled tenants to purchase their holdings. In 1905 the Sinn Fein (ourselves) party, devoted to securing absolute independence for Ireland, was formed. In 1914 Asquith's Home Rule bill passed Parliament, but, owing to the opposition of Ulster and the onset of the World War, the operation of home rule was deferred.

The Easter rebellion in Dublin, 1916, was an abortive attempt to throw off British rule. Winning the elections of 1918, the Sinn Fein party organized the Dail Eireann (Irish Parliament) Jan. 21, 1919, and demanded recognition for the Irish Republic. After two years of turmoil and guerrilla warfare, an agreement was signed Dec. 6, 1921, creating the Irish Free State, with the same status within the British Empire as Canada or Australia, and giving Ulster the option of joining or remaining separate. This agreement, promptly approved by the British Parliament, was ratified Jan. 7, 1922, by the Dail Eireann. The Free State was established Dec. 6, 1922. W. T. Cosgrave was made the first president of the Executive Council.

Ironsides, Cromwell's troopers, a thousand strong, and raised by him in the Eastern counties of England, so-called at first from the invincibility displayed by them at Marston Moor; were selected by Cromwell "as men," he says "that had the fear of God before them, and made conscience of what they did. . . . They were never beaten," he adds, "and wherever they were engaged against the enemy, they beat continually."

Israelites (Hebrew *Yisreëli*), the descendants of Jacob, "the chosen people." The twelve tribes descended from Jacob's children were called "Israel" in Egypt, and throughout the Pentateuch, the books of Joshua, Judges, Samuel, and Kings. The name was afterward given to the larger portion, or ten northern tribes, after the death of Saul, a distinction that obtained even in David's time. But more definitely was the name applied to the schismatical portion of the nation, including all the tribes save Judah, Simeon, and Benjamin, which set up a separate monarchy in Samaria after the death of Solomon. After the exile the two branches became blended, and are again called by the old name by Ezra and Nehemiah. But by degrees the name "Jews" (*q. v.*) supplanted this appellation, especially among foreigners. The history of the Israelites, especially during the early periods, is inseparably bound up with that of their rulers, patriarchs, etc., as Abraham, Jacob, Moses, Joshua, the Judges, David, Solomon, etc., to all of which the reader is referred. The following is a short summary of the leading points in the history of the Israelites: Abraham called, B. C. 1921; Isaac born, 1896; Esau and Jacob born, 1837; death of Abraham, 1822; Joseph sold into Egypt, 1729; Moses born, 1571; institution of the Passover and the Exodus, 1491; promulgation of the Law from Sinai, 1491; the tabernacle set up, 1490; Joshua leads the Israelites into Canaan, 1451; the first bondage, 1413; the second, 1343; the third, 1304; the fourth, 1252; the fifth, 1206; the sixth, 1157; Samson slays the Philistines, 1136; Samuel governs as Judge, about 1120; Samson pulls down the temple of Dagon, 1117; Saul made king, 1095; David kills Goliath, about 1063; death of Saul and accession of David, 1055; David captures Jerusalem and makes it his capital, 1048; Solomon lays the foundations of the temple, 1012; it is dedicated, 1004; death of Solomon and division of the kingdom, 975.

In the reign of Solomon the prophet Ahijah was intrusted with the announcement to Jeroboam that, in punishment for the many acts of disobedience to the divine law, and particularly of the idolatry so extensively practiced by Solomon, the greater part of the kingdom would be transferred to him. This breach was never healed. A spirit of disaffection had long been rife, even in the reigns of David and Solomon, fostered by various causes, not the least among which was the burdensome taxes imposed by the latter monarch for the support of his luxurious court and for the erection of his numerous buildings. But however much these causes may have operated to create a breach between the North and South districts of Palestine, certain it is that God Himself expressly forbade all attempts on the part of Rehoboam or his successors to subdue the revolted provinces, and, with slight exceptions, the subsequent history of the two nations still more widely separated them. The precise amount of territory contained in the Kingdom of Israel cannot be accurately ascertained; it was approximately as nine to four compared with the sister Kingdom of Judah; the ten tribes included in Israel, it is supposed, were Ephraim and Manasseh (East and West), Issachar, Zebulon, Asher, Naphtali, Gad, Reuben, and part of Dan; the population was probably, at the separation, about 4,000,000. It was not long before the new kingdom showed signs of weakness. It developed no new power, which is not surprising when we consider that it was but a section of David's Kingdom shorn of many sources of strength. "The history of the Kingdom of Israel is, therefore, the history of its decay and dissolution." The first symptom of decline was shown in the emigration of many families who adhered to the old religion of the Israelites back to Judah; and to check

this Jeroboam set up rival sanctuaries with visible idols, 975 B. C., but which only increased the evil he wished to check. As soon as the golden calves were set up the priests and Levites flocked back to Judah, where they were warmly received. Jeroboam's whole policy aimed singly at his own aggrandizement. To supply the want of a priesthood, divine in its origin, a line of prophets was raised up remarkable for their purity and austerity. Jeroboam reigned twenty-two years; his son Nadab was violently cut off after a brief reign of two years, with all his house, and so ended the line of Jeroboam. The fate of this dynasty was but a type of those that followed. Domestic famine, the sword of the foreigner, and internal dissensions helped the tottering kingdom on its downward way, and only one brief era of prosperity occurred, under the sway of Jeroboam II., who reigned forty-two years. The Syrian invasion, under Phul, 771 B. C., compelled Menahem, the King of Israel, to pay heavy tribute, and in the reign of Pekah we find them leading many of the Israelites into captivity. In 721 Samaria was taken by Shalmaneser, the ten tribes were carried into captivity, and an end was put to the Kingdom of Israel. See *Jews* for the subsequent history of the chosen people.

Italy. The ancient history of Italy is more conveniently treated under *Rome*. We, therefore, glance at more modern times, after the Western Empire had fallen before a mixed horde of barbarous mercenaries, chiefly composed of the Heruli. Under the Hohenstaufen dynasty, Italy enjoyed an interregnum from foreign rule of about sixty years, which, however, was wasted in suicidal conflicts between the two factions of the Guelphs and Ghibellines. The most terrible incident of this period was the massacre of the Sicilian Vespers. Notwithstanding the inveterate internecine feuds of Italy, it was a period of great splendor and prosperity. The free cities or republics of Italy rivaled kingdoms in the extent and importance of their commerce and manufactures, the advancement of art and science, the magnificence of their public edifices and monuments, and the prodigious individual and national wealth to which they attained. Unhappily, a spirit of rivalry and intolerance grew up during this period of mediæval splendor, and in the arbitrary attempts of these states to secure supremacy over each other they gradually worked their own destruction. After the battle of Waterloo the final reconstitution of Italy was decreed by the Congress of Vienna. The accession of Pius IX., in 1846, seemed the inauguration of a new era for Italy. A general amnesty was followed by wise, liberal measures, which were also adopted by Tuscany and Piedmont, in emulation of Rome. By a simultaneous outbreak in Sicily and Milan in January, the great revolution of 1848 was inaugurated in Italy. The revolution of France in February imparted a strong impulse to that of Italy, and speedily Naples, Piedmont, and Rome conceded constitutional rights to the popular demands. The Milanese unanimously revolted against Austrian rule on the 17th of March, and after five days of heroic fighting the Austrians were expelled from the city, and Radetsky, with 70,000 troops, compelled to retreat. On the 29th, Charles Albert entered Lombardy, the avowed champion of Italian independence. In the Congress of Paris, at the close of the Russian War (1856), Cavour strongly urged the expediency of a withdrawal of French and Austrian troops from Rome and the legations. The victories of Magenta and Solferino were quickly followed by the abrupt and inconclusive Peace of Villafranca, July 11, 1859. On the 18th of March, 1860, Parma, Modena, and the Emilian provinces were incorporated with Sardinia, and the grand-duchy of Tuscany on the 22d. On the 17th of March, the law by which Victor Emmanuel assumed the title of King of Italy was promulgated amid universal rejoicing. On the 6th of the ensuing May, Garibaldi, with about 1,000 volunteers, set sail from Genoa for Sicily, where a revolutionary outbreak had taken place. His swift and comparatively bloodless conquests of the two Sicilies is one of the most extraordinary incidents in modern history. At the close of the German-Italian war, Venetia, 1866, became part of the Kingdom of Italy by treaty with Austria. In 1870 the whole of the papal states were absorbed by the kingdom of Italy and Rome was its recognized capital. In 1878 Victor Emmanuel died, and was succeeded by his son Humbert I. In 1882 Italy entered the triple alliance with Germany and Austria-Hungary. Humbert was assassinated July 29, 1900; succeeded by Victor Emmanuel III. In 1911 Italy entered into war with Turkey over affairs in Tripoli; by the treaty of Lausanne, Oct., 1912, Italy acquired full sovereignty over Tripoli.

Bound by the Triple Alliance to assist Germany and Austria-Hungary in case of attack, Italy refused to aid them in 1914, arguing that they were engaged in an aggressive war. As war progressed, popular opinion urged the conquest of *Italia Irredenta* — the "unredeemed" Austrian districts of Trentino and Trieste, largely Italian in population but never Italian possessions. Italy denounced the Triple Alliance, May 4, 1915, and declared war upon Austria-Hungary, May 24. In 1916 Italian forces captured the important Austrian fortress of Gorizia. Following severe defeat at Caporetto, Oct. 24, 1917, the Italian armies retreated to the Piave.

In June, 1918, the reorganized Italian and allied forces crushed a powerful Austrian offensive and, in October, completely routed the Austrian armies, compelling Austria to accept a truce of virtual surrender, November 4.

The Treaty of St. Germain, 1919, awarded Italy practically all of *Italia Irredenta*, including Trieste, together with parts of Tirol and Dalmatia.

Widespread Socialist activity in Italy, following the close of the war, gave rise to the reactionary organization of the Fascisti, which largely suppressed the Socialists. In 1922, Mussolini, leader of the Fascisti, became premier, with virtual dictatorial power.

Jacobins, the members of a political club which exercised a very great influence during the French Revolution. It was originally called the *Club Breton*, and was formed at Versailles, when the States General assembled there

in 1789. It then consisted exclusively of the members of the States General, all more or less liberal or revolutionary, but of very different shades of opinion. On the removal of the court and national assembly to Paris this club began to acquire importance. It now met in a hall of the former Jacobin Convent in Paris, whence it received the name of the Jacobin Club, which was first given to it by its enemies, the name which it adopted being that of the *Society of Friends of the Constitution.* It now also admitted members who were not members of the National Assembly, and held regular and public sittings. It exercised a great influence over the agitation, of which the chief seat and focus was in the capital, and this influence was extended over the whole country by affiliated societies. Its power increased, until it became greater than that of the National Assembly. It reached the zenith of its power when the National Convention met in September, 1792. The agitation for the death of the king, the storm which destroyed the Girondists, the excitement of the lowest classes against the *bourgeoisie* or middle classes, and the reign of terror over all France were the work of the Jacobins. But the overthrow of Robespierre on the 9th Thermidor, 1794, gave also the death blow to the Jacobin Club; and on November 9, 1794, the Jacobin Club closed. The term Jacobin is often employed to designate persons of extreme revolutionary sentiments.

Janizaries (Turkish, *Yeñi-tcheri,* new soldiers), an Ottoman infantry force, somewhat analogous to the Roman prætorians, part of them forming the guard of the sultan. They were originally organized about 1330, and subsequently obtained special privileges, which in time became dangerously great. The regular janizaries once amounted to 60,000, but their numbers were afterwards reduced to 25,000. The irregular troops amounted to 300,000 or 400,000. Their power became so dangerous and their insurrections so frequent that several unsuccessful attempts were made to reform or disband them. At various times sultans had been deposed, insulted, and murdered by the insurgent janizaries. At last, in June, 1826, they rebelled on account of a proposal to form a new militia, when the sultan, Mahmoud II., having displayed the flag of the prophet, and being supported by their aga or commander-in-chief, defeated the rebels and burned their barracks, when 8,000 of them perished in the flames. The corps was abolished, and a curse laid upon the name. As many as 15,000 were executed, and fully 20,000 were banished.

Japan. Although Japan has passed through the successive eras of tribal government, pure monarchy, feudalism, anarchy, and modern empire, its ruling dynasty boasts of forty-six centuries of unbroken succession, and claims descent from Jimmu Tenno, first mikado, a fabulous warrior, whose descent from the sun goddess is a matter of faith with the Japanese, who base upon it their claim of the mikado's divinity. The empire claims to have had a previous existence of 2,479 years; but its history dates from Jimmu 667 B. C., and from his death until 571 A. D. thirty-one mikados ruled; the famous Yamato Daké and Sujin the Civilizer belong to this period. Jingu Kogo, Empress of Japan, 270 A. D., conquered Corea in person. In 552 A. D. Buddhism was introduced into Japan, and thenceforth became a potent influence in the formation of character. About this time a succession of infant mikados contributed to loss of power in the mikadoate, and to the formation of noble families, who, one by one, gained ascendency, and ruled the mikados; the feudal system began its existence, and feuds between the rival families were constant. The Fujiwarra family were opposed by the Sugawara, and succeeded by the Tairas and Minamotos. In 1184, Yoritomo became first shogun, (a term meaning general), the dual system of government, which ended only in 1867, began, and the shogunate monopolized the real power of the nation, of which the mikado was nominal and spiritual head. From 1199 to 1333 both the mikadoate and the shogunate were under the power of the Hojo family, who set up and removed rulers at their own pleasure; but they promoted the arts, and defeated an invasion of the Mongol Tartars. The Ashi-Kaga family next came into power, and occasioned a fifty-six years' war between the northern and southern dynasties, and strengthened feudalism at the time when all Europe was throwing off its chains. In 1536, Hideyoshi conquered the Coreans, and brought marine architecture to a higher state of perfection; he became taiko, and this period is called the age of taiko. In 1542, Europeans landed on Tanigashima; fire-arms were introduced, Portuguese merchants were attracted, and in 1549, Francis Xavier landed, and with an interpreter preached Christianity in various parts of the empire; he paved the way for the success of others, and priests and Jesuits flocked to Japan, when a total of 600,000 converts was recorded. Wabunaga protected the Christians, as the latter persecuted the Buddhists, whom he hated; but by intrigues and quarrels among themselves the priests alienated the support of the shogun, who persecuted the native Christians. The Jesuits stirred them up to resistance, and after a brief battle between Hedéyori, leader of the Christians, and Iyésayŭ; during which 100,000 men perished, the priests were exiled from Japan, 1615. In 1624 all foreigners except the Dutch and Chinese were banished from Japan, the Japanese were forbidden to leave the country, and all larger vessels were destroyed. In 1637 the great massacre of Christians began, the twenty or less Dutch traders were confined to the island of Deshima, and 100 years' intercourse with Christian nations resulted only in the adoption of gunpowder, fire-arms, and tobacco. For two centuries and a half after Iyésayŭ, Japan had peace; feudalism and anarchy were perfected, and the Tokugawa was the most prominent of a number of families who divided Japan; the power of the shogun increased, the last four rulers of the shogunate being known to Europeans under the title of "Tycoon." In 1853, Commodore Perry, with a fleet of American vessels, arrived at Yeddo, and the Perry treaty with the United States was concluded by him with the supreme ruler of Japan. This usurpa-

tion of authority increased the rivalry; after a brief revolution the government was changed to its ancient form and the mikado became the only ruler of Japan. This occurred in 1868. The United States opened Japan to the world after the failure of the Portuguese, Spaniards, Dutch, and Russians.

Owing to conflicting interests in Corea, Japan declared war upon China in July, 1894, and soon won decisive victories. By the Treaty of Shimonoseki the terms of peace included recognition of Corean independence, the cession to Japan of Formosa and some smaller islands, with the peninsula of Liao-Tung, including Port Arthur, a large war indemnity, and a very great relaxation of restrictions on foreign industry and commerce in China. In 1904-05, war with Russia occurred over Manchuria (See Russo-Japanese War).

Emperor Mutsuhito, whose reign of forty-five years saw Japan develop into one of the greatest nations of the world, died at Tokyo, July 30, 1912. He was succeeded by his son Yoshihito.

In August, 1914, Great Britain, at war with Germany and Austria-Hungary, asked Japan for assistance according to the alliance of 1905. Japan declared war upon Germany, Aug. 23, captured Tsingtao, the fortified port of Kiao-chow, Sept. 27, and took possession of the province. German islands in the Pacific were also taken.

In 1921, Japan sent delegates to the Arms Conference at Washington, and signed a four-power treaty with the United States, Great Britain, and France, agreeing to certain naval restrictions. In 1923, the country was visited by a terrible earthquake, which largely destroyed Tokyo and Yokohama and resulted in the loss of over 200,000 lives.

Jews (Heb. *Yehuda*). The history of the Jews begins with the return of the remnant of the kingdom of Judah from the Babylonish captivity in consequence of the Edict of Cyrus. Below will be found a brief *résumé* of the chief historical events in the history of the Jews according to the biblical narrative. According to Eusebius, the Scripture history ends in 442 B. C., and thenceforward the Roman historians and Josephus furnish the best accounts. *The Babylonish Captivity.*—Daniel prophesies at Babylon, B. C. 603; Obadiah prophesies, 587; Daniel interprets the handwriting on the wall, 538; he prophesies the speedy return from bondage and the coming of a Messiah, 538. *The Return from Captivity.*—Cyrus, ruler of all Asia, authorizes the return of the Jews and the rebuilding of the Temple at Jerusalem, 536; Haggai and Zechariah flourish, 520; the second Temple finished, 515; Ezra arrives in Jerusalem to correct abuses, 458; beginning of the seventy weeks of years predicted by Daniel, being 490 years prior to the crucifixion of Christ, 457; the walls of Jerusalem rebuilt, 445; Malachi flourishes, 415. *The Jews under the Macedonian Empire.*—Alexander the Great marches against Jerusalem to besiege it, but ultimately goes to the Temple and offers sacrifices to the God of the Jews, 332; Jerusalem taken by Ptolemy Soter 320; the Scriptures translated (the Septuagint version) by seventy-two Jewish scribes, at the instance of Ptolemy Philadelphus, 277; Antiochus captures Jerusalem, sacks the Temple, and massacres 40,000 of the people, 170; commencement of the government of the Maccabees, 166; a treaty, the first in Jewish history, made with the Romans, 161; Judas Hyrcanus assumes the title of "King of the Jews," 107; Jerusalem captured by Pompey, 63. *The Jews under the Roman Empire.*—Antipater made ruler of Judea by Julius Cæsar, 49; Herod, son of Antipater, marries Miriamne, daughter of the king, 42; Herod decreed king by the Roman Senate, 40; Jerusalem captured by Herod and Sosius, the Roman general, 37; Herod rebuilds the Temple on a scale of greater magnificence than ever before, 18; Jesus Christ, the long-looked-for Messiah, born four years before 1 A. D., 4 B. C.; Pontius Pilate procurator of Judea, A. D. 22; John Baptist commences his ministry, 25; is beheaded, 27; Christ's ministry and miracles, 27-29; his death and resurrection, 29; the Jews are persecuted for refusing to worship Caligula, 38; receive the right of Roman citizenship, 41; Claudius banishes them from Rome, 50; Titus captures Jerusalem, the city and Temple are sacked and burned, and 1,000,000 Jews perish, 70; Adrian rebuilds Jerusalem, names it Ælia Capitolina, and erects a temple to Jupiter, 130; the rebellion of Bar-cocheba, 135-36; final desolation of Judea, more then 500,000 Jews are slain by the Romans, they are banished from Judea by an edict of the Roman Emperor, and are forbidden to return upon pain of death, 136.

The Jews have suffered much even in modern times and especially in Russia at the hands of the oppressor. In America only have they enjoyed at all times perfect freedom and all the

rights of citizenship. Full emancipation was granted to the Jews in England in 1858.

Kansas, derived from an Indian name meaning "smoky water," was visited by the Spaniards in 1541; afterward by the French in 1719. It came to the United States through the Louisiana Purchase, and was a portion of the territory which, by the Missouri Compromise of 1820, was always to remain untouched by slavery. When the territory of Kansas was organized, in 1854, it was declared by Congress that the Missouri Compromise was abolished. This led to the Kansas troubles, which lasted till 1859, with various vicissitudes, when a free constitution was adopted, forever prohibiting slavery. This imbroglio played an important part in inflaming the passions of North and South, and ripening the conditions which made the Civil War inevitable. Kansas was admitted to the Union in 1861. During the Civil War the State was the scene of irregular warfare, known as "jay-hawking," carried on by Confederate raiders from Missouri and Arkansas and the Unionists who opposed them. The only battle of prominence took place at Lawrence on August 21, 1863. In 1880, the constitution was amended, prohibiting liquor traffic. In 1912, the state granted suffrage to women.

Kentucky. The name Kan-tuck-kee signifies "darkened bloody ground," and the country now included in the State was originally the common hunting ground for the Indian tribes living north and south of it. The first white visit was that of John Finley and others, from North Carolina, in 1767. Daniel Boone began to explore Kentucky in 1769. Colonel James Knox planted a Virginian colony in 1770, followed by others in 1773-74, and James Harrod founded Harrodsburg in 1774. In 1775, the Cherokees ceded the country to Boone, who acted as agent for Colonel Richard Henderson and his company. Kentucky was a part of Virginia till 1790, when it became a separate Territory. It was admitted as a State into the Union in 1792, being the second admitted. A second constitution was adopted in 1800, and the present one in 1850. Kentucky during the Civil War endeavored to hold a position of neutrality. The chief battles fought in the State were Mill Spring, January 19, 1862, and Perryville, October 8, 1862. In 1864, martial law was declared, and civil authority was not restored until October, 1865. In 1900, William Goebel, contesting candidate for governor, was assassinated. A series of notable trials followed. Serious conditions in the tobacco fields, 1906-1910, led to violence and lawlessness by night riders bordering upon civil war.

Lake Erie, Battle of. An important naval engagement in the war of 1812, between the United States and Great Britain, fought in Put-in-bay, Lake Erie, September 10, 1813. The American forces were intrusted to Lieut. Oliver Hazard Perry who equipped a squadron of nine sail at Erie on Presque Isle bay, and, although blockaded by the British fleet under Capt. Barclay, succeeded in getting his squadron out of port, August 12, 1813. On the 28th Perry was made master commandant. On September 10th he lay in Put-in-bay when he discovered the British squadron and went out to meet it. It consisted of six vessels.

The Americans had some advantage in able seamen. Only the Lawrence and the Niagara of the America squadron were regular vessels of war, the others having been built for trading. Their guns were of heavier caliber than those of the English, but of shorter range. This enabled the British to open battle with advantage. Out of 101 officers and men on Perry's flagship Lawrence only 18 were not disabled. In that desperate condition, Perry left the Lawrence and shifted his flag to the Niagara. The action now became general and, after a stubborn contest, Perry forced Barclay's flagship Detroit and three other vessels to surrender. The remaining two attempted to escape, but were soon overtaken and captured.

When Perry saw that victory was secure, he wrote with pencil on the back of an old letter, resting it on his navy cap, the despatch to Gen. Harrison: "We have met the enemy and they are ours—two ships, two brigs, one schooner, and one sloop." The contest had lasted about three hours with a loss on either side of about 130 in killed and wounded, Capt. Barclay himself among the latter. This victory completely established American supremacy on the lake. Congress bestowed gold medals on Perry and Master commandant Elliott, and minor rewards upon the other officers and men.

Lancaster, the name of a royal English house which flourished in two lines in the Thirteenth, Fourteenth, and Fifteenth Centuries. The first commences with Edmund, son of Henry III. and Eleanora of Provence, and brother of Edward I. Thomas, his son and successor in the earldom, cousin-german to Edward II., headed the confederacy of barons against Piers Gaveston, and finally shared the responsibility of his death with Hereford and Arundel. Henry (previously Earl of Leicester), brother and heir of Thomas, joined the conspiracy of Isabella and Mortimer against Edward II., and received the king into his custody at Kenilworth. Henry, his son (previously Earl of Derby), after vainly endeavoring to make peace with John, King of France, under the mediation of the pope at Avignon, was sent with an army into Normandy, and took part in the victory of Poitiers and the subsequent French wars. The next Duke of Lancaster commences a new lineage, that of the princes opposed to the house of York. The first in the line was John of Gaunt, or Ghent, fourth son of Edward III. His name is one of the most celebrated in English history and in the chivalry of the Middle Ages. Henry of Hereford, the successor of John of Gaunt in the dukedom, was son to him by his first wife. He claimed the crown by descent, by the mother's side, from Edmund the first earl, who was popularly supposed to be the elder brother of Edward I., and to have been deprived of the succession by his father for personal reasons. He became king by deposing Richard II., 1399, and was a prince of great ability and valor. He reigned as Henry IV. till his death in 1413, and was succeeded by his son, Henry V. The son of the latter also inherited the crown as Henry VI., and in his reign the feuds of York and Lancaster broke out, which ended in the union of the two houses in the person of Henry VII.

LEAGUE OF NATIONS, PEACE CONFERENCE, AND ARMS CONFERENCE

League of Nations. The League of Nations was provided for by the Peace Conference at Versailles in 1919, through the adoption of a League of Nations Covenant. The avowed object of this covenant was "to promote international co-operation and to achieve international peace and security: by the acceptance of obligations not to resort to war; by the prescription of open, just, and honorable relations between nations; by the firm establishment of the understandings of international law as the actual rule of conduct among Governments, and by the maintenance of justice and a scrupulous respect for all treaty obligations in the dealings of organized peoples with one another." The organization of the League consists of an assembly, a council, and a secretariat, the last named being a permanent body.

The assembly consists of representatives of nations which are members of the League. It has power to deal with any matter within the sphere of action of the League, or affecting the peace of the world. Each power represented is entitled to at most three delegates but is permitted to cast only one vote.

The council is composed of representatives, one each from Great Britain, France, Italy, Japan, and from a number (originally four) of other member nations in the League. These undesignated nations are, from year to year, elected by the assembly to membership in the council of the League.

The secretariat is established at the headquarters of the League in the city of Geneva, Switzerland. It consists of the secretary general and the necessary staff of secretaries and advisers. The secretariat prepares schedules of work for the meetings of the assembly and the council, conducts the official correspondence of the League, and looks after carrying out the decisions of the assembly and the council.

The League of Nations Covenant provided that the council should take such steps as it deemed practicable to bring about reduction of armaments. It provided further that the members of the League should undertake a mutual guarantee of territorial integrity and political independence of all League members. This provision was interpreted at the meeting of the assembly in 1921 to mean a guarantee as against external aggression.

The Covenant further provides that any war or threat of war is to be brought to the attention of the council, whether or not it affects member nations. Members of the League further agree to submit all matters of serious disagreement to arbitration or to inquiry by the council of the League and in no case to go to war within three months after a decision has been rendered. When a member disregards the Covenant and declares war the other members are required to sever economic and other relations with such state. When disputes arise between member states and outside states, or between nonmember states, the nonmember states concerned are to be invited to take advantage of League membership to facilitate settlement of such dispute.

The League has control of the various mandataries created under the Treaty of Versailles, and the secretariat is empowered to receive reports from the nations to whom mandataries were assigned. Amendments to the Covenant can take effect only when ratified by all members of the League represented in the council and by a majority of the members whose representatives compose the assembly. Members of the League are pledged to endeavor to secure fair conditions of labor for men, women, and children.

The Treaty of Versailles which created the League went into effect January 10, 1920, and the first meeting of the League council was held January 16, 1920. Since that date it has held numerous meetings. The first meeting of the League assembly was held at Geneva in November and December 1920. The regular meeting time of the assembly was fixed for the first Monday of September of each year, at Geneva. The meeting for 1923 opened on September 3 and closed on September 29. Forty-seven nations were represented at the opening. Abyssinia and the Irish Free State were admitted to the League.

The following 54 nations were members of the League, October, 1923:

Abyssinia, Albania, Argentina, Australia, Austria, Belgium, Bolivia, British Empire, Brazil, Bulgaria, Canada, Chile, China, Colombia, Costa Rica, Cuba, Czechoslovakia, Denmark, Esthonia, Finland, France, Greece, Guatemala, Haiti, Honduras, Hungary, India, Irish Free State, Italy, Japan, Latvia, Liberia, Lithuania, Luxemburg, Netherlands, New Zealand, Nicaragua, Norway, Panama, Paraguay, Persia, Peru, Poland, Portugal, Rumania, Salvador, Serb-Croat-Slovene State (Jugoslavia), Siam, South Africa, Spain, Sweden, Switzerland, Uruguay, Venezuela.

The President of the Assembly of the League (elected Sept. 3, 1923) is Cosmo de la Torriente, of Cuba.

The Secretary General of the League is Sir Eric Drummond, of Great Britain.

Among the accessory bodies attached to the League of Nations and acting under its direction, the following are the most important: (1) a permanent international court of justice; (2) a military, naval, and air commission; (3) an armaments commission; (4) a commission for the supervision of traffic in arms; (5) a blockade commission; (6) a mandates commission. In addition, the following technical organizations have been built up by the authority of the League: (1) an advisory economic and financial commission; (2) an advisory commission for communication and transit; (3) a health commission. An international labor office is established at Geneva, which works in close connection with the League.

Members of the International Court of Justice are: Senator Rafael Altamira, of Spain; Prof. Dionisio Anzilotti, of Italy; Judge Epitacio de Silva Pessoa, of Brazil; Prof. Antonio S. de Bustamante, of Cuba; Viscount Robert Bannatyne Finlay, of Great Britain; Prof. Max Huber, of Switzerland; Prof. B. T. C. Loder, of Holland; Prof. John Bassett Moore, of the United States; Judge Didrick Galtrup Gjeddo Nyholm, of Denmark; Prof. Yorozuoda, of Japan; Prof. Charles Andre Weiss, of France. Besides the eleven Judges just named, there are four Deputy Judges—Judge Frederik Valdemar Nikolai Beickmann, of Norway; Prof. Demetriu Negulesco, of Rumania; Dr. Wang Chung Hui, of China; and Judge Mihailo Jovanovic, of Jugoslavia.

At the meeting of the Assembly in September, 1923, Brazil, Belgium, and Spain were re-elected to membership in the Council, Czechoslovakia was chosen in place of China, while Sweden and Uruguay also were elected.

Important Acts of the League include: (1) Through the direct intercession and appeal of the assembly, Poland and Lithuania were brought to accept the basis for a settlement of their dispute about Vilna proposed by M. Hymans on behalf of the League council. (2) An international commission was sent to Albania to investigate the grievances of that state against Jugoslavia and Greece. The League adjusted their boundaries, by mutual agreement. (3) Financial reconstruction in Austria was successfully carried through by a commission authorized by the League. Similar work was undertaken for Hungary. (4) On Sept. 16, 1921, the Permanent Court of International Justice was finally and officially established through the election, by the council and the assembly, of eleven judges and four deputy judges. (5) The dispute between Sweden and Finland about the Aland Islands was peacefully solved by a decision of the council—accepted by both parties, the islands to remain Finnish under certain guarantees of autonomy. (6) The health commission, which is aided financially by the Rockefeller Institute, has been so organized as to do efficient international service. (7) Important steps toward control of the opium traffic have been taken.

Paris-Versailles Peace Conference, The. After the signing of the armistice on Nov. 11, 1918, the preliminary work of arranging for peace negotiations was cared for by the Inter-Allied Supreme War Council which had brought about the close of the war. Representatives of the powers met informally and outlined the constitution of the Peace Conference. It was determined that the five great Allied Powers, the United States, the British Empire, France, Italy, and Japan, should participate in all the sessions and commissions of the Conference. Other powers were to be called into conference upon questions affecting their special interests.

The Conference opened in Paris on January 18, 1919. The following countries were represented: The United States, France, Great Britain, Italy, and Japan with five members each; Brazil with three members; Belgium, China, Greece, the Hejaz, Poland, Portugal, Rumania, Serbia, Siam, Czechoslovakia, Australia, Canada, South Africa, and India with two members each; Cuba, Guatemala, Haiti, Honduras, Liberia, Nicaragua, Panama, Bolivia, Equador, Peru, Uruguay, and New Zealand with one member each.

The representatives who signed the Peace Treaty were:—Of the United States: President Wilson, Robert Lansing, Henry White, Col. E. M. House, Gen. Tasker H. Bliss. Of the British Empire: David Lloyd George, Andrew Bonar Law, Viscount Milner, Arthur James Balfour, George Nicoll Barnes; For the Dominion of Canada: Charles Joseph Doherty, Arthur Lewis Sifton; For the Commonwealth of Australia: William Morris Hughes, Sir Joseph Cook; For the Union of South Africa: Louis Botha, Jan Christian Smuts; For the Dominion of New Zealand: William Ferguson Massey; For India: Edwin Samuel Montagu, Maharaja Sir Ganga Singh Bahadur. Of the French Republic: Georges Clemenceau, Stephen Pichon, Louis-Lucien Klotz, André Tardieu, Jules Cambon. Of Italy: Baron S. Sonnino, Marquis G. Imperiali, S. Crespi. Of Japan: Marquis Saionzi, Baron Makino, Viscount Chinda, K. Matsui, H. Ijuin.

A Supreme Council, or Council of Ten, was organized as an executive committee of the Conference, to consist of the ranking delegates of the five great powers. Later, the authority of this council was transferred to the Council of Four, consisting of President Wilson and the three premiers, Lloyd George, Georges Clemenceau, and Vittorio Emanuele Orlando.

The Conference undertook first to draft the League of Nations Covenant, of which President Wilson was the foremost advocate. This was entrusted to a committee of ten, two members from each of the five great powers. The final draft of the Covenant, following closely an outline prepared by General Smuts of South Africa, was completed in April. Financial, economic, and boundary questions were considered by various commissions made up of distinguished specialists in these various fields.

The treaty was presented to the German delegates at Versailles on May 7, 1919. Its chief provisions were for a League of Nations, for payment of reparations by Germany, for adjustment of boundaries among new European states, and for mandataries to assume the government of the forfeited German colonial possessions. Upon the protest of the German delegates, certain changes were made in the treaty. A new group of German delegates at length signed the treaty on June 28, 1919.

The Peace Conference continued its sessions throughout the year 1919. The United States delegation left Paris on Dec. 9.

President Wilson submitted the treaty to the United States Senate on July 10, 1919. That body rejected it Nov. 19. It was again submitted in December 1919 and rejected on March 19, 1920.

Arms Conference. President Harding in his address to Congress on April 12, 1921 said, "We are ready to co-operate with other nations to approximate disarmament, but merest prudence forbids that we disarm alone." During the debate in the Senate upon the Naval Appropriations Bill in May, senators repeatedly expressed sentiment in favor of disarmament through international agreement. Senator Borah of Idaho embodied this opinion in the following resolution, which was adopted as an amendment to the Senate bill appropriating $494,000,000 for maintenance and enlargement of the navy in the year 1921-22:

"The President is authorized and requested to invite the Governments of Great Britain and Japan to send representatives to a conference, which shall be charged with the duty of promptly entering into an understanding or agreement by which the naval expenditures and building programs of each of said governments, to wit, the United States, Great Britain, and Japan, shall be substantially reduced annually during the next five years to such an extent and upon such terms as may be agreed upon, which understanding or agreement is to be reported to the respective governments for approval."

Objection to this amendment was raised on the ground that it restricted agreement to three nations only. When the naval bill was considered in conference of the House and Senate, the following joint resolution was substituted for the Borah amendment and was accepted by both houses:

"Joint resolution concurring in the declared purpose of the President of the United States to call an international conference to limit armaments.

"Resolved, by the Senate and House of Representatives of the United States of America in Congress assembled, that the Congress hereby expresses its full concurrence in the declaration of the President in his address to Congress on April 12, 1921, that 'we are ready to co-operate with other nations to approximate disarmament, but merest prudence forbids that we disarm alone,' and, further, fully concurs in his declared purpose and intention to call an international conference to consider the limitation of armaments with a view to lessen materially the burden of expenditures and the menace of war; and that for the expenses preliminary to and in connection with the holding of such conference the sum of $100,000, to be expended under the direction of the President, is hereby appropriated."

On July 10 the State Department issued the following announcement:

"The President, in view of the far-reaching importance of the question of limitation of armament, has approached

with informal but definite inquiries the group of powers heretofore known as the Principal Allied and Associated Powers, that is, Great Britain, France, Italy, and Japan, to ascertain whether it would be agreeable to them to take part in a conference on this subject, to be held in Washington at a time to be mutually agreed upon. If the proposal is found to be acceptable, formal invitations for such a conference will be issued.

"It is manifest that the question of limitation of armament has a close relation to Pacific and Far Eastern problems, and the President has suggested that the powers especially interested in these problems should undertake in connection with this conference the consideration of all matters bearing upon their solution with a view to reaching a common understanding with respect to principles and policies in the Far East. This has been communicated to the powers concerned, and China has also been invited to take part in the discussion relating to Far Eastern problems."

This suggestion of a disarmament conference was cordially received by all the governments concerned, and on August 11 the State Department issued formal invitations to Great Britain, France, Italy, Japan, and China, to join in a conference at Washington on Nov. 11, 1921, the 3d anniversary of the Armistice of 1918.

On Nov. 11 the members of the Conference from the various nations participated in the ceremonies attending the burial of the body of an unknown American soldier in the National Cemetery at Arlington. The formal sessions of the Conference opened on the morning of Nov. 12 in the Continental Memorial Hall, the building of the National Association of the Daughters of the American Revolution at Washington. Full delegations were present from the United States, Great Britain, France, Italy, Japan, China, Holland, Belgium, and Portugal.

The following were the Principal Delegates seated in the Conference:—*United States:* Charles Evans Hughes, Elihu Root, Henry Cabot Lodge, Oscar W. Underwood. *Great Britain:* Hon. Arthur J. Balfour, Lord Lee of Fareham, Sir Robert Borden, Hon. George F. Pearce, V. S. Srinivasa Sastri, Sir J. W. Salmond, Sir Auckland Geddes. *France:* Aristide Briand, René Viviani, Albert Sarraut, Jules Jusserand. *Japan:* Prince Iyesato Tokugawa, Admiral Tomosaburo Kato, Baron Kijuro Shidehara. *Italy:* Carlo Schanzer, Vittorio Rolandi Ricci, Filippo Meda, Luigi Albertini. *Holland:* Jonkheer H. A. van Karnebeek, Jonkheer F. Beelaerts van Blokland, Dr. E. Moresco. *Belgium:* Barton de Cartier de Marchienne. *China:* Dr. S. Alfred Sze, V. K. Wellington Koo, Wang Chung-hui. *Portugal:* Viscount d'Alte and delegation.

Mr. John W. Garrett, of Baltimore, was chosen Secretary General of the Conference. Each delegation was provided with a staff of general and technical advisers. The Advisory Committee of the United States consisted of the following 21 persons, appointed by President Harding:

George Sutherland of Utah, ex-Senator; Herbert C. Hoover of California, Secretary of Commerce; General John J. Pershing, Chief of Staff of the Army; Rear Admiral W. L. Rodgers; Stephen G. Porter of Pennsylvania, Chairman of the House Committee on Foreign Affairs; Governor John M. Parker of Louisiana; Henry P. Fletcher of Pennsylvania, Assistant Secretary of State; Colonel Theodore Roosevelt of New York, Assistant Secretary of the Navy; Colonel J. M. Wainwright of New York, Assistant Secretary of War; Mrs. Charles Sumner Bird of Massachusetts; Mrs. Katherine Phillips Edson of California; Mrs. Eleanor Franklin Egan of New York; Mrs. Thomas G. Winter of Minnesota, President General of the Federation of Women's Clubs; William Boyce Thompson of New York, financier; Willard Saulsbury of Delaware, ex-Senator; Samuel Gompers, President of the American Federation of Labor; John L. Lewis of Indiana, President of the United Mine Workers of America; Walter George Smith of Pennsylvania, lawyer and publicist; Carmi Thompson of Ohio, former Treasurer of the United States; Charles S. Barrett of Georgia, President of the National Farm Bureau; Harold M. Sewell of Maine, former Minister to Hawaii and Consul General in Samoa.

President Harding welcomed the delegates. Upon nomination by Mr. Balfour of the British delegation, Secretary Hughes was unanimously chosen permanent chairman of the Conference. Mr. Hughes, in an epoch making address, stated the purposes of the conference and laid down a detailed program for limitation of naval armaments by the United States, Great Britain, and Japan. These proposals he based upon the following four principles:

1. That all capital shipbuilding programs, either actual or projected, should be abandoned.
2. That further reduction should be made through the scrapping of certain of the older ships.
3. That, in general, regard should be had to the existing naval strength of the powers concerned.
4. That the capital ship tonnage should be used as the measurement of strength for navies, and a proportionate allowance of auxiliary combatant craft prescribed.

The plan outlined contained a provision for the mutual limitation of naval armament by the United States, Great Britain, and Japan,—the famous "10-year naval holiday." Under this agreement, within three months, the navy of the United States should have 18 capital fighting ships, that of Great Britain 22, that of Japan 10. No replacements should be begun for ten years, and thereafter the capital ship tonnage of these three powers should be 500,000 tons for the United States, 500,000 for Great Britain, 300,000 tons for Japan. This is the famous 5-5-3 plan. The program laid down by Secretary Hughes was received with great enthusiasm both in the Conference and by the people of the nations involved.

The Conference was organized in two committees of the whole: one made up of delegates of five nations, Great Britain, France, Italy, Japan, and the United States, to consider limitation of armament; the other made up of delegates of the nine nations represented, including China, Belgium, Holland, and Portugal, to consider a program for dealing with questions affecting the Far East and the Pacific.

While popular interest was centered upon the economic saving to be realized through decreased expenditure for armament, the first and most pressing task of the Conference was the formulation of an agreement to take the place of the Anglo-Japanese treaty. This treaty had long been a source of disturbance in the relations between Japan and the United States. Moved by protests of the over-seas dominions, the British government had refused to definitely renew the treaty in 1921. At the plenary session of the conference on Dec. 10 Senator Lodge of the American delegation presented the draft of a treaty between the United States, the British Empire, France, and Japan. This treaty, known as the Four-Power Pacific Treaty, was signed on Dec. 13 by the delegates of these four powers. The following is the text of this historic document:

The United States of America, the British Empire, France, and Japan, with a view to the preservation of the general peace and the maintenance of their rights in relation to their insular possessions and insular dominions

in the regions of the Pacific Ocean, have determined to conclude a treaty to this effect and have appointed as their plenipotentiaries:

The President of the United States; His Majesty the King of the United Kingdom of Great Britain and Ireland, etc. And for the Dominion of Canada; For the Commonwealth of Australia; For the Dominion of New Zealand; For India; The President of the French Republic; His Majesty the Emperor of Japan:

Who having communicated their full powers, found in good and due form, have agreed as follows:

ARTICLE I

The high contracting parties agree as between themselves to respect their rights in relation to their insular possessions and insular dominions in the regions of the Pacific Ocean.

If there should develop between any of the high contracting parties a controversy arising out of any Pacific question and involving their said rights which is not satisfactorily settled by diplomacy and is likely to affect the harmonious accord now happily subsisting between them, they shall invite the high contracting parties to a joint conference to which the whole subject will be referred for consideration and adjustment.

ARTICLE 2

If the said rights are threatened by the aggressive action of any other power the high contracting parties shall communicate with one another fully and frankly in order to arrive at an understanding as to the most efficient measures to be taken, jointly and separately, to meet the exigencies of the particular situation.

ARTICLE 3

This agreement shall remain in force for ten years from the time it shall take effect, and after the expiration of said period it shall continue to be in force subject to the right of any of the high contracting parties to terminate it upon twelve months' notice.

ARTICLE 4

This agreement shall be ratified as soon as possible in accordance with the constitutional methods of the high contracting parties and shall take effect on the deposit of ratifications, which shall take place at Washington, and thereupon the agreement between Great Britain and Japan, which was concluded at London on July 13, 1911, shall terminate.

The United States delegates made in writing the following reservations with respect to this treaty:

1. That the treaty shall apply to the mandated islands in the Pacific Ocean; provided, however, that the making of the treaty shall not be deemed to be an assent on the part of the United States of America to the mandates and shall not preclude agreements between the United States of America and the mandatory powers respectively in relation to the mandated islands.

2. That the controversies to which the second paragraph of Article I refers shall not be taken to embrace questions which, according to principles of international law, lie exclusively within the domestic jurisdiction of the respective powers.

At the final plenary session of the Conference, February 6, 1922, the delegates signed the treaties adopted Feb. 1 and 4. These included: (1) the five power treaty between the United States, Great Britain, Japan, France, and Italy, providing for limitation of naval armament; (2) the five power treaty, limiting use of submarines and prohibiting use of poison gas in warfare; (3) a nine power treaty, pledging the signatory powers to respect the integrity of Chinese territory and to maintain the "open door" policy; (4) a nine power treaty, providing for adjustment of Chinese tariffs. The Chinese and Japanese delegates also signed an agreement, providing for the restoration of Shantung to China.

Lexington, a town of Massachusetts, ten miles northwest of Boston, noted as the scene of the first fight between the British and Americans in the war of the Revolution, April 19, 1775. On the evening of April 18th, General Gage, the British commander in Boston, sent 800 soldiers, under Major Pitcairn, to destroy the American supplies at Concord. Paul Revere, of Boston, escaping their sentinels, galloped out to Lexington and Concord with the news, so when the British reached Lexington at daybreak, they found about seventy Americans waiting for them on the village common. Captain John Parker, their commander, ordered them not to shoot until the English did. Major Pitcairn rode forward and called out: "Disperse ye rebels!" but though the Americans were outnumbered ten to one, they stood firm. Then Pitcairn ordered his men to fire, and four Americans were killed and nine wounded. Some shots were fired in return, and three English soldiers were wounded; but after that the Americans retreated some being killed as they ran. The British marched on to Concord, but meanwhile the whole country was aroused, and as they came back, hundreds of Americans attacked them from behind the houses and stone walls by the roadside. They were saved from destruction only by the arrival of reinforcements. Though not a very great battle, this was one of the most important ones that ever was fought.

Louisiana. In 1541, De Soto discovered the Mississippi and in 1682 La Salle voyaged down this river to its mouth, naming the country Louisiana and taking possession of it in the name of the King of France. In 1718, Bienville founded New Orleans. In 1733, a settlement was made at Baton Rouge. In 1750, the cultivation of cotton was begun in the territory. In 1755, Louisiana received a large increase in population from the Acadians, who were driven from their homes in Canada. By a secret treaty in 1762, France ceded Louisiana to Spain, and in 1768 the French drove the first Spanish Governor, Don Antonio de Ulloa, from the colony. In 1800, Louisiana was ceded to Napoleon by Spain, and in 1803 was purchased from France by the United States for 60,000,000 francs. In 1806 and 1807, Aaron Burr's scheme to set up an independent nation in the Mississippi Valley caused much disturbance in New Orleans.

In 1812, Louisiana was admitted to the Union as a state, with boundaries as they are now. That same year the first steam vessels on the Mississippi arrived from Pittsburg. The battle of New Orleans between the British and Americans was fought January 8, 1815. During the period from 1815 to 1860 there was continual industrial activity and Louisiana became a leading agricultural State. In 1850, Baton Rouge was made the seat of State government. On January 26, 1861, Louisiana passed the Ordinance of Secession. Port Hudson, the last Confederate stronghold on the Mississippi, was captured by General Banks July 8, 1863, and on May 26, 1865, the war in Louisiana was ended by the surrender of General Kirby Smith. From 1865 to 1874 a period of carpetbag government caused many disturbances. In 1884, the Industrial Cotton Exhibition was opened at New Orleans.

Lundy's Lane, a locality in the province of Ontario, near the Falls of Niagara. Here, July 25, 1814, an obstinate and decisive engagement was fought between an American force, numbering 3,000 men, under General Brown, and a body of about 2,000 British troops commanded by General Drummond. The loss

of the Americans was 743 men; that of the British 878 men.

Lützen, a small town in the Prussian province of Saxony, famous for two great battles fought in its vicinity. The first, a brilliant victory of the Swedes in the Thirty Years' War, took place November 16, 1632. The battle on May 2, 1813, was fought somewhat farther to the south, at the village of Grosgoschen. It was the first great conflict of the united Russian and Prussian army with the army of Napoleon in that decisive campaign, and the French were left in possession of the field.

Maine. Various but unsuccessful attempts at colonization in Maine were made between the years 1602 and 1620 by both the French and English. In 1620, Sir Ferdinando Gorges, as head of the Plymouth Company, received a patent of all the region between 40° and 48° north latitude. In consequence of disputes afterward with the Massachusetts Colony, the company was dissolved, and in 1639 Gorges received a formal charter of the region between the Piscataqua and Kennebec, under the title of Maine. Internecine quarrels between the different settlements, on points of jurisdiction, caused the Massachusetts Colony in 1651 to set up a claim to the province under her charter, and parliament sanctioned it. In 1677, all claims of other grantees were purchased. From this time the history of the province was practically merged in that of Massachusetts. The final separation occurred in 1820, when Maine was admitted to the Union, being the tenth under the constitution. In 1842, the boundary dispute between Maine and Great Britain was settled. The "Maine Liquor Law" was passed in 1851. It was repealed in 1856 and passed again in 1858, being made a part of the Constitution in 1884. The death penalty was abolished in 1876, restored in 1883, and again abolished in 1887. The growth of the wood-pulp and paper-mill industry began about 1880, and in 1890 there was a rapid development of the lumber, granite, ice, and fishery trades. In 1879-80 occurred a notable contest for the governorship between the Republicans and Fusionists.

Mamelukes (*măm'a-lookz*). Originally, male slaves imported from Circassia into Egypt by the rulers of that country. They were instructed in military exercises, but soon exhibited a spirit of insubordination, assassinating the Sultan, Turan Shah, and, in 1258, appointing Ibegh, one of their own number, Sultan of Egypt. They were at length conquered by Selim I., and Cairo, their capital, was taken by storm, after they governed Egypt 263 years. During the French invasion of Egypt by Napoleon I., the Mamelukes formed a fine body of cavalry, and for a time seriously annoyed the invaders, though many afterwards joined them. In 1811, Mehemet Ali annihilated their power by treacherously inveigling and destroying 470 of their chief leaders.

Manila Bay, Battle of. A remarkable engagement between the American Asiatic squadron, under command of Commodore George Dewey, and a Spanish naval force, under command of Admiral Montojo, supported by land batteries, fought on May 1, 1898. When it became evident, in March, 1898, that war between the United States and Spain was inevitable, Commodore Dewey began to mobilize his vessels in the harbor of Hong Kong preparatory to striking a blow at the Philippine Islands on the breaking out of hostilities. By April 1st, he had gathered there his flagship, the "Olympia," a steel protected cruiser; the "Boston," a partially protected steel cruiser; the "Raleigh," protected steel cruiser; the "Concord," steel gunboat; and the "Petrel," steel gunboat. Toward the close of the month, the "Baltimore," a steel protected cruiser, the "Hugh McCulloch," revenue cutter, and two newly-purchased ships loaded with coal and other supplies, joined the fleet. Lying in Manila Bay, one of the largest and most important in the world, was a Spanish squadron, comprising, the "Reina Christina," steel cruiser; "Castilla," wood cruiser; "Velasco," iron cruiser; "Don Antonio de Ulloa," iron cruiser; "Don Juan de Austria," iron cruiser; "Isla de Cuba," steel protected cruiser; "Isla de Luzon," steel protected cruiser; "General Lezo," gunboat; "El Cano," gunboat; "Isla de Mindanao," auxiliary cruiser; "Marques del Duero"; and two torpedo boats. It was supposed that the harbor had been planted with mines and torpedoes and supplied with numerous searchlights, and that the forts on the shore had been strengthened in anticipation of an attack.

The United States squadron entered the bay on the night of April 30th, and at 5 o'clock on Sunday morning, May 1st, opened fire on the Spanish squadron and the forts. Two engagements were fought, and during the brief interval the United States squadron drew off to the east side of the bay to enable officers and men to get their breakfast. The entire battle lasted less than two hours. The Spanish flagship, "Reina Christina," was completely burned; the "Castilla" suffered the same fate; the "Don Juan de Austria" was blown up by a shell from one of the United States vessels; one or more ships were burned; and the entire Spanish fleet was destroyed. After his second attack, in which he destroyed the water battery at Cavite, Commodore Dewey anchored off the city of Manila and sent word to the governor-general that if a shot was fired from the city at the fleet, he would lay Manila in ashes. The Spanish loss was about 2,000 officers and men. The United States squadron did not lose a ship or a man. Two vessels were damaged in their upper works, and eight men were variously injured.

Maryland. One of the thirteen original States, it was named after the mother of Charles II. The State was settled by Lord Baltimore in 1632, under a grant from Charles I. Puritan and Virginian colonies disputed the authority of the proprietary governors, and it was not till 1714, after many broils and considerable bloodshed, extending over three-quarters of a century, that the rights of the Calvert family were finally settled. In 1649, the Assembly passed an act allowing Christians of all sects the public exercise of their faith. Baltimore was founded in 1730. The Virginia boundary was adjusted in 1668, that of Delaware and Pennsylvania.

known in our history as "Mason and Dixon's Line," in 1763. A republican constitution was adopted in 1776. The "Maryland Line" was famous in the Revolutionary War for its gallantry. The Federal Constitution was adopted in 1788. In the War of 1812, Maryland suffered much from Admiral Cockburn's fleet; Frenchtown, Havre de Grace, and Frederick were burned, and Fort McHenry unsuccessfully bombarded. The only important battle fought within the State during the late Civil War was that of Antietam, in September, 1862.

Mason and Dixon's Line. This line was originally the parallel of latitude 39 degrees, 43 minutes, 26.3 seconds which separates Pennsylvania from Maryland. It received its name from Charles Mason and Jeremiah Dixon, two English mathematicians and astronomers, who traced the greater part of it between the years 1763 and 1767, though the last thirty-six miles were finished by others. It was practically the dividing line between the free and the slave States in the East. During the discussion in Congress on the Missouri Compromise, John Randolph, of Roanoke, Virginia, made free use of the phrase, and thereafter it became popular as signifying the dividing line between the free and slave territories throughout the country. The boundary, as thus extended by popular usage, followed the Ohio River to the Mississippi, and west of that was the parallel of 36 degrees, 30 minutes, the southern boundary of Missouri, though Missouri itself was a slave State.

Massachusetts was one of the thirteen original States. Though first visited by the English under Bartholomew Gosnold in 1602, the first permanent settlement was made by the Puritan colony, which landed from the "Mayflower" at Plymouth in 1620. The expedition commanded by John Endicott, which arrived in 1628, acting under the auspices of the Massachusetts Bay Company, which had received a royal charter, gradually planted settlements at Charlestown, Boston, Watertown, Dorchester, Roxbury, Salem, Mystic, Saugus (Lynn), and other places. The restoration of the Stuarts threatened the rights of the colonists, but their charter was finally confirmed in 1662. King Philip's War occurred in 1675-76, and put the colonists in great peril. In 1684, the Massachusetts charter was declared forfeited to the Crown under Charles II., but it was restored after the accession of William and Mary. In 1692, the colonies of Massachusetts Bay and Plymouth were consolidated. The province took active part in the various French and Indian wars, and contributed largely to the expedition which captured Louisburg in 1745. The Boston Massacre in 1770, the destruction of the tea in 1773, and the Port Bill in 1774 were important incidents preceding the Revolution. At Lexington and Concord, in 1775, Massachusetts made the final appeal to arms. At this time the population of the province was 352,000. The State Constitution, still essentially the organic law, was formed in 1780, and the Federal Constitution was ratified in 1788. The total expenditures of the State on account of the late Civil War amounted to $30,162,200.

Mecklenburg Declaration. This declaration was adopted, it is said, in May, 1775, at a midnight meeting of representatives of the militia of Mecklenburg County, North Carolina. It declares that the people of that county are free and independent of the British Crown, and not only is its general tenor that of the Declaration of Independence, but many phrases are word for word as they appear in that document. The minutes of the midnight meeting are said to have been destroyed by fire in 1800. Whether the Declaration of Independence followed the words of the Mecklenburg Declaration or whether the latter, having probably been replaced from memory, was tinctured with the former, is a disputed question.

Mexico. The history of ancient Mexico exhibits two distinct and widely different periods — that of the Toltecs and that of the Aztecs. The Eighth Century is the traditional date when the Toltecs are related to have come from the North. Their capital was established at Tula, north of the Mexican Valley. Their laws and usages stamp them as a people of mild and peaceful instincts, industrious, active, and enterprising. It is related that a severe famine and pestilence all but destroyed the Toltec people in the Eleventh Century, and near the end of the next century, a fresh migration brought, among other kindred nations, the Aztecs into the land. Within two centuries and a half this last people had become predominant. But their rule was in a great degree, a reversion to savagery.

The Aztecs founded, about 1325, the city of Tenochtitlan, or Mexico; a hundred years later they had extended their sway beyond their plateau valley, and on the arrival of the Spaniards, their empire was found to stretch from ocean to ocean. Their government was an elective empire, the deceased prince being usually succeeded by a brother or nephew, who must be a tried warrior; but sometimes the successor was chosen from among the powerful nobles. The monarch wielded despotic power, save in the case of his great feudal vassals; these exercised a very similar authority over the peasant class, below whom, again, were the slaves. The Mexicans apparently believed in one supreme invisible creator of all things, the ruler of the universe; but the popular faith was polytheistic. At the head of the Aztec pantheon was the frightful Huitzilopochtli, the Mexican Mars. The victims were borne to the summit of the great pyramidal temples, where the priests, in sight of assembled crowds, bound them to the sacrificial stone, and, slashing open the breast, tore from it the bleeding heart and held it up before the image of the god.

Cortez landed at Vera Cruz in 1519. Before his energy, and the superior civilization of his followers, the power of the native empire crumbled away. In 1540 Mexico was united with other American territories — at one time all the country from Panama to Vancouver's Island — under the name of New Spain, and governed by viceroys appointed by the mother country. The intolerant spirit of the Catholic clergy led to the suppression of almost every trace of the ancient Aztec nationality and civilization, while the commercial system crippled the resources of the colony; for all foreign trade with any coun-

try other than Spain was prohibited on pain of death. Mexico ranked first among all the Spanish colonies in regard to population, material riches, and natural products. In 1810 the discontent broke into open rebellion, and a guerilla warfare was kept up until, in 1821, the capital was surrendered by O'Donoju, the last of the viceroys. In the following year, General Iturbide, who, in 1821, had issued the plan de Iguala, providing for the independence of Mexico under a prince of the reigning houses, had himself proclaimed emperor; but the guerilla leader Guerrero, his former ally, and General Santa Ana raised the republican standard, and in 1823 he was banished to Italy with a pension. Returning the following year he was taken and shot, and the federal republic of Mexico was finally established.

For more than half a century after this the history of Mexico is a record of disorder and civil war. In 1836 Texas secured its independence, recognized by Mexico in 1845. In that year Texas was incorporated with the United States; but its western boundary was not settled, and war ensued between Mexico and the United States. From the fall of Santa Ana in 1855, down to 1867, great confusion prevailed. In April, 1862, Emperor Napoleon formally declared war against Mexico; but the French finally had to withdraw in 1867, largely because of the attitude of the United States. Maximilian, who had become Emperor of Mexico under French support, was executed in the same year, and Juarez returned to power. On his death in 1872, the chief justice, Lerdo de Tejada, assumed the presidency, in which he was succeeded in 1877 by General Porfirio Diaz, one of the ablest of Mexican soldiers and administrators.

In 1910, a rebellion was started under Madero. In 1911 Diaz was forced to resign; Madero was made president. In 1912 Felix Diaz led an insurrection against Madero, who was assassinated February 24, 1913. Huerta became acting president. A revolt against the Huerta government by the Constitutionalists, followers of Madero, resulted in the appointment of Carranza as their commander-in-chief. The United States declined to recognize Huerta.

On April 9, 1914, a party of American bluejackets landed at Tampico for gasoline. They were arrested by Mexican troops, but released with an apology. Rear-admiral Mayo demanded a salute to the American flag which was refused. The United States navy was ordered to Tampico to enforce the demand. 1,000 marines were landed at Vera Cruz. On April 21 the customs house was seized by order of President Wilson. 3,000 additional troops took the city on April 22. On May 20, delegates of the so-called A-B-C powers—Argentina, Brazil, Chile—met at Niagara Falls, Canada, to arrange peaceful settlement between United States and Mexico. The conference ended without positive results.

Huerta resigned in July, 1915, and left the country; Carbajal became provisional president. The Constitutionalists under Carranza occupied Mexico City in August; Villa arose against Carranza, now provisional president, but was defeated. In October, 1915, Carranza was formally recognized as chief executive by the United States and other governments, and, in 1917, was elected president of Mexico. In May, 1920, a revolution, led by General Obregon, resulted in the deposition and death of Carranza. In September, 1920, General Obregon was elected president and assumed office, December 1, 1920.

Michigan. The name is derived from Indian words, meaning "a weir of fish." Though visited as early as 1610 by French missionaries and fur-traders, the first European settlement was made at Sault Ste. Marie by Father Marquette in 1668. Fort Michilimackinac, now Mackinaw, was established three years later. In 1701 Antoine Cadillac founded Detroit. With other French possessions it came into the ownership of England in 1763. Michigan came into the possession of the United States in 1796, when it was included in the government of the Northwest Territory. The Territory of Michigan was formed in 1805. In 1837 Michigan was admitted as a state. In 1916 Prohibition was adopted by constitutional amendment. In 1918 full suffrage was granted to women.

Minnesota. The name is derived from an Indian word, signifying "cloudy water." Hennepin and La Salle visited the region as early as 1680. Extended explorations were made by John Carver in 1766 and by Lieut. Pike in 1805, after which explorers and settlers followed in considerable numbers. Fort Snelling, at the mouth of the Minnesota River, was built and occupied in 1821. In 1837 lumbering industries began to attract immigration. The Territory established in 1849 embraced about twice the limits of the present State, the western limit extending to the Missouri and White Earth rivers. In 1851, the Sioux ceded all their lands west of the Mississippi to the Big Sioux River. The State was admitted to the Union May 11, 1858. The portion of the State lying west of the Mississippi originally belonged to the Louisiana Purchase, and the eastern portion was a part of what was known as the "Northwest Territory." It was the scene of the Sioux War and massacre in 1862-63.

Mississippi. This region was first traversed by De Soto in 1542, and in 1682 La Salle descended the Mississippi (the name derived from Indian words meaning "great water"), took formal possession, and called the adjacent country Louisiana. Iberville built a fort on the Bay of Biloxi in 1699, and in 1716 Fort Rosalie was erected on the site of Natchez. After the cession of the east portion of Louisiana (including what is now Mississippi) to Great Britain, in 1763, and until the Revolutionary War, immigration proceeded very slowly. The Territory of Mississippi was organized in 1798. In 1804 the boundaries were enlarged, and Mississippi was made to comprise the whole of the present States of Alabama and Mississippi north of the 31st parallel. The region south of that line between the Pearl and Perdido rivers was added in 1812, though claimed by Spain. Alabama was organized as a Territory in 1817, and Mississippi was admitted as a State. The ordinance of secession was passed January 9, 1861. The principal events within the State during the war of 1861-65 were the battles of Iuka and Corinth and the siege of Vicksburg, which sur-

rendered on July 4, 1863. The State was formally readmitted to the Union in 1870. On January 29, 1903, the Yazoo Canal was opened, restoring to Vicksburg the water front it lost during 1876, when the Federal Government attempted to dredge a canal, tapping the Yazoo River. A Prohibition statute was enacted in 1908 which took effect in 1909.

Missouri. The name of the State signifies "big muddy." The settlement and progress of Missouri were at first slower than in the lower portions of French Louisiana. Its oldest town, Ste. Genevieve, was founded in 1755. In 1763, France ceded to Spain the portion west of the Mississippi, and to England the section east of the river. Numbers of French Canadians had settled along the whole line of the river, and an active trade had been carried on between upper and lower Louisiana. With liberal grants of lands to colonists, immigrants flocked hither from Spain. In 1775, St. Louis, originally a depot of the fur-trade, contained 800 inhabitants, while Ste. Genevieve had only 460. Spain sided with the colonists during the Revolution, and her arms were successful in lower Louisiana and Florida. In 1780, however, St. Louis was attacked by a force of English and Indians from Michilimackinac, and was relieved only by the arrival of General Clarke from Kaskaskia with American assistance. With the retrocession of Louisiana to France in 1800, and its subsequent sale to the United States by Napoleon three years later, its political ownership became fixed. Missouri was included in the Territory of Louisiana, which had been set off in 1805, with St. Louis as the seat of territorial government. In 1812, with the admission of the present State of Louisiana into the Union, the name of the Territory was changed to Missouri. With rapid immigration the population had swelled in 1817 to 60,000. In 1820, by the celebrated compromise, Missouri was admitted to the Union as a slaveholding State, on condition that slavery should never exist north of latitude 36° 30′, in lands farther west, out of which new States should be formed. During the late Civil War repeated efforts were made to force secession on Missouri, but unsuccessfully. Though no great battles were fought within the State limits, it was the field of active military operations and, in many sections, of bloody guerilla-fighting. The battle of Wilson's Creek, on August 10, 1861, where General Lyon, the Federal commander, was killed, and the capture of Lexington by the Confederate general, Sterling Price, on September 20, 1861, were the most important events of the first year of the conflict. Several times General Price held more than half the State in his hands, and it was not till 1864 that the Confederates were finally expelled. In June, 1865, a new constitution was ratified by the people. The fifteenth amendment to the Federal Constitution was adopted by the legislature in 1869. Missouri was the eleventh State admitted under the Federal Constitution.

Montana. In 1743, Chevalier de la Verendrye, with a party of French Canadians, entered Montana and discovered the Rocky Mountains, but made no attempt at settlement. The country came into the possession of the United States by the Louisiana Purchase of 1803. In 1804 and 1806, Lewis and Clark made exploring expeditions up the Missouri and across the mountains to the Pacific, crossing Montana twice. Alexander Henry, in 1808, led a party of fur-traders into the Yellowstone country, and in 1806–1810, John Colter, of Lewis and Clark's expedition, engaged in hunting and trapping in the territory. Fort Union, the first permanent fort in Montana, was built in 1829 by Kenneth Mackenzie, and in 1832 the first steamer ascended the Missouri into Montana. Fort Benton was built in 1846 by Alexander Culbertson. In 1853–54, Montana was explored by a scientific and military, expedition sent out by Governor Isaac J. Stevens, of Washington Territory. The Gold Creek mines were discovered in 1862, and in the same year the development of the mines of Beaverhead Valley and Bighole River began. In 1864, Montana was organized as a Territory and Helena and Butte City were founded. From 1864 to 1879 there was war with the Sioux, Blackfeet, and Cheyennes. In 1874, Helena was made territorial capital. The battle of Little Big Horn, when General Custer and his men were massacred, occurred in 1876. In 1881, the first railroad reached Helena, and in 1883 the second was completed. In 1889, Montana was admitted as a State. The Montana State University was opened at Missoula in 1895. Montana granted suffrage to women in 1914 and adopted constitutional Prohibition in 1916.

Nebraska. The name first applied to the river is of Indian origin, and signifies "Shallow Water." When originally organized as a Territory in 1854, it extended from latitude 40° north to the northern national boundary and west to the crest of the Rocky Mountains. The Territory of Colorado was set off from this on February 28, 1861, and that of Dakota a few months later. At the same time Nebraska received from Utah and Washington Territories a tract of 15,378 square miles, lying on the southwest slope of the Rocky Mountains, which, however, was taken from her with an additional portion in 1863 to form the Territory of Idaho. Nebraska was thus cut down to its present limits. Measures to form a State government were made in 1860 and in 1864, but the first was defeated by the popular vote, and the second (being an enabling act of Congress) was not acted on. The Civil War and Indian hostilities checked the growth of the Territory during 1861–65. In 1866, a constitution was framed and ratified by popular vote, and in 1867 Nebraska was admitted as a State. Constitutional Prohibition was adopted in 1916.

Nevada. The region within the limits of Nevada forms part of the Mexican cession of 1848. It was organized by act of Congress as a Territory in 1861, from a portion of Utah, and embraced the region bounded north by the present boundary of the State, east by the 116th meridian, south by the 37th parallel, and west by California. A portion of California which had been included the latter-named State refused to transfer, and by an additional act of Congress, in 1861, a further portion of Utah was added, extending the east boundary the distance of one degree. Nevada became a

State October 31, 1864. In 1866, a third portion of Utah was added, extending the east boundary to the 114th meridian, and at the same time the portion of the State South of the 37th parallel was added from Arizona. The earliest settlements were made by the Mormons in 1848. Gold was discovered in 1849; but the rapid advance in population dates from the discovery of silver in 1859. Among the earliest discoveries was that of the world-renowned Comstock lode. In 1906–07 rich discoveries of gold were made at Goldfield and other points. The State was the twenty-fifth admitted under the Constitution. Suffrage was granted to women in 1914.

New Hampshire. One of the thirteen original States. The first settlements were made within the limits of New Hampshire at Dover and Portsmouth in 1623. The district was annexed to Massachusetts in 1641, became a royal province in 1679, and was again annexed to Massachusetts in 1689. It became a separate province in 1741 and remained so till the Revolution. Indian atrocities were frequent till the English conquered Canada. It was supposed till 1764 that the present State of Vermont was included in the province. The territory, however, was claimed by New York; the controversy lasted till the independence of Vermont was acknowledged in 1790. In 1776, New Hampshire declared its independence and established a temporary government of its own. It took an active part in the Revolutionary War, and the battle of Bennington was fought within its limits. The Constitution of the United States was ratified in 1788. During the Civil War New Hampshire furnished 34,606 men to the Union cause.

New Jersey. The State of New Jersey, one of the thirteen original States, was originally a part of New York, and was first settled about 1617 by the Dutch. A patent granted by Charles II. of England, to his brother, the Duke of York, in 1664, gave the latter a claim on all the country between the Delaware and Connecticut rivers. An expedition under Colonel Nicolls conquered the whole territory. The portion of the province now named New Jersey received its name from Sir George Carteret, to whom the Duke of York had sold his claim, in memory of the Island of Jersey of which the former had been governor. A constitution was formed for it in 1665 as a separate colony. In 1776, a State constitution was formed, and during the Revolution the battles of Trenton, Princeton, Millstone, Red Bank, and Monmouth were fought within the State limits. The Federal Constitution was ratified December 18, 1787, the State capital established at Trenton in 1790, and the present constitution August 13, 1844. The State furnished 79,511 fully equipped troops to the Union army and navy during the Civil War.

New Mexico. The earliest explorers of New Mexico were Spaniards who long held possession of the region. Though one of the most recently settled portions of the Union, it was among the earliest to be occupied by the white man, and Santa Fé, originally an Indian pueblo, claims the title of the oldest town in the country. When the Spaniards first visited this region, they found a people living in communities with substantial dwellings, and marking the decay of a civilization which had flourished in previous centuries. In 1822 the people of New Mexico, together with other inhabitants of Mexico, of which it then formed a part, threw off the Spanish yoke. In 1846 United States troops under Gen. Stephen Kearney occupied New Mexico, which was surrendered by Mexico in the treaty of Guadalupe Hidalgo in 1848. It then included the greater part of the present Arizona and part of Nevada and of Colorado. The territorial government was organized in 1850 and inaugurated in 1851. In 1853 a large strip was added by the Gadsden Purchase. Arizona was set off in 1863, and in 1867 a section was annexed to Colorado. New Mexico became a state on January 6, 1912, the 47th State to be admitted to the Union.

New York. The Bay of New York and the river emptying into it were explored by Hendrik Hudson, a navigator in the employment of the Dutch East India Company, in September, 1609. In 1614, the Dutch made settlements on Manhattan Island, and the name New Netherland was extended to all the unconquered regions lying between Virginia and Canada. Seven years later the Dutch West India Company was incorporated and took possession. In 1623, settlements were made at Albany and on Long Island, and in 1626, Peter Minuit, the Director-General, bought Manhattan Island of the Indians. In 1629, the company passed the act under which the manorial monopolies in land were established. In spite of Indian wars the colony grew so fast that it came in collision with the English on the Connecticut and the Swedes on the Delaware River. The claims made by the English to New Netherland on the score of Cabot's prior discovery were finally enforced in the charter granted by Charles II. to the Duke of York, and the armed expedition of Colonel Nicolls in 1664. The Dutch under Governor Stuyvesant surrendered, and New Netherland became New York, though the Dutch reconquered and held the province for a short period, before English rule became permanent. The tyranny exercised over the province by Francis Nicholson, the lieutenant of Andros, who had been appointed to be governor, caused the revolt in 1689 headed by Jacob Leisler, which was at first successful, though Leisler was two years later executed for treason. In 1687 began the series of French and Indian wars in which the New York colonists bore so important a part. The first of these closed in 1697, with the Peace of Ryswick. The second, or Queen Anne's War, lasted from 1702 to 1713. The most important act in this long conflict between the French and English for the sovereignty of North America, and the end of the historic drama, began in 1754. The contest lasted with varying fortunes until the French were finally driven from their line of fortresses on the lake and the war was ended by General Wolfe's expedition, which resulted in the capture of Quebec and the final overthrow of French power in Canada in 1759. The province of New York entered zealously into the Revolutionary cause,

though it contained a large loyalist faction. Many of the most important military operations were conducted within its limits. The two leading battles fought were that of Long Island on August 27, 1776, whereby the British secured New York City and held it till the end of the war; and the battle of Saratoga, on October 17, 1777, which occasioned the surrender of General Burgoyne's army. On November 25, 1783, New York was evacuated by the British. In 1790, the conflicting claims of New York and New Hampshire were settled by the erection of the disputed territory into the State of Vermont. In 1797, Albany was made the capital of the State, and slavery was abolished in 1817. During the War of 1812 the most notable incidents connected with New York State were the battle of Lundy's Lane, Ontario, near the Niagara frontier, fought by General Winfield Scott, and Commodore McDonough's naval defeat of the British on Lake Champlain, both in 1813. The Erie Canal, originally projected in 1800, was, through DeWitt Clinton's influence, completed in 1825. During the Civil War, the State furnished 455,568 Union troops. In 1917 a constitutional amendment was adopted granting full suffrage to women.

Normandy. An ancient northwest province of France, extending along the English channel, from a point south of the mouth of the Somme to the bay of Cancale, now divided into the departments of Seine-Inférieure, Eure, Calvados, Orne, and La Manche. The Romans included the territory in Gallia Lugdunensis Secunda. It received the name of Normandy from the Northmen, who occupied it in the beginning of the Tenth Century. In 912, Charles the Simple gave his sanction to their conquests, and Rollo, their chief, received the title of Duke of Normandy. The sixth successor of Rollo, William, became in 1066 the conqueror and first Norman king of England. On his death (1087) England and Normandy were separated, the latter reverting to Robert Courteheuse, while William Rufus seized upon the former. Henry I. ruled over both, but his daughter Matilda was only Duchess of Normandy. Her son, Henry II., accomplished another reunion. From King John Normandy was wrested by Philip Augustus of France; but it was twice held by the English, first under Edward III., and a second time, from 1417 to 1450, under Henry V. and Henry VI. Charles VII. of France made it an integral portion of his kingdom.

North Carolina. In 1663 eight noblemen received from Charles II. the patent of the province of Carolina, but a few years prior to this settlements had been made by Dissenters from Virginia and from New England. Albemarle, the name given to the portion now North Carolina, was rapidly augmented by settlers from Virginia, New England, and Bermuda. In 1729, Carolina became a royal government, all but one of the proprietors having sold out to the Crown, and North and South Carolina were formally declared distinct provinces. In 1765, North Carolina received large accessions in parties of Irish Presbyterians, Scotch Highlanders, and Moravians. In 1769, the Provincial Assembly declared against the right of taxation without representation, and in 1774 representatives were sent to the first Continental Congress, which adopted the declaration of colonial rights. In the revolution North Carolina was a leader and its territory was a scene of some important campaigns. In 1776, it united with the other colonies in the Declaration of Independence, and a State constitution was formed the same year. Aside from partisan warfare, the only battle fought in the State was that of Guilford Court House in 1781, between Generals Greene and Cornwallis. The State seceded from the Union May 21, 1861, and the military operations which followed were notable. The most important were the capture of Fort Hatteras in 1861, of Roanoke Island and Fort Macon in 1862, and of Fort Fisher in 1865. The State ratified the 14th Amendment in 1868, and the 15th Amendment in 1869. Statutory Prohibition was adopted by a referendum vote in 1908.

North Dakota. The Territory of North Dakota, of which North and South Dakota were formed, originally constituted part of the Territory of Minnesota, which was organized in 1849 from part of the Louisiana Purchase of 1803. In 1854 the Territory of Nebraska was formed, comprising then the present State of Nebraska and all of Dakota. On March 2, 1861, the Territory of Dakota was organized, comprising then the States of Montana and Wyoming. The first permanent settlements by whites were made in 1859 in Clay, Union, and Yankton counties. On November 2, 1889, the Territory was divided and the States of North and South Dakota formed and admitted to the Union at the same time. The history of the settlement and growth of the country is identical with that of the territories of which it originally formed a part. Constitutional Prohibition adopted in 1889.

North German Confederation, The, was formed after the famous "Seven Weeks' War" and the "Peace of Prague," when Austria was entirely excluded from Germany. The confederation included Hanover, Hesse-Cassel, Nassau and Frankfort (all incorporated with Prussia), and the states north of the Main united to Prussia in a bund. Strictly speaking, therefore, the confederation was Prussia and the states north of the Main. In 1870, during the Franco-German War, the "North German Confederation," being joined by Bavaria, Württemberg, Baden, and Hesse-Darmstadt, became the "German Confederation," and two months afterwards (January 18, 1871), the King of Prussia had the title of "German Emperor" given him.

Northmen. A name applied to the ancient inhabitants of Scandinavia, or Norway, Sweden, and Denmark, but more generally restricted to those searovers, called Danes by the Saxons, who sailed on piratical expeditions to all parts of the European seas, made their first appearance on the coast of England in 787, and from the year 832 repeated their invasion almost every year, till they became masters of all the country under their King Canute, and reigned in England during the next fifty years, down to 1042, when the Saxon Dynasty was restored in the person of Edward the Confessor. In 885, they laid siege to Paris, but were at length

bought off by Charles the Fat. Rollo, one of the most renowned of the Norman chieftains, after ravaging Friesland and the countries watered by the Scheldt, accepted the hand of a daughter of Charles the Simple, and received with her, under the tie of vassalage, possession of all the land in the valley of the Seine, from the Epte and Eure to the sea, which then went by the name of Normandy. They rapidly adopted the more civilized form of life that prevailed in the Frankish Kingdom — its religion, language, and manners — but inspired everything they borrowed with their own vitality. Their conquest of England, in 1066, gave that country an energetic race of kings and nobles on the whole well-fitted to rule a brave, sturdy, but somewhat torpid people like the Anglo-Saxons.

Norway. The early history of Norway is comprised in that of the other Scandinavian countries, and is, like theirs, for the most part fabulous. It is only towards the close of the Tenth Century, when Christianity was introduced under the rule of Olaf I., that the mythical obscurity in which the annals of the kingdom had been previously plunged begins to give place to the light of historical truth.

The introduction of Christianity, which was the result of the intercourse which the Norwegians had with the more civilized parts of Europe, through their maritime expeditions, destroyed much of the old nationality of the people with the heathenism which they had hitherto cherished, although the sanguinary feuds which had raged among the rival chiefs of the land can scarcely be said to have lost their ferocity under the sway of a milder religion. Olaf II., or the Saint (1015–1030), who zealously prosecuted the conversion of his countrymen, raised himself to supreme power in the land by the subjection of the small kings or chieftains, who in the times of heathenism had subdivided the kingdom among them. The war between Olaf and King Knud the Great of Denmark, which terminated in 1030 with the battle of Sticklestad, in which the former was slain, brought Norway under the sway of the Danish conqueror; but at his death in 1036, Olaf's son, Magnus I., recovered possession of the throne, and henceforth, till 1319, Norway continued to be governed by native kings. The death in that year of Haakon V., without male heirs, threw the election of a new king into the hands of the National Assembly, who, after many discussions, made choice of Magnus VIII., of Sweden, the son of Haakon's daughter. He was in turn succeeded by his son Haakon and his grandson Olaf V., who having been elected King of Denmark in 1376 became ruler of the sister Scandinavian kingdoms on the death of his father in 1380. This young king, who exercised only a nominal sway under the guidance of his mother, Queen Margaret, the only child of Valdemar III. of Denmark, died without heirs in 1387. Margaret's love of power and capacity for government brought about her election to the triple throne of the Scandinavian lands, and from this period till 1814, Norway continued united with Denmark; but while it shared in the general fortunes of the latter state, it retained its own constitutional mode of government, and exercised its right of electing to the throne, until, like the sister kingdom, it agreed of its own free will to relinquish this privilege in favor of hereditary succession to the throne. The Napoleonic crisis may be said to have severed this union, which had existed for more than 400 years; for Denmark, after having given unequivocal proofs of adhesion to the cause of Bonaparte, was compelled, after the disastrous War of 1813, to purchase peace at the cost of this long united partner of her state. Crippled in her resources, and almost a bankrupt, she saw herself constrained to sign the treaty of Kiel in 1814, by which it was stipulated by the allied powers that she should resign Norway to Sweden, receiving in return, by way of indemnity, some portion of Swedish Pomerania and the island of Rügen, which were subsequently exchanged with Prussia for Lauenburg on the payment by that state of two million rix dollars. The Norwegians, having refused to admit the validity of the treaty of Kiel, nominated Prince Christian, the heir-presumptive to the throne of Denmark, regent and subsequently King of Norway. This nomination was made by the National Diet, or Storthing, which met at Eidsvold, where they drew up a constitution based on the French Constitution of 1791. These measures found, however, neither supporters nor sympathizers among the other nations; and with the sanction of the great allied powers, Charles John Bernadotte, Crown-Prince of Sweden, led an army into Norway, and, after taking Fredrikstad and Frederikshald, threatened Christiania. Denmark being unable to support the cause of Prince Christian, and Norway being utterly destitute of the means necessary for prosecuting a war, resistance was of no avail, and the Norwegians, in this untoward conjuncture of affairs, were glad to accept the proposals made to them by the Swedish King for a union with Sweden, on the understanding that they should retain the newly promulgated constitution, and enjoy full liberty and independence within their own boundaries. These conditions were agreed to, and strictly maintained, a few unimportant alterations in the constitution, necessitated by the altered conditions of the new union, being the only changes introduced in the machinery of government. Charles XIII. was declared joint King of Sweden and Norway in 1818. After the union, Norway firmly resisted every attempt on the part of the Swedish monarchs to infringe upon the constitutional prerogatives of the nation; and during the reign of the first of the Bernadotte Dynasty, the relations between him and his Norwegian subjects were marked by jealousy and distrust on both sides; but after his death the people generally became more contented and Norway continued to make rapid progress towards a state of political security and material prosperity far greater than it ever enjoyed under the Danish dominion.

The dissolution of the union with Sweden which had endured since 1814, took place June 7, 1905, following a dispute between the two countries as to their diplomatic representation abroad. Prince Charles of Denmark became King, as Haakon VII.

NOTABLE WARS OF HISTORY

Dates	Historic Name	Leading Battles	Chief Leaders
B. C. 1193–1184	**Trojan War.** Greeks capture Troy.	Siege of Troy.	Hector; Agamemnon.
743–669	**Messenian War.** Sparta conquers Messenia.		
504–469	**Perso-Grecian War.** Greece successfully resists Persian invasion.	Marathon; Thermopylæ; Salamis; Platea; Mycale.	Miltiades; Leonidas; Themistocles; Pausanius.
595–586 448–447 357–346	**Sacred Wars of Greece.** Largely intestine, and without results.		
431–404	**Peloponnesian War.** Athens conquered by Lacedæmonia.	Battles chiefly naval.	Pericles; Alcibiades; Lysander
334–331	**Greco-Persian War.** Greece conquers Persia.	Granicus; Issus; Arbela.	Alexander the Great; Darius.
343–290	**Samnite War.** Romans conquer Samnites.	Caudine Forks; Sentinum.	Fabius Maximus; Caius Pontius.
264–146	**Punic Wars.** Romans destroy Carthage.	Ticinus; Trebia; Thrasymenus; Cannæ; Metaurus; Zama.	Fabius; Scipio; Hannibal.
200–146	**Greco-Roman War.** Greece subdued by Rome.	Cynoscephalæ; Pydna.	Flaminius; Æmilius Paulus; Mummius; Perseus.
112–106	**Jugurthine War.** Romans conquer Numidia.	Muthul; Cirta.	Jugurtha; Metellus; Marius.
90–88	**Roman Social War.** Right of Roman citizenship granted the Socii.		Samnites; Marsians.
88–63	**Mithridatic War.** Mithridates, King of Parthia, defeated.	Chæronea; Cabira.	Lucullus; Pompey; Sulla.
73–71	**Gladiatorial War.** Gladiators defeated.	Petelia.	Spartacus; Crassus.
58–51	**Gallic War.** Gauls conquered by Cæsar.		Cæsar.
50–31	**Roman Civil War.** Roman Empire established.	Pharsalia; Thapsus; Munda; Philippi; Actium.	Cæsar; Pompey; Brutus; Cassius; Antony; Augustus.
A. D. 70	**Jewish-Roman War.** Jerusalem taken; temple destroyed.	Siege of Jerusalem.	Titus.
86–100	**Dacian War.** Country beyond Danube conquered.		Trajan.
409–553	**Barbarian Wars.** Teutonic hordes capture Rome and ravage Italy.	Sack of Rome.	Alaric; Genseric; Attila.
710–1492	**Saracen Conquests.** The Saracens occupy Northern Africa and Spain; defeated in France.	Xerxes; Tours; Tarifa; Granada.	Musa; Tarik; Charles Martel; Cid Rodrigo.
1095–1291	**The Crusades.** Christians capture Jerusalem and ports of Spain, but are finally repulsed.	Siege of Jerusalem; Acre.	Godfrey of Bouillon; Conrad III.; Louis VII.; Frederick II.; Philip Augustus; Richard the Lion-Hearted; Louis IX.; Edward I.; Saladin.
1337–1453	**Hundred Years' War.** England lost all her possessions in France except Calais.	Crécy; Calais; Poitiers; Agincourt.	Edward III. of England; Edward the Black Prince; Henry V. of England; Joan of Arc.
1385–1389	**Austro-Swiss War.** Independence of Switzerland.	Sempach; Näfels.	Arnold von Winkelried; Leopold II.
1419–1436	**Hussite War.** Religious toleration secured.	Prague.	John Ziska; Sigismund.
1455–1485	**Wars of the Roses.** House of York supplants that of Lancaster on English throne.	St. Albans; Bloreheath; Wakefield; Towton; Barnet; Tewksbury.	Richard, Duke of York; Edward, Duke of York; Earl of Warwick; Queen Margaret; Henry VI.
1562–1598	**French Civil War.** Edict of Nantes, Protestant toleration.	Dreux; St.-Denis; Jarnac; Moncontour; Iyry.	Duke of Anjou; Henry III.; Henry IV.; Condé.
1567–1609	**Spanish-Netherlands War.** Independence of the Netherlands achieved.	Zütphen; Nieuport; various sieges and naval conflicts.	William of Orange; Maurice of Nassau; Duke of Alva; Alexander Farnese; Duke of Parma.
1618–1648	**Thirty Years' War.** Religious freedom secured.	Dessau; Leipsic; Lech; Lützen; Nördlingen.	Gustavus Adolphus; Wallenstein; Tilly; Turenne.

NOTABLE WARS OF HISTORY—Continued

Dates	Historic Name	Leading Battles	Chief Leaders
1642–1652	**English Civil War.** English Commonwealth established.	Edgehill; Marston Moor; Naseby; Worcester.	Prince Rupert; Fairfax; Charles I.; Cromwell.
1701–1714	**Spanish Succession.** French and Spanish crowns disunited. Protestant succession in England.	Blenheim; Ramillies; Turin; Oudenarde; Malplaquet.	Duke of Marlborough; Prince Eugène; Marshals Tallard and Villars.
1700–1709	**Swedish-Russian War.** Defeat of Charles XII.	Narva; Pultowa.	Charles XII. of Sweden; Peter the Great.
1740–1748	**Austrian Succession.** Many previous treaties affirmed; Maria Theresa, Empress of Austria.	Dettingen; Fontenoy; Piacenza; Lawfeld.	Marshal Saxe; George II. of England; Duke of Cumberland.
1756–1763	**Seven Years' War.** Prussia gains a high rank.	Prague; Kollin; Rosbach; Lissa; Torgau.	Marshal Daun; Frederick the Great.
1775–1783	**American Revolutionary War.** United States achieve their independence.	Bunker Hill; Saratoga; Monmouth; Yorktown.	Washington; Greene; Burgoyne; Cornwallis; Clinton; Howe; Lafayette; Gates.
1792–1799	**French Revolution.** Bourbons defeated.	Valmy; Jemappes; Wattignies; Lodi; Arcole.	Kellerman; Dumouriez; Jourdan; Moreau; Bonaparte.
1800–1815	**Napoleonic Wars.** France advances to the first place in Europe.	Marengo; Trafalgar; Austerlitz; Jena; Eylau; Friedland; Wagram; Borodino; Leipsic; Waterloo.	Napoleon; Wellington; Nelson; Blücher; Alexander I.; Francis I.; Frederick William III.; Ney.
1812–1815	**War of 1812.** United States entirely independent of Great Britain.	Battles chiefly naval; Burning of Washington; New Orleans.	Com. Perry; Admiral Cockburn; Ross; Jackson.
1821–1828	**War for Greek Independence.** Greece independent of Turkey.	Missolonghi; Navarino.	Admiral Canaris; Byron; Ibrahim Pasha.
1846–1847	**Mexican War.** Boundary between United States and Mexico fixed.	Buena Vista; Cerro Gordo; Capture of Mexico City.	Taylor; Scott; Santa Ana.
1854–1856	**Crimean War.** Independence of Turkey guaranteed. Peace of Paris.	Alma; Balaklava; Inkerman; Malakoff.	Lord Raglan; St. Arnaud; Prince Menschikoff; Gen. Canrobert.
1859	**Italian War.** Papal States and two Sicilies annexed to Italy.	Magenta; Solferino.	Napoleon III.; Victor Emmanuel; Franz Josef I.
1861–1865	**American Civil War.** Abolition of slavery.	Bull Run; Shiloh; Seven Days; Antietam; Murfreesboro; Chancellorsville; Vicksburg; Gettysburg; Chickamauga; Chattanooga; Atlanta; Wilderness.	McClellan; Grant; Sherman; Sheridan; Jackson; Thomas; Lee; Johnston; Meade.
1866	**Seven Weeks' War.** Prussia defeats Austria and unifies Germany.	Langensalza; Königgrätz or Sadowa.	Marshal Benedek; William I.; Beyer.
1870	**Franco-Prussian War.** Paris taken and Alsace and Lorraine added to German Empire.	Wörth; Gravelotte; Sedan; Metz; Capture of Paris.	William I.; Von Moltke; Frederick; Frederick Charles; Napoleon III.; MacMahon; Bazaine.
1877	**Russo-Turkish War.** Rumania, Servia, Montenegro, independent of Turkey. Treaty of Berlin.	Shipka Pass; Kars Plevna.	Grand Duke Nicholas; Gourko; Skobeleff; Todleben; Osman Pasha; Mukhtar Pasha.
1894–1895	**Chinese-Japanese War.** Indemnity to Japan; independence of Korea.	Occupation of Korea by Japanese; Port Arthur; Wei Hai Wei; Nieuchang.	Oyama; Prince Arisugawa; Prince Komatsu.
1898	**Spanish-American War.** End of Spanish rule in America; Cuba, Porto Rico, and Philippines pass to United States.	Manila Bay; Santiago; San Juan; El Caney.	Admirals Dewey, Schley, Sampson, Montojo, Cervera; Generals Shafter, Toral.
1899–1902	**Boer War.** Annexation of Transvaal and Orange river colony to British empire.	Kimberly; Ladysmith; Mafeking; Pretoria.	Joubert; De Wet; Botha; De la Rey; French; White; Bullen; Kitchener; Roberts.
1904–1905	**Russo-Japanese War.** Mutual concessions, confirmed by treaty of Portsmouth. Japan a world power.	Yalu; Telissu; Liaoyang; Sha-ho; Siege of Port Arthur; Mukden; Destruction of Russian fleet.	Admiral Makaroff; Kuropatkin; Linievitch; Stoessel; Oyama; Kuroki; Admiral Togo; Admiral Kamimura; Admiral Rojestvensky; Nogi; Oku.

Ohio. The French made the first explorations in what is now Ohio, La Salle's discoveries dating from about 1680. The English, whose patents covered a portion of the region which the French traders aimed to monopolize, came in hostile contact with the latter. It was in this connection that Washington's name first became notable through the Braddock Expedition. In 1763 Canada and the whole region West to the Mississippi previously claimed by France were surrendered to Great Britain. After the Revolutionary War, the United States assumed control over the region afterward known as the Northwest Territory, acknowledging the claim made by Virginia to 3,709,848 acres near the rapids of the Ohio, and a similar claim by Connecticut to 3,666,621 acres near Lake Erie, which became known as the "Western Reserve." These claims were admitted in the sense of ownership, but in no way as question of State jurisdiction. The first permanent settlement was made at Marietta, in 1788. The early years of the Northwest Territory were harassed by Indian warfare, which did not cease till the crushing defeat inflicted on them by General Anthony Wayne in 1794. In 1799, the Northwest Territory was organized, and shortly afterward Ohio (the name being derived from the Indian signifying "beautiful river") was formed into a separate territorial government. In 1803, the Territory was admitted as a State, the fourth under the Federal Constitution. The seat of government was in Chillicothe till 1810, in Zanesville till 1812, and in Chillicothe again till 1816, after which the State capital was fixed at Columbus. In 1818, the first steamboat, the "Walk on the Water," was launched on Lake Erie. In 1836, the first western railroad was opened, from Toledo, Ohio, to Adrian, Michigan, with horse power at first and, in 1837, with steam power. The State began to be noted for wheat growing about 1840, and in 1863 her coal and iron mines began to be developed. Manufacturing became an important industry about 1865, and for a decade grew rapidly. The Standard Oil Company was formed in 1870, and during the next two decades the State's oil fields were rapidly developed. During the Civil War Ohio furnished one-eighth of the federal troops.

Oklahoma. The history of Oklahoma before it was constructed into a separate Territory is identical with that of the region of which Texas and New Mexico formed a part. When Indian Territory was created as a home for all the Indian tribes most of what is now Oklahoma was within its bounds. Some time in the early seventies the name first appeared in political history, the occasion being a bill introduced into Congress to create a Territory out of part of Indian Territory, to be known as Oklahoma. The measure failed of passage and for more than a decade nothing was heard of the country. It was not forgotten, however, as in March, 1889, an amendment was tacked on to the Indian Appropriation Bill providing for the opening to homestead settlers of the little area of land embracing less than 3,000,000 acres and lying in the center of what is now the great State. The land was opened in April, 1889, and the first rush of Oklahoma "boomers" took place. In June, 1890, the territorial government first came into existence, and by the act which brought this about a strip of land known as "No Man's Land," consisting of 3,681,000 acres, was added as Beaver County. Other sections were added from time to time until the Territory contained 24,933,120 acres. In 1906, Congress provided an enabling act whereby Oklahoma and Indian Territory might be created into a State and admitted into the Union. On November 16, 1907, the conditions of this act having been complied with, the President of the United States signed the Constitution of Oklahoma, and issued a proclamation announcing its admission. The first State legislature convened December 2, 1907.

Oregon. The original region named Oregon was the whole province claimed by the United States on the Pacific Coast, extending from latitude 42° to 54° 40′ north. Until 1846 joint possession was held by Great Britain and the United States, and then the latter, by the northwest boundary treaty, abandoned all claim to the country north of the 49th parallel, and the name Oregon was restricted to the region south of that line, which was given up by Great Britain. The first accurate knowledge of the territory was brought back by Captain Robert Gray, an American navigator, who entered the mouth of the Columbia River in 1792, and gave the name of his ship to it. The sale of Louisiana to the United States, in 1803, endowed this country with a title of ownership, and the expedition of Lewis and Clark, in 1804–1806, strengthened the claim. Though a trading-post was established in 1811, by the Pacific Fur Company, under the Astor *régime*, at the mouth of the Columbia River, the region was largely inhabited by Indians and the employés of the Hudson Bay Fur Company until the active emigration of Americans, between 1833 and 1850, introduced a new element. The territorial organization took place in 1848. In 1853, Washington Territory was instituted out of the region north of the Columbia River on the west and of the 46th parallel on the east. In 1858, Oregon was admitted as a State. A Lewis and Clark Centennial Celebration was held at Portland in 1905. Suffrage was granted to women in 1912. Constitutional Prohibition adopted, 1914.

Pennsylvania. Delaware River and Bay were first explored under the auspices of the Dutch East India Company, from 1604 to 1624, and military jurisdiction was established. Till 1664 they continued in possession of both sides of the bay without much colonization, though a Swedish colony settled at Chester, on the west bank of the river, in 1638, where their industry and peacefulness prefigured the characteristics of the Quakers, who were to come later. Under a charter given by Charles II., in 1681, the region west of the Delaware was granted to William Penn, the Quaker, who colonized it and founded Philadelphia in 1682. Under this grant was included Delaware, and the whole region was ruled under the same proprietary until 1699, when a separate legislature, though not a separate governor, was allowed to this section of the province. This union lasted till 1776. The letter of the Penn charter included territory

already covered in the vague grants made to the New England colonies Virginia and Maryland. All the boundary-lines, however, were easily settled, except that separating Pennsylvania and Maryland, which was not defined until the completion of the Mason and Dixon Survey, in 1767. The original Swedish immigrants readily coalesced with the Quaker colonists, and the remarkable thrift of the people, combined with their peaceful Indian policy, soon made Pennsylvania a flourishing region. Large additional bodies of immigrants, Scotch-Irish between 1715 and 1725, and Germans from 1730 onward, rapidly swelled population and wealth. The government instituted by William Penn remained in force until 1776, when the province joined the other colonies in the fight for independence, and a provisional constitution was made by a convention presided over by Benjamin Franklin. Philadelphia was occupied by the British forces from September, 1777, to June, 1778. All the earlier sessions of the Continental Congress were held in this city. The battle of Germantown was fought within the present chartered limits of the city in 1777. From 1790 to 1800 it was the seat of the Government of the United States. In 1790, a new State constitution was formed. In 1794 occurred the disturbance known as the "Whiskey Rebellion" in the western part of the State, growing out of opposition to the excise laws. In 1799, the seat of the State government was removed to Lancaster, and thence in 1812 to Harrisburg, which still remains the capital. In 1862, during the late Civil War, the State was threatened with invasion by the Confederates, but the tide of attack then stopped with invading Maryland. In 1863 General Lee carried out his interrupted purpose, and overran the south portion of the State to within a short distance of Harrisburg. On his retreat General Meade joined battle with him at Gettysburg, near the Maryland line. The battle beginning July 1st, lasted three days, resulting in the Confederate defeat. This Federal victory was probably the important turning-point of the war. As the seventh in the geographical order of the original States, Pennsylvania has become historically the "Keystone" State. Disastrous riots occurred about Pittsburg and elsewhere in 1877 and 1892. In 1908, the famous "State House Cases" were brought to trial, as the result of an alleged $5,000,000 steal by the contractors of the new State capitol, at Harrisburg, and their accomplices.

Persia. The original country of the Persians occupied a small portion of modern Persia on the north of the Persian Gulf. After being under the Assyrians, and next under the Medes, Cyrus (B. C. 559–529), by conquering and uniting Media, Babylonia, Lydia, and all Asia Minor, became the founder of the Persian Empire. The empire was further extended by his son and successor, Cambyses (B. C. 529–522), who conquered Tyre, Cyprus, and Egypt; and by Darius I., who subdued Thrace and Macedonia, and a small part of India. His son Xerxes (486–465 B. C.) reduced Egypt, which had revolted under his father, and also continued the war against the European Greeks, but was defeated at Thermopylæ and at Salamis (480 B. C.), and obliged to defend himself against their attacks in a disastrous war. Artaxerxes I. (465–425 B. C.) had a long and comparatively peaceful reign. Artaxerxes was followed by Darius II. or Darius Nothus, Artaxerxes II. (Mnemon), Artaxerxes III. (Ochus), and Darius III. (Codomannus, 338–330 B. C.), the last of this dynasty, known as the Achæmenian Dynasty. He was defeated by Alexander the Great in three battles, lost his life, and the empire passed into the hands of his conqueror. On the dissolution of the Macedonian Empire, after the death of Alexander (323), Persia ultimately fell to his general, Seleucus and his successors, the Seleucidæ (312). They reigned over it till 236 B. C., when the last Seleucus was defeated and taken prisoner by Arsaces I., the founder of the dynasty of the Arsacidæ and of the Parthian Empire, of which Persia formed a portion, and which lasted till 226 A. D. The supremacy was then recovered by Persia in the person of Ardishír Babigán (Artaxerxes), who obtained the sovereignty of all Central Asia, and left it to his descendants, the Sassanidæ, so called from Sassan, the grandfather of Ardishír. This dynasty continued to reign for about 417 years, under twenty-six sovereigns. The reign of Sapor II., called the Great (310–381), and that of Chosroes I. (Khosru, 531–579), were perhaps the most notable of the whole dynasty. The latter extended the Persian Empire from the Mediterranean to the Indus, from the Jaxartes to Arabia and the confines of Egypt. He waged successful wars with the Indians, Turks, Romans, and Arabs. Chosroes II. (591–628) made extensive conquests, but lost them again in the middle of the reign of the Byzantine Emperor Heraclius. His son, Ardishír (Artaxerxes) III., but seven years old, succeeded him, but was murdered a few days after his accession. He was the last descendant of the Sanssaidæ in the male line. Numerous revolutions now followed, until Yezdigerd III., a nephew of Chosroes II., ascended the throne in 632, at the age of sixteen. He was attacked and defeated by Caliph Omar in 639–636, and Persia became for more than 150 years a province of the Mohammedan Empire. The Arab conquest had a profound influence on Persian life as well as on the language and religion. The old Persian religion was given up in favor of Mohammedanism, only the Guebres, or Parsees, adhering to the faith of their fathers. About the beginning of the Ninth Century the Persian territories began to be broken up into numerous petty states. The Seljuks, a Turkish Dynasty, who first became powerful about 1037, extended its dominions over several Persian provinces, and Malek-Shah, the most powerful of them, conquered also Georgia, Syria, and Asia Minor. Through Genghis Khan the Tartars and Mongols became dominant in Persia about 1220, and they preserved this ascendency till the beginning of the Fifteenth Century. Then appeared (1387) Timurlenk (Tamerlane) at the head of a new horde of Mongols, who conquered Persia and filled the world from Hindustan to the extremities of Asia Minor with terror. But the death of this famous conqueror in 1405 was followed not long after by the downfall of the

Mongol dominion in Persia, where the Turkomans thenceforward remained masters for 100 years. The Turkomans were succeeded by the Sufi Dynasty (1501–1736). The first sovereign of this dynasty, Ismail Sufi, pretended to be descended from Ali, the son-in-law of Mohammed. The great Shah Abbas (1587–1628) introduced absolute power, and made Ispahan his capital. Under Shah Soliman (1666–94) the empire declined, and entirely sunk under his son Hussein. A period of revolts and anarchy followed until Kuli Khan ascended the throne in 1736 as Nadir Shah, and restored Persia to her former importance. In 1747 Nadir was murdered and his death threw the empire again into confusion. Kerim Khan, who had served under Nadir, succeeded in making himself master of the whole of Western Iran or modern Persia. He died in 1779. Aga Mohammed, a Turkoman belonging to the noblest family of the Tribe of the Kajars, seated himself on the throne, which he left to his nephew, Baba Khan. The latter began to reign in 1796 under the name of Futteh Ali Shah. In 1813 he was compelled to cede to Russia all his possessions to the north of Armenia, and in 1828 his share of Armenia. Futteh Ali died in 1834, leaving the crown to his grandson, Mehemet Shah. He died in 1848, and was succeeded by his son, Nasr-ed-Din. In May, 1852, he annexed the Sultanate of Herat, but was compelled to relinquish it by the British. Persia has since acquired portions of territory formerly belonging to the Omân, Afghanistan, and Beluchistan. Muzaffer-ed-Din succeeded in 1896. He was succeeded in January, 1907, by Mohammed Ali, who, after an attempt to overcome the constitution granted by his father, abdicated in favor of Ahmed Mirza.

Early in the war of nations, 1914, Persia proclaimed neutrality.

Philippine War. When the Philippines were taken over by the United States an insurgent army was operating against Spain. After first assisting the United States troops, Aguinaldo, the insurgent leader, desiring absolute freedom of control, turned his forces against them. On Feb. 4, 1899, his army of Filipinos made a night attack near Manila. Although the insurgents were driven back with great loss, the Americans lost 49 soldiers and 148 were wounded. About 13,000 men under General Otis participated in this initial battle of the new conflict in the Philippines. From this time forward the Americans continuously gained ground. On April 26 the insurgents, using artillery for the first time, were defeated by Col. Funston. On May 23 Gen. Lawton arrived with his command at Malolos, having marched 120 miles in 20 days, participating in 22 fights, and capturing 28 towns. In August an arrangement was made with the sultan of the Sulu islands providing for the continuance, by the United States, of the pension formerly paid by Spain, the United States flag to be paramount, and the sultan to repress piracy. In December, 1900, Gen. Lawton was killed while assisting a wounded soldier. Aguinaldo was successful in eluding all efforts until March, 1901, when he was captured by means of a stratagem by Gen. Funston of the Kansas Volunteers. In recognition Funston was brevetted brigadier-general in the regular army. On July 4, 1902, the President proclaimed the Philippine insurrection at an end.

Poland. A republic of Europe. Prior to 1772, it was an important kingdom. Its capital was at Cracow from about 1320 to the reign of Sigismund III. (1587–1632), when it was removed to Warsaw. At the period of its greatest extent, previous to 1660, it had an area of about 375,000 square miles, extending northward to the Baltic sea and the gulf of Riga, westward to Brandenburg, southward to Hungary and almost to the Crimea, and eastward throughout most of the basin of the Dnieper.

At the outbreak of the great European war in 1914 about six-sevenths of this area was comprised in Russia, including Russian Poland, Lithuania, Volhynia, and a major part of Little Russia, Livonia, and Courland. The portion of Poland which belonged to Austria comprised the crownland of Galicia. The portion belonging to Prussia comprised Posen, West Prussia, and Ermland, in what is now known as East Prussia.

Poland was a state of much influence and promise until rent with serious factional troubles in the eighteenth century. These so weakened it that it fell a prey to the more powerful neighboring states of Russia, Prussia, and Austria. In 1772, 1793, and 1795 occurred three successive partitions of Poland, whereby all the territory of the kingdom was divided among the three adjoining states. Napoleon, in return for military support, promised to reconstruct an independent Poland but accomplished little. Following Napoleon's downfall, the congress of Vienna, 1815, made some readjustments but left the whole of Poland distributed between Russia, Prussia, and Austria.

One of the results of the World War was the re-establishment of Poland as an independent country. The musician Paderewski served in 1919 as the first premier. In 1920, Poland successfully withstood a military attack by Soviet Russia. Vilna, in Lithuania, was occupied by Poland in the same year and was added to Polish territory.

Portugal. The name Portugal is a corrupted form of that of the hill fort, *Portus Cale*, which stood on the south bank of the Douro, and is now one of the suburbs of Oporto ("the harbor"). The Carthaginians under Hamilcar subdued the region, and were followed by the Romans. In the Fifth Century A. D., Lusitania, like the rest of the peninsula, was overrun by the Visigoths, and in the Eighth Century was conquered by the Arabs. The warlike Fernando, King of Leon and Castile, in the course of marauding expeditions conquered and occupied the important city and stronghold of Coimbra, in 1064. His son, Alonso IV., seized his brother's territory of Galicia, which included part of the north of Portugal.

Alfonso I. defeated a large Saracen army in the plain of Ourique, Alemtejo, in 1139, took the great stronghold of Santarem, and with the aid of a fleet of English, German, and Flemish crusaders carried Lisbon itself by siege in 1147. Before his death, in 1185, he had kindled the fire of patriotic loyalty in the nation, which his sword had extended to the Mediterranean Sea. The Burgundian Dynasty founded by him con-

tinued to rule Portugal until 1580. Alfonso III. was called the Restorer for his reconquest of Algarve. His son Dinis laid the foundation of the commercial greatness of Portugal.

Henrique the Navigator sent forth expeditions which explored the west coast of Africa, and discovered the Azores, Madeiras, Canaries, Cape Verde, and other islands. Maritime discovery and colonization continued during the reigns of Alfonso V., Joao II., and Manuel. In 1487-88 Bartholomeo Diaz doubled the Cape of Good Hope. In 1497-99 Vasco da Gama made his famous voyage to India, and in 1500 Cabral discovered Brazil. The great navigator Magalhaens was a Portuguese.

When Joao III. ascended the throne in 1521, Portugal was one of the first kingdoms of Europe. In 1580 Philip II. of Spain annexed Portugal to his own dominions. Portugal was now burdened with much of the expense and misery of the Spanish wars in Germany and the Netherlands. Moreover, it lost to the Dutch a great part of its foreign possessions. After a shameful union of sixty years Portugal regained its liberty by a revolt which placed Joao de Braganca on the throne in 1640. In 1668 Spain ceded all claims to Portugal and the Dutch restored Brazil, but nothing could bring back the old prosperity.

Ordered by Napoleon to seize British merchandise in Portugal, Joao VI. sought protection of England and transferred the seat of government to Rio de Janeiro in 1807. The French then occupied Portugal. Wellington's victories over the French, 1808-10, delivered Portugal from Napoleon's tyranny. A revolution took place in Lisbon in 1820 and a constitution was proclaimed. In 1821 Joao returned from Brazil and accepted the constitution. In 1825 he acknowledged the independence of Brazil under his brother Dom Pedro as emperor.

Numerous outbreaks culminated in the assassination of King Carlos on Feb. 1, 1908. Manuel II. succeeded to the throne, but a revolution in 1910 turned the monarchy into a republic.

As an ally of Great Britain, Portugal, in February, 1916, seized German and Austrian ships within her waters. On March 9 Germany declared war on Portugal. Portuguese troops assisted the Allies in Africa and on the Franco-Belgian front. In 1919 a monarchial revolt failed to restore Manuel II. to the throne.

Prohibition. Connecticut enacted local prohibition in 1839. Maine was the first to establish state-wide prohibition. This was done by legislative enactment in 1851, and later was incorporated in the state constitution. The thirty-two states which had adopted state-wide prohibition previous to January 1, 1919, together with the District of Columbia, contained population of 51,300,000, according to the latest U. S. census estimates. In the other sixteen states there were districts under local prohibition embracing 65 per cent of their area and a population exceeding 14,000,000. Practically nine-tenths of the area and two-thirds of the population of the United States had thus come under prohibition by state and local enactments. The list of the thirty-two states which adopted prohibition follows:

Name of State	Constitutional or Statutory	Date Effective
Alabama,	Statutory,	1915
Arizona,	Constitutional,	1915
Arkansas,	Statutory,	1916
Colorado,	Constitutional,	1916
Florida,	Constitutional,	1919
Georgia,	Statutory,	1908
Idaho,	Constitutional,	1916
Indiana,	Statutory,	1918
Iowa,	Statutory,	1916
Kansas,	Constitutional,	1881
Maine,	Constitutional,	1884
Michigan,	Constitutional,	1918
Mississippi,	Statutory,	1909
Montana,	Constitutional,	1918
Nebraska,	Constitutional,	1917
Nevada,	Statutory,	1918
New Hampshire,	Statutory,	1918
New Mexico,	Constitutional,	1918
North Carolina,	Statutory,	1909
North Dakota,	Constitutional,	1889
Ohio,	Constitutional,	1919
Oklahoma,	Constitutional,	1907
Oregon,	Constitutional,	1916
South Carolina,	Statutory,	1916
South Dakota,	Constitutional,	1917
Tennessee,	Statutory,	1909
Texas,	Statutory,	1918
Utah,	Statutory,	1917
Virginia,	Statutory,	1916
Washington,	Statutory,	1916
West Virginia,	Constitutional,	1914
Wyoming,	Constitutional,	1920

At this stage it was but a step from state to national prohibition. An amendment to the Federal constitution providing for nation-wide prohibition was adopted by the senate of the United States, Aug. 1, 1917, by a vote of 65 to 20, and by the house of representatives, Dec. 17, 1917, by a vote of 282 to 128. At the general elections of Nov. 5, 1918, legislatures were chosen overwhelmingly in favor of ratification. On Jan. 16, 1919, thirty-six states, the necessary three-fourths, had ratified it by legislative action, and, on Jan. 29, the prohibition amendment was proclaimed to take effect Jan. 16, 1920. The first thirty-six states completed ratification as follows:

In 1918: Mississippi, Jan. 8; Virginia, Jan. 11; Kentucky, Jan. 14; North Dakota, Jan. 25; South Carolina, Jan. 28; Maryland, Feb. 13; Montana, Feb. 19; Texas, Mar. 4; Delaware, Mar. 18; South Dakota, Mar. 20; Massachusetts, Apr. 2; Arizona, May 24; Georgia, June 26; Louisiana, Aug. 8; Florida, Nov. 27.

In 1919: Michigan, Jan. 2; Ohio and Oklahoma, Jan. 7; Maine and Idaho, Jan. 8; West Virginia, Jan. 9; Washington, Tennessee, and California, Jan. 13; Illinois, Indiana, Arkansas, North Carolina, Alabama, and Kansas, Jan. 14; Oregon, Iowa, Utah, Colorado, and New Hampshire, Jan. 15; Nebraska, Jan. 16.

Previous to March 1, 1919, nine additional states ratified the amendment, namely; Missouri and Wyoming, Jan. 16; Wisconsin and Minnesota, Jan. 17; New Mexico, Jan. 20; Nevada, Jan. 21; Vermont and New York, Jan.29; Pennsylvania, Feb. 25.

The three states, New Jersey, Connecticut, and Rhode Island, which had not ratified up to Jan. 1, 1922, contained a population of about 5,000,000. The forty-five states ratifying contained a population of approximately 100,000,000, and embraced 99 per cent of the area of the United States. The legislatures of Idaho, Kansas, South Dakota, Utah, Washington, and Wyoming voted unanimously for ratification and the average vote in the forty-five state legislatures ratifying was about 6 to 1 in favor of the amendment.

In 1917 Porto Rico adopted prohibition by a referendum vote. The District of Columbia, 1917, and Alaska, 1918, were placed under prohibition by act of Congress.

PRESIDENTS OF THE UNITED

Name	Born		Parents		Paternal Ancestry
	When	Where	Father	Mother	
1. George Washington,	1732	Bridge's Creek, Va.,	Augustine,	Mary Ball,	English,
2. John Adams,	1735	Braintree, Mass.,	John,	Susanna Boylston,	English,
3. Thomas Jefferson,	1743	Shadwell, Va.,	Peter,	Jane Randolph,	Welsh,
4. James Madison,	1751	Port Conway, Va.,	James,	Nelly Conway,	English,
5. James Monroe,	1758	Westmoreland Co., Va.,	Spence,	Eliza Jones,	Scotch,
6. John Quincy Adams,	1767	Quincy, Mass.,	John,	Abigail Smith,	English,
7. Andrew Jackson,	1767	Mecklenburg Co., N. C.,	Andrew,	Elizabeth Hutchinson,	Scotch-Irish,
8. Martin Van Buren,	1782	Kinderhook, N. Y.,	Abraham,	Maria Hoes,	Dutch,
9. William H. Harrison,	1773	Berkeley, Va.,	Benjamin,	Elizabeth Bassett,	English,
10. John Tyler,	1790	Charles City Co., Va.,	John,	Mary Armisted,	English,
11. James K. Polk,	1795	Mecklenburg Co., N. C.,	Samuel,	Jane Knox,	Scotch-Irish,
12. Zachary Taylor,	1784	Orange Co., Va.,	Richard,	Sarah Strother,	English,

2 yr., 4 mo., 29 d.,	1923	57	Apoplexy,	San Francisco, Cal.,	Marion, Ohio.

Rhode Island. Supposed to be identical with the ancient Vinland of the Icelandic Sagas, historians credit the first discovery of Rhode Island to the Norsemen about 1000 A. D. The navigator Verrazzano visited Narragansett Bay and its shores in 1524. The State was settled at Providence in 1636, by Roger Williams and his companions, who had been banished from Massachusetts by religious intolerance. In 1638, the Island of Aquidneck, afterward called Rhode Island, was settled at Newport and Portsmouth. A third settlement was formed at Warwick in 1643. The same year Roger Williams went to England and obtained a patent for the united government of the settlements. In 1663, this patent gave way to a charter by Charles II., incorporating the colony of Rhode Island and Providence Plantations, which remained in force for 180 years. The colony suffered severely in King Philip's War, 1675-76, which resulted in the destruction of the Wampanoag and Narragansett tribes of Indians. In 1687, Sir Edmond Andros, who had been made Governor of New York, New England, etc., abrogated the charter, but it became again the ruling constitution after his recall. In the wars between France and England, Rhode Island furnished valuable aid by land and sea for the expeditions against Louisburg, Crown Point, Oswego, and Canada. In 1756, she had fifty privateers at sea. During the War of the Revolution the State supplied many ships and sailors for naval operations. Rhode Island was invaded by the British, and vain attempts were made for several years to drive them thence by Count d'Estaing's fleet and General Sullivan's army. The State was the last to accept the Federal Constitution, May 29, 1790. Dorr's insurrection occurred in 1842, an imbroglio growing out of the bigoted suffrage laws, an inheritance from colonial times. It was only in 1861 that the boundary line between Rhode Island and Massachusetts was finally settled. In 1901, Massachusetts revoked the edict of banishment against Roger Williams, which had stood for nearly three centuries.

RULERS OF THE WORLD

ROMAN EMPERORS

Name	Lineage	Period of Rule		Birth	Death
	THE CÆSARS	B. C.	A. D.	B. C.	A. D
Augustus,	A title conferred by the Senate,	30	14	63	14

Hon. William Lyon Mackenzie King,	1921–		1874	....

Russia. The origin of the Russian Empire is involved in much obscurity, but it is usually regarded as having been founded by Rurik, a Scandinavian (Varangian), about 862, his dominions and those of his immediate successors comprising Novgorod, Kieff, and the surrounding country. Vladimir the Great (980–1015), the Charlemagne of Russia, introduced Christianity and founded several cities and schools. But from this period down to the time when the country was overrun by the Tartars, Russia was almost constantly the scene of civil war. For more than two centuries Russia was subject to the Tartars. But Russia's real foundation may be said to date from the accession of Peter the Great in 1689, who first secured to the country the attention of the more civilized nations of Europe. His first military achievement was his conquest of Azov from the Turks in 1696, which, however, he lost again in 1711. He also completed the conquest of Siberia; and, what was of more importance, obtained from Sweden by the Peace of Nystad, in 1721, Livonia, Esthonia, Ingria, or part of Karelia, the Territory of Viborg, Oesel, and all the other islands in the Baltic from Courland to Viborg. Catharine I., widow of Peter I., succeeded on the death of the latter, but died after a reign of only two years. The throne was then occupied successively by Peter II., 1727–30; by Anna, 1730–40; by Ivan VI., 1740–41; by Elizabeth, 1741–62; by Peter III., about six months in 1762; by Catharine II., wife of Peter III., 1762–96; by Paul, 1796–1801; by Alexander I., 1801–25; by Nicholas, 1825–55; by Alexander II., 1855–81. During all these reigns the growth of the empire was continuous. The Kirghiz Cossacks were subdued in 1731, the Ossetes in 1742; the Finnish Province of Kymenegard was gained by the Treaty of Abo in 1743. The three partitions of Poland took place under Catharine II. in 1772, 1793, and 1795. Russia acquired nearly two-thirds of this once powerful state. By the Peace of Kutchuk-Kainarji in 1774, the Turks gave up Azov, part of the Crimea (the other part was taken possession of in 1783), and Kabardah; and by the Peace of Jassy in 1792, Oczakov. Georgia also came under the protection of Russia in 1783, and Courland was incorporated in 1795. A portion of Persian Territory had already been acquired; and in 1801 the formal annexation of Georgia was effected. The Peace of Fredrikshamn, 1809, robbed Sweden of the whole of Finland, which now passed to Russia; the Peace of Bucharest, 1812, took Bessarabia from the Turks; that of Tiflis, 1813, deprived the Persians of parts of the Caucasus; and then the Vienna Congress of 1815 gave the remainder of Poland to Russia. After fresh wars, the Persians lost the provinces of Erivan and Nakhichevan in 1828; and the Turks lost Anapa, Poti, Akhalzik, etc., by the Peace of Adrianople in 1829. The desire to possess further dominions of the sultan led to a war against Turkey in 1853, in which England, France, and Sardinia also took part in 1854, and which ended in the Peace of Paris, 1856. The Russians were compelled to restore to Moldavia the left bank of the Danube in Bessarabia. This district, however, was again restored to Russia by the Congress of Berlin in 1878, which followed the Russo-Turkish War of 1877–78. In 1858, Russia acquired by agreement with China the sparsely populated but widely extended district of the Amur; the subjection of Caucasia was accomplished in 1859 and 1864, and considerable conquests have followed since 1866 both in Turkestan and the rest of Central Asia. A ukase of 1868 annihilated the last remains of the independence of Poland. The following table will show the extent of these continuous accessions of territory:

The extent of Russian Territory under —

Ivan the Great,	1462,	about	382,716 sq. m.
Vassili Ivanovitch,	1505,	"	510,288 "
Ivan the Terrible,	1584,	"	1,530,864 "
Alexis Michaelovitch,	1650,	"	5,039,094 "
Peter I.,	1689,	"	5,953,360 "
Anna,	1730,	"	6,888,888 "
Catharine II.,	1775,	"	7,122,770 "
Alexander II.,	1868,	"	7,866,940 "
Alexander II.,	1881,	"	8,325,393 "
Nicholas II.,	1909,	"	8,647,657 "

The population from 14,000,000 in 1722 had grown to 182,182,600 by 1915. The effort to extend the Russian domain in the East became a fixed policy. In 1881, the Tekke Turcomans were subjected; in 1884, Merv was taken, and Penjdeh was occupied and annexed in 1885, which led to considerable friction between Russia and Britain. A great disturbing element to the Imperial Government of Russia sprang up in Nihilism. Alexander II. was killed by their agency, and many attempts were made to murder the succeeding emperors. In 1891, flour and grain were sent by the United States to relieve distress caused by failure of the harvest. Oppressive measures against the Jews excited unfavorable comment. Alexander III. died November 1, 1894, and was succeeded by his son, Nicholas II. In 1900, following the Boxer Rebellion, China gave to Russia exclusive mining and railway privileges in Manchuria, and the command

of all the Chinese troops there to the Russian authorities. This occupation was to end in three years, and the delay in the withdrawal of Russian troops led to open hostilities between Russia and Japan in 1904. (See Russo-Japanese War.) During 1905-06, Russia was much perturbed by internal disturbances.

When Austria-Hungary made war upon Servia, 1914, Russia mobilized a portion of her troops "for reason of defense against the preparations of Austria." A general mobilization was ordered July 31. Germany, supporting Austria, at once declared war upon Russia (*See* World War). With Grand Duke Nicholas commander-in-chief of army and navy, the Russians attacked Austrian Galicia, looking forward to an attack on Berlin. They were driven out of Prussia, but met with some successes in Galicia. In September, it was estimated, 1,000,000 Austrians faced 1,500,000 Russians along a battle front of 175 miles.

March 22, 1915, Przemysl, great Austrian fortress in Galicia, was taken by the Russians after siege begun early in the war; it was recaptured by Austro-German forces June 3. Slowly the Russians fell back before the Germans; the storming of Warsaw began July 23; the city was entered by German troops Aug. 5 after withdrawal of the Russians; within a month thereafter the German troops took 12 Russian fortresses.

In 1916 Russian forces were engaged along battle lines from Riga to the Rumanian border and in Persia and Asiatic Turkey. Feb. 16 they took the strong Turkish fortress at Erzerum, Armenia.

Early in 1917 the ever-growing revolutionary party in the duma acquired sufficient power to force the abdication of Nicholas II (March 15). A provisional government was then established, of which Kerensky became the head. After a period of great internal dissension, resulting in the disorganization of the army, the Bolshev ki, representing the Soviets or soldiers' and workmen's councils, in November seized control of the government. Under the leadership of Trotzky and Lenine an armistice with Germany was arranged, culminating in a separate peace signed at Brest-Litovsk early in 1918 whereby the Bolshevik government agreed to cede to Germany much valuable Russian territory and to pay a huge indemnity.

The Bolsheviki government made Moscow its capital and Lenine its premier. A socialist scheme of ownership and management of land and industry was set up. Trotzky, with his armies, proceeded to suppress rebellion and attempts at independence in the Ukraine and the Baltic provinces. In 1920 these military activities culminated in an unsuccessful attack on Poland.

The vowed purpose of the Bolsheviki to incite revolution in other lands led the Entente Allies and the United States to support anti-Bolshevik movements and to refuse to trade with the Russians. In 1921 the Bolshevik industrial system gave signs of breaking down. Lenine found it necessary to go back to the "capitalistic" management of industry. Owing to paralyzed agricultural production, severe famine prevailed over large areas, threatening the lives of millions of people. On Lenine's death in 1924, Alexis Rykov became his successor as premier and president of the people's Commissars.

Russo-Japanese War. A war between Russia and Japan, waged in Manchuria (1904-05). The chief cause of the war was the occupation of Manchuria by Russia after the Boxer uprising of 1899-1900, endangering Japanese preponderance in Korea. An earlier cause of irritation was the action of Russia, Germany, and France in preventing the retention by Japan of Port Arthur and the Liao-tung peninsula after the Chinese-Japanese war of 1894-95, and the subsequent leasing of this territory from China by Russia. The principal events of the war were the attacks of the Japanese fleet upon the Russian squadron at Port Arthur, Feb. 8 and 9; naval fight off Chemulpo, Feb. 9; Vladivostok bombarded by Admiral Kamimura, March 6; Port Arthur bombarded, March 21-22; defeat of the Russians by the Japanese first army, May 1; Japanese victory at Kinchau, May 27-28; occupation of Dalny by the Japanese, May 29-30; Russians defeated at Telissu and Wafangkau, June 14-15; investment of Port Arthur, July 31, 1904—Jan.1, 1905; sortie of the Port Arthur fleet, resulting in a sea battle, in which most of the Russian vessels were driven back to Port Arthur and the rest dispersed, Aug. 10; Vladivostok squadron defeated, Aug. 14; battle of Liaoyang, resulting in the success of the Japanese, the Russians retiring upon Mukden, Aug. 27—Sept. 4; the Baltic fleet sailed for the Far East, Oct., 1904; Port Arthur surrendered, Jan. 1, 1905; battle of Mukden resulted in the capture of the city, Feb. 19—March 10; battle of the Sea of Japan and the annihilation of the Baltic fleet by Admiral Togo, May 27-28; President Roosevelt urged the Russian and Japanese governments to negotiate for peace, June 8; plenipotentiaries met at Portsmouth, New Hampshire, Aug. 9; treaty of peace signed, Sept. 5, 1905.

St. Bartholomew, Massacre of, a massacre of the Huguenots which took place in Paris, France, beginning on the night of August 23-24 (St. Bartholomew's Day), 1572. A large number of prominent Huguenots had been invited to the royal palace to participate in the wedding festivities of Henry of Navarre. While these guests were in the palace they were slaughtered without mercy, and at a signal the massacre quickly spread over the city. The anti-Huguenot leaders were Charles IX., the Queen-mother Catharine de' Medici, and the Duke of Guise. The massacre spread over France and it is variously estimated that 2,000 to 100,000 lives were lost.

Salic, or Salique Law, The (*săl'-ĭk*). An ancient fundamental law of the Ripuarian Franks, which excluded females from inheriting the French throne. It is supposed to have been established by Pharamond or Clovis, and to have derived its name from the River Saale, in Saxony, whence those Franks originally came. This body of law was revised and reconstituted by Charlemagne; according to it "no portion of *Salic land* can fall to females," but what was

meant by *Salic* land has been long debated among French antiquaries. It was the cause of long wars between England and France, when, in opposition to it, Edward III. claimed the throne of France by a title prior to that of Philip of Valois. It has been recognized in all countries of which the crown has developed on a member of the blood royal of France; it formed the foundation of the pretensions of Don Carlos to the Spanish Crown. It was observed with reference to the great fiefs which had been granted to princes of the blood, by way of appanage; and hence, on the death of Charles the Bold of Burgundy, without a male heir, that duchy reverted to Louis XI.

Scotland was first visited by the Roman troops under Agricola, who penetrated to the foot of the Grampian Mountains. It was afterward exposed to the ravages of the Norwegians and Danes, with whom many bloody battles were fought. Various contests were also maintained with the kings of England. Robert Bruce, however, secured the independence of the country and his title to the throne by the decisive battle of Bannockburn in 1314. He was succeeded by his nephew, Robert Stewart, and he by his eldest son, Robert. The latter was a weak prince, and the government was seized by the Duke of Albany, who stoned to death the eldest son of the king. James, his second son, to escape a similar fate, fled to France; in the year 1424 he returned to Scotland, and, having excited the jealousy of the nobility, he was assassinated in a monastery near Perth. James II., his son, an infant prince, succeeded him in 1437. He was killed by the bursting of a cannon at the siege of the castle of Roxburgh. James III. ascended the throne at the age of seven years. His reign was weak and inglorious, and he was murdered in the house of a miller, whither he had fled for protection. James IV., a generous and brave prince, began his reign in 1488. He was slain at the battle of Flodden. James V., an infant of less than two years of age, succeeded to the crown. He died in 1542, and was succeeded by his daughter, the celebrated Queen Mary. She was succeeded by her son James, who, in 1603, ascended the throne of England, vacant by the death of Queen Elizabeth, when the two kingdoms were united into one great monarchy which was legislatively united in 1707.

Servia. The Serbs, an agricultural people of Galicia, entered the country about 637. From the eighth to the twelfth century they were under Greek or Bulgarian suzerainty. Servia reached its height under Stephen Dushan (1331-1355), when the empire included Bosnia, Albania, Thessaly, part of Bulgaria and nearly all of the Hellenic peninsula. The battle of Kossovo, June 15, 1389, gave Servia to Turkey. It was fully subjugated in 1459; during 345 years of Turkish rule Servia was reduced to a race of peasants. They gained autonomy in 1817. Complete independence was established by the treaty of Berlin, 1878. Prince Peter was proclaimed king in 1903 after the assassination of King Alex. I. and Queen Natalie. Austria's annexation of Bosnia and Herzegovina, 1908, was resented. The Balkan states made war on Turkey, 1912. By the peace of London, 1913, Servia's territory was extended. Suspicion of Servian complicity in the murder of the Austrian heir-apparent in Bosnia, June 28, 1914, led to the Austrian ultimatum which brought on the World War. While successful in resisting attack during 1914, Servia was overwhelmed in 1915 by Austrian and Bulgarian armies which occupied the country until the end of the war in 1918. By the Treaty of Versailles, 1919, Servia became a leading component in the new Serb-Croat-Slovene State, called also Jugoslavia.

Seven Years' War, The (1756-63), was the third, last, and most terrible of the contests between Frederick the Great of Prussia and Maria Theresa (with the other powers of Europe on one side or the other) for the possession of Silesia. This long and desperate conflict made no change in the territorial distribution of Europe, but it increased tenfold the moral power of Prussia, and gave its army a prestige which it retained till the battle of Jena. It cost Europe 1,000,000 lives.

Shays's Rebellion. At the close of the Revolution, the United States were burdened with a very heavy foreign and domestic debt. They were impoverished by the long war, and it was difficult to raise the means to meet the arrears of pay due the soldiers of the Revolution. On the recommendation of Congress, each State endeavored to provide means for raising its quota by a direct tax. This effort produced much excitement in some of the States, and, finally, in 1787, a portion of the people of Massachusetts openly rebelled. Daniel Shays, who had been a captain in the Continental Army, marched at the head of a thousand men, took possession of Worcester, and prevented a session of the Supreme Court. He repeated his performance at Springfield, and the insurrection soon became so formidable that the governor was compelled to call out several thousand militia under General Lincoln, to suppress it. Though some of the insurgents were sentenced to death, none was executed.

Sicilies, The Two, a former kingdom of Italy, consisting of Naples (or South Italy) and Sicily. In 1047, while Greeks and Saracens were struggling for the possession of Lower Italy and Sicily, the twelve sons of Tancred de Hauteville, a count in Lower Normandy, came in with their followers. Robert Guiscard, one of these brothers, subdued Apulia and Calabria, taking the title of duke, and his youngest brother, Count Roger, conquered Sicily. Roger's son and successor, Roger II., completed the conquest of all Lower Italy by subduing Capua, Amalfi, and Naples, at that time celebrated commercial republics, and in 1130 took the title of king, calling his kingdom the Kingdom of the Two Sicilies. In 1759, when Charles IV. ascended the Spanish throne under the name of Charles III., he conferred the Kingdom of the Two Sicilies on his third son Ferdinand, and decreed at the same time that it should never again be united to the Spanish Monarchy. The reign of Ferdinand extended through the stormy period of the French Revolution and the subsequent European commotions. A varied experience followed, during which the country was successively subject to Germany, France, and Spain.

In 1860, an insurrection broke out in Sicily, and an expedition of volunteers from Piedmont and other Italian provinces under Garibaldi sailed from Genoa to the assistance of the insurgents. The result was that the Neapolitan troops were driven from the island. Garibaldi, following up his success, crossed over to the mainland, where he met little or no opposition; Francis II. fled from Naples; the strong places in his hands were reduced; and by a popular vote the Kingdom of the Two Sicilies ceased to exist as such and became an integral part of the Kingdom of Italy.

Sicilian Vespers, the name given to a massacre of the French in Sicily, March 30, 1282. On the evening of Easter Monday the conspirators were already assembled at Palermo; but the massacre was precipitated by an outrage offered by a Frenchman to a Sicilian bride, who was passing along the streets with her train. Instantly the Frenchman was killed, and, the populace being aroused by the conspirators, all the French who could be found in the city were slaughtered. Eight thousand were slain in Palermo alone, and the massacre afterwards spread over the island, the French being even dragged out of the churches to which they had fled for protection. The six hundredth anniversary of the Sicilian Vespers was celebrated with much enthusiasm at Palermo in 1882.

Slavery. The establishment of one man's right to control the liberty, property, and even life of another. Slavery probably arose at an early period of the world's history out of the accident of capture in war. Savages, in place of massacring their captives, found it more profitable to keep them in servitude. All the ancient Oriental nations of whom we have any records, including the Jews, had their slaves. In Greece in general, and especially at Athens, slaves were mildly treated, and enjoyed a large share of legal protection, while by the Romans they were used with considerable rigor. The English word *slave* is simply the name of the Sclavonian race. The wars of the Frankish kings and emperors filled Saracenic Spain with Sclavonic captives to such an extent that in its language, as well as in those of other European countries, a natural name meaning, in its own tongue, *glorious*, became the title of servitude. The African slave trade was commenced by the Portuguese in 1442; it was, however, of only trifling extent till the Sixteenth Century. But the importation of negroes into the West Indies and America having once begun, it gradually increased, until the vastness and importance of the traffic rivaled its cruelty and guilt. The slave trade was abolished in England in 1807 but it was only in 1834 that slavery itself was abolished throughout the British dominions. Long before that time, several of the North American States had decreed the extinction of slavery. Vermont abolished it in 1777, before she had joined the Union. Pennsylvania in 1780, Rhode Island and Connecticut shortly after, New York in 1797, and New Jersey in 1804, provided for the gradual emancipation of their slaves. In Massachusetts the Supreme Court declared that slavery was abolished by the act of adopting the State Constitution of 1780. In 1820, the United States passed a law declaring the slave trade to be piracy, but no conviction was obtained under the statute until November, 1861, when Nathaniel Gordon, master of a vessel called the "Erie," was convicted and hanged at New York. Finally, the abolition of slavery, cause and fruit of the gigantic war of secession, was definitively consecrated in 1865 by the Thirteenth Amendment to the Constitution of the United States. The French emancipated their negroes in 1848, and the Dutch in 1863. Slavery was also partially abolished in Brazil in 1871, and gradual emancipation has been adopted in Cuba.

South Carolina. The first attempt to colonize the territory now included in South Carolina was made by Jean Ribault, a Frenchman, in 1562. The first permanent settlement was made by English colonists, who planted themselves on the banks of the Ashley in 1670, but removed to the site of Charleston in 1680. The province was created by Charles II. in 1683. Both the Carolinas were included under a common name and proprietary government till 1729, when the king formed the province into two royal colonies. Large numbers of French Huguenots had arrived in 1685, and subsequently Swiss, Irish, and German colonists. South Carolina suffered severely from Indian depredations, and joined with Georgia, under Oglethorpe, in a contest with Spanish Florida. She took an active part in the Revolution, and the battles of Fort Moultrie, Charleston, Camden, King's Mountain, Cowpens, Eutaw Springs, etc., were fought on her soil. The United States Constitution was ratified in 1788. In 1832, the State passed the Nullification Act, which threatened civil war, then happily averted, but afterward precipitated in 1861 by the firing on Fort Sumter. The State was readmitted to federal relations in 1868. From 1865 until 1871 there were reconstruction troubles, ending with the election of Wade Hampton as Governor of the State and his recognition by President Hayes. In 1886 Charleston suffered from a severe earthquake which caused much property loss. The present State constitution was adopted in 1897. In 1915 constitutional Prohibition was adopted by an overwhelming majority.

South Dakota. South Dakota became a State November 2, 1889, when the Territory of Dakota was divided into two States. The history of that part of the country will be found under Minnesota, Nebraska, and North Dakota. A prohibitory amendment was adopted at the first state election, but, owing to an adverse U. S. Supreme Court decision, did not go into effect. Constitutional Prohibition was again adopted in 1916.

Spain, the *Spania*, *Hispania*, and *Iberia* of the Greeks, and known to the Romans by the same names, is supposed to have been originally inhabited by a distinct race called Iberians, upon whom a host of Celts are supposed to have descended from the Pyrenees. These two races coalesced and formed the mixed nation of the Celtiberians. About the middle of the Third Century B. C. the Carthaginian influence began to be felt in Iberia, and a considerable tract of territory was brought under subjection to Carthage by Hamilcar, who founded the city of

Barcelona. The Romans had driven the Carthaginians from the peninsula in 206 B. C., and the country was erected into a Roman Province. From the time of the complete supremacy of the Romans till the death of Constantine the condition of Spain was eminently prosperous. Everywhere throughout the country towns of purely Roman character sprang up, and numerous aqueducts, bridges, amphitheaters, etc., were built. Spain was for three centuries the richest province of the Roman Empire. In 409 A. D., hordes of barbarians, Alans, Vandals, and Suevi, crossed the Pyrenees and swept over and desolated the peninsula. About 412 the Visigoths invaded the country, and their king, Athaulf, established the Gothic monarchy in Catalonia. In 711 the Moors obtained mastery of nearly the whole of Spain. The Moors held Spain for the first few years as a dependency of the province of North Africa; but after the downfall of Musa the country was governed (717) by *emirs* appointed by the Caliph of Damascus. During the period of Moorish domination the small independent kingdom of Asturias, or Leon, had been growing in power and extent. In 758 a second independent Christian Kingdom was founded in Sobrarve, which was in 801 swallowed up by the caliphate of Cordova. Thirty-six years afterward was founded the third Christian Kingdom, that of Navarre, and in 933 another independent monarchy was founded in Castile, which, from its central position and consequent greater facilities for expansion, soon became the most powerful of the Spanish states. The Kingdom of Aragon was the last Christian kingdom formed in Spain. The rest of the history of the Spanish kingdoms before their union is undeserving of a detailed account. Ferdinand II., the last sovereign of Aragon, by marriage with Isabella, Queen of Castile, in 1469, by the conquest of Granada in 1492, and that of Navarre in 1512, united the whole of Spain (and French Navarre) under one rule. Charles I. (Charles V. of Germany) succeeded Ferdinand, and in his reign Mexico and Peru were added to the possessions of Spain. Philip II., by his enormous war expenditure and maladministration, laid a sure foundation for the decline of the country; and the reigns of Philip III. and IV. witnessed a fearful acceleration in the decline. That of Charles II. was still more unfortunate, and the death of the latter was the occasion of the War of the Spanish Succession. Philip V. was the first of the Bourbon Dynasty who occupied the throne of Spain. Under Charles III. (1759–88) the second great revival of the country commenced, and trade and commerce began to show signs of returning activity. During the inglorious reign of Charles IV. (1788–1808) a war broke out with Britain, which was productive of nothing but disaster to the Spaniards and by the pressure of the French another arose in 1804, and was attended with similar ill success. Charles's eldest son ascended the throne as Ferdinand VII. Forced by Napoleon to resign all claims to the Spanish Crown, Ferdinand became a prisoner of the French, and Joseph, the brother of the French Emperor, was declared King of Spain and the Indies. But before this time an armed resistance had been organized throughout the whole country. The various provinces elected juntas, or councils, consisting of the most influential inhabitants of the respective neighborhoods, and it was their business to administer local rule. The Supreme Council of Seville declared war against Napoleon and France in 1808. England, on solicitation, made peace with Spain, recognized Ferdinand VII. as king, and sent an army to aid the Spanish insurrection. After many bloody campaigns the French were driven from the country. The reign of Ferdinand's daughter, Isabella II., was disturbed by the Carlist rebellion, 1834–39. Frequent changes of ministry, occasional revolts, the banishment of Queen Christina, the war with the Moors, the annexation of Santo Domingo in 1861, and the quarrels between Spain and her former colonies, Peru and Chile, were the most marked events in the more recent history of Spain. In 1868, Isabella was driven from the throne by a general revolt; and the Cortes, in 1871, elected Prince Amadeo of Italy to be king. Finding the task of ruling constitutionally hopeless, Amadeo abdicated in 1873, upon which the form of government was changed into a republic. During the remainder of 1873, and the whole of 1874, Spain was the scene of general anarchy and much bloodshed. In December, 1874, Alfonso, son of ex-Queen Isabella, was declared King of Spain at Santander, under the title of Alfonso XII. He died in 1886, and his widow, Queen Maria Christina, was chosen regent during the minority of the infant Prince Alfonso XIII. The Prince reached his majority, May 17, 1902, and became king.

During the World War Spain maintained neutrality, but at the expense of serious internal conflict with pro-German and pro-Ally parties. In 1921-22, the Spanish army sustained severe defeats in Spanish Morocco. A revolution in 1923 resulted in the dictatorship of the military leader Primo Rivera.

Spanish-American War. In 1898, a crisis in Cuban affairs brought on war with the United States, known as the Spanish-American War, which from its opening to its close lasted 114 days. In that time the United States land and sea forces destroyed two Spanish fleets, received the surrender of more than 35,000 Spanish soldiers, took by conquest the fortified cities of Santiago de Cuba, in Cuba, Ponce, in Porto Rico, and Manila, on the island of Luzon, in the Philippines, and secured control, pending negotiations of peace, of the entire Spanish possessions in the West Indies, the Philippines, and Guam of the Ladrone Islands. The Americans suffered no loss of ships or territory and but 279 killed and 1,465 wounded in battle, while the cost to Spain, aside from prisoners, ships, and lost territory, was 2,199 killed, and 2,948 wounded. The cost to the United States in money was $141,000,000.

The principal events immediately preceding and during the war are as follows:

February 15th—The United States battleship "Maine" was blown up in the harbor of Havana. According to the report of the Court of Inquiry appointed by the United States the explosion was due to an external mine.

April 20th—President McKinley, authorized by Congress to intervene in Cuba, using the United States military and naval forces, sent an ultimatum to Spain. The Spanish minister at once left Washington, and the next day the United States minister left Madrid.

April 22d—A proclamation was issued by the President blockading the principal ports of Cuba.

April 23d—President McKinley issued a call for 125,000 volunteers to serve for two years.

April 27th—The batteries of Matanzas, Cuba, were shelled by Admiral Sampson's flagship, the "New York," with the monitor "Puritan" and the cruiser "Cincinnati."

April 29th—The Spanish fleet, commanded by Admiral Cervera, consisting of the "Cristobal Colon," the "Almirante Oquendo," the "Maria Teresa" and the "Viscaya," and the torpedo boats "Furor," "Terror," and "Pluton," left the Cape Verde Islands for Cuba.

May 1st—Commodore Dewey, commanding the United States Asiatic squadron, destroyed the entire Spanish fleet in Manila Bay, Philippines, without losing a man.

May 11th—The "Wilmington," "Winslow," and "Hudson" engaged the Spanish batteries at Cardenas. Ensign Bagley and four of the "Winslow's" crew were killed. Major-General Wesley Merritt was ordered to the Philippines as military governor.

May 12th—A United States fleet, commanded by Rear-Admiral Sampson, bombarded the fortifications of San Juan, Porto Rico.

May 19th—Admiral Cervera's fleet reached Santiago de Cuba, and a few days later was "bottled up" there by the "flying squadron" of Commodore Schley.

May 25th—President McKinley called for 75,000 more volunteers. Twenty-five hundred United States troops sailed from San Francisco for Manila, several thousand more following at a later date.

May 31st—The "Massachusetts," "Iowa," and "New Orleans" bombarded the fortifications at the mouth of Santiago Harbor. They were bombarded again several times after Admiral Sampson took command of the fleet.

June 3d—Assistant Naval Constructor Hobson with seven men ran the collier "Merrimac" to the mouth of Santiago Harbor and sank her in the channel under the fire from the Spanish forts. Hobson and his men were taken prisoners.

June 10th—Six hundred marines were landed at Caimanera, Guantanamo Bay, Cuba, where sharp skirmishing continued for several days, several Americans being killed.

June 12th—The 5th Army Corps, commanded by General Shafter, sailed from Tampa on twenty-nine transports for Santiago, arriving off there on June 20th.

June 13th—President McKinley signed the War Revenue Bill, providing for the raising of revenues by a stamp tax and providing for a popular bond loan which was immediately subscribed.

June 17th—A Spanish fleet under Admiral Camara left Cadiz for the Philippines, but returned after passing through the Suez Canal.

June 22d—General Shafter's troops began disembarking at Daiquiri and Siboney, near Santiago.

June 14th—Roosevelt's Rough Riders were attacked while advancing toward Santiago; sixteen Americans were killed and forty more wounded before the Spaniards were repulsed.

July 1st—General Lawton took El Caney, near Santiago, and General Kent, commanding the 1st division of the 5th Army Corps, which included the 2d, 6th, 9th, 10th, 13th, 16th, and 24th infantry, and the 71st New York volunteers, took San Juan Hill after heavy fighting. Official reports gave the American losses 231 killed and 1,364 wounded and missing.

July 3d—Admiral Cervera's squadron made a dash out of Santiago Harbor, and every vessel was sunk or disabled by the American fleet. General Shafter demanded the surrender of Santiago. The seizure of Guama, in the Ladrone Islands, by the "Charleston" was reported at this time.

July 7th—President McKinley signed resolutions passed by the Senate annexing the Hawaiian Islands to the United States, and the "Philadelphia" was ordered to Honolulu to raise the American flag.

July 17th—General Toral, in command of the Spanish troops at Santiago, General Linares being wounded, surrendered his forces and the east portion of the province of Santiago de Cuba to General Shafter.

July 21st—General Leonard R. Wood, formerly colonel of the 1st Volunteer cavalry, was appointed military governor of Santiago.

July 25th—United States troops, under General Nelson A. Miles, landed at Guanica, Porto Rico, the town having surrendered to the "Gloucester."

July 26th—Through the French ambassador, the government of Spain asked President McKinley on what terms he would consent to peace.

July 28th—Ponce, the second largest city in Porto Rico, surrendered to General Miles, and he was received by the residents with joyful acclamations. Capture of several other towns, with little or no fighting, followed.

July 30th—President McKinley's statement of the terms on which he would agree to end the war was given to the French ambassador. The President demanded the independence of Cuba, cession of Porto Rico and one of the Ladrones to the United States, and the retention of Manila by the United States pending the final disposition of the Philippines by a joint commission.

July 31st—United States troops engaged the Spaniards at Malate, near Manila, in the Philippines, and repulsed them, with some loss on both sides.

August 9th—The French ambassador presented to President McKinley Spain's reply, accepting his terms of peace.

August 12th—Protocols agreeing as to the preliminaries for a treaty of peace were signed by Secretary Hay and the French ambassador. United States military and naval commanders were ordered to cease hostilities. The blockades of Cuba, Porto Rico, and Manila were lifted and hostilities ended.

August 13th—Manila surrendered after a combined assault by the army under General Merritt and Dewey's fleet.

Sparta or Lacedæmon. A celebrated city of ancient Greece; capital of Laconia and of the Spartan state, and the chief city in the Peloponnesus; on the west bank of the Eurotas River, and embraced a circuit of six miles. Sparta was a scattered city consisting of five separate quarters. Unlike Athens, it was plainly built, and had few notable public buildings; consequently, there are no imposing ruins to be seen here as in Athens, and the modern Sparta is only a village of some 4,000 inhabitants.

The Spartan state was founded, according to tradition, by Lacedæmon, son of Zeus. The most celebrated of its legendary kings was Menelaus. Shortly after their settlement in the Peloponnesus it is probable that the Spartans extended their sway over all the territory of Laconia, a portion of the inhabitants of which they reduced to the condition of slaves. They also waged war with the Messenians, the Arcadians, and the Argives, against whom they were so successful that before the close of the Sixth Century B. C. they were recognized as the leading people in all Greece.

Early in the following century began the Persian wars, in which a rivalry grew up between Athens and Sparta. This rivalry led to the Peloponnesian War, in which Athens was humiliated and the old ascendency of Sparta regained. Soon after this the Spartans became involved in a war with Persia, and Athens, Thebes, Corinth, and some of the Peloponnesian States took this opportunity to declare war against them. This war, known as the Bœotian or Corinthian War, lasted eight years and increased the reputation and power of Athens. To break the alliance of Athens with Persia, Sparta, in 387 B. C., concluded with the latter power the peace known by the name of Antalcidas; and the designs of Sparta became apparent when she occupied, without provocation, the city of Thebes, and introduced an aristocratical constitution there. Pelopidas delivered Thebes, and the celebrated Theban War (378–363) followed, in which Sparta was much enfeebled. During the following century Sparta steadily declined, though one or two isolated attempts were made to restore its former greatness.

Stadtholder (Dutch, *Stadhouder*), the name formerly given to the chief magistrate of the United Provinces of Holland. The last Stadtholder was William V., who had to fly to England in 1795, at the invasion of the French Republican army. After the Congress of Vienna (1815), Holland, with Belgium, was erected into a kingdom, and William V., was the first king, under the name of William I.

Star-Chamber, an ancient English tribunal, said to have existed from a very early period, but revived during the reign of Henry VII. One derivation of the name is from the star-covered roof or ceiling of the room in which the tribunal assembled; but this derivation is at least doubtful. The tribunal consisted of privy councillors, and of certain judges, who acted without the intervention of a jury. As this was a violation of *Magna Charta*, and as the tribunal had been guilty of the most grave excesses, especially in the time of Charles I., the Star Chamber was abolished by the Long Parliament in 1641, at the same time as the High Commission Court.

Sumter, Fort (named after General Thomas Sumter, 1734–1832), an American fort associated with both the beginning and the end of the Civil War; built of brick, in the form of a truncated pentagon thirty-eight feet high, on a shoal partly artificial, in Charleston Harbor, three and one-half miles from the city. On the withdrawal of South Carolina from the Union in December, 1860, Major Anderson, in command of the defenses of the harbor, abandoned the other forts, and occupied Fort Sumter, mounting sixty-two guns, with a garrison of some eighty men. The attack on the fort was opened by General Beauregard April 12, 1861, and it surrendered on the 14th; this event marked the beginning of the war. The Confederates strengthened it, and added ten guns and four mortars. In April, 1863, an attack by a fleet of monitors failed. In July batteries were erected on Morris Island, about 4,000 yards off, from which in a week 5,000 projectiles, weighing from 100 to 300 pounds, were hurled against the fort; at the end of that time it was silenced and in part demolished. Yet the garrison held on amid the ruins and in September beat off a naval attack; and in spite of a forty days' bombardment in October–December, 1863, and for still longer in July and August, 1864, it was not till after the evacuation of Charleston itself, owing to the operations of General Sherman, that the garrison retired, and the United States flag was again raised April 18, 1865; an event soon followed by the evacuation of Richmond and the Confederate surrender.

Sweden. When we first hear of Sweden the country was inhabited by numerous tribes, kindred in origin, but politically separate. Two principal groups are recognizable, *Goths* in the South and *Swedes* in the North. Ingiald Hrada, the last ruler of the old royal family of the Ynglingar, who drew their origin from Njord, sought to establish a single government in Sweden and perished in the attempt. To the Ynglingar followed, in the Upland, the dynasty of the *Skioldungar*. Erik Edmundsson acquired the sovereignty of the whole of Sweden about the end of the Ninth Century. The dawn of Swedish history now begins. Efforts to introduce Christianity were made as early as 829 A. D., but it was not till 1000 A. D., that Olaf Skötkonung, the Lap King, was baptized. Erik undertook a crusade against the pagan Finns, and having compelled them to submit to baptism, and established Swedish settlements among them, he laid the foundation of the union of Finland with Sweden. Erik's murder in 1160 by the Danish prince, Magnus Henriksen, who had made an unprovoked attack upon the Swe-

dish king, was the beginning of a long series of troubles. In 1389, the throne was offered by the Swedish nobles to Margaret, Queen of Denmark and Norway, who threw an army into Sweden, defeated the Swedish king, Albert of Mecklenburg, and by the union of Calmar, in 1397, brought Sweden under the same scepter with Denmark and Norway. In 1523, Sweden emancipated itself from the union with Denmark, which had become hateful to the Swedes, and rewarded its deliverer, the young Gustaf Vasa, by electing him king, and declaring its independence of Denmark. Gustaf Vasa, on his death, in 1560, left to his successor a hereditary and well-organized kingdom, a full exchequer, a standing army, and a well-appointed navy. Sigismund, grandson of Vasa, who had been elected king of Poland through the influence of his Polish mother, was compelled to resign the throne in 1599 to his uncle Karl. The deposition of Sigismund gave rise to the Swedo-Polish War of Succession, from 1604–60; and on the death of Karl, in 1611, his son, the great Gustavus Adolphus, found himself involved in hostilities with Russia, Poland, and Denmark. The young king soon concluded treaties of peace with his northern neighbors, and placed the internal affairs of his kingdom in order, and, although he ranks as one of the greatest military commanders of his age, the extraordinary number of benefits which he conferred on every department of the administrative system of Sweden entitles him to still greater renown as the benefactor of his native country. The reign of Christina was disastrous. Karl X. was occupied in generally unsuccessful wars against Poland and Denmark; while the long rule of his son, Karl XI.—from 1660–97—was characterized by success abroad and the augmentation of the regal power. In 1718, the male line of the Vasas expired with the death of Charles XII. His sister and her husband, Frederick of Hesse-Cassel, were called to the throne by election. The weak Adolphus Frederick of Holstein-Gottorp, who was called to the throne on the death of Frederick in 1751, did little to retrieve the evil fortunes of the state; but his son Gustavus III. (1771–92), skillfully recovered the lost power of the Crown. Gustavus IV. was forcibly deposed in 1809, and obliged to renounce the Crown in favor of his uncle Charles XIII. The dominant party in Sweden elected General Bernadotte to the rank of crown-prince, the latter assumed the reins of government, and by his steady support of the allies against the French Emperor secured to Sweden, at the Congress of Vienna, the possession of Norway, when that country was separated from Denmark. Under the administration of Bernadotte, who in 1818 succeeded to the throne as Charles XIV. John, the united kingdoms of Sweden and Norway made great advances in material prosperity, and in political and intellectual progress; and, although the nation at large entertained very little personal regard for their alien sovereign, his son and successor, Oscar (1844–59), and his grandsons, King Charles XV., and King Oscar II., who came to the throne in 1872, so identified themselves with their subjects that the Bernadotte Dynasty secured the loyal affections of every section of the united nations of Sweden and Norway down to 1903.

In that year serious difficulty arose between Norway and Sweden, owing to the desire of the former for autonomous government. In 1905 the two nations separated, and Oscar II. continued monarch of Sweden until his death, December 8, 1907, when he was succeeded by his oldest son, Gustaf V.

Switzerland was in Roman times inhabited by two races — the Helvetii, supposed to have been Celts, on the northwest, and the Rhætians on the southeast. After the conquest of Gaul both races adopted the language and habits of Rome. When the invasions took place the Burgundians settled in Western Switzerland, while the Alemanni, another Germanic tribe, took possession of the country east of the River Aar. A third Teutonic people, the Goths, entered the country from Italy and took possession of the country of the Rhætians. The Helvetii retained their old pagan creed until the Seventh Century, when they were converted by Irish monks. During the Eleventh and Twelfth Centuries the greater part of Switzerland was ruled on behalf of the emperors by the lords of Zahringen, who, however, became extinct in 1218. In 1273, Rudolf of Habsburg, a Swiss nobleman, became emperor. Schwyz, Uri, and Unterwalten, with Lucerne, Zürich, Glarus, Zug, and Berne, eight cantons in all, in 1352, entered into a perpetual league which was the foundation of the Swiss Confederation. In 1415 the people of the cantons invaded Aargau and Thurgau, parts of the Austrian territory, and annexed them; three years later they crossed the Alps and annexed Ticino, and constituted all three subject states. In 1481 the towns of Freiburg and Soleure were admitted into the confederacy. Basel and Schaffhausen (1501) and Appenzell (1513) were next received into the confederation, and its true independence began. War broke out in 1531 between the Catholics and Protestants, and the former were successful. During the Thirty Years' War Berne and Zürich contrived to maintain the neutrality of Switzerland, and in the Treaty of Westphalia, in 1648, it was acknowledged by the great powers as a separate and independent state. In 1798, Switzerland was seized by the French. At the peace of 1815 its independence was again acknowledged. In 1847, the Jesuits were expelled and the monasteries were suppressed. An attempt was made by diplomatic notes to intimidate the Swiss Government, but the revolution of 1848 broke out and prevented further interference. In the same year the radical party carried the constitution of 1848. After a rebellion against the King of Prussia, as Prince of Neufchâtel, the canton was declared a republic, with a constitution similar to that of the other Swiss states.

Tarpeian Rock (*tăr-pē′ yan*), a precipitous rock forming part of the Capitoline Hill at Rome over which persons convicted of treason to the state were hurled. It was so named, according to tradition, from *Tarpeia*, a vestal virgin of Rome, and daughter of the governor of the citadel on the Capitoline, who, covetous of the golden bracelets worn by the Sabine soldiery, opened the gate to them on the promise of receiv-

ing what they wore on their left arms. Once inside the gate they threw their shields upon her, instead of the bracelets. She was buried at the base of the Tarpeian Rock.

Tartary, properly Tatary, the name under which, in the Middle Ages, was comprised the whole central belt of Central Asia and Eastern Europe, from the Sea of Japan to the Dnieper, including Manchuria, Mongolia, Chinese Turkestan, Independent Turkestan, the Kalmuck and Kirghiz steppes, and the old khanates of Kazan, Astrakhan, and Crimea, and even the Cossack countries; and hence arose a distinction of Tartary into European and Asiatic. But latterly the name Tartary had a much more limited signification, including only Chinese Turkestan and Western Turkestan. It took its name from the Tatars or Tartars.

Temple, Solomon's, the building reared by Solomon as a habitation for Jehovah. David had planned the Temple, but was divinely forbidden to erect it, as he had shed so much blood in his wars. He made great preparations for his son and successor, who, he learned from the prophet Nathan, was destined to achieve the work. It was built on Mount Moriah, chiefly by Tyrian workmen, and had massive foundations. The stone for its erection was dressed before its arrival, so that the edifice arose noiselessly; the floor was of cedar, boarded over with planks of fir; the wainscoting was of cedar, covered with gold, as was the whole interior. It was modeled inside on the tabernacle, which was Jehovah's dwelling while journeyings were continually taking place. There was a Holy and a Most Holy Place. The temple was surrounded by an inner court for the priest. There was also a Great or Outward Court, called specially the Court of the Lord's House. This temple was destroyed by the Babylonians during the siege of Jerusalem under Nebuchadnezzar. On the return from Babylon, a temple, far inferior to Solomon's was commenced under Zerubbabel, B. C. 534, and, after a long intermission, was resumed B. C. 520, and completed B. C. 516, under Darius Hystaspes. The second temple was gradually removed by Herod, as he proceeded with the building or rebuilding of a temple designed to rival the first rather than the second. The work was commenced B. C. 21 or 20; the temple itself was finished in about a year and a half, the courts in eight years, but the subsequent operations were carried on so dilatorily that the Jews reckoned forty-six years as the whole time consumed. In the courts of this temple Jesus preached and healed the sick. It caught fire during the siege of Jerusalem under Titus, and was burned to the ground.

Tennessee. The name is derived from "Tanase," the Indian appellation of the Little Tennessee River. The first permanent white settlement was made on the Tennessee River, about thirty miles from the site of Knoxville, and Fort Loudon built. Indian wars lasted till 1761, when the savages were reduced to terms. From 1777 to 1784 the territory formed a portion of North Carolina. During the four years subsequent, the settlers maintained an organization as the State of Franklin, but were reunited to North Carolina in 1788. In 1789 the Territory, with that of Kentucky, was organized by the United States Government, which had received its cession from North Carolina. In 1794, a distinct territorial organization was made, and in 1796 Tennessee was admitted as a State, the third under the Federal Constitution. The State seceded in June, 1861. The principal military events within her limits during the Civil War were the capture of Forts Henry and Donelson, in February, 1862; the battle of Pittsburg Landing, or Shiloh, in April, 1862; the battle of Murfreesboro, in January, 1863; the battle of Chickamauga, in September, 1863; the battles about Chattanooga, and the battles of Franklin and Nashville, in November, 1864. State was readmitted in 1866. The Centenary of the State was celebrated by an Exposition at Nashville in 1897. In 1907 the National Rivers and Harbors Convention met at Memphis. Statutory Prohibition was enacted in 1909.

Teutones, a tribe of Germany, which, with the Cimbri, invaded Gaul in B. C. 113. In B. C. 102, they were defeated with great slaughter near Aquæ Sextiæ (Aix in the department of Bouches du Rhône) by the Roman general Marius. A tribe of the same name is mentioned by Pliny and others as inhabiting a district north of the Elbe, which appears to have been the original settlement of the Teutones before their invasion of Gaul.

Teutonic Knights, a military religious order of knights, established toward the close of the Twelfth Century, in imitation of the Templars and Hospitallers. It was composed chiefly of Teutons or Germans who marched to the Holy Land in the Crusades, and was established in that country for charitable purposes. In the Thirteenth Century they acquired Poland and Prussia, and they long held sway over a great extent of territory in this part of Europe. The order began to decline in the Fifteenth Century, and was finally abolished by Napoleon in 1809.

Texas. The first attempt at colonization known to history was made by La Salle, who sailed into Matagorda Bay, and erected Fort St. Louis on the Lavaca in 1685. Four years later the French were ousted by the Spaniards. The two nationalities contested the dominion of the country with bitterness, though the right of possession was for the most part with the Spaniards. In 1715, the name of New Philippines was given to the country, and the Marquis de Aguayo was made governor-general, under whose rule Spanish settlements were rapidly multiplied. In 1762-63, France settled the feud by her cession of the Louisiana territory to Spain. The recession of Louisiana to France in 1803, and the sale by the latter power to the United States, still left the boundary of the old Spanish possessions west of Louisiana open to controversy, as there had previously been no well-defined line. In 1806, the territory between the Sabine and Arroya Honda was established as a neutral ground by the Spanish and American generals commanding on the frontier. In the absence of any national settlement, a series of revolutionary intrigues began with the projected movement of Aaron Burr in 1806. Filibustering expeditions into Texas from the United States led to several severe battles, and it was not till 1819 that the

Sabine River was finally established as the Texan boundary. The revolutionary spirit, which made Texas a region of turmoil, did not cease when Mexico became independent under the leadership of Iturbide. Invasions from the United States continued, and, though several peaceable and thrifty American colonies had been planted, the dictator Bustamante, in 1830, forbade the people of the United States from further immigration. The long bitterness between the two races culminated in 1835, and the Americans in the province, after fighting several engagements, organized a provisional government, with Sam Houston as Commander-in-Chief of the Texan forces. A series of sanguinary battles ensued between the Mexican troops under General Santa Ana and the Texan revolutionists, and the atrocities of the Mexicans awakened deep sympathy for the Texans. The issue of the contest was practically settled with the battle of San Jacinto, April 21, 1836, when Santa Ana was taken prisoner. General Houston was elected president of the Texan Republic the same year, and in March, 1837, the United States formally recognized the new government. Intermittent hostilities continued between Mexico and Texas, which, in 1839–40, had been recognized by the leading European governments; but the threats of the former nation to subjugate the Texans were rendered negative by her own weakness and the growing power of the young State. The annexation of Texas to the United States, which led to the Mexican War, occurred by her admittance as a State in 1845, the fifteenth under the Constitution. After the election of Abraham Lincoln the State seceded, February 23, 1861, by force of a popular vote, ratifying the ordinance of the convention called for that purpose. General Twiggs, on February 18th, surrendered to the State authorities all the United States posts, troops, and munitions of war in the department. No very important military operations occurred within the State limits during the war. The last fight of the war took place in Texas, ending in a Federal defeat, on May 13, 1865, and General Kirby Smith surrendered the last Confederate army here on May 26th. Texas was readmitted to her full rights in the Union, March 30, 1870. A period of lawlessness existed in the State for a number of years, but was finally suppressed by the Texas Rangers in 1879. A storm and tidal wave destroyed Galveston in 1900. In the next year vast oil fields were discovered near Beaumont. Colored United States soldiers engaged in a riot at Brownsville in 1905, and were dismissed from the service by the President.

Thebes (*thēbz*). The principal city of Bœotia, seated on the River Ismenus. Its fame was great in legendary Greece; it was built by Cadmus; Amphion reared its walls; the Sphinx, Œdipus, and the fatal combat of Eteocles and Polynices, figured in its story. It played a subordinate part in the history of Greece, until the time of Epaminondas, when by his genius it was raised to the first rank among the states of Hellas. But it fell with his death, and never recovered from the destructive siege by Alexander the Great, in 336 B. C.—A city of Egypt, on the Nile, called *No* in the Old Testament, and in the Iliad celebrated for its 100 gates, and its vast military forces. Amun, or Ammon, was especially worshiped there. Among its ruins are the magnificent temples of Luxor and Karnak, on the east bank of the Nile.

Thermopylæ, a celebrated pass of Ancient Greece, leading from Thessaly into Locris, between Northern and Southern Greece. It lay between Mount Œta (celebrated mythologically as the mountain on which Hercules burnt himself to death) and a morass which fringed the Malic or Maliac Gulf; both the eastern and the weatern entrance to the pass approaching so close to the morass as to leave room for only a single carriage. In this pass, Leonidas, King of Sparta, was appointed to oppose the invading armies of Xerxes (480 B. C.). These were driven back with immense slaughter, in their repeated attempts to force the pass, till at last Ephialtes, a Malain, guided a body of Persians over the mountain, and thus enabled them to fall on the rear of the Greeks, who were all slain (Leonidas included), with the exception of one man. The pass derived its name from the hot springs, sacred to Hercules, by which it was distinguished.

Thirty Tyrants of Rome. The collective title given to a set of military usurpers who sprung up in different parts of the empire during the fifteen years (253–268 A. D.) occupied by the reigns of Valerian and Gallienus, and, amid the wretched confusion of the time, endeavored to establish themselves as independent princes. The name is borrowed from the Thirty Tyrants of Athens, but, in reality, historians can reckon only nineteen: Cyriades, Macrianus, Balista, Odenathus, and Zenobia, in the East; Postumus, Lollianus, Victorinus and his mother Victoria, Marius, and Tetricus, in the West; Ingenuus, Regillianus, and Aureolus, in Illyricum and the countries about the Danube; Saturninus, in Pontus; Trebellianus, in Isauria; Piso, in Thessaly; Valens, in Achæa; Æmilianus, in Egypt; and Celsus, in Africa.

Thirty Years' War (1618 to 1648), a war in Germany, at first a struggle between Roman Catholics and Protestants. Subsequently it became a struggle for political ascendancy in Europe. On the one side were Austria, nearly all the Roman Catholic princes of Germany, and Spain; on the other side were, at different times, the Protestant powers and France. The occasion of this war was found in the fact that Germany had been distracted ever since the Reformation by the mutual jealousy of Catholics, Lutherans, and Calvinists. Certain concessions had been made to the Protestants of Bohemia by Rudolph II. (1609), but these were withdrawn by his successor Matthias in 1614, and four years afterward the Bohemian Protestants were in rebellion. Count Thurn at the head of the insurgents repeatedly routed the imperial troops, compelling them to retire from Bohemia, and (1619) invaded the archduchy of Austria. Matthias having died in 1619, he was succeeded by Ferdinand II., who was a rigid Catholic, but the Protestants elected as their king, Frederick, Elector Palatine, who was a Protestant. Efforts at mediation having failed, the Catholic forces of Germany marched

against Frederick, who, with an army of Bohemians, Moravians, and Hungarians, kept the field till November 8, 1620, when he was totally routed at Weissenberg, near Prague, by Duke Maximilian of Bavaria. The Protestant cause was now crushed in Bohemia, and the people of that province were much embittered. The dominions of Frederick, the Palatinate of the Rhine included, were now conquered, the latter being occupied by Count Tilly, assisted by the Spaniards under Spinola. At the Diet of Ratisbon (March, 1623) Frederick was deprived of his territories, Duke Maximilian receiving the Palatinate. Ferdinand, whose succession to the throne of Bohemia was thus secured, sought foreign assistance, and a new period of war began. Christian IV. of Denmark, induced partly by religious zeal and partly by the hope of an acquisition of territory, came to the aid of his German co-religionists (1624), and being joined by Mansfeld and Christian of Brunswick, advanced into lower Saxony. There they were met by Wallenstein, Duke of Friedland, who in 1626 defeated Mansfeld at Dessau, while Tilly was also successful in driving Christian back to Denmark. In the peace of Lübeck which followed (May, 1629), Christian of Denmark received back all his occupied territory, and undertook not to meddle again in German affairs. After this second success, Ferdinand again roused his people by an edict which required restitution to the Roman Catholic Church of all church lands and property acquired by them since 1552.

To the assistance of the Protestants of Germany came Gustavus Adolphus, King of Sweden, who landed (1630) with a small army on the coast of Pomerania. Joined by numerous volunteers, and aided by French money, he advanced, and routed Tilly at Breitenfeld (or the battle of Leipsic, September, 1631), victoriously traversed the Main and the Rhine valleys, defeated Tilly again near the confluence of the Lech and the Danube (April, 1632), and entered Munich. Meanwhile the emperor sought the aid of Wallenstein, by whose ability and energy Gustavus was obliged to retire to Saxony, where he gained the great victory of Lützen (November, 1632), but was himself mortally wounded in the battle. The war was now carried on by the Swedes under the chancellor Oxenstierna, till the rout of the Swedish forces at Nördlingen (September, 1634) again gave to the emperor the preponderating power in Germany. The Elector of Saxony, who had been an ally of Gustavus, now made peace at Prague (May, 1635), and within a few months the treaty was accepted by many of the German princes. The Swedes, however, thought it to their interest to continue the war, while France resolved to take a more active part in the conflict. Thus the last stage of the war was a contest of France and Sweden against Austria, in which the Swedish generals gained various successes over the imperial forces, while the French armies fought with varied fortunes in West Germany and on the Rhine. Meanwhile the emperor had died (1637), and had been succeeded by his son, Ferdinand III. The struggle still continued till, in 1646, the united armies of the French under the great generals Turenne and Condé, and the Swedes advanced through Suabia and Bavaria. The combined forces of Sweden, Bavaria, and France were then about to advance on Austria, when the news reached the armies that the peace of Westphalia (1648) was concluded, and that the long struggle was ended.

Ticonderoga, a village in Essex County, N. Y., on Lake Champlain. Ticonderoga figured prominently during the colonial and revolutionary periods. In 1755 the French erected a fort here and named it Carillon. Two years later Montcalm started from this place with 9,000 men and captured Fort William Henry on Lake George. In 1758 General Abercrombie endeavored to take the French fort, and was repulsed after losing 2,000 men; but in 1759 it fell into the hands of General Amherst together with Crown Point. Both were then enlarged and strengthened at a heavy expense. In 1775 the works were taken by Ethan Allen while weakly garrisoned. Two years later the fort surrendered to General Burgoyne, and after being dismantled was abandoned.

Tiers Etat (*te-arz a-tah'*). [Fr., the third estate.] This term was universally applied in France to the mass of the people under the old *régime.* Before the cities rose to wealth and influence, the nobility and clergy possessed the property of almost the whole country, and the people were subject to the most degrading humiliations. But as trade and commerce began to render men independent, and they were able to shake off their feudal bonds, the Tiers Etat gradually rose into importance; and at length the third estate, during the Revolution, may be said to have become the nation itself.

Tilsit, a town of Germany, in the Prussian province of East Prussia, on the river Niemen, about sixty miles northeast of Königsberg. It is celebrated for the Peace concluded in the town, in 1807, between the Emperor Napoleon, the Emperor of Russia, and the King of Prussia. The three monarchs met on a raft moored in the river. The population of the town at last census was 34,539.

Toleration, Act of, an Act of Parliament passed in the reign of William and Mary (1689), and confirmed by Anne, relieving all persons who dissented from the Church of England (except Roman Catholics and persons who denied the doctrines of the Trinity) from many of the disabilities under which they had been placed by the acts of former reigns. By the Act of Toleration, such persons were to be no longer prevented from assembling for religious worship according to their own forms, but they were to be required to take the oaths of allegiance and supremacy, and to subscribe a declaration against transubstantiation; and Dissenting ministers were to be also required to subscribe to certain of the Thirty-nine Articles. The benefits of the Act were subsequently (in 1813) extended to persons who denied the doctrine of the Trinity. Most of the remaining disabilities of Nonconformists have been removed by later legislation; and the disabilities of the Roman Catholics (which were continued by the Act of Toleration) were repealed in 1829 by the passing of the Catholic Emancipation Act.

Toltecs, a Mexican race who are supposed to have been supreme in Central America from

the Seventh to the Eleventh Centuries. They were completely obliterated by the Aztecs and Tezcucans, who held the country when the Spaniards first landed. The latter races were of a martial spirit, but they were indebted for their arts, their civilization, and their religion to their milder predecessors. The Toltecs present striking analogies to the Etruscans, and in a less degree to the Egyptians and Assyrians. They were great builders, and their religion was a mystic system of great complexity, intimately connected with the study of astronomy, and interpreted by a priesthood, who formed an exclusive caste.

Tory, a political party name of Irish origin, first used in England about 1679, applied originally to Irish Revolutionary Catholic outlaws, and then generally to those who refused to concur in the scheme to exclude James II. from the throne. The nickname, like its contemporaneous opposite, Whig, in coming into popular use became much less strict in its application, till at last it came simply to signify an adherent of that political party in the state who disapproved of change in the ancient constitution, and who supported the claims and authority of the king, church, and aristocracy, while their opponents, the Whigs were in favor of more or less radical changes, and supported the claims of the democracy. In modern times the term has to some extent been supplanted by Conservative.

Tournament, or Tourney, a common sport of the middle ages, in which parties of mounted knights encountered each other with lances and swords in order to display their skill in arms. Tournaments reached their full perfection in France in the Ninth and Tenth Centuries where they first received the form under which they are known to us. They were introduced into England soon after the Conquest by the Normans. *Jousts* were single combats between two knights, and at a tournament there would often be a number of jousts as well as combats between parties of knights. The place of combat was the *lists,* a large open place surrounded by ropes or a railing. Galleries were erected for the spectators, among whom were seated the ladies, the supreme judges of the tournaments. A knight taking part in a tournament generally carried some device emblematic of a lady's favor. Tournaments gradually went out with the decline of chivalry, and are rare, except in America, where they are a form of sport.

Tower of London. The most ancient, and historically the most interesting pile in the English metropolis; a mass of buildings on the north side of the Thames, immediately to the east of the ancient city walls, its ramparts and gates surrounded by a dry ditch in pentagonal shape; in outer circuit measuring 1,050 yards. Within this the whole of the buildings are encircled by a double line of walls and bulwarks, in some places forty feet high and twelve feet thick; the space between the walls being known as the outer ward, and the interior as the inner ward. The inner ward was formerly the royal quarter. The outer ward was the folk's quarter. The inner ward is defended by twelve massive and conspicuous towers, stationed at unequal distances, and possessing distinctive names and formations. In the center, rearing its head proudly above them all, stands the main quadrangular building and great Norman keep, known as the White Tower. To the north are the barracks, and to the northwest the Church of St. Peter and Vincula. The entrance to the buildings is on the west side by the Lion's Gate.

For centuries the tower was a palace, a prison, a fortress, and a court of law. Here the Plantagenet kings held their gay tournaments, magnificent revels, and pompous religious ceremonials. Here also tragedy succeeded tragedy, and the innocent blood of many of England's bravest and most beautiful poured forth in a cruel stream. Wise statesmen, fair queens, child princes, noble warriors, and priests were slain, their only crimes, in many cases, being their rank, their patriotism, and their faith. "No sadder spot on earth," says Macaulay, of England. . . . "Death is there associated . . . with whatever is darkest in human nature and in human destiny, with the savage triumph of implacable enemies, with the inconstancy, the ingratitude, the cowardice of friends, with all the miseries of fallen greatness and of blighted fame."

The tower is now chiefly used as an arsenal, and has a small military garrison of the yeomen of the guard. The governorship is still a post of distinction.

Treaty, A, in public law, is an agreement of friendship, alliance, commerce, or navigation, entered into between two or more independent states. Treaties have been divided by publicists into *personal* and *real,* the difference being that the former relate exclusively to the persons of the contracting parties — e. g., treaties guaranteeing the throne to a particular sovereign and his family, and the latter are treaties for national objects, independent of the rulers of the state. While personal treaties expire with the death of the sovereign, or the extinction of his family, real treaties bind the contracting parties independently of any change in the sovereignty of the states. The constitution of each particular state must be looked to to determine in whom the power of negotiating and contracting treaties with foreign powers resides. In monarchies, whether absolute or constitutional, it is usually vested in the sovereign. In republics the chief magistrate, senate, or executive council is intrusted. The Constitution of the United States of America (Article II, Section 2) vests it in the President, with the advice and consent of the Senate. No special form of words is necessary for the validity of a treaty; but modern usage requires that an agreement which has originally been verbal should, as soon as possible, be committed to writing. Treaties of alliance may be offensive or defensive; in the former the ally engages to coöperate in hostilities against a specified power, or against any power with which the other may be at war; in the latter, the engagements of the ally extend only to a war of aggression commenced against the other contracting party.

Treaties, Coalitions, Conventions, and Leagues. The principal treaties of history are the following:

Adrianople, 1829, Adrianople restored by the Russians to Turkey.

Aix-La-Chapelle, 1748, celebrated treaty between Great Britain, France, Holland, Hungary, Spain, and Genoa. A number of previous treaties renewed and confirmed.

Aix-La-Chapelle, 1818, between the Allies and France. The latter paid 265,000,000 francs to the Allies.

Amiens, 1802, treaty of peace between Great Britain and Holland, France, and Spain.

Augsburg, League of, 1686, between Holland and other European powers to enforce respect for the treaties of Münster and Nimeguen.

Baden, 1714, terminating the War of the Spanish succession, between France and the Emperor.

Basel, 1795, treaties between France and Prussia and between France and Spain.

Berlin, decree, 1806, issued by Napoleon I., against the commerce of England.

Breda, 1667, treaty between England, Holland, France, and Denmark.

Breslau, 1742, between Maria Theresa of Austria and Frederick II. of Prussia.

Bretigny, 1360, treaty of peace that interrupted the Hundred Years' War between England and France.

Calmar, Union of, 1397, United Denmark, Sweden, and Norway under Queen Margaret of Denmark.

Cambray, 1508, league against Venice, comprising the Pope, the Emperor, and the Kings of France and Spain.

Cambray, Peace of, 1529, between Francis I. and Charles V.

Campo Formio, Peace of, 1797, between France and Austria.

Carlowitz, Peace of, 1699, between Turkey and Austria, Poland and Venice. Humiliating concessions made by Austria.

Carlsbad, Congress of, 1819, held by the German powers to protest against the progress of free institutions and popular rights.

Catholic League, 1576, formed to prevent the accession of Henry IV. of France.

Coalitions Against France, 1792, 1799, 1805, 1806, 1809, 1813, led by England and entered into by the great powers of the Continent to break down French influence in Europe.

Concordat, 1801, between Napoleon I. and Pius VII., whereby the former was made in effect head of the Gallican Church.

Constance, 1183, between Frederick Barbarossa and the Lombard cities.

Copenhagen, 1660, between Denmark and Sweden.

Fontainebleau, 1807, treaty between Napoleon and the royal family of Spain.

Frankfort, 1871, conclusion of the preliminary treaty of Versailles.

Gastein, Convention of, 1865, between Prussia and Austria.

Ghent, 1814, treaty of peace between United States and England, closing War of 1812.

Hague Convention, 1907, concerning the rights and duties of neutral powers in war.

Hamburg, 1241, league with Lübeck, giving rise to the Hanseatic League.

Hay-Pauncefote, 1901, superseded the Clayton-Bulwer treaty, Great Britain withdrawing her objections to a canal constructed by the United States and under the sole guarantee of neutralization by the latter power. The treaty also omitted a clause previously insisted upon, forbidding the fortification of the canal.

Holy Alliance, 1815, a league between the Emperors of Russia and Austria and the King of Prussia, by which they ostensibly bound themselves to Christian principles in political matters.

Hubertusburg, 1763, peace between Austria, Prussia, and Saxony.

Jay's Treaty, 1794, between the United States and Great Britain.

Kiel, 1814, between Denmark, Sweden, and England. Norway and Sweden united.

Kutchuk-Kainardji, 1774, between Turkey and Russia.

London, 1840, quadruple treaty between Great Britain, Austria, Prussia, and Russia on the one hand, and Turkey, touching the states of Egypt.

London, Peace of, 1913, between Balkan states and Turkey, closing Balkan war.

Lunéville, 1801, between France and Austria and the German Empire.

Madrid, 1526, between Charles V. and Francis I.

Münster, 1648, between France and the Emperor of Sweden. By this peace, the principle of a balance of power in Europe was first recognized.

Nanking, 1842, ended the opium war between Great Britain and China.

Nantes, Edict of, 1598, by which Henry IV. of France granted toleration to the Huguenots.

Nystad, 1721, closed the war between Sweden and Russia.

Paris, Treaties of: 1763, terminating the Seven Years' War, in Austria; the French and Indian War. **1783,** terminating the American Revolutionary War. **1814-15,** between France and the Coalition. **1856,** terminating the Crimean War. **1898,** terminating the Spanish-American War.

Partitions of Poland by following countries:

1772, secret treaty between Russia, Prussia, and Austria.

1793, between Russia and Prussia.

1795, between Russia, Austria, and Prussia.

Passau, 1552, securing the liberties of German Lutherans.

Perry's Treaty, 1854, commercial treaty between United States and Japan.

Portsmouth, 1905, treaty between Japan and Russia, closing the Russo-Japanese War.

Prague, 1866, peace between Prussia and Austria.

Pressburg, 1805, peace between France and Austria; ancient states of Venice ceded to Italy, and Independence of Switzerland stipulated.

Pretoria, 1902, terminated the Boer War between Great Britain and the Transvaal.

Pyrenees, 1659, between France and Spain; mutual concessions of territory made.

Quadruple Alliance, 1718, celebrated treaty between Great Britain, France, Austria, and Holland, for the purpose of guaranteeing the succession of the reigning families in Great Britain and France, and settling the partition of the Spanish Monarchy.

Rastatt,1714, between France and Austria.

Rastatt, Congress of, 1797, between France and the Empire, established a general peace with the Germanic powers.

Ratisbon, 1806, secession of the Germanic princes from the Empire, to the cause of Napoleon, forming the—

Rhine, Confederation of, 1806.

Ryswick, 1697, peace between France and the allied powers, closing the war of the "Patch Note."

St. Clair-Sur-Epte, 911, terminated the war between the Norse under Rolla and Charles the Simple of France.

Saint Germain, 1570, peace between the Catholics and Huguenots.

San Stefano, 1878, this treaty, supplemented by the Congress of Berlin, closed the Russian-Turkish War.

Schönbrunn,1809, treaty between France and Austria.

Shimonoseki, 1895, closed the war between Japan and China.

The Hague, 1659, between England, France, and Holland, with a view to preserve the equilibrium of Northern Europe.

Thorn, 1466, settled the terms of the Polish conquest of Western Prussia.

Tientsin, 1858, between China and each of the nations of Great Britain, France, Russia, and the United States.

Tilsit, 1807, treaty concluded between France and Russia, whereby Napoleon restored to the Prussian Monarch one-half of his territories, and Russia recognized the Confederates of the Rhine, and the elevation of Napoleon's brothers, Joseph, Louis, and Jerome to the thrones of Naples, Holland, and Westphalia.

Tolentino, 1797, between the Pope and the French Republic.

Triple Alliance, 1668, the celebrated alliance between the States-General and England against France for the protection of the Spanish Netherlands. Sweden afterward joined the league.

Triple Alliance, 1883, between Austria, Germany, and Italy.

Triple Entente, 1906, an unwritten agreement between England, France and Russia—an outgrowth of the "Entente Cordiale."

Troyes, 1420, between England, France, and Burgundy, whereby Henry V. of England succeeded to the throne of France.

Ulm, 1620, by which Frederick V. lost Bohemia.

Utrecht, 1713, terminated the wars of Queen Anne of England, and secured the Protestant succession in England, and enlarged British colonization in America.

Utrecht, Union of, 1579, foundations of the Dutch Republic laid.

Valencay, 1813, between Napoleon and Ferdinand VII. of Spain, whereby the latter restored full possession of his kingdom upon agreeing to maintain its integrity.

Verdun, Contract of, 843, concluded the war between Lothaire, Ludwig the German, and Charles the Bald, and settled their respective imperial dominions after the death of their father, Louis the Pious.

Verona, Congress of, 1822, held by the great powers to adjust Spanish and Grecian disturbances.

Versailles, 1783, between Great Britain and the United States at close of American Revolution: the treaty was signed in Paris. **1783,** between Great Britain, France, and Spain. **1871,** between France and Germany; William I. proclaimed Emperor of Germany.

Versailles, 1919, formulated between the Entente Allies and the United States of America, on the one side, and the Central Powers, Germany, Austria-Hungary, Turkey, and Bulgaria, on the other, following the crushing defeat of the latter group in the decisive campaigns of 1918. The treaty, which terminated the great World War, was signed June 28th, 1919, and ratified soon thereafter by the requisite number of powers. It stipulated the terms of peace, including the matter of territorial possessions and reparations, and instituted a League of Nations.

Vienna, 1725, treaty between the Emperor of Germany and the King of Spain, settling the sovereignty over certain parts of the Spanish dominions. **1731,** treaty of alliance between Germany, Great Britain, and Holland, by which the Pragmatic Sanction was granted, and the Spanish succession settled. **1738,** treaty of peace between Germany and France; Lorraine ceded to France, and France guaranteed the Pragmatic sanction. **1815,** treaty between Great Britain, Austria, Russia, and Prussia, confirming the treaty of Chaumont.

Warsaw, 1683, alliance between Austria and Poland against Turkey, in pursuance of which John Sobieski assisted in raising the siege of Vienna. **1768,** treaty between Russia and Poland.

Washington, 1842, Ashburton treaty defined the northeastern boundary between the United States and Canada.

Washington, 1871, between Great Britain and the United States to adjust the Alabama claims.

Westphalia, 1648, between France, Germany, and Sweden, terminating the Thirty Years' War.

Worms, Concordat of, 1122, between the Emperor and the Pope, ending the War of Investitures.

Zürich, 1859, closed the dispute between Austria and France and Sardinia.

Triumvirate, a coalition of three men in office or authority; specifically applied to two great coalitions of the three most powerful individuals in the Roman Empire for the time being. The first of these was effected in the year 60 B. C., between Julius Cæsar, Pompey, and Crassus, who pledged themselves to support each other with all their influence. This coalition was broken by the fall of Crassus at Carrhæ in Mesopotamia, soon after which the civil war broke out, which ended in the death of Pompey, and establishment of Julius Cæsar as perpetual dictator. After his murder, 44 B. C., the civil war again broke out; and after the battle of Mutina, 43 B. C., Antony, Octavius, and Lepidus coalesced, thus forming the second triumvirate. They divided the provinces of the empire, Octavius taking the West, Lepidus, Italy, and Antony, the East.

Troy, or Ilium (Greek, *Troia or Ilion*), an ancient city in the Troad, a territory in the northwest of Asia Minor, south of the western extremity of the Hellespont, rendered famous by Homer's epic of the Iliad. The region is for the most part mountainous, being intersected by Mount Ida and its branches. There have been various opinions regarding the site of the Homeric city, the most probable of which places ancient Troy at the head of the plain bounded by the modern river Mendereh, supposed to be the Scamander of Homer, and the Dombrek, probably the Homeric Simois. The Ilium of history was founded about 700 B. C. by Æolic Greeks, and was regarded as occupying the site of the ancient city, but this is doubtful; it never became a place of much importance. The ancient and legendary city, according to the Homeric story, reached its highest splendor when Priam was king; but the abduction of Helen, wife of Menelaus, King of Sparta, by Paris, one of Priam's sons, brought about its destruction. To revenge this outrage, all the Greek chiefs, afterwards famous in history, banded themselves against the Trojans and their allies, and went against Troy with a great fleet. The first nine years of the war were spent by the Greeks in driving the Trojans and their allies within the walls of the capital. The tenth year brought about a quarrel between Achilles, the bravest of the Greeks, and Agamemnon, the Greek commander-in-chief, which proved for a time disastrous to their party. This forms the subject of the Iliad. In the end, the city was taken by means of a large hollow wooden horse, in which a number of the bravest of the Greek heroes concealed themselves, while the rest retired to their ships. Thinking that the Greeks had given up the siege, the Trojans incautiously drew the horse within the city, and gave themselves up to revelry. The Greeks within the horse issued from their concealment, and, being joined by their companions without the walls, Troy was taken and utterly destroyed. This is said to have occurred about 1184 B. C. Not only has the site of the ancient city been disputed, but the legends connected with it are held by some scholars to have no historical foundation; nor has this view been altered by the excavations of Schliemann, and his discovery of the remains of a prehistoric city or cities at Hissarlik, the site of the historic Ilium.

Tudor, the name of one of the royal families of England allied to the race of Plantagenets. The line embraced five sovereigns, and commenced in 1485 with Henry Tudor, Earl of Richmond, the grandson of Sir Owen Tudor, a Welsh knight of distinction, and Catherine, widow of Henry V. Henry, after the battle of Bosworth Field, was proclaimed king with the title of Henry VII. From him the crown descended to his son Henry VIII., whose son Edward VI. succeeded, and after him his two sisters, Mary and Elizabeth; the Tudor dynasty expired with the death of Elizabeth in 1603, when the house of Stuart succeeded.

Tuileries (*twē'-lĕr-ĭz*), the residence of the French monarchs, on the right bank of the Seine, in Paris. Catharine de' Medici, wife of Henry II., began the building (1564); Henry IV. extended it, and founded the old gallery (1600); and Louis XIV. enlarged it (1654), and completed that gallery. The side toward the Louvre consisted of five pavilions, and four ranges of buildings; the other side had only three pavilions. During the revolution of 1830 the palace was sacked. It was restored by Louis Philippe to its former splendor, but in 1848 it was again pillaged. The Tuileries then

became a hospital for wounded soldiers, a picture gallery, and the home of Louis Napoleon in 1851. On May 23, 1871, it was almost totally destroyed by fire (the work of the communists), and the remaining portions were removed in the year 1883.

Turkish, or Ottoman, Empire. Previous to the World War and after the Balkan and Italian wars, 1912-13, the Turkish empire comprised Turkey in Europe, consisting of a strip of land east of a line from Enos on the Ægean sea to Midia on the Black sea, and Turkey in Asia, including Asia Minor, Syria, Mesopotamia, part of Arabia, Crete, and numerous islands in the Ægean. Formerly, the empire was much more extensive, comprising, within recent times, Greece, Rumania, Servia, and Albania, in Europe, and a large part of northern Africa. We shall here give a brief sketch of the history of the Ottoman Empire, referring to the article *Turkey* for information regarding the geography, constitution, etc., of Turkey proper.

The Ottoman Turks came originally from the region of the Altai Mountains, in Central Asia. Early in the Eighth Century they came in contact with the Saracens, from whom they took their religion. In the Thirteenth Century they appeared as allies of the Seljukian Turks against the Mongols, and for their aid received a grant of lands from the Seljuk sultan of Iconium in Asia Minor. Their leader, Othman or Osman, of the race of Oghuzian Turkomans, became the most powerful emir of Western Asia, and after the death of the Seljuk sultan of Iconium, in the year 1300, he proclaimed himself sultan. He died in 1326. Thus was founded upon the ruins of the Saracen, Seljuk, and Mongo power the Empire of the Osman or Ottoman Turks in Asia. After Osman, the courage, policy, and enterprise of eight great princes, whom the dignity of caliph placed in possession of the standard of the Prophet, and who were animated by religious fanaticism and a passion for military glory, raised it to the rank of the first military power in both Europe and Asia (1300–1566).

The first of them was Orkhan, son of Osman. He subdued all Asia Minor to the Hellespont, took the title of *Padishah*, and became son-in-law to the Greek Emperor Cantacuzenus. Orkhan's son, Soliman, first invaded Europe in 1355. He fortified Gallipoli and Sestos, and thereby held possession of the straits which separate the two continents. In 1360 Orkhan's second son and successor, Amurath I., took Adrianople, which became the seat of the Empire in Europe, conquered Macedonia, Albania, and Servia, and defeated a great Slav confederation under the Bosnian King Stephen at Kossova in 1389. After him Bajazet, surnamed Ilderim (*Lightning*), invaded Thessaly, and also advanced towards Constantinople. In 1396 he defeated the Western Christians under Sigismund, King of Hungary, at Nicopolis, in Bulgaria; but at Angora, in 1402, he was himself conquered and taken prisoner by Timour, who divided the provinces between the sons of Bajazet. Finally, in 1413, the fourth son of Bajazet, Mohammed I., seated himself upon the undivided throne of Osman. In 1415 his victorious troops reached Salzburg and invaded Bavaria. He conquered the Venetians at Thessalonica in 1420. His celebrated grand-vizier Ibrahim created a Turkish navy. Mohammed was succeeded by his son, Amurath II., who defeated Ladislaus, King of Hungary and Poland, at Varna, in 1444. Mohammed II., the son of Amurath, completed the work of conquest (1451–81). He attacked Constantinople, which was taken May 29, 1453, and the Byzantine Empire came finally to an end. Since that time the city has been the seat of the Sublime Porte or Turkish Government. Mohammed added Servia, Bosnia, Albania, and Greece to the Ottoman Empire, and threatened Italy, which, however, was freed from danger by his death at Otranto in 1480. His grandson, Selim I., who had dethroned and murdered his father in 1517, conquered Egypt and Syria. Under Soliman II., *the Magnificent*, who reigned between 1519 and 1566, the Ottoman Empire reached the highest pitch of power and splendor. In 1522 he took Rhodes from the Knights of St. John, and by the victory of Mohacz, in 1526, subdued half of Hungary. He exacted a tribute from Moldavia, made Bagdad, Mesopotamia, and Georgia subject to him, and threatened to overrun Germany, but was checked before the walls of Vienna (1529). Soliman had as an opponent Charles V. of Germany, as an ally Francis II. of France. From his time the race of Osman degenerated and the power of the Porte declined.

In the latter part of the Sixteenth Century, and most of the Seventeenth Century, the chief wars were with Venice and with Austria. The battle of Lepanto (1571), in which the Ottoman fleet was overthrown by the combined fleets of Venice and Spain, was the first great Ottoman reverse at sea, and the battle of St. Gothard (1664), near Vienna, in which Montecuculi defeated the Vizier Kiuprili, the first great Ottoman reverse on land. In 1683 Vienna was besieged by the Turks, but was relieved by John Sobieski and Charles of Lorraine; in 1687 the Turks were again defeated at Mohacz, and in 1697 (by Prince Eugene), at Szenta. Then followed the Treaty of Carlowitz in 1699, by which Mustapha II. agreed to renounce his claims upon Transylvania and a large part of Hungary, to give up the Morea to the Venetians, to restore Podolia and the Ukraine to Poland, and to leave Azov to the Russians. Eugene's subsequent victories at Peterwarden and Belgrade obliged the Porte to give up, by the Treaty of Passarowitz in 1718, Temeswar, Belgrade, with a part of Servia and Wallachia; but the Turks on the other hand took the Morea from Venice, and by the Treaty of Belgrade in 1739 regained Belgrade, Servia, and Little Wallachia, while for a time they also regained Azov.

Russia, which had been making steady advances under Peter the Great and subsequently, now became the great opponent of Turkey. In the middle of the Eighteenth Century the Ottoman Empire still embraced a large part of Southern Russia. The victories of Catharine II.'s general Romanzoff in the war between 1768 and 1774 determined the political superiority of Russia, and at the Peace of Kutchuk-Kain-

arji, in 1774, Abdul-Hamid was obliged to renounce his sovereignty over the Crimea, to yield to Russia the country between the Bog and the Dnieper, with Kinburn and Azov, and to open his seas to the Russian merchant ships. By the Peace of Jassy, 1792, which closed the war of 1787-91, Russia retained Taurida and the country between the Bog and the Dniester, together with Otchakov, and gained some accessions in the Caucasus. In the long series of wars which followed the French revolution the Ottoman Empire first found herself opposed to France, in consequence of Bonaparte's campaign in Egypt, and finally to Russia, who demanded a more distinct recognition of her protectorate over the Christians, and to whom, by the Peace of Bucharest, May 28, 1812, she ceded that part of Moldavia and Bessarabia which lies beyond the Pruth. In 1817, Mahmud II. was obliged to give up the principal mouth of the Danube to Russia. Further disputes ended in the Porte making further concessions, which tended towards loosening the connection of Servia, Moldavia, and Wallachia with Turkey. In 1821 broke out the war of Greek independence. The remonstrances of Britain, France, and Russia, against the cruelties with which the war against the Greeks was carried on, proving of no avail, those powers attacked and destroyed the fleet of Mahmud at Navarino (1827). In 1826, the massacre of the Janizaries took place at Constantinople, after a revolt. In 1828-29, the Russians crossed the Balkans and took Adrianople, the war being terminated by the Peace of Adrianople (1829). In that year Turkey had to recognize the independence of Greece. In 1831-33, Mehemet Ali, nominally Pasha of Egypt, but real ruler both of that and Syria, levied war against the sultan of Turkey, and threatened Constantinople, when the Russians, who had been called on for their aid by the sultan, forced the invaders to desist. In 1840 Mehemet Ali again rose against his sovereign, but through the active intervention of Great Britain, Austria, and Russia, was compelled to evacuate Syria.

Turkey became involved in war with Russia and was joined by England and France in 1854. This, the Crimean war, speedily terminated with the defeat of Russia, and the treaty of Paris, March 30, 1856. The principal articles were the abolition of the Russian protectorate over the Danubian principalities (Moldavia and Wallachia united in 1861 as the principality of Rumania), the rectification of the frontier between Russia and Turkey, and the cession of part of Bessarabia to the latter power.

In 1875 the people of Herzegovina broke into rebellion. A year later the Servians and Montenegrins took up arms. Meantime the great powers of Europe were pressing reforms on Turkey, and in 1876 a conference met at Constantinople, to make a fresh settlement of her relations with her Christian provinces. All the recommendations of the conference were rejected by Turkey; and in April, Russia, who had been coming forward as the champion of the oppressed provinces, commenced hostile operations in both parts of the Turkish Empire. She was immediately joined by Rumania, who on the 22d of May (1877) declared her independence. After the fall of Kars, November 18, and the fall of Plevna, December 10, the Turkish resistance collapsed, and on the 3d of March, 1878, Turkey was compelled to agree to the Treaty of San Stefano, in which she accepted the terms of Russia. These were modified by the Treaty of Berlin, July 13, by which Rumania, Servia, and Montenegro were declared independent; Rumanian Bessarabia was ceded to Russia; Austria was empowered to occupy Bosnia and Herzegovina, and Bulgaria was erected into a principality.

The main events since the Treaty of Berlin are the French invasion of Tunis in 1881; the treaty with Greece, executed under pressure of the great powers in 1881, by which Turkey ceded to Greece almost the whole of Thessaly and a strip of Epirus; the occupation of Egypt by Great Britain in 1882; and the revolution at Philippopolis in 1885, when the government of Eastern Roumelia was overthrown, and the union of that province with Bulgaria proclaimed. In 1903, revolts broke out in Bulgaria and Albania, attended with massacres and atrocities. In 1909, Abdul-Hamid II. was dethroned by the Young Turks, and Mehmed V. made sultan. In 1912, Greece, Bulgaria, Servia, and Montenegro engaged in war with Turkey. Peace was concluded in 1913 by a treaty signed at London by which Turkey lost all her territory in Europe west of an irregular line from Enos on the Ægean sea to Midia on the Black sea.

On Nov. 10, 1914, Turkey entered the World War as an ally of Germany, attacking Russia and menacing the Suez Canal. In 1915, the Turkish forces on the Gallipoli peninsula repulsed all attempts of the Allies to capture the Dardanelles. Late in 1917, Jerusalem was captured by the English, and, in September, 1918, Turkish military power was utterly crushed by the victorious armies of Gen. Allenby.

The Treaty of Sèvres, signed Aug. 10, 1920, restricting Turkey in Europe to Constantinople and a small adjoining territory, was not ratified. A Turkish Nationalist movement, led by Mustapha Kemal, with headquarters at Angora, took over the governmental authority. Nationalist troops, in September, 1922, drove the Greeks from Smyrna and adjoining territory, which they had occupied under the Treaty of Sèvres. Sultan Mohammed VI was deposed, and Abdul Medjid was elected caliph by the National Assembly. By a treaty negotiated with the Allies at Lausanne in 1923, Turkey secured in Europe the part of Thrace east of the Maritza river and the control of Constantinople. She was also recognized as supreme in Anatolia. The nationalist government abolished the caliphate in 1924, thereby severing the connection between church and state.

Tuscany (Italian, *Toscana*), formerly a grand-duchy, now a department of Italy; area, 9,289 square miles; population, 2,340,100. The chain of the Northern Apennines forms a considerable portion of its northern boundary, the sea being its boundary on the west. The principal river is the Arno. Cereals cover a large area, and vineyards, olive-yards, and orchards are numerous. The manufacture of silk is considerable. The marble of Tuscany, especially that of Siena, is well known. Tuscany

corresponds to the ancient Etruria, which was, however, of wider extent. After the fall of the Western Empire (476) it passed successively into the hands of the Ostrogoths, Byzantine Greeks, and Lombards. Charlemagne made it a Frankish province, and it was governed by marquises or dukes until the Twelfth and Thirteenth Centuries, when it became broken up into a number of small republics, four of which were Florence, Pisa, Siena, and Lucca. From the first, Florence occupied the leading place, and it gradually extended its territory. In 1569 Pope Pius I. granted to Cosmo I. the title of Grand-duke of Tuscany, and this position was retained, with interruptions, by the celebrated Medici family, until 1737, when it passed to Francis Stephen, Duke of Lorraine. In 1859, when under his descendant, the Grand-duke Leopold, it was annexed to Sardinia by a popular vote, and in 1861 became, with Sardinia, part of the kingdom of Italy.

United States of America. When first visited by Europeans, the country now comprised within the United States was exclusively inhabited by the race commonly called American Indians. According to the Scandinavian sagas, Leif, a Norwegian, sailed about 1001 from Iceland for Greenland, but was driven southward by storms till he reached a country called Vinland, which is supposed to have been Rhode Island or some other part of the coast of New England. In 1497, about five years after the discovery of America by Columbus, John Cabot sailed westward from Bristol, England, and on June 24th discovered land (Labrador), along which he coasted to the southward nearly 1,000 miles. In 1498, his son, Sebastian Cabot, sailed from the same port in search of a northwest passage to China; but finding the ice impenetrable, he turned to the south and coasted as far as Chesapeake Bay. In 1512, the Spaniard Ponce de Leon discovered Florida. In 1539, took place the expedition of the Spaniard De Soto, who, in the course of two years, penetrated overland from Tampa Bay on the west coast of Florida to a point 200 miles beyond the Mississippi. In 1565, the Spaniards founded St. Augustine, the first permanent settlement in the United States. In 1585, an expedition sent by Sir Walter Raleigh made a settlement on Roanoke Island, N. C., which failed. In 1607, the English founded Jamestown on James River, Virginia, their first permanent settlement. The master spirit of this enterprise was Captain John Smith. Plymouth, Mass., was founded in 1620 by the "Pilgrim fathers of New England," a body of Puritans led by John Carver and others, who sailed from England in the "Mayflower." Salem was settled by John Endicott in 1628. In 1630, John Winthrop settled Boston. In 1692, Plymouth Colony was united to Massachusetts. Portsmouth and Dover in New Hampshire were settled in 1623. The first permanent English settlements in Maine were made about the same time. These settlements ultimately fell under the jurisdiction of Massachusetts. Connecticut was colonized in 1635-36 by emigrants from Massachusetts, who settled at Hartford, Windsor, and Wethersfield. Rhode Island was first settled at Providence in 1636 by Roger Williams. In 1623, permanent settlements were made by the Dutch at Fort Orange (now Albany) and at New Amsterdam on the present site of New York. The Swedes settled on the Delaware in 1638, and were expelled in 1655 by a Dutch army. The English seized New Amsterdam in 1664, and with it the whole of New Netherland, which they named New York from the Duke of York, to whom it had been granted by Charles II. New Jersey at this time acquired its distinctive name. In 1681 the territory west of the Delaware was granted to William Penn, who colonized it chiefly with Friends or Quakers, and founded Philadelphia in 1682. Maryland was settled in 1632 by Roman Catholics sent out by Lord Baltimore. The first permanent settlement in North Carolina appears to have been made about 1663, on Albemarle Sound, by emigrants from Virginia. The first permanent settlement in South Carolina was made in 1670 by colonists from England on the Ashley River, near the site of Charleston, which began to be settled about the same time. Georgia was settled by General James Oglethorpe, who, in 1733, founded Savannah. The principal Indian wars were those of 1622 and 1644–46 in Virginia; the Pequot War (1636-37) and King Philip's War (1675-76) in New England; that with the Corees and Tuscaroras in 1711, and that with the Yemassees in 1715, in the Carolinas. Toward the close of the Seventeenth Century the Indians on the northern and western frontiers began to receive aid from the French in Canada, who, whenever their mother country was at war with England, carried on hostilities with the English colonies, and frequently, accompanied by their savage allies, made destructive and bloody inroads into New England and New York. The first conflict with the French, known as King William's War lasted seven years, terminating in 1697. Queen Anne's War (1702–13) was marked by the conquest from the French in 1710 of Acadia (Nova Scotia). The principal event of King George's War was the capture (1745) of Louisburg, the chief stronghold of the French in America, which was restored to the French at the close of the war (1748). Disputes having arisen with the French on the Ohio, an expedition under Washington, was sent toward that river, which, on May 28, 1754, cut to pieces a French detachment under Jumonville, who was slain. This affair began the long contest known as the French and Indian War. Among its prominent events were Braddock's defeat (1755) near Fort Duquesne, when Washington distinguished himself by covering the retreat; the capture by the French of Oswego (1756) and Fort William Henry, at the head of Lake George (1757); and the taking of Louisburg after a siege of seven weeks by Generals Amherst and Wolfe, and the repulse of an attack on Ticonderoga made by a powerful army under General Abercrombie and Lord Howe (1758). The crowning exploit of the war was the taking of Quebec (1759) by an army led by General Wolfe. In 1763, by the Treaty of Paris, Canada and its dependencies were formally ceded to Great Britain. The transfer from the French to the English of the posts between the Great

Lakes and the Ohio led (1763) to a war with the Indian tribes, of which the master spirit was Pontiac. The sentiment of political freedom was strongly developed among the colonists, and republican ideas and feelings transmitted from the period of the commonwealth in England were widely diffused, though at the same time a warm attachment existed for the mother country and a devoted loyalty to the Crown. The first opposition was aroused by an act of parliament in 1761, authorizing sheriffs and officers of the customs to use "writs of assistance" or general search warrants. These writs were resisted in Massachusetts, where the rights of the people were defended by James Otis. In 1765 the Stamp Act was passed, which declared that every document used in trade or legal proceedings, to be valid, must have affixed to it a tax stamp of the minimum value of one shilling, and increasing indefinitely according to the value of the writing. To enforce the act parliament authorized the ministry to send troops, for whom the colonies were required to provide quarters and various necessaries. These acts created great excitement and indignation in America. Everywhere the people determined not to use the stamps, and associations calling themselves "sons of liberty," were organized in opposition to the act and for the general defense of the rights of the colonies. In October a congress of delegates from nine colonies assembled in New York on the invitation of Massachusetts, and drew up a declaration of rights, a memorial to parliament, and a petition to the king, in which they claimed the right of being taxed only by their own representatives. The merchants of the principal cities agreed to purchase no more goods in England till the act was repealed, and the people pledged themselves to use no articles of English manufacture. The Stamp Act was repealed in 1766, but the next year parliament passed an act imposing duties on paper, glass, tea, and some other articles imported into the colonies. The colonies in return revived with renewed vigor their non-importation associations. Massachusetts, and especially Boston, was foremost in the opposition. A military force under General Gage was sent to occupy the town in 1768. A collision took place March 5, 1770, between the soldiers and a crowd of citizens, in which three of the latter were killed and eight wounded. The "Boston Massacre," as this was called, caused great excitement throughout the country. In April, 1770, the government removed all the duties except that of threepence a pound on tea. Combinations were now formed against the importation and use of tea, and measures taken to prevent its being either landed or sold. At Boston, December 16, 1773, a band of men disguised as Indians went on board three tea ships which had recently arrived from England, and emptied the tea into the water. Parliament thereupon, in 1774, passed the "Boston Port Bill," which closed that port to all commerce, and transferred the board of customs to Marblehead and the seat of colonial government to Salem. Other repressive bills were also passed. On September 5th the "Old Continental Congress" met in Philadelphia, in which all the colonies were represented except Georgia. A declaration of rights was agreed upon, in which was set forth the claim of the colonists as British subjects to participate in making their own laws and imposing their own taxes, and to the rights of trial by a jury of the vicinage, of holding public meetings, and of petitioning for redress of grievances. The maintenance of a standing army in the colonies without their consent was protested against, as were eleven acts passed since the accession of George III. in violation of colonial rights and privileges. The first conflict occurred, and the first blood of the Revolution was shed, on April 19, 1775. (See under Lexington.) On the night of the day following the action the king's governor and army found themselves closely beleaguered in Boston. The people everywhere rose in arms, and before the close of summer the power of all the royal governors from Massachusetts to Georgia was at an end. Volunteer expeditions from Vermont and Connecticut, led by Ethan Allen and Benedict Arnold, seized the important fortresses of Ticonderoga (May 10th) and Crown Point (May 12th). The second Continental Congress assembled on May 10th at Philadelphia, in the State house, now known as Independence Hall. It sent another petition to the king, denying any intention of separation from England, and asking only for redress of grievances; but measures were taken to raise an army, to equip a navy, and to procure arms and ammunition. The forces before Boston were adopted as the Continental army, and Washington was nominated and unanimously chosen (June 15th) as commander-in-chief. Before he could reach the seat of war the battle of Bunker Hill had been fought, June 17th. He regularly beleaguered Boston till March 17, 1776, when the British evacuated it and sailed for Halifax. Meantime, an invasion of Canada under General Montgomery resulted in the capture of Montreal and a repulse from Quebec, which was attacked December 31, 1775, by parties led by Montgomery and Arnold. On June 28, 1776, a British fleet attacked Charleston, S. C., and was repulsed with great loss by a small force in Fort Sullivan (afterward Fort Moultrie), commanded by Colonel Moultrie. On July 4th the Declaration of Independence written by Jefferson, was adopted, and in this document the colonies were first designated the "United States of America." Soon after the evacuation of Boston by the British, Washington transferred his army to New York. On June 29th the late garrison of Boston arrived from Halifax, and soon after other British troops from Europe and from the South. The campaign began on Long Island, where, on August 27th, the Americans were defeated with heavy loss, and forced to abandon that island, and soon after the city of New York. Having fought another unsuccessful battle at White Plains (October 28th), Washington early in December was compelled to retreat beyond the Delaware at the head of but 3,000 men. About the same time the British seized and held the island of Rhode Island. On the night of December 25th Washington crossed the Delaware in open boats with 2,400 men, and falling upon the British forces at Trenton, captured about 1,000 Hessians.

On January 3, 1777, he defeated the enemy again at Princeton, taking 230 prisoners. A movement threatening Philadelphia called Washington south. In the battle on the Brandywine, September 11th, he was outnumbered and compelled to retreat with a loss of nearly 1,000 men. On the 26th, the British took possession of Philadelphia without opposition. On October 4th, Washington attacked the British at Germantown, seven miles from Philadelphia, but was repulsed with heavy loss; and soon afterward both armies went into winter quarters, the Americans at Valley Forge, on the Schuylkill, twenty miles from Philadelphia. Meantime, a British army, 7,500 strong, besides Indians, commanded by General Burgoyne, advanced from Canada by Lake Champlain, and took Ticonderoga, Fort Independence, and Whitehall. Strong detachments, which were sent to Bennington, Vt., to destroy a collection of stores, were met there (August 16th) and defeated with the loss of about 200 killed and 600 prisoners by the Vermont and New Hampshire militia led by General Stark. Burgoyne was encountered by General Gates, to whom, after the battles of Stillwater (September 19th) and Saratoga (October 7th), he capitulated at Saratoga (October 17th) with his whole army. The consequences of this victory were apparent in the signing, in February, 1778, of treaties of alliance and of amity and commerce with France. The British evacuated Philadelphia in the night of June 17th with more than 17,000 men. Washington pursued, and on the 28th the two armies engaged in battle on the plains of Monmouth, near Freehold, N. J. The Americans remained masters of the field, while the British retreated to New York. An attempt made in August, with the assistance of the French fleet under Count d'Estaing, to drive the British from Rhode Island, proved a failure. On December 29th the British, having defeated the American forces at Savannah, took possession of the city. In September, 1779, Savannah was besieged by a French and American force, and on October 9th an assault was made upon it, which was repulsed with a loss to the allies of nearly 800 men, among them Casimir Pulaski. About this time the British evacuated Rhode Island, to concentrate their forces at New York. One of the most brilliant achievements of the war was the storming (July 16, 1779) of Stony Point on the Hudson by General Wayne. On the ocean, which swarmed with American privateers, Paul Jones chiefly distinguished himself. Charleston, S. C., after a feeble defense of several weeks, was surrendered to the British on May 12, 1780, by General Lincoln. The rest of South Carolina nominally submitted to the royal authority; but a guerilla warfare was kept up by Sumter, Marion, and other partisan leaders. Congress sent General Gates to recover South Carolina. On his first encounter with Cornwallis at Camden, August 16th, he was routed with great loss, and with the remnant of his force fled to North Carolina. Early in September Cornwallis marched into North Carolina, where, on October 7th, at King's Mountain, a detachment from his army was totally defeated by 900 militia, who killed and captured upward of 1,100 of the enemy. Cornwallis withdrew to South Carolina. On July 10th, a French fleet arrived at Newport, bringing the Count de Rochambeau and 6,000 soldiers. In September a treasonable plot schemed by Arnold was discovered. The principal military operations of 1781 were in the south, where Greene had superseded Gates. At the Cowpens, S. C., on January 17th, General Morgan won a brilliant victory over the British under Colonel Tarleton. On March 15th, the British gained a victory at Guilford Court House, N. C., but drew from it no advantage; and on September 8th occurred the drawn battle of Eutaw Springs, which nearly terminated the war in South Carolina. Cornwallis, having advanced into Virginia in April, was opposed by Lafayette, Wayne, and Steuben, and fortified himself at Yorktown. Meanwhile, the American army under Washington and the French army of Rochambeau had formed a junction on the Hudson. The allied army arrived before Yorktown September 28, 1781, and began a regular siege, which lasted till October 19th, when Cornwallis surrendered with his whole force of 7,247 men, besides 840 sailors; 106 guns were taken. This victory substantially terminated the contest. A preliminary treaty of peace was signed at Paris, November 30, 1782, by Franklin, Adams, Jay, and Laurens. On September 3, 1783, a definitive treaty was signed at Versailles, by which the United States were formally acknowledged by Great Britain to be free, sovereign, and independent. New York, the last position held by the British on our coast, was evacuated November 25, 1783. On June 12, 1776, while the resolution of independence was under consideration in Congress, a committee of one from each colony was created to draft a form of confederation, and the articles reported by it were adopted November 15, 1777. Having been ratified by all the States, they went into effect on March 1, 1781. Dissatisfaction with the confederation, owing to the weakness of the central government under it, soon became widespread, and in 1786 a convention of delegates from several States at Annapolis, Md., recommended the calling of a convention of delegates from all the States to propose changes in the articles of confederation. This plan was approved by Congress on February 21, 1787, and the convention organized at Philadelphia on May 25th, by the choice of Washington as president. It remained in session until September 17th, when it adjourned after adopting the Constitution. All the States were represented except Rhode Island. Having been ratified by the requisite number of States, the Constitution went into effect on March 4, 1789. At the first election Washington was chosen president and John Adams vice-president, and Washington was inaugurated in New York on April 30th. In the summer of 1790 an Indian war broke out with the tribes of the northwest, who, after inflicting defeats on Generals Harmar and St. Clair, were finally quelled by General Wayne, and peace was restored in August, 1795. At the second presidential election in 1792, Washington again received the unanimous votes of the electoral colleges, and Adams was reëlected vice-president. The whiskey insurrection against an unpopular excise law in 1794 threw Western

Pennsylvania into confusion, but was energetically suppressed by the president. Two parties had sprung up, the Federalists, supporters of the Constitution as it was, and the Republicans or Democrats, who desired to limit the federal power. The Republicans were active in their sympathy for the French Republic. At the third presidential election (1796) the Federalists, among whom Alexander Hamilton was prominent, supported John Adams and the Republicans Thomas Jefferson. Adams, who received seventy-one electoral votes, was chosen president while Jefferson, who received sixty-eight, the next highest number, became, by the Constitution as it then was, the vice-president. At the beginning of the administration the relations with France were threatening, and envoys were sent to adjust the difficulties; but the French Government refused to receive them. This excited great indignation in the United States, and Congress made preparations for war. The measures adopted were not without effect. A fresh embassy was sent, and a treaty was concluded in 1800. During the troubles with France two acts were passed by Congress, known as the alien and sedition laws: the first, which was limited to two years, empowering the president to order aliens who were conspiring against the peace of the United States to quit the country; the other, which was to remain in force till March 4, 1801, providing among other things for the punishment by fine and imprisonment of seditious libels, upon the government. These laws became exceedingly unpopular, and were bitterly denounced as harsh and unconstitutional. They contributed largely to the dissatisfaction with Mr. Adam's administration, which led in the next presidential election to the success of the Republican candidates, Jefferson and Burr, each of whom received seventy-three votes. The tie threw the election into the House of Representatives, where, on the thirty-sixth ballot, Jefferson was chosen president and Burr vice-president. This contest led to the adoption of the twelfth amendment of the Constitution, requiring the electors to designate which person is voted for as president and which as vice-president. Jefferson's administration for the most part was marked by vigor and enlightened views, and in 1804 he was reëlected, with George Clinton as vice-president. The vast territory then called Louisiana was purchased from France in 1803. A war with Tripoli, ended in 1805, humbled the Barbary pirates. In 1806 Aaron Burr secretly organized a military expedition, chiefly in the western States, which led to his arrest and trial at Richmond in 1807, on a charge of attempting to dismember the Union and to establish an independent dominion west of the Alleghanies; but no overt act being proved against him, he was acquitted. The relations with Great Britain began in 1805 to be disturbed by the unfriendly acts of that power directed against American commerce, and by the exercise of the asserted right to search American vessels for suspected deserters from her navy. In 1806, an act was passed prohibiting the importation of certain articles of British production. In 1807, Congress laid an embargo, which prohibited the departure from American ports of vessels bound for foreign countries. This measure was vehemently denounced by the Federal party, and was repealed in 1809. In the presidential election of 1808 the Republican candidates, James Madison for president and George Clinton for vice-president, were elected. Congress continued the non-importation system. A long negotiation was carried on with the English Government without result, and on June 18, 1812, war was declared against Great Britain. In the summer of 1811, hostilities, excited as was alleged by British emissaries, were begun by the Indian tribes north of the Ohio under the lead of Tecumseh. William Henry Harrison, Governor of Indiana Territory, defeated them on the banks of the Tippecanoe River, November 7, 1811. The campaign of 1812 closed with little or no credit to the American arms on land, the principal event being the surrender of Detroit (August 16th) by the American General Hull to General Brock. But the navy achieved a series of brilliant victories, which were followed by others during the succeeding years of the war. The campaign of 1813 was marked by alternate successes and reverses. The principal events were the defeat of General Winchester at the River Raisin by the British and Indians, the capture of York (now Toronto) and of Fort George in Canada by the Americans, the repulse of a British attack on Sackett's Harbor, and the defeat of the British and Indians near Thames River, Canada, by General Harrison, Tecumseh being slain. On Lake Erie, September 10th, a British fleet of six vessels was captured after a severe contest by Lieutenant O. H. Perry. On July 5, 1814, the British were defeated at Chippewa by General Brown, and on the 25th at Bridgewater or Lundy's Lane by Generals Brown and Winfield Scott. On September 11th the United States fleet, under Commodore Macdonough, totally defeated the English fleet on Lake Champlain; and on the same day the British army, which had invaded New York and laid siege to Plattsburgh, retreated to Canada. In August, a British fleet arrived in the Chesapeake with an army of 5,000 men commanded by General Ross, who marched on Washington, and, after putting to flight the militia at Bladensburg, took possession of the federal city on the 24th, and burned the capitol, the president's house, and other public buildings. On the next day the British retired to their ships, and on September 12th-13th attacked Baltimore, where they were repulsed by the citizens, and General Ross was killed. After protracted negotiations a treaty of peace was signed at Ghent, December 24, 1814, which provided for the mutual restoration of all territory taken during the war. Nothing was said of the impressment of American seamen, one of the main causes of the war, but the practice was discontinued. Before the news of peace could cross the Atlantic, a British army, 12,000 strong, was defeated at New Orleans (January 8, 1815) by fewer than 5,000 men under General Jackson. In the same year Commodore Decatur compelled the rulers of Algiers, Tunis, and Tripoli to make indemnity for former outrages, and to agree to abstain from depredations on American commerce. The presidential election of 1812 had resulted in the reëlection of Mr. Madison. El-

bridge Gerry was chosen vice-president. At the presidential election of 1816 James Monroe of Virginia, and Daniel D. Tompkins of New York, Democrats, were elected president and vice-president, respectively. Monroe's administration began under very favorable circumstances. Party distinctions had so nearly disappeared, that Democrats and Federalists combined to support the government. He was reëlected in 1820 by all the electoral votes except one. Daniel D. Tompkins was reëlected vice-president. The main event of Monroe's administration was the Missouri controversy, by which, for the first time, the country was disastrously divided upon the slavery question. In the session of 1818-19 a bill was introduced in Congress authorizing the Territory of Missouri to form a constitution, whereupon James Tallmadge of New York moved in the House of Representatives to insert a clause prohibiting any further introduction of slaves, and granting freedom to the children of those already in the Territory on their attaining the age of 25. This motion was carried, but the Senate refused to concur. In the session of 1819-20 the debate was long and acrimonious. The Senate sent to the House the Missouri bill with the prohibition of slavery in that State struck out, but with the proviso that it should not thereafter be tolerated north of latitude 36° 30′. This compromise was at length agreed to. The other great event of Mr. Monroe's administration was the recognition (1822) of the Spanish American republics, which had declared and maintained their independence for several years. In 1823 the president in his annual message put forth a declaration, famous as the "Monroe Doctrine," in which it was announced that any attempt on the part of European governments to extend their system to any portion of this hemisphere would be considered dangerous to the peace and safety of the United States. In 1819, Florida had been ceded by Spain. In the presidential election of 1824 none of the four candidates (Andrew Jackson, John Quincy Adams, William H. Crawford, and Henry Clay) had a majority of the electoral votes, and Adams was elected by the House of Representatives. John C. Calhoun had been elected vice-president by the electoral colleges. Adam's administration was remarkable for order, method, and economy, but party spirit was higher than it had been for many years. At the election of 1828 General Jackson was chosen president, while John C. Calhoun was reëlected vice-president. In his first annual message (December, 1829) the president took strong ground against the renewal of the charter of the United States bank, as not being authorized by the Constitution. Congress, in 1832, passed a bill to recharter it, but Jackson vetoed it; and the charter expired by limitation in 1836. The commercial part of the community generally took the side of the bank, and the party formed in opposition to the president assumed the name of Whigs, while his supporters adhered to the old name of Democrats. In 1832 arose the so-called nullification movement in South Carolina, growing out of the tariff acts of that year and of 1828. A State convention held in November declared these acts unconstitutional and, therefore, null and void, and proclaimed that any attempt by the General Government to collect duties in the port of Charleston would be resisted by force of arms, and would produce the secession of South Carolina from the Union. Jackson had just been reëlected for a second term, while Martin Van Buren was chosen vice-president. The firmness of the president gave an effectual check to the incipient rebellion, and the affair was finally settled by a proposition brought forward in Congress by Henry Clay, the leading champion of the protective system, for the modification of the tariff by a gradual reduction of the obnoxious duties. Other events of Jackson's administration were the removal of the public funds from the United States bank, the extinction of the national bank and the beginning, toward the close of 1835, of a war with the Seminole Indians in Florida. In the presidential contest of 1836, Mr. Van Buren, who was supported by the Democrats, was elected. No candidate having been elected vice-president, Richard M. Johnson was chosen by the Senate. The new administration began under most untoward circumstances. Within two months after the inauguration the mercantile failures in the city of New York alone amounted to more than $100,000,000. The war with the Seminoles was not ended till 1842. At the election in 1840, Harrison and Tyler, the Whig candidates for president and vice-president, were chosen. General Harrison was inaugurated March 4, 1841, and died on April 4th. The presidential office devolved on John Tyler, who soon developed a policy in relation to a national bank much more in accordance with the views of the Democratic party than with those of the Whigs. A treaty was concluded in 1842 with Great Britain by Daniel Webster for the settlement of the northeastern boundary. The Texas question (see Texas) became the prominent issue in the presidential contest of 1844, the Democratic party supporting and the Whigs opposing annexation. The Democratic candidates, James K. Polk for president and George M. Dallas for vice-president, were elected over Henry Clay and Theodore Frelinghuysen. Joint resolutions for annexing Texas as one of the States of the Union were signed by President Tyler March 1, 1845, which led to a war with Mexico in 1846. General Zachary Taylor defeated the Mexicans at Palo Alto May 8th, at Resaca de la Palma May 9th, at Monterey in September, and at Buena Vista February 23, 1847. General Scott landed near Vera Cruz on March 9th with about 12,000 men, immediately besieged that city, which surrendered before the end of the month, and entered the city of Mexico on September 14th, after a series of hard-fought and uniformly successful battles. A treaty of peace was negotiated at Guadalupe Hidalgo, February 2, 1848, by which Mexico granted to the United States the line of the Rio Grande as a boundary, and ceded New Mexico and California. The Oregon dispute with Great Britain, which claimed the whole region, while the United States claimed as far north as latitude 54° 40′, was settled by the treaty of 1846, which adopted the boundary of the parallel of 49°, with a modification giving to Great Britain the whole of Vancouver Island.

In the Democratic National convention of 1848, Lewis Cass was nominated for president, and William O. Butler for vice-president. By the Whig convention Zachary Taylor and Millard Fillmore were nominated. The question of slavery had a powerful influence on the political combinations of this period. In 1846, during the Mexican War, a bill being before Congress authorizing the president to use $2,000,000 in negotiating a peace, David Wilmot, a Democratic representative from Pennsylvania, moved to add thereto a proviso prohibiting slavery in any territory acquired from Mexico. This proviso was adopted in the House, nearly all the members from the free States voting for it, but failed in the Senate from want of time. Several delegates seceded from both the Whig and Democratic conventions of 1848, on the failure of those bodies to pronounce in favor of the principle of the proviso. These, with the Liberty party, formed in 1840, organized a free-soil or free Democratic party, and Martin Van Buren was nominated for president and Charles Francis Adams for vice-president. Van Buren and Adams received at the election, in November, a popular vote of 291,263, but secured no electoral vote. Taylor and Fillmore were elected. The application in 1850 of California for admission as a State roused the slavery controversy, and the difficulty was complicated by the application of New Mexico for admission, and by a claim brought forward by Texas to a western line of boundary which would include a large portion of New Mexico. Finally, a compromise was proposed by Henry Clay in the Senate as a final settlement of the whole question of slavery, and after a long discussion the result aimed at was attained by separate acts, which provided for: (1) the admission of California as a free State; (2) Territorial Governments for New Mexico and Utah without excluding slavery, but leaving its exclusion or admission to the local population; (3) the settlement of the Texas boundary question; (4) the abolition of the slave trade in the District of Columbia; (5) the enactment of a stringent law for the arrest and return of fugitive slaves. President Taylor died July 9, 1850, and was succeeded by the vice-president, Millard Fillmore. The whole weight of his administration was given to the support of the compromise measures. The Democratic National Convention of 1852 nominated for president Franklin Pierce of New Hampshire, who was known to hold opinions satisfactory to the South on the subject of slavery, and William R. King of Alabama for vice-president. The Whig National Convention nominated for president General Winfield Scott, and for vice-president William A. Graham of North Carolina. The National Convention of the Free-soil party nominated John P. Hale for president, and George W. Julian for vice-president. Pierce and King were elected. The passage in 1854 of a bill for the organization of the Territories of Kansas and Nebraska, by which the Missouri Compromise Act of 1820 was repealed, roused great excitement and indignation in the free States. The struggle in Kansas between the anti-slavery and pro-slavery parties (see Kansas) and the assault by Brooks on Sumner (see Sumner, Charles) added to the feeling. Preparatory to the presidential canvass of 1856 the Republican party was formed, which absorbed the entire Free-soil party, the greater part of the Whig party, and considerable accessions from the Democratic. That portion of the Whig party opposed to anti-slavery measures was merged, especially at the South, in an organization called the American party, from its opposition to foreign influence, and particularly to Roman Catholic influence, in our political affairs, but popularly known as the "Know-Nothing Party" from the secrecy of its organization and the reticence of its members. This party nominated Millard Fillmore for president, and Andrew J. Donelson of Tennessee for vice-president. The Democratic National Convention nominated James Buchanan of Pennsylvania for president, and John C. Breckenridge of Kentucky for vice-president. The Republican National Convention nominated John C. Fremont of California for president, and William L. Dayton of New Jersey for vice-president. Buchanan and Breckenridge were elected. The chief interest of Mr. Buchanan's administration centered around the slavery controversy. A constitution for Kansas framed at Lecompton in 1857 was laid before Congress in the session of 1857-58, and its discussion resulted in a schism in the Democratic party, and eventually in its division into two bodies, one of which looked upon Stephen A. Douglas as its leader, while the other supported Breckenridge for the presidency. The Democratic National Convention met at Charleston, April 23, 1860, and a controversy on the subject of slavery immediately arose. A non-committal platform having been adopted, most of the Southern delegates withdrew and adopted a platform of their own, denying the right of Congress to interfere with, and asserting its duty to protect, slavery in the Territories. The convention adjourned May 3d, reassembled in Baltimore June 18th, and nominated Stephen A. Douglas of Illinois for president, and Benjamin Fitzpatrick of Alabama for vice-president. The latter afterward declined, and Herschel V. Johnson of Georgia was substituted. A convention called by the seceding delegates convened at Baltimore on June 23d, and nominated John C. Breckenridge for president, and Joseph Lane of Oregon for vice-president. The "Constitutional Union" party, composed mainly of the American party, nominated for president John Bell of Tennessee, and for vice-president Edward Everett of Massachusetts. The Republican National Convention assembled at Chicago on May 16th, and nominated for president Abraham Lincoln of Illinois, and for vice-president Hannibal Hamlin of Maine. In the election, November 6th, Mr. Lincoln received the electoral votes of all the free States (except three in New Jersey), 180, and was elected. Mr. Bell received the votes of Virginia, Kentucky, and Tennessee, 39; Mr. Douglas the 9 votes of Missouri and 3 from New Jersey; and the remaining Southern States cast their 72 electoral votes for Breckenridge. A convention was at once called in South Carolina, and on December 20th unanimously adopted an ordinance of secession from the Union. Before the end of May, 1861, eleven States had passed ordinances of secession (South Carolina, Missis-

sippi, Florida, Alabama, Georgia, Louisiana, Texas, Virginia, Arkansas, Tennessee, and North Carolina). On February 4th a Congress met at Montgomery Ala., and framed a constitution for the "Confederate States of America." Jefferson Davis of Mississippi was chosen president, and Alexander H. Stephens of Georgia vice-president. After governmental organization, the first warlike act was the bombardment by the Confederates of Fort Sumter, which surrendered April 13, 1861. On July 21st was fought the battle of Bull Run, near Manassas Junction, Va., the first of any magnitude during the war, in which the Union forces under General McDowell were defeated by the Confederates under General Beauregard, and fell back in disorder to Washington. Soon after General McClellan, who had cleared West Virginia of Confederate troops, was placed in command of the army of the Potomac. On August 10th, a battle was fought at Wilson's Creek, near Springfield, Mo., between the Confederates under General McCulloch and the Federals under General Lyon, who fell. This was followed by a varying and indecisive warfare in that State. On August 29th, Forts Hatteras and Clark, N. C., were taken by General Butler and Commodore Stringham; and on November 7th, Port Royal, S. C., by Commodore Du Pont and General T. W. Sherman. On October 21st, a portion of General Stone's command, having crossed the Potomac at Ball's Bluff, about midway between Harper's Ferry and Washington, was defeated by the Confederate General Evans, with a loss of 1,000 out of 1,900 men. On February 6, 1862, the Federal Commodore Foote, with a fleet of gunboats from Cairo, reduced Fort Henry on the east bank of the Tennessee River in Tennessee; and on the 16th Fort Donelson, on the west bank of the Cumberland, surrendered with about 13,000 men to General Grant. The Confederates under McCulloch and others, just driven out of Missouri, were defeated at Pea Ridge, Ark., March 7th-8th. In the night of April 7th, Island No. Ten in the Mississippi, a few miles above New Madrid, Mo., surrendered, after a series of operations by General Pope and Commodore Foote, lasting over a month. The Federal fleet was now enabled to proceed down the river as far as Vicksburg, Miss., receiving the surrender of Memphis, Tenn., June 6th. The battle of Shiloh, Miss., raged two days (April 6th and 7th), when the Confederates under Beauregard fell back to Corinth, leaving the field in the possession of the Union army under Generals Buell and Grant. Corinth was evacuated after some operations against it under General Halleck. An important event of the year was the capture of New Orleans toward the close of April by naval and land forces under Captain Farragut and General Butler. Early in the year Roanoke Island, New Berne, Beaufort, Washington, Plymouth, and other places on the coast of North Carolina were occupied by the Federals. On April 11th, Fort Pulaski, at the mouth of the Savannah River, was reduced. Toward the end of August the Confederate General Bragg started on an invasion of Kentucky from East Tennessee. He captured Richmond, Lexington, and Munfordsville, and on October 1st entered Frankfort. The Union forces under General Buell moving against him, he slowly retreated to Perryville, where, on the 8th, a severe battle was fought. During the succeeding night Bragg continued his retreat, and passed into East Tennessee. About the end of September the Confederates under Generals Price and Van Dorn advanced against Corinth, Miss., now defended by General Rosecrans. Their assaults (October 3d, 4th) were repulsed with great loss. General Rosecrans, having superseded Buell, moved into Tennessee, and marched upon Murfreesboro, where Bragg's forces were concentrated, reaching Stone River near that place on December 29 and 30th. Here bloody engagements occurred December 31, 1862, and January 2, 1863, which resulted in Bragg's retreat. Still greater operations took place on the eastern theater of the war. Brisk fighting occurred in the Shenandoah Valley (March–June), with decided advantage on the whole to the Confederate General Jackson over Banks, Fremont, and others. About April 1, 1862, General McClellan transferred his forces to Fortress Monroe, near which a remarkable naval duel had taken place (at Hampton Roads) and began a movement upon Richmond up the peninsula between the York and James Rivers, fighting at Yorktown, Williamsburg, Seven Pines, Fair Oaks, and Mechanicsville, and, during a retrograde movement to Harrison's Landing on the James, at Cold Harbor, Savage's Station, Frazier's Farm, and, finally (July 1st), at Malvern Hill. About the middle of August his army was transferred to the Potomac. The Confederate army, commanded by General Robert E. Lee, who had succeeded J. E. Johnston, had retired to Richmond, to assume the offensive against Washington. On August 9th an indecisive battle was fought by General Banks against Jackson at Cedar Mountain; and on August 29th and 30th occurred the second battle of Bull Run, between the Union army under Pope and the Confederate forces under Jackson and Longstreet, in which the latter had the advantage. Lee moved to the Potomac above Washington and crossed into Maryland. Jackson captured Harper's Ferry with 11,500 men. McClellan, advancing to meet Lee, found him on September 15th strongly posted across Antietam Creek near Sharpsburg, where, on the two following days, a bloody battle was fought. In the night of the 18th, Lee retreated into Virginia. McClellan crossed the Potomac about November 1st. On the 7th he was superseded by General Burnside, who moved down the Rappahannock to Fredericksburg. Lee had made a parallel movement down the south bank and strongly intrenched himself on the bluffs behind the town. On December 13th, Burnside crossed the river and made repeated attacks on the enemy's position, but was repulsed with great slaughter, and on the 15th returned to the north bank. On January 26, 1863, Burnside was superseded by General Joseph Hooker. About the close of April Hooker began to cross the Rappahannock, and concentrated his forces at Chancellorsville, where a bloody engagement ensued, May 2d–4th, in which the Union army was worsted by the forces under Lee, Hooker recrossing to the north side of the river. General Jackson was mortally

wounded. About the beginning of June, Lee again assumed the offensive. The main body of the Confederate army crossed the Potomac above Harper's Ferry, June 24th-25th, and marching across Maryland entered Pennsylvania. Hooker moved north, so as to cover Washington, and on the 26th crossed the Potomac about half way between Washington and Harper's Ferry. On the 28th he was succeeded by General Meade. The latter advanced into Pennsylvania, and on July 1st, 2d, and 3d the two armies met in the great battle of Gettysburg, which ended in the discomfiture of the Confederate army. On the 4th, Lee began his retreat, and on the 13th recrossed the Potomac. Meade crossed on the 18th, and reached Warrenton on the 25th, where he was soon confronted by Lee on the other side of the Rappahannock. In the west important operations had taken place under Generals Grant and Sherman against Vicksburg. Close pressed, on July 3d, General Pemberton surrendered that Confederate stronghold, with 27,000 men, to General Grant, who, on the 4th, occupied the city. The result of this campaign rent the Confederacy in twain, and decided its fate. Port Hudson, La., on the Mississippi, surrendered after a siege to General Banks, July 8th. Rosecrans remained quietly at Murfreesboro till June 23, 1863, when he advanced, forcing Bragg to retreat to Chattanooga, which was occupied by a detachment on September 9th, Bragg retiring into Georgia and posting his troops in the vicinity of Chickamauga Creek, east of Trenton. Here, September 19th and 20th, occurred a severe engagement, in which the Federals were worsted and fell back to Chattanooga, where they were besieged by Bragg. On October 23d, General Grant arrived and took command. A series of movements was at once initiated, which resulted in driving Bragg from Chattanooga (November 25th) and forcing him to retreat into Georgia. An army under General Burnside, which had occupied Knoxville, and was besieged there by Longstreet, was relieved at the beginning of December. All Tennessee was now recovered. In Arkansas, General Steele had captured Little Rock, September 10th. Fort Wagner, on Morris Island at the entrance of Charleston Harbor, after vigorously repelling a heavy assault, had about the same time been reduced by a regular siege under General Gillmore. On April 20, 1864, Plymouth, N. C., was compelled to surrender to a Confederate force under General Hoke, and as a consequence Washington, N. C., was evacuated by the Federals eight days later. On October 31st, Plymouth was retaken by the Federal fleet. On April 12th Fort Pillow, on the Mississippi about forty miles above Memphis, was taken by assault by the Confederates under General Forrest, and many of its colored defenders were killed after the capture. In August, Forts Gaines and Morgan, commanding the entrance to Mobile Bay, were reduced by a fleet under Admiral Farragut, aided by a land force under General Granger, and the Confederate fleet there was destroyed. West of the Mississippi, the most important movement in 1864 was Bank's disastrous Red River campaign in the early spring. In September and October, General Price with a considerable force made a raid through Missouri. In Virginia, General Grant, who had received the chief command of the Union armies, began on May 4th to cross the Rapidan and advance into the "Wilderness." Here (May 5th and 6th) and at Spottsylvania Court House near by (May 8th–21st) followed a series of sanguinary engagements, which baffled the direct advance. Grant then advanced by a succession of flank movements to the Chickahominy, where, on June 3d, he suffered a disastrous check in the second battle of Cold Harbor. On the 12th, having determined to attack Richmond from the south, he began to move, crossing the Chickahominy below Lee's position, and effecting the passage of the James, June 14th-15th. Lee thereupon retired within the intrenchments covering Richmond. On the 15th and 16th a part of the Union forces unsuccessfully assailed Petersburg, and on the 19th Grant began a regular siege. An invasion of Maryland under General Early in July, which threatened Washington, failed, and led to operations in the Shenandoah Valley, in which General Sheridan nearly destroyed Early's forces at Winchester. On May 5, 1864, General W. T. Sherman started from Chattanooga on his campaign against Atlanta, in which he was ably opposed by Johnston, and vainly assailed by his successor in command, General Hood. Atlanta was evacuated by the Confederates on September 1st. Near the middle of November he started for the coast. Marching through the heart of Georgia without opposition, he reached the vicinity of Savannah, capturing Fort McAllister December 13th, and occupying the city December 21st. On December 15th and 16th, Hood, who had marched north with his army, suffered a bloody repulse before Nashville by Thomas. An attempt in December, by a fleet under Admiral Porter and a land force under General Butler, to reduce Fort Fisher at the mouth of Cape Fear River, commanding the approach to Wilmington, N. C., failed; but on January 15, 1865, it was carried by an assault under General Terry, aided by the fleet. The Federal forces occupied Wilmington on February 22d. The siege of Petersburg and Richmond continued till April 3, 1865, when, after Lee's defeat at Five Forks (March 31st, April 1st), those places were occupied by the Federals, having been evacuated by Lee during the preceding night. Grant vigorously pursued the retreating army, and at Appomattox Court House, on the 9th, compelled Lee to surrender the remnant of his forces, about 27,000 in all, an event which virtually terminated the war. On February 1st, General Sherman started from Savannah on a northward movement through the Carolinas, and reached Columbia on the 17th. General Hardee, being thus taken in the rear, evacuated Charleston, which was occupied by a detachment of General Gillmore's forces on the 18th, and the same day the national flag was raised over Fort Sumter. Sherman reached Fayetteville, N. C., on March 12th. On the 19th the left wing under Slocum encountered the Confederate army under General Johnston at Bentonville, repelled several assaults, and on the 21st, being reinforced, compelled it to retreat

to Smithfield, covering Raleigh. Sherman then occupied Goldsboro, whence he advanced on April 10th. Johnston retreated through Raleigh, and on April 26th surrendered his entire army, then reduced to about 31,000 men. In the meantime, a cavalry force under General Wilson had swept through Alabama from the north, and passed into Georgia, occupying Selma on April 2d, Montgomery on the 12th, and Columbus, Ga., on the 16th. Mobile was taken on April 12th by General Canby, aided by a fleet under Admiral Thatcher. On May 4th, General Taylor surrendered the Confederate forces in Alabama to General Canby. The last fight of the war occurred May 13th, on the Rio Grande in Texas, between Colonel Barrett (Federal) and General Slaughter (Confederate), the latter being victorious. The trans-Mississippi army of the Confederates, the last in the field, was surrendered by Kirby Smith on May 26th. During the war Confederate cruisers, mostly built and fitted out in British ports, and manned by British sailors, scoured the ocean. Evading vessels of war, they destroyed hundreds of merchantmen, doing irreparable injury to the commerce of the Union. The chief of these were the "Alabama," "Chickamauga," "Florida," "Georgia," "Olustee," "Shenandoah," "Sumter," and "Tallahassee." The "Alabama," the most famous, commanded by Raphael Semmes, was sunk off Cherbourg, France, June 19, 1864, by the United States steamer "Kearsarge," commanded by Captain Winslow. After the fall of Richmond, President Davis of the Confederacy fled south, and was captured at Irwinville, Ga., by General Wilson's forces, May 10, 1865. He and some other prominent leaders were imprisoned for a time, but no man was punished for participation in the rebellion. The National Republican Convention assembled at Baltimore on June 7, 1864, and nominated President Lincoln for reëlection, and for vice-president Andrew Johnson of Tennessee. The platform pledged a vigorous prosecution of the war for the suppression of the rebellion, and favored an amendment to the Constitution abolishing slavery. The National Democratic Convention assembled at Chicago on August 29th, and nominated General George B. McClellan for president, and for vice-president George H. Pendleton of Ohio. The election took place on November 8th, the eleven seceded States not participating. McClellan and Pendleton received the electoral votes of New Jersey, Delaware, and Kentucky, 21; Lincoln and Johnson received those of all the other States, 212, and were elected. On March 4, 1865, Lincoln's second inauguration took place. On April 14th he was assassinated by John Wilkes Booth, and the Secretary of State, Mr. Seward, dangerously wounded by another conspirator; and on the following day Vice-President Johnson entered upon the duties of the presidency. The question of emancipation early attracted the attention of the administration and Congress. On April 16, 1862, an act was passed abolishing slavery in the District of Columbia, and on June 9th another act declared that slavery should not thereafter exist in the Territories. On January 1, 1863, Mr. Lincoln issued a proclamation declaring free all persons held as slaves within the States or portions of States then in rebellion. The 13th amendment to the Federal Constitution, declaring that slavery shall not exist within the United States or any place subject to their control, was declared adopted by the proclamation of the Secretary of State on December 18, 1865. The first step toward the reconstruction of loyal governments in the seceded States was the proclamation of President Lincoln of December 8, 1863. Under this scheme governments were organized in Louisiana and Arkansas in the early part of 1864, and in Tennessee early in 1865, but senators and representatives from those States were not admitted to Congress. After the close of the war President Johnson appointed provisional governors for several of the seceded States. But Congress did not approve this scheme of reconstruction, and senators and representatives from those States were not admitted. In June, 1866, a joint resolution adopted by Congress proposed the 14th amendment to the Constitution, extending the rights of citizenship to all classes of native and naturalized persons, guaranteeing the validity of the national debt, forbidding the payment of any part of the Confederate debt or of claims for the loss of slaves, etc. In July senators and representatives were admitted from Tennessee, that State having ratified the 14th amendment. On January 8, 1867, an act was passed over President Johnson's veto, conferring the right of suffrage on colored citizens of the District of Columbia, and on the 24th a similar act became a law for the Territories. The congressional plan of reconstruction was developed in the act of March 2d and the supplementary acts of March 23d and July 19th, each of which was passed over the President's veto. These acts declared that "no legal State Governments or adequate protection for life or property now exist in the rebel States of Virginia, North Carolina, South Carolina, Georgia, Alabama, Mississippi, Louisiana, Florida, Texas, and Arkansas," and divided them into five military districts. The district commanders were required to make a registration of voters, comprising male citizens of the United States 21 years old and upward, without regard to race, color, or previous condition, who had resided in the respective States one year, and were not excluded from holding office by the 14th amendment. Delegates were to be elected in the several States by the registered voters to conventions for framing new constitutions. Only when constitutions had been adopted conferring the right of suffrage on colored persons, and such constitutions had been approved by Congress, and when the 14th amendment had been ratified by the legislatures of the respective States, were senators and representatives to be admitted. The conditions of these acts were complied with in Alabama, Arkansas, Florida, Georgia, Louisiana, North Carolina, and South Carolina in 1868, and in Mississippi, Texas, and Virginia in 1870. But the subsequent action of the legislature of Georgia in excluding colored members led to further measures on the part of Congress, and delayed the final restoration of that State until 1870. The adoption of the

14th amendment was proclaimed July 28, 1868. In February, 1869, a joint resolution proposing the 15th amendment to the constitution, prohibiting the denial or abridgment by any state of the Union of the right to vote on account of color or previous condition of servitude, was passed. The difference between President Johnson and congress on the question of reconstruction led to his separation from the republican party, and to the passage March 2, 1867, over his veto, of the "tenure of office" act, which took from the president the power to remove, without the consent of the senate, such civil officers as are appointed by the president with the consent of the senate. His attempt to remove Mr. Stanton, secretary of war, led to his impeachment, a resolution to that effect passing the house of representatives February 24, 1868. He was tried before the senate and acquitted in May, there being a majority against him, but not the necessary two-thirds vote. In 1867, Alaska was purchased of Russia.

The national republican convention nominated General Ulysses S. Grant for president, and for vice-president Schuyler Colfax. The national democratic convention nominated Horatio Seymour and Francis P. Blair, Jr. The election took place November 3, Virginia, Mississippi, and Texas not voting. Grant and Colfax were elected. In May, 1872, a convention assembled at Cincinnati, composed of persons dissatisfied with President Grant. They styled themselves "liberal republicans." Horace Greeley was nominated for president, and Benjamin Gratz Brown for vice-president. The national republican convention nominated President Grant for reelection, and for vice-president Henry Wilson. The national democratic convention nominated the same candidates as the Cincinnati convention. The election, November 5th, resulted in the choice of Grant and Wilson. One of the prominent events of Grant's administration was the settlement by the treaty of Washington (May 8, 1871), and a subsequent arbitration at Geneva, Switzerland (1871-2), of outstanding disputes with Great Britian, of which the principal (the "Alabama claims" question) related to the charge that the British government had failed in its duties as a neutral in allowing the construction and fitting out of confederate cruisers in British ports. The verdict awarded to the United States an indemnity of $15,500,000 in gold.

In 1876 the republicans nominated Rutherford B. Hayes and William A. Wheeler. The democrats nominated Samuel J. Tilden and Thomas A. Hendricks. Hayes and Wheeler, although they received a minority of the popular vote, were declared by a special commission, whose report was adopted by congress in joint convention, to have been elected by a majority of one in the electoral colleges. In 1876, the centennial exposition was held in Philadelphia, in celebration of the one hundredth year of American independence. The exhibitors, from all parts of the world, numbered 30,865. At the following election (1880) the republicans elected General Garfield, who was shot by Charles J. Guiteau, July 2, 1881, at the Baltimore and Potomac depot, Washington, D.C., and died September 19, 1881. Vice-president Arthur became president.

In 1885, Grover Cleveland succeeded as president. The anti-polygamy bill, virtually disfranchising Mormons, became a law in 1886; also the inter-state commerce bill. A bill passed in 1879 prohibiting the immigration of Chinese as laborers, amended in 1882 making the restriction to last for twenty years, was further amended in 1888 by taking away from the Chinese now or heretofore in the country the privilege of return unless they had previously procured certificates. In 1889, Benjamin Harrison, elected by the republicans, became president, the issue of the campaign being free-trade vs. protection. In 1890 a protective tariff bill, known as the McKinley act, became a law. It increased duties on 115 articles, embracing farm products and manufactures, and decreased those on 190, i. e., manufactures established. It placed sugar on the free list. The coinage act of 1890 made it compulsory for the government to buy 54,000,000 ounces of silver yearly; instead of coining the same, to issue silver certificates therefor. On June 19, 1890, the report of the international American conference was presented, forming the basis of the policy of reciprocity by which treaties were entered into with Germany, France, Spain, Brazil, and the countries of Central and South America. An application of the "Monroe doctrine" in regard to the Samoan group of islands, which had been seized by Germany, resulted in a treaty which saved the absorption of the islands. The Bering sea question, long a diplomatic stumbling-block between the United States and Great Britian, was referred to a board of arbitration. The presidential election in 1892 resulted in the selection of Grover Cleveland. President Harrison retired from office, March 4, 1893. President William McKinley was inaugurated March 4, 1897, and a year later, after a number of attempts to allay the Cuban situation, came the war with Spain. A commission met in Paris to discuss the terms of peace between Spain and the United States, December 28, 1898, Spain ceded to the United States the Philippines, Porto Rico, and Guam, and agreed to retire from Cuba, accepting the offer of $20,000,000, the United States' proposition.

President McKinley was inaugurated for the second term, 1901. He was shot by an assassin on September 6, 1901, and died on the 14th, when he was succeeded by Vice-president Roosevelt, who, after the election of 1904, was inaugurated, 1905, for a full term.

President Roosevelt initiated reforms in railroads, corporations, and trust methods, and pushed forward the construction of the Panama canal. In 1906, a race war occurred at Brownsville, Texas, resulting in the colored troops stationed there being ordered out of the state, and in their subsequent expulsion from the United States army. In March, 1907, the president issued orders for the exclusion of Japanese laborers. This action opened the way for negotiations between the governments of Japan and the United States, which culminated, early in 1908, in the complete restraint of Japanese immigration to the United States.

In June, 1908, the republican national convention at Chicago nominated William H. Taft for president, and James S. Sherman as vice-

president, who were elected, defeating W. J. Bryan and J. W. Kern, the democratic nominees.

The chief features of the Taft administration were the creation of a commerce court and a tariff board, the establishment of postal savings banks and parcel post. The fisheries dispute with England was arbitrated successfully at The Hague. In 1912 arbitration treaties with France and with Great Britain were signed. In 1913 the 16th amendment, or income tax law, was adopted. The presidential election of 1912 resulted in the selection of Woodrow Wilson for president and Thomas R. Marshall for vice-president.

Noteworthy events of Wilson's first term were: ratification of the 17th amendment providing for the direct election of senators by the people; revision of the tariff, known as the Underwood-Simmons tariff law; establishment of federal reserve banks; workmen's compensation act; eight-hour railway wage law; child labor law; purchase of Danish islands.

In April, 1914, the port of Vera Cruz, Mexico, was seized by order of the President and held until September. Upon the outbreak of the European war in August, 1914, the President proclaimed neutrality.

The loss of more than 100 Americans on the British steamer "Lusitania," sunk by a German submarine, May 7, 1915, led to extended diplomatic correspondence with Germany. During 1915 the naval advisory board and the federal trade commission were established, and the government railway in Alaska was begun.

As a result of Villa's raid on Columbus, N. M., early in 1916, a military expedition was sent into Mexico. In midsummer the national guard was mobilized on the Mexican border and the largest appropriations for the army and navy ever made in time of peace were passed by Congress. Following the Mexican disorders and the disturbing actions of Germany with respect to American rights on the high seas, there ensued a nation-wide movement in favor of military and naval preparedness, accompanied by immense civic parades and other demonstrations. The National Defense act, signed June 3, authorized a regular army of 186,000 and a federalized national guard with an eventual peace strength of 425,000. During 1916 Congress erected a shipping board, a farm loan board, a tariff commission, and an employees' commission. A council of national defense was established, the Philippines act was passed, and also the Adamson bill adjusting railway wage problems.

In November, 1916, Woodrow Wilson was re-elected president, defeating Charles E. Hughes, the Republican candidate.

On Jan. 22, 1917, President Wilson stated to the Senate the general terms, embodied in fourteen articles, in accordance with which peace should be fixed at the termination of the war.

In consequence of Germany's declaration, Jan. 31, of unrestricted submarine warfare, President Wilson appeared before the Senate, Feb. 3, and announced the severance of diplomatic relations with Germany.

On Apr. 2, 1917, President Wilson delivered a remarkable address to Congress resulting, on Apr. 6, in a declaration of war against Germany by a vote of 82 to 6 in the Senate and 373 to 50 in the House. On Apr. 17 Congress voted an appropriation of $7,000,000,000 for war purposes. Additional war appropriations raised the total voted by the 65th Congress at its first session to more than $19,000,000,000, of which $640,000,000 was for the aviation service.

During the period of actual war, 1917-18, four government loans were floated, as follows:

First Liberty Loan, 3½ per cent, June, 1917, $2,000,000,000; subscriptions, $3,035,226,850; allotment, $2,000,000,000; 4,500,000 subscribers.

Second Liberty Loan, 4 per cent, October, 1917, $3,000,000,000; subscriptions $4,617,000,000; allotment, $3,808,766,150; 10,000,000 subscribers.

Third Liberty Loan, 4¼ per cent, April, 1918, $3,000,000,000; subscriptions $4,176,516,850; all allotted; 17,000,000 subscribers.

Fourth Liberty Loan, 4¼ per cent, October, 1918, $6,000,000,000; subscriptions $6,989,047,000; all allotted; 21,000,000 subscribers.

The total of the four loans, $16,954,400,000, was purchased by 52,500,000 subscribers. In addition, War Savings Stamps subscriptions to Nov. 20, 1918, amounted to $879,330,000.

Of the grand total of $17,833,730,000 realized from Liberty Loans and War Savings Stamps subscriptions, $8,171,776,666 had been advanced, Nov. 15, 1918, to allied nations, Great Britain receiving $3,945,000,000, France, $2,445,000,000, Italy, $1,210,000,000, Russia, $325,000,000, Belgium, $192,520,000, and the remainder to lesser countries, including Greece, Servia, Liberia, Cuba, and Czecho-Slovakia.

On May 18, 1917, selective conscription was enacted. On June 5 following, 9,587,000 men registered for military service, and on July 13 a call was issued for 678,000 drafted men. At the end of December 195,494 soldiers had been embarked overseas.

On Jan. 21, 1918, the government requisitioned for service all Dutch ships in American harbors. The price of wheat for 1918 was fixed by the President, Feb. 23, at $2.20 per bushel. March 30 daylight saving went into effect throughout the United States. July 2 Secretary Baker announced the arrival of a total of 1,019,115 United States troops in France. Final registration, Sept. 12, of man power, age 18 to 45, of 13,228,000 men, brought the total to 23, 700,000. The congressional elections, Nov. 5, resulted in a Republican majority in the house and the senate. On Nov. 11, an armistice was signed with Germany, and on Nov. 23 American troops entered Rhenish Prussia.

Jan. 18, 1919, the International Peace Conference opened at Versailles, France. President Wilson headed the American delegation. On Feb. 14 President Wilson read to the conference a draft of a constitution for a League of Nations. After prolonged negotiations, a treaty of peace with Germany, incorporating a League of Nations, was signed, June 28, by the American and other delegates at Versailles. Dissatisfaction with various provisions of the covenant of the League, resulted, Nov. 19, in the refusal of the Senate to approve the Treaty of Versailles.

On Jan. 16, 1920, the prohibition amendment, ratified one year previous, became effective. On March 19, the Treaty of Versailles again

failed of ratification by the Senate. In the November elections of 1920, the Republican party won popular approval of the policy of nonparticipation in the League of Nations. W. G. Harding, of Ohio, was elected president, and the Republicans gained control of both houses of Congress. A treaty of peace with Germany was signed in Berlin, August 25, 1921. Upon November 12, following, the Washington Conference assembled.

The special session of Congress, convened by President Harding, April 11, 1921, passed an immigration restriction bill and a budget bill. In the session of 1921-22, the Fordney-McCumber tariff act was passed. The election of November, 1922 materially reduced the Republican majority in Congress.

Returning from a tour of the western states and Alaska, President Harding died suddenly in San Francisco, August 2, 1923. He was succeeded in the presidency by the vice-president, Calvin Coolidge, of Massachusetts.

Utah, which was acquired by the United States in 1848, by the treaty of Guadalupe Hidalgo, was settled by the Mormons in 1847. At first church officers ruled the government, but, with the coming of non-Mormons in 1849, the state of Deseret was organized, a constitution adopted, and an appeal made to congress for admission to statehood. Congress refused admission as a state but organized the territory of Utah, September 9, 1850. After forty-five years the territory was admitted as a state in 1896.

Vermont. The first white settlement was made at Brattleboro, in 1724, as a military station, by the Massachusetts colonists. It served as a base of operations during the French wars. Immigration set in, and, in 1768, 124 townships had been granted by Governor Wentworth, of New Hampshire, by which colony the fee and jurisdiction of the soil were claimed. A counter-claim was made by New York in 1763, causing a bitter controversy between the two colonies. In 1777, the people of Vermont declared their independence, and, though admission to the confederacy of states was sought, it was refused, and Vermont remained outside of the Union till 1791. New York had surrendered its claims for a financial consideration in 1790. Vermont was the first state to join the original thirteen. Though not confederated with the other colonies against Great Britain, the "Green mountain boys" had signalized their valor and patriotism in a number of hard-fought battles and expeditions. Among these were the capture of Ticonderoga by Ethan Allen, the invasion of Canada, the battles on Lake Champlain, and the two battles near Bennington, which were the primary cause of Burgoyne's defeat at Saratoga.

Virginia. The name Virginia bestowed by Queen Elizabeth in 1584 on the region now known as North Carolina, discovered by Sir Walter Raleigh's expedition, was afterward applied to the whole country to 45° north. In 1606, James I. gave to the London company, which made the first permanent English settlement in America at Jamestown in 1607, the country from 34° to 38° north, extending 100 miles from the sea. The colony was saved from ruin by Captain John Smith two years later. Colonization increased rapidly, and in 1619 a legislative body was formed. In 1641, there were 15,000 English in the colony. In 1676 occurred Bacon's rebellion, brought on by the tyranny of Sir William Berkeley, the governor. The French war of 1754, of which Braddock's defeat was the most notable incident, first brought George Washington into notice. Virginia, under the leadership of Patrick Henry, was the first to protest against British oppression in 1764, and sent representatives to the continental congress in 1775. The most important military event of the Revolution in Virginia was the surrender of Cornwallis at Yorktown, October 19, 1781. Virginia passed an ordinance of secession, April 17, 1861, and in the war that followed became the bloodiest cock-pit of the whole contest. The most important battles were Bull Run, July 21, 1861; Winchester, May 25, 1862; the battles of the peninsular campaign in the summer of 1862; second battle of Bull Run, August 29, 1862; Fredericksburg, December 13, 1862; Chancellorsville, May 2-4, 1863; the battles of the Wilderness campaign in 1864, ending in the investment of Petersburg and Richmond; and the final surrender of General Lee at Appomattox court house, April 9, 1865. Statutory Prohibition was approved by popular vote, 1914.

Washington. The first record in history of the region which is now the state of Washington was the discovery, in 1592, of the strait of Juan de Fuca by a Greek pilot. In 1775 Captain Heceta, a Spanish navigator, discovered the mouth of the Columbia, but was unable to enter the river. In 1789 Captain Kendrick, an American, sailed through the strait of Fuca, through the gulf of Georgia and Queen Charlotte sound. On the 11th of May, 1792, Captain Gray, of the American ship "Columbia," entered the river to which he gave the name of his ship. This gave to the United States the priority of claim to the Oregon region, which then comprised the present states of Washington, Oregon, and Idaho. In October, 1792, an Englishman sailed up and examined the Columbia about 100 miles from the mouth. The coast soon became well-known, and the United States government fitted out expeditions to explore the interior. The most important was that under Lewis and Clark, who, ascending the Missouri, made the Clearwater river, thence entering the Columbia and reaching the Pacific in December, 1805. In 1846 a treaty fixed the boundary at the forty-ninth parallel. The territory of Oregon was formed in 1848, and in 1853 the territory of Washington was established from a part of the original country. Washington was admitted to statehood November 11, 1889. In 1910 the state granted suffrage to women and in 1914 enacted statutory Prohibition.

Waterloo, Battle of, an important battle won by the allied forces over Napoleon, near Waterloo, a Belgian village eleven miles south of Brussels, June 18, 1815. The preliminary battles had been at Ligny, June 16th (when Napoleon had defeated the Prussians under Blücher), and at Quatre-Bras, on the same day (when the allies under Wellington compelled the French Marshal Ney to retire). At Waterloo the French numbered about 72,000. The allies

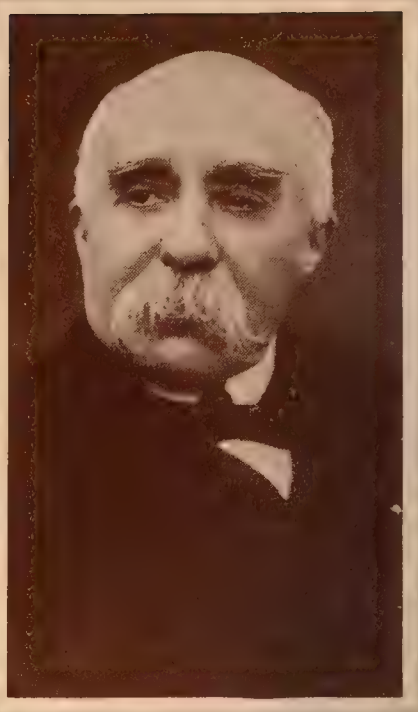
(British, Dutch, and Germans), under Wellington, had about 67,000; the Prussians (about 50,000 more), under Blücher, came up in time to take part in the close of the battle, and in the pursuit. The battle began about 11.30 A. M. Briefly it may be said to have consisted of a series of brilliant but unsuccessful charges made by the French, and dogged resistance on the part of the British; in the evening the French Old Guard charged, but unavailingly, after which the allies advanced. The French lost about 35,000, and many prisoners; the allies about 22,000. Marshal Grouchy, though he defeated Blücher at Wavre, June 18th, failed to prevent him from joining Wellington, and himself failed to come to Napoleon's aid, though but a few miles distant. The rout of the French was complete, and the disaster final to Napoleon.

West Virginia. Immediately after the ordinance of secession, passed by Virginia in April, 1861, a mass-meeting of citizens convened at Clarksburg, and denounced the action of the convention, recommending the citizens of Northwest Virginia to meet in convention at Wheeling on May 13th. Other meetings sustained the movement, and delegates from twenty-five western counties met in convention, denounced the action of Virginia, and provided for a convention of all the counties of the state adhering to the Union. The latter convention repudiated the action of Virginia, and elected Francis H. Pierpont as governor of the reorganized state of Virginia. The ultimate result was the formation of the new state under the title of West Virginia, and in 1863 the state was admitted to the Union. Military operations in what is now known as West Virginia were mostly confined to 1861.

In 1912 constitutional Prohibition was adopted to take effect in 1914.

Wisconsin. The name is derived from the River Wisconsin (originally used with the French orthography, *Ouisconsin*), from an Indian word, meaning "wild, rushing channel." The first white people in Wisconsin were French explorers, Jean Nicolet and his followers, who entered the region in 1634. In 1658-59 two fur traders, Radisson and Groseilliers, visited the Mississippi and left a record of their travels. In 1665 a Jesuit mission at La Pointe was founded by Father Claude Allouez, and three years later he established the mission of St. Francis Xavier on the shores of Green bay. In 1673 Father Marquette, accompanying Louis Joliet, reached the Mississippi by passing through Wisconsin, and later Father Hennepin and La Salle traced other waterways within the territory. Trading posts were established soon after this, becoming dependencies of Mackinaw. About the middle of the eighteenth century a settlement was established at Green bay; at the close of the Revolution Prairie du Chien, at the mouth of the Wisconsin, grew into a settlement, and a few years later La Pointe and Portage became permanent trading posts.

England retained Mackinaw after the treaty of 1783, and American dominion was not felt by the Wisconsin traders until after the war of 1812. By the ordinance of 1787 Wisconsin had been a part of the Northwest territory. In 1800 it was included in Indiana territory. In 1809 it passed to Illinois, and in 1818 to Michigan. In 1828 Fort Winnebago was erected at Portage. In 1832 occurred the Black Hawk war, which almost exterminated the Sacs. The territory of Wisconsin was formed in 1836 out of lands then comprised in the territory of Michigan. It embraced all the land now within the states of Iowa, Wisconsin, and Minnesota, and that part of Dakota which lies east of the Missouri and White Earth rivers. In 1838 all the territory west of the Mississippi, and of a line due north from the source of that river to the international boundary-line, was taken to form the territory of Iowa. Wisconsin became a state in 1848, the seventeenth admitted to the Union.



Woman Suffrage. The first state to grant suffrage to women was Wyoming, which incorporated it in its territorial statutes in 1869. Colorado granted suffrage to women, 1893; Utah and Idaho, 1896; Washington, 1910; California, 1911; Arizona, Kansas, and Oregon, 1912; Alaska, 1913; Montana and Nevada, 1914. In 1913 the women of Illinois were given extensive franchise privileges by state law. In 1917 New York, by a majority exceeding 100,000, voted full suffrage to women. In 1918 Michigan, Oklahoma and South Dakota granted women full suffrage. The House of Representatives, May 21, 1919, and the Senate, June 4, 1919, passed a resolution submitting to the states a proposed federal amendment extending full suffrage to women throughout the nation. On August 26, 1920 the requisite number of states having ratified it, Secretary of State Colby proclaimed the amendment adopted.

Wyoming was first visited by white men in 1742 and 1744, when Sieur de Verendrye, with a party from Canada, entered the territory and discovered the Rocky mountains. John Colter, of Lewis and Clark's expedition of 1806-10, explored the northern part of the section and discovered Yellowstone park. In 1807 Ezekiel Williams made extensive explorations in Wyoming, and in 1812 Robert Stuart's courier party discovered the route to the West known as the "overland trail." In 1834 Sublette and Campbell built Fort Williams, afterward called Fort Laramie, and established the first permanent post in the state. In 1834 the first emigrants to the Pacific coast passed along the overland trail, and in 1836 the first white women crossed the Rocky mountains.

Fort Bridger, the second permanent post, was built in 1842. Fort Laramie was garrisoned in 1849 and made a government post. Indian wars occurred, 1854-1876. In 1866 at the massacre of Fort Phil Kearny, Colonel Fetterman and eighty men were killed. The gold mines of Sweetwater were discovered in 1867, and the city of Cheyenne was founded in the same year. The first passenger train on the Union Pacific railroad arrived in Wyoming in 1867. In 1868 the territory of Wyoming was organized. Cheyenne was designated as the capital, and Laramie was founded. The first territorial legislature convened at Cheyenne in 1869. An act was approved that year giving women the right of suffrage. Coal was discovered in 1869. In 1890 Wyoming was admitted to statehood.

WORLD WAR

CAUSES OF THE CONFLICT

While there is now no question as to its chief causes, only the historian of the distant future will be in position to state with absolute completeness all of the causes of the recent international conflict which for more than four years ravaged mankind.

Magnitude of the War. The gigantic struggle involved every continent. It affected in some vital way every leading nation. It interfered in scarcely less degree with the peace or with the prosperity of each lesser state. In the end it embattled twenty-eight nations. These embraced more than nine-tenths of the population of the globe!

Its battle-lines flamed on arctic marshes, in snowy mountain passes, in African jungles, in Asian deserts, in Italian valleys, and in the fair fields of France. Its circling navies sped to every ocean. The blood of its combatants was commingled in the farthest seas. Its heroes fought in the sky, in moving forts, and in caverns of the earth. Under its banners were arrayed soldiers from every race, the white, the yellow, the red, and the black. In sheer magnitude it stands absolutely unapproached among all the wars of history. Truly the conflict could not be given a fitter name than that of the WORLD WAR.

Complexity of the Struggle. In the very nature of the case, the interplay of causes, motives, and issues involved was exceedingly complex. Further, those who have lived through this period of tremendous stress, whether as actors on its battlefields or as noncombatants in remote regions, have all been too close to local aspects of the struggle to judge with accuracy the comparative importance of what they have actually seen.

Only the carefully assembled, verified, and digested total of all these observed facts will yield final, correct conclusions. A long period of close study will be required in order to assign with exactness the relative rank of the various causes of the war. Locked archives of the nations will be opened. Secret treaties will be brought to light. The concealed compacts of emperors, kings, chancellors, and diplomats will be made known. In a generation or two, perhaps, a complete, authoritative history of the world war may be written on the basis of all these revealed, proved, and well-weighed facts.

The Inciting Incident. The assassination of the Austrian crown prince Franz Ferdinand at Serajevo, Bosnia, June 28, 1914, precipitated the most inexcusably criminal war of human record. But this unfortunate event was a mere incident. The murder of a Habsburg prince by a Jugo-Slav conspirator no more caused the ensuing conflict than a push-button under a finger-thrust causes an electric light. It merely turned on a death-dealing current already generated by the Habsburgs and Hohenzollerns of Vienna and Berlin.

The attack on Servia brought Russia into the war. The violation of Belgium brought Great Britain into it. Brutal defiance of national rights at sea brought the United States into it. Yet none of these events of themselves engendered the war or impelled the world to unite in arms against the Teutonic powers.

The Real Cause. The great actuating cause was the insensate ambition of Germany to impose its imperial autocratic rule upon the entire world. Behind it were the racial and national jealousies of Teuton and Slav, of German and Frenchman, of German and Britisher. All these antagonisms had been fostered and fanned well-nigh into flame by a half century of increasing Teutonic aggression. Behind it, too, were the German belief in and desire for war in order to fulfil German destiny and to promote German *Kultur*. Behind it also was the German will to conquer the Entente powers as a step to European supremacy and thence to world power.

Back of it, too, were fifty years of universal military training in Germany, of constant drill in the use of arms, of unceasing military and naval preparation, all conducted with scientific precision, with boasted thoroughness, and complete to the most minute detail.

Whatever the relative importance of the various contributing factors, the great outstanding fact, made clearer at each new stage of the conflict, is Germany's responsibility for causing and continuing the war and the inexpiable guilt of the Hohenzollerns for its shocking atrocities.

All diplomatic efforts to prevent the war at its beginning were thwarted by Germany's ominous opposition. All reasonable endeavors to end it afterwards were rendered futile by German presumptions of victory and of the right to dictate a conqueror's peace.

An Imperial Conspiracy. Leaving to future historians the selection of the exact term with which to denote it, there was, in essence, a criminal conspiracy between the Hohenzollerns of Germany and the Habsburgs of Austria to establish a world empire by force. Confident that they possessed the power, they determined to impose their rule regardless of treaties, national honor, or human rights. These worshippers of militarism resolved to stop at nothing, to respect no law of God or man, but to rob, pillage, desecrate, burn, starve, enslave, torture, outrage, and murder, — in short, to terrorize by every extreme of frightfulness all who dared to oppose them.

Germany expected to strike quickly and to win overwhelming military victory before the other powers were prepared to resist. By exacting staggering indemnities from conquered nations, she planned to transform war costs into handsome profits with which to extend still further her rule of blood and iron. To achieve this monstrous design Germany completed vast armaments and built more and more deadly instruments of destruction. With like premeditation and thoroughness Germany placed her secret agents in every country. By a most elaborate system of espionage she charted her campaigns in advance and rehearsed military attacks in detail years before they were actually delivered.

German Propaganda. By cunningly concealed propaganda, Germany systematically sought to lull peaceful democratic nations into a false sense of security. Pacifism and disarmament were covertly encouraged, sometimes to the point of financial support. Even England, under pacifist influences, actually reduced her already puny forces to the "contemptible little army" that the Kaiser later particularly requested his armed hordes to destroy.

Side by side with espionage and the secret encouragement of pacifism, a vigorous campaign was conducted to foster belief in the superiority of everything German. The whole world was to be steeped with the idea that the German is a superman, that German genius transcends all other genius, and that the German unapproachably excels in every field. According to this widely proclaimed view to emulate the German would be useless and to compete with him impossible.

Americans, especially, were induced to believe that German thoroughness and German efficiency surpassed that of every other nation. But above all else, the paid tools of the Hohenzollerns extolled German military invincibility. They affirmed that the German army could not be resisted and that to defeat it was beyond human power. They maintained that German military armaments, munitions, equipment, tactics, leadership, and morale were of a superior order, entirely beyond comparison with that of any other nation. Whole peoples, at times, were brought under the spell of this invincibility myth, though it was exploded whenever Belgians, French, British, or Americans met Germans on equal terms.

Germany's Allies. The foregoing facts show how deliberately and with what infinite pains the Hohenzollerns prepared to overthrow the other nations of the world. Yet to this overwhelming evidence must be added the character and the record of Germany's allies.

The foremost of these were the Habsburgs, a decaying medieval dynasty which, aided by a small minority of Teutons, ruled the dissimilar peoples of Austria-Hungary with iron repression. Habsburg monarchs for centuries plunged Europe into its most sanguinary wars, usually to settle some dynastic contention or to gratify some imperial whim. The terrible Thirty Years' war was brought on by the Habsburgs. A Habsburg emperor, after the French Revolution, sent armies to destroy the newly founded republic in France. The Habsburg rule long sought to keep Greece under the yoke of the Turk. It was a Habsburg prince, Maximilian, who tried to enthrone himself emperor of Mexico in outright defiance of the United States and the Monroe Doctrine.

Further, it was the Habsburgs who fought to prevent Italy from becoming a nation. Again, it was the Habsburgs of Austria who, in 1908, annexed Bosnia and Herzegovina in violation of a solemn treaty. By these same Habsburgs the Balkan states in 1913 were deprived of the fruits of their victories over the Turks. It was the Habsburgs who planned to crush Servia and to conquer a path to Asia through Slavic countries. Yet these are but a few fragments from the black record of this greedy, reactionary house. Such was the character of the feudal autocracy chosen by Germany as her chief copartner in the proposed subjection and despoilment of the nations.

The next in order among the accomplices of Germany was the unspeakable Turk, whose sultan was proclaimed the Kaiser's special friend and whose religion the Kaiser assumed to defend. The civilized world will never read the record of this partnership without a shudder of horror. With the Kaiser's implied consent, hundreds of thousands of Christians in Armenia were starved and slaughtered by the Turks. To aid further the spread of Hohenzollern *Kultur*, the sultan of Turkey, with encouragement from Berlin, proclaimed a "holy war," calling on Moslems throughout the entire world to rise and slay their Christian neighbors.

Last of all was the traitor czar of Bulgaria, the infamous Ferdinand who betrayed his own people and, at the behest of William II, set his armies at the throats of their fellow Slavs in the Balkans. This venal tyrant was the first to abandon his Hohenzollern master when the "invincible" German armies crumbled in "victorious" retreat.

Democracy vs. Autocracy. The consummating evidence of Hohenzollern guilt was found in their barbarous conduct of the war, in their brutal inhumanities on land and sea, and in their impudent hypocrisy in defending them as necessary punishments inflicted in "defense" of the fatherland.

As the conflict progressed, the issue became very clear. It was autocracy against democracy, — a life and death struggle between monarchical militarism and the free peoples of the world. How nearly the conspiring Hohenzollerns and their despotic allies succeeded in their sinister designs and how completely the liberty-loving nations overthrew them at last is shown in the following chronology of important events of the WORLD WAR.

NOTE: For governments and for geographical boundaries as they existed at the beginning of the war, see the sections on Geography, page 507, and Government, page 585. For changes in governments and rulers resulting from the war, consult the section on History, page 9, and also Rulers of the World, pages 146 and 605, in connection with the following Chronology of the World War.

SEVERANCE OF DIPLOMATIC RELATIONS

The nations that formally severed diplomatic relations, whether later declaring war or not, are as follows:

Austria against Japan,	Aug. 26, 1914
Austria against Portugal,	Mar. 16, 1916
Austria against Servia,	July 26, 1914
Austria against United States,	Apr. 8, 1917
Bolivia against Germany,	Apr. 14, 1917
Brazil against Germany,	Apr. 11, 1917
China against Germany,	Mar. 14, 1917
Costa Rica against Germany,	Sept. 21,1917
Ecuador against Germany,	Dec. 7, 1917
Egypt against Germany,	Aug. 13, 1914
France against Austria,	Aug. 10, 1914
Greece against Austria,	July 2, 1917
Greece against Turkey,	July 2, 1917
Guatemala against Germany,	Apr. 27, 1917
Hayti against Germany,	June 17, 1917
Honduras against Germany,	May 17, 1917
Nicaragua against Germany,	May 18, 1917
Peru against Germany,	Oct. 6, 1917
Santo Domingo against Germany,	June 8, 1917
Turkey against United States,	Apr. 20, 1917
United States against Germany,	Feb. 3, 1917
Uruguay against Germany,	Oct. 7, 1917

DECLARATIONS OF WAR

According to the State Department's list, the nations involved in the conflict made declarations of war as follows:

Austria against Belgium,	Aug. 28, 1914
Austria against Japan,	Aug. 27, 1914
Austria against Montenegro,	Aug. 9, 1914
Austria against Russia,	Aug. 6, 1914
Austria against Servia,	July 28, 1914
Belgium against Germany,	Aug. 4, 1914
Brazil against Germany,	Oct. 26, 1917
Bulgaria against Servia,	Oct. 14, 1915
China against Austria,	Aug. 14, 1917
China against Germany,	Aug. 14, 1917
Costa Rica against Germany,	May 23, 1918
Cuba against Germany,	Apr. 7, 1917
Cuba against Austria-Hungary,	Dec. 16, 1917
France against Austria,	Aug. 13, 1914
France against Bulgaria,	Oct. 16, 1915
France against Germany,	Aug. 3, 1914
France against Turkey,	Nov. 5, 1914
Germany against Belgium,	Aug. 4, 1914
Germany against France,	Aug. 3, 1914
Germany against Portugal,	Mar. 9, 1916
Germany against Rumania,	Sept. 14,1916
Germany against Russia,	Aug. 1, 1914
Great Britain against Austria,	Aug. 13, 1914
Great Britain against Bulgaria,	Oct. 15, 1915
Great Britain against Germany,	Aug. 4, 1914
Great Britain against Turkey,	Nov. 5, 1914
Greece (Prov.Gov.) against Bulgaria,	Nov. 28, 1916
Greece against Bulgaria,	July 2, 1917
Greece (Prov.Gov.) against Germany,	Nov. 28, 1916

Greece against Germany,	July 2, 1917
Guatemala against Austria-Hungary,	Apr. 22, 1918
Guatemala against Germany,	Apr. 22, 1918
Hayti against Germany,	July 15, 1918
Honduras against Germany,	July 19, 1918
Italy against Austria,	May 24, 1915
Italy against Bulgaria,	Oct. 19, 1915
Italy against Germany,	Aug. 28, 1916
Italy against Turkey,	Aug. 21, 1915
Japan against Germany,	Aug. 23, 1914
Liberia against Germany,	Aug. 4, 1917
Montenegro against Austria,	Aug. 8, 1914
Montenegro against Germany,	Aug. 9, 1914
Nicaragua against Germany,	May 24, 1918
Panama against Austria,	Dec. 10, 1917
Panama against Germany,	Apr. 7, 1917
Portugal against Germany, (authorizing intervention)	Nov. 23, 1914
Portugal against Germany, (granting military aid)	May 19, 1915
Rumania against Austria, (accepted by Austria's allies)	Aug. 27, 1916
Russia against Bulgaria,	Oct. 19, 1915
Russia against Germany,	Aug. 7, 1914
Russia against Turkey,	Nov. 3, 1914
San Marino against Austria,	May 24, 1915
Servia against Bulgaria,	Oct. 16, 1915
Servia against Germany,	Aug. 6, 1914
Servia against Turkey,	Dec. 2, 1914
Siam against Austria,	July 22, 1917
Siam against Germany,	July 22, 1917
Turkey against Allies,	Nov. 23, 1914
Turkey against Rumania,	Aug. 29, 1916
United States against Austria-Hungary,	Dec. 7, 1917
United States against Germany,	Apr. 6, 1917

CHRONOLOGY OF THE WORLD WAR

Events of 1914

JUNE—1914

28. Archduke Franz Ferdinand, crown prince of Austria-Hungary, and his wife, the Duchess of Hohenburg, while attending military maneuvers on the occasion of their first official visit to Serajevo, Bosnia, are assassinated by Gavrio Prinzip, a Servian student.

JULY—1914

23. Austria-Hungary sends an ultimatum to Servia, accusing the Servian government of complicity in murder of the crown prince, Franz Ferdinand, and making upon the Servian government demands which no state could fully meet without an actual surrender of its independence as a nation. The Austro-Hungarian note further stipulated that Servia must signify acceptance of these demands within 48 hours.

24. Russia, seconded by Great Britain and France, demands that Austria-Hungary prolong the term of her ultimatum to Servia. When urged by Great Britain and Russia to support this demand for delay, Germany refuses and the proposal is, likewise, flatly rejected by the Austro-Hungarian government

25. Servia replies to the Austro-Hungarian note in extremely conciliatory terms, agreeing to all demands not involving the surrender of her sovereignty, and proposes, in case her answer is not considered satisfactory, to refer the decision to the international tribunal at The Hague or to a council of the great powers.

26. Sir Edward Grey, British foreign secretary, suggests a conference of representatives of the four powers, England, France, Germany, and Italy, for the purpose of arriving at a plan to prevent complications between Austria and Russia. To this proposal France and Italy immediately agree but Germany refuses.

27. Answering an inquiry from the Prince Regent of Servia, Czar Nicholas II urges Servia to neglect "no step which might lead to a settlement" but promises that if, despite Russia's pacific endeavors, war should ensue, "Russia will in no case disinterest herself in the fate of Servia."

28. Evidently with full approval of Germany and in disregard of all proposals for mediation, the Austro-Hungarian government declares war against Servia at noon (Tuesday).

29. Russia decrees partial mobilization against Austria. Sir Edward Grey urges the German government to suggest any method whereby the influence of the four powers, Great Britain, France, Germany, and Italy, can be used together to prevent war between Austria and Russia. Serious complications between Germany and Russia begin to arise.

30. Germany pronounces objectionable Sazonov's proposal that Russia would desist from military preparation provided Austria should withdraw from her ultimatum such points as violate the sovereign rights of Servia.

31. While Austria-Hungary ostensibly was willing to satisfy Russia, relations between Germany and Russia become extremely critical. Austria proclaims general mobilization of her armies. Russia follows with a similar proclamation. At 7 P. M. Germany sends France an ultimatum demanding within 18 hours a declaration whether, in the event of a war between Germany and Russia, France would remain neutral. Upon being questioned by England, France explicitly agrees to respect the neutrality of Belgium but Germany declines to make such a promise. At midnight Germany sends a 12-hour ultimatum to Russia demanding that mobilization cease not only against Germany, but against Austria-Hungary.

AUGUST—1914

1. As demobilization would have rendered Russia defenseless against a combined German and Austrian attack, no reply was made to Germany's ultimatum. At 7:10 P. M. Germany declared war against Russia. France, as Russia's ally, sent a noncommittal reply to the German ultimatum which was followed at 5 P. M. by an order for the mobilization of the French army. Italy, though bound by treaty to the Triple Alliance, but regarding Germany and Austria-Hungary as aggressors, declares that she will remain neutral.

2. German troops, violating the neutrality of an independent state, invade Luxemburg. Germany presents a 12-hour ultimatum to Belgium demanding free passage of German armies through Belgium to attack France.

3. Belgium refuses to accede to the German demands, stating that France had already (July 31) pledged herself to respect Belgian neutrality. At 6:45 P. M. Germany declares war against France.

4. German military forces invade Belgian territory at Gemmenich. King Albert, telling the German emissaries that "Belgium is a nation, not a road," appeals to Great Britain, France, and Russia (who, with Germany, had by the treaty of 1839 solemnly guaranteed the neutrality of Belgium) for armed assistance in repelling the German invasion. Sir Edward Grey dispatches an ultimatum to Berlin demanding that Germany respect the neutrality of Belgium. Germany refuses on the ground of "military necessity," the German chancellor, Von Bethmann-Hollweg, angrily rebuking Great Britain for making war just for a "scrap of paper." At 11 P.M. Great Britain declares war against Germany.

5. German forces attack the forts of Liége, Belgium, and are repulsed with terrific loss.

6. Austria-Hungary declares war against Russia. Servia declares war against Germany.

7. After reducing two of the Liége forts by heavy artillery, German forces enter the city.

Russia declares war against Germany.

8. French troops occupy Mulhouse.
First English forces land in France.
Montenegro declares war on Austria-Hungary.
9. Montenegro declares war on Germany.
Austria declares war on Montenegro.
12. German heavy artillery begins reduction of the remaining Liége forts.
13. France and Great Britain declare war on Austria.
16. Austrian forces cross the Save into Servia.
17. Belgian government is moved to Antwerp.
Last Liége fortresses fall.
18. Servians defeat Austrians at Jadar.
19. Canada authorizes expeditionary force.
Germans occupy Louvain.
20. Germans occupy Brussels.
French in Lorraine retreat across the frontier.
Joffre assumes command of the allied armies in France.
Russians defeat Germans at Gumbinnen.
21. Germans levy a war tax of $10,000,000 on Liége and $40,000,000 on Brussels.
22. Belgian fortress of Namur falls.
23. Japan declares war on Germany.
French forces, greatly outnumbered, are defeated at the battle of Charleroi, Belgium, compelling rapid retreat into France.
Von Kluck, with about 200,000 men, attacks Sir John French, with two British divisions, about 80,000 men, at Mons, Belgium.
24. Joffre orders general strategic withdrawal of the allied armies to the line of the Marne.
Gen. French leaves precarious positions at Mons and begins notable 6-day retreat.
26-27. Germans sack and burn Louvain.
British fight stubbornly around St. Quentin and Cambrai.
27. Austria-Hungary declares war against Japan.
28. Austria-Hungary declares war on Belgium.
British forces end retreat on the Noyon-Chauny-La Fère line, after losing 230 officers and 13,000 men and inflicting losses estimated three times as great upon Von Kluck's divisions.
British fleet under Sir David Beatty engages, in Helgoland Bight, a portion of the German fleet, sinking three armored cruisers and two destroyers.
29. Germans capture La Fère.
30. The French evacuate Amiens.
31. Name of Russian capital changed from St. Petersburg to Petrograd.
Paris prepares for siege.
Von Hindenburg defeats Russians at Tannenberg, capturing 70,000 prisoners.

SEPTEMBER—1914

1. Allied armies continue retreat.
Russians defeat Austrians in Galicia.
2. Russian armies capture Lemberg.
3. French government removed from Paris to Bordeaux.
4. German army under Von Kluck, upon reaching a point near Louvres, about 17 miles from Paris, the nearest approach made by German forces during the war, turns away from the capital and marches east to strike at the French center behind the Marne.
5. German army begins advance south of the Marne. Joffre disposes the allied forces for a great offensive, ordering his armies to attack and "to die rather than retreat."
6. Battle of the Marne begins, on a line extending from Ermenonville to Verdun. With upwards of 1,000,000 men, Joffre confronts German armies totaling 900,000.
7. General engagement continues on the entire line of the Marne with the Allies on the offensive.
Germans capture the fortress of Maubeuge.
8. Gen. Gallieni, the "savior of Paris," forms a new army, transports 80,000 men in automobiles eastward from the capital and attacks the rear of Von Kluck's army which is simultaneously attacked on flank by the English army.
9. Left wing of the Allies continues to advance, the British crossing the Marne.
Russian army of 1,500,000 overwhelmingly defeats 1,000,000 Austrians in Galicia.
Servia wins victory over Austrians on the Drina.
10. Battle of the Marne ends with German armies in full retreat to the Soissons-Rheims line, thus marking the failure of Germany's efforts to crush the French center and capture Paris.
11. Battle in France continues with Allies steadily forcing back the German armies.
13. The great German retreat ends on a previously prepared line from Soissons to the Argonne Forest. Battle of the Aisne begins.
14. French forces reoccupy Amiens.
15. The French reoccupy Rheims.
16. The Russian armies attack Przemysl.
21. Russians capture Jaroslav.
22. Servians defeat Austrians near Krupani.
24. The Allies occupy Péronne.
25. German forces penetrate to St. Mihiel and occupy Camp des Romains.
28. Rheims cathedral bombarded by Germans. Battle of the Aisne closes with both armies approaching a deadlock which remained practically unbroken for nearly four years.
Turkey closes the Dardanelles.
29. Germans begin siege of Antwerp.

OCTOBER—1914

1. British Indian troops arrive at Marseilles.
3. Russians severely defeat Germans in a great five days' battle near Augustowo.
9. Antwerp surrenders to the Germans.
13. Germans occupy Lille.
Allies stoutly resist German advance toward the Channel ports. British capture Ypres.
Belgian government removed to Havre.
14. German forces enter Bruges.
Canadian forces arrive at Plymouth.
15. Germans occupy Ostend.
20. Germans forced to retreat in Poland.
30. Belgians flood Yser valley, preventing German advance toward Calais.

NOVEMBER—1914

1. German squadron of five cruisers defeats British squadron of four vessels off Coronel, Chile, sinking the "Good Hope" and the "Monmouth."
3. Russia declares war against Turkey.
7. Tsingtao surrenders to the Japanese.
9. German cruiser "Emden," after sinking 25 merchant ships in the South Pacific, is driven ashore at Cocos Islands by Australian cruiser "Sydney."
10. Germans capture Dixmude and cross Yser canal.
11. Russians take Johannisburg, East Prussia.
20. British parliament authorizes an additional army of 1,000,000.
22. Germans heavily attack Ypres, held at great sacrifices by British.
27. Russians occupy Czernowitz.
30. Battle of Flanders for possession of the Channel ports, after six weeks of terrific struggle, ends with the Allies firmly holding their lines from the Lys to the sea. Under the eyes of the Kaiser, several hundred thousand picked German troops had been thrown against the Anglo-Belgian and French forces. The Belgians and the British sacrificed the greater part of their original armies, but, supported by the French under the direction of Gen. Foch, withstood all onslaughts, maintained control of Calais and Dunkirk, and inflicted upon the German army losses estimated at upwards of 200,000 men.

DECEMBER—1914

2. Austrian forces capture Belgrade.
6. Russians begin bombardment of Cracow.

8. British recapture Passchendaele.

Servians inflict crushing defeat on Austrian armies, recapturing Ushitza and Valievo.

Powerful British squadron under Vice-Admiral Sturdee, destroys German squadron of five cruisers off Falkland Islands, sinking the "Scharnhorst," "Gneisenau," "Nürnberg," and "Leipzig." The "Dresden" temporarily escaped.

12. Montenegrins inflict further defeat on retreating Austrians and occupy Vishegrad.

14. Servians recapture Belgrade and expel all Austrians from Servian soil.

16. German cruisers bombard Hartlepool, Scarborough, and Whitby on east coast of England.

Events of 1915

JANUARY—1915

6. Russians capture Kimpolung in southern Bukowina, near the Rumanian frontier.

14. British forces occupy Swakopmund, German Southwest Africa.

17. Russians capture Kirlibaba pass in the Carpathians.

24. Important naval battle off Dogger Bank, between German battle-cruiser squadron raiding coast of England and British squadron under Admiral Beatty, results in sinking of German battle-cruiser "Blücher" and the flight of the remaining German ships to protected waters.

29. German airships bombard Yarmouth, King's Lynn, and other towns in Norfolk, England.

30. Russians occupy Tabriz, Persia.

FEBRUARY—1915

1-4. Gen. von Mackensen, with 140,000 men, desperately attacks Russians on a 7-mile front at Bolimov, 40 miles west of Warsaw.

4. Germany proclaims the waters around the British Isles a "war zone" after Feb. 18th, declaring her intention to sink every enemy merchant ship found in the zone.

5-8. Russian reenforcements from Warsaw overwhelm the German advance and force Von Mackensen's whole army back to the Rawka.

7. Von Hindenburg, after concentrating 9 army corps against 4 Russian army corps in East Prussia, drives the invaders from German soil.

8. Russian warships attack Trebizond.

9. The French capture the heights of Les Eparges but fail to expel the Germans from St. Mihiel salient.

10. The United States government warns Germany that the German government will be held to a "strict accountability" if through its proposed policy of submarine warfare any American merchant ships are destroyed or citizens of the United States lose their lives.

12. German forces occupy Mariampol, Russia.

18. Austrians recapture Czernowitz.

20. In freeing East Prussia the Germans claim the capture of 75,000 prisoners and 300 guns.

24. Germans under Von Hindenburg capture Przasnysz and advance on Ostrolenka.

25. Allied fleet completes the reduction of the forts at entrance to the Dardanelles.

26. German advance against Russians checked near Przemysl.

27. Russian counter-stroke recovers Przasnysz, with 10,000 German prisoners, and forces Von Hindenburg to retreat to the Prussian frontier.

MARCH—1915

3. Austro-Germans, advancing into Galicia, are thrown back to Kolomea.

10. British attack German lines at Neuve Chapelle, capture the village but fail to gain the commanding ridge east of the town. The net result of this severe battle was an advance of about a mile on a 3-mile front, at a cost of 13,000 men.

12. British expedition under Gen. Jan Smuts wins important victory at Kitovo Hills, German East Africa.

14. German cruiser "Dresden" sunk by British.

18. Great Anglo-French naval attack on inner forts of Dardanelles fails; three battleships lost.

20. Germans bombard Soissons cathedral.

22. Russians capture the great Austrian fortress of Przemysl, after a siege of four months, taking 120,000 prisoners.

28. British steamer "Falaba" sunk with an American citizen, Leon C. Thrasher, on board.

APRIL—1915

4. Replying to Ambassador von Bernstorff's protest against the shipment of munitions to the Allies, President Wilson states that any change in the laws of neutrality during the progress of a war would be a departure from neutrality and that placing an embargo on munitions would constitute such a change.

7. Russians capture Smolnik and the Rostok pass in the Carpathians.

11-12. Turks in Mesopotamia defeated at Shaiba.

17. The British in Flanders capture Hill 60. This action marked the beginning of a series of terrific assaults and counter-assaults, continuing for six weeks, known as the Second Battle of Ypres.

22. German attack, using asphyxiating gas for the first time, crushes British positions near Ypres.

24. Allied line near Ypres further driven back by second attack of chlorine gas.

25. British begin landing troops at six points on Gallipoli peninsula.

MAY—1915

1. Von Falkenhayn completes preparation for great Austro-German campaign against Russia under Von Mackensen, assembling 26 army corps and over 4000 guns.

American steamer "Gulflight" attacked by German submarine; 3 American lives lost.

2. Austro-Germans begin a general offensive in Galicia. Von Mackensen inflicts disastrous defeat on Russians at Gorlice.

4. Italy renounces the Triple Alliance.

7. British passenger steamship "Lusitania" is sunk without warning by German submarine off Irish coast, with a loss of 1152 lives including 114 Americans, among them Elbert Hubbard, Albert G. Vanderbilt, Charles Frohman, and J. M. Forman.

8. Germans, invading Courland, enter Libau.

9. Gen. d'Urbal, assisted by Foch, Joffre, and later by Pétain, with seven army corps and 1100 guns, begins the great Battle of Artois.

10. Repeated attacks by Anzac forces fail to capture Turkish positions at Gallipoli.

Russian offensive gains against the Austrians.

11. French capture Notre Dame de Lorette and Carency, in the Artois sector.

13. President Wilson sends a note calling upon the German government to disavow the illegal sinking of the "Lusitania" and other ships.

15-17. Russians severely defeated on the San.

17. French capture the left bank of the Yser-Ypres canal virtually ending the Second Battle of Ypres which, despite local successes due to the use of poisonous gas, resulted in German defeat.

20. British end 12-day attempt to carry Aubers Ridge with the view of retaking Lille. The net result of the battles of Aubers Ridge and Festubert was an advance of 600 yards on a front of 4 miles.

23. Italy declares war on Austria-Hungary to take effect May 24.

24. San Marino declares war against Austria.

27. Italians cross the Isonzo river near Monfalcone and capture Pilcante and Ala.

Russians force Germans at Sieniawa to retreat across the San with heavy loss.

28. British and French capture important Turkish positions on Gallipoli peninsula.

Austrian aeroplanes bombard Venice.

Germany makes a noncommittal reply to President Wilson's demands concerning submarine warfare.

31. French capture Souchez, one of the last important actions in the Battle of Artois.

JUNE—1915

1. Austrians occupy Stryj.

3. Austro-Germans recapture Przemysl.

British on the Tigris occupy Amara.

5. Final actions of the Second Battle of Ypres close with Bixschoote and Lizerne again in allied hands, but with Hill 60, St. Julien, and Zonnebeke in German possession.

9. Russians resume offensive in Galicia.

The American government, "contending for nothing less high and sacred than the rights of humanity," renews its demands upon Germany.

11. The Italians capture Gradisca.

16. French capture Althof and Steinbruck.

17. Italians capture important heights in the Gorizia sector.

21. Gen. Pétain completes the capture of the "Labyrinth," bringing to a close the great Battle of Artois. While failing of its main object, namely, the capture of the important coal-field and railway center of Lens, the conflict proved that German positions of considerable depth could be carried by sufficient artillery and mining preparation. In this prolonged struggle each side is estimated to have lost 60,000 men.

22. Austro-Germans recapture Lemberg.

28. Austro-Germans launch gigantic offensive against whole Russian line, the concentration for Mackensen's campaign to expel Russians from Galicia aggregating 2,000,000 men and 1500 heavy guns.

JULY—1915

1-7. Russians administer severe check upon Austrian advance at battle of Krasnik.

6. The Italian government proclaims a blockade of the Adriatic.

8. Germany sends a second unsatisfactory answer to the American demand concerning unjustifiable methods of submarine warfare.

9. Entire German force in German Southwest Africa surrenders to Gen. Botha.

18. Russians begin evacuation of Warsaw.

21. The United States government sends a pointed note to the German government stating that "it cannot believe that the Imperial government will refrain from disavowing the wanton act of its naval commander."

23. French forces in Kamerun capture Moopa.

24. Italians destroy one of the forts at Plava.

30. Germans use flame projectors in capturing British trenches east of Ypres.

Austro-German forces reach Lublin, Poland.

German army crosses Vistula north of Ivangorod.

AUGUST—1915

1. Austria-Hungary protests to the United States against shipments of war supplies to the Entente Allies, asserting that such trade is a violation of neutrality.

4. Immense Russian fortress of Ivangorod captured by the Germans.

5. Germans capture Warsaw.

6. Allied reenforcements landed at Suvla Bay fail to effect the capture of Gallipoli.

9. Austro-Germans break through Russian line between Ostrolenka and Vilna.

10. Austro-Germans capture important Russian fortress of Lomza but are unable to disrupt the main Russian line.

11. Russians evacuate Van, Armenia.

12. President Wilson, answering the Austro-Hungarian protest concerning trade in war supplies, reiterates his earlier statements to Germany (*See* April 4), and points out that to prohibit such trade would make every nation an armed camp and greatly encourage militarism.

15. Germans pierce the Russian line between the Narew and the Bug.

Austrian aeroplanes bombard Venice.

17. Victorious German armies capture Kovno and break the strong Russian line on the Niemen, thereby compelling the abandonment of Brest-Litovsk and the further withdrawal of the Russians.

19. Russian fortress of Novo Georgievsk falls under fire of German heavy caliber guns.

The British liner "Arabic" is sunk by a German submarine; two American citizens drowned.

21. Failing to drive the Turks from their lines at Gallipoli, the British resort to trench work.

Italy declares war against Turkey.

23. Austro-Germans capture Kovel, compelling the Russians to evacuate important positions.

25. Austro-Germans occupy Brest-Litovsk.

SEPTEMBER—1915

1. Ambassador von Bernstorff assures Secretary of State Lansing that German submarines will not thereafter sink either belligerent or neutral passenger ships without warning.

1-2. Russians abandon the great fortress of Grodno and the entire Niemen-Bug line, leaving the Teutonic armies in full possession of Poland and its immense fortresses.

6. Czar Nicholas assumes command of the Russian armies, supplanting the Grand Duke Nicholas.

7. Austro-Germans capture Dubno.

8. Russian armies, striking back, defeat Austro-Germans at Tarnopol and Tremblowa.

18. Germans take Vilna.

23. Bulgaria orders general mobilization and concentrates troops on Servian border.

Italians capture heights of Monte Coston.

24. Anglo-French begin the Battle of Loos.

25. Loos village and Hill 70 captured by the English after a terrific struggle. By counter-attacks the Germans recover most of Hill 70.

French take Souchez cemetery but lose it in German counter-attack. In Champagne the French penetrate German lines on a 15-mile front.

Greece decrees general mobilization.

28. The French attack Vimy Ridge securing the western slopes and most of Givenchy Wood, ending the disastrous Battle of Loos. The failure of the Allies was due to lack of sufficient British reserves and an unfortunate delay in beginning the French advance. The British alone lost 50,000 men.

29. The British force the Turks to evacuate Kut-el-Amara and to retreat on Bagdad.

OCTOBER—1915

1. The Russians finally halt the great Austro-German drive commanded by Von Hindenburg. The battered Russian armies, though managing to maintain a united front, had suffered unparalleled reverses for five months, losing 300,000 killed and wounded and 1,100,000 prisoners.

4. French bring the great Battle of Champagne to a close after taking Massiges plateau and Tahure ridge, together with 23,000 prisoners, many guns, and much war material. The French staff officially estimates total German losses at 140,000.

5. Count von Bernstorff notifies the American government that Germany had given strict instructions to submarine commanders which would absolutely prevent any repetition of incidents similar to the "Arabic" case.

French and British troops are landed at Saloniki.

6. Austro-German forces estimated at 300,000 under command of Von Mackensen cross the Danube near Belgrade to cooperate with the Bulgarian armies in crushing Servia.

9. Austro-Germans occupy Belgrade.
11. Russians break Austrian line and cross the Stripa.
Bulgarians begin attacks on Servia at four points.
13. Edith Cavell, British nurse, is shot by Germans at Brussels.
English troops capture portions of the famous "Hohenzollern Redoubt."
14. Bulgaria declares war on Servia.
15. Great Britain declares war on Bulgaria.
16. France declares war on Bulgaria.
17. Great Britain offers Cyprus to Greece for fulfilment of Greek treaty obligations to Servia.
18. Servia protests to the United States against German extermination of civil population.
19. Italy declares war on Bulgaria.
Russia declares war on Bulgaria.
21. Italians begin general offensive from the Tyrol to the Adriatic.
22. Greece, declining to abandon her neutral policy, refuses to aid Servia in return for the cession of Cyprus.
31. Russian counter-offensive in Baltic stops German advance at Platokovna.

NOVEMBER—1915

5. Nish, Servian war capital, surrenders.
7. Italian forces under Garibaldi capture Col di Lana.
10. Russians, assisted by their fleet, beat back German attempts to capture Riga.
24. Servian government is removed to Scutari.
25. Gen. Townshend, in Mesopotamia, is compelled to fall back to Kut-el-Amara where, with about 15,000 men, he is besieged by the Turks.
29. The German government finally declares that all possible provisions should be made for the safety of persons on a vessel about to be sunk at sea. Apparently this constituted a signal diplomatic victory for the American contention for the safety of innocent persons on the high seas. But, as in case of the treaty guaranteeing the inviolability of Belgium and many time-honored provisions of international law, this agreement was later regarded by Germany as only a "scrap of paper."
30. Teutonic allies capture Prisrend, Servia, with 16,000 prisoners, also Monastir.
The German-Bulgarian campaign results in the complete subjection of Servia. Surviving Servian troops numbering less than 100,000 are driven into Montenegro and Albania, pursued by the Austrians.

DECEMBER—1915

6. First meeting of the joint war council of the Allies is held at Paris.
7. Allied forces in Servia retire before Bulgarians.
10. Bulgarians in Monastir tear down American flag from Red Cross hospital and seize stores.
15. Sir Douglas Haig is appointed commander-in-chief of British armies in France.

Events of 1916

JANUARY—1916

8. Complete evacuation of Gallipoli by the British and French.
11. Russian armies under the Grand Duke Nicholas march through the mountain passes into Turkish Armenia.
13. Austrian forces occupy Cettinje, the capital of Montenegro, and rapidly complete the conquest of the country.
16. At the end of three weeks' fighting the Russians abandon their attempt to recapture Czernowitz, after suffering losses of about 60,000 men. Though a costly military failure, this demonstration in Bukowina prevented the central powers from persuading Rumania to join them, and, by forcing the transfer of Mackensen with 250,000 men to the Russian front, relieved the hard-pressed Allies in the Balkans.
19. King Nicholas of Montenegro, following the complete defeat of his armies, flees to Italy.
23. The Austrians occupy Scutari, Albania.
24. The seat of the Montenegrin government is transferred to Bordeaux, France.
25. The Albanian port of San Giovanni di Medua captured by Austrian forces from Montenegro.
29. German Zeppelin bombards Paris.

FEBRUARY—1916

10. Germany announces armed merchant ships will be sunk without warning.
16. Russian forces under the Grand Duke Nicholas inflict crushing defeats upon the Turks in Armenia, capturing the strongly fortified city of Erzerum, with 13,000 prisoners and 300 guns, the total Turkish losses being estimated at 60,000 men.
21. The Crown Prince, having concentrated 14 German divisions against 3 French divisions on a 7-mile sector, from Brabant to Herbebois, where the front line defenses were about 8½ miles from Verdun, begins the most stupendous series of attacks on a fortified position known to military history. By a withering artillery fire of unparalleled volume in which hundreds of thousands of high explosive shells of all calibers from 4 to 14 inches were used, the French first line trenches on a three-mile front were demolished and occupied by German infantry on the evening of the first day.
22. Germans, attacking the Verdun defenses, carry Caures Wood with a part of Haumont Wood, and, after leveling Haumont village with a hurricane of shells, take it by storm, compelling the evacuation of Brabant, and crushing by sheer weight of numbers all French counter-attacks.
23. Furious bombardments supported by heavy columns of infantry enable the Germans, though suffering enormous losses, to reach Samogneux, Beaumont, and Ornes in their attack on Verdun.
24. At the end of four days of gigantic attack, after firing, it is estimated, not less than 2,000,000 high explosive shells against the French positions and sacrificing tens of thousands of lives in massed assaults, the Germans have battered their way through the French defenses, until they stand before Douaumont, the first of the permanent forts guarding Verdun. At night, under cover of blinding clouds of snow, the decimated and exhausted defenders of the outworks of Verdun retire to prepared positions of great strength on Côte du Poivre (Pepper Hill), 1140 feet high, and on the hill plateau of Douaumont, 1290 feet high.
Portugal, urged by England, fulfils her treaty obligations to her ally and requisitions 44 German and Austrian ships interned in Portuguese waters.
25. Gen. Pétain, bringing heavy reenforcements, arrives at Verdun and, with inspiring energy, reorganizes the demoralized defense. The Germans, massing 18 divisions, about 400,000 men, on a front of 4½ miles, from Pepper Hill to Hardaumont, throughout the day sent wave upon wave of massed infantry up the snow-covered slopes of the Douaumont plateau, only to be broken and destroyed in appalling numbers by the French machine-gun and artillery fire. Late in the day, by a final supreme assault, viewed from a distant hill by the Kaiser himself, a Brandenburg regiment stormed and took the old dismantled fort of Douaumont, but failed to secure command of the summit of the plateau.
26. Gen. Pétain orders a counter-attack which sweeps the Germans back down the hillside and cuts off the Brandenburgers in Fort Douaumont.
Austro-Bulgarian forces occupy Durazzo, Albania, following its evacuation by the Italians who had there safeguarded the escape of more than 100,000 Servians to Corfu, where they reorganized as a fighting force and later joined the allied armies at Saloniki.

29. At the end of four days of incessant battle the German attacks on Douaumont slacken. The initial impact of the German drive is broken. The arrival of heavy French reenforcements, transported in thousands of motor lorries, marks the passing of the crisis in the Verdun defense.

MARCH—1916

2. Germans begin artillery attacks on Verdun positions west of the Meuse.

5. German Zeppelins raid coast of England.

German cruiser "Moewe" reaches a home port after capturing 15 vessels in the South Atlantic.

6. The Germans, northwest of Verdun, capture Forges and Regnéville.

10. The Germans, northwest of Verdun, recapture Crow Wood.

14. The Germans capture lower portion of Le Mort Homme, or Dead Man's Hill, northwest of Verdun.

20. The Germans attack heavily west of the Meuse, near Verdun, and capture Avocourt Wood.

22. The Germans, northwest of Verdun, take Haucourt Hill.

French passenger steamer "Sussex" sunk without warning by German submarine, 50 lives lost; all American passengers saved.

27-28. First war council of the Entente Allies meets in Paris.

30. Russian hospital ship "Portugal" sunk by Turkish submarine.

APRIL—1916

1. At the end of a twelve-day battle for Hill 304, northwest of Verdun, the Germans gain Malancourt and Haucourt.

2. After desperate attacks continuing over three weeks, the Germans, northeast of Verdun, enter Caillette Wood and take the village of Vaux.

3. The French before Verdun recapture the village of Vaux and recover most of Caillette Wood.

8. The total German advance since March 7 at Verdun amounts to a mile on a 6-mile front.

9-11. The Crown Prince sacrifices nine infantry divisions in ferocious assaults on the French line northwest of Verdun in vain attempts to capture Hill 304 and Le Mort Homme.

18. The Russians occupy Trebizond.

After terrific bombardment of the French lines, twelve German regiments attacking Pepper Hill near Verdun are thrown back with great losses.

23. Strong Turkish forces occupy Quatia, Egypt, 25 miles east of the Suez canal.

29. British army of 9000 men under Gen. Townshend surrenders to Turks at Kut-el-Amara.

MAY—1916

15-June 18. Great Austrian offensive against Italians in the Trentino.

Austrian attack penetrates Italian front between the Adige and the Astico.

15. The British capture portions of the crest of Vimy Ridge.

20. The Russians join the British on the Tigris.

Sixty German batteries, northwest of Verdun, concentrate their fire on Le Mort Homme. German infantry captures the French first-line positions.

22. The French, in front of Verdun, recapture Fort Douaumont.

24. The Germans again expel the French from Fort Douaumont.

29. Culmination of German attacks on Verdun positions west of the Meuse. Adding five fresh infantry divisions, the Germans gain Cumières, Caurettes Wood, and the summit of Le Mort Homme.

31-June 7. After an eight days' battle the Germans northeast of Verdun capture Fort Vaux, opening, with the capture of Fort Douaumont, a breach in the permanent fortifications of Verdun only 4½ miles from the city.

31. Great naval engagement off the Danish coast, called the Battle of Jutland, or the battle of the Skager-rak. The British grand fleet under Admiral Jellicoe encountered the German high seas fleet under Admiral von Scheer off Jutland, about 200 miles from the German naval base at Wilhelmshaven and about 400 miles from the British base in the Orkney Islands. The action began when the scouting squadron of battle cruisers under Vice-admiral Sir David Beatty met the leading ships of the German column. At 3:48 P. M. the battle cruisers of each side became engaged at a range of 10½ miles. The engagement continued with the advance squadrons of British battle cruisers attacking, regardless of losses, the entire German fleet of battleships and battle cruisers. At 6 P. M. the main division of the British fleet under Admiral Jellicoe came upon the scene and swept the German fleet off the battle area. In the obscuring haze and mist which increased as evening came on, fighting continued intermittently for about two hours. The battle developed into a retreat and a pursuit, the British cruisers and destroyers inflicting heavy losses upon the German ships during the night. A few days after this severe engagement the British announced their losses to the world. The Germans, on the contrary, concealed and denied theirs, and the Kaiser proclaimed a stupendous "victory" for the German navy. However, the morning following the conflict found the British fleet patrolling the entire battle area. The alleged "victorious" German high seas fleet never again attempted to dispute the control of the North sea. Its next close approach to the British fleet was on the occasion of its surrender to Admiral Beatty, Nov. 21, 1918.

The British lost the battle cruisers "Queen Mary" (27,000 tons), "Indefatigable" (18,750 tons), "Invincible" (17,250 tons); the armored cruisers "Defence" (14,600 tons), "Warrior" (13,660 tons), "Black Prince" (13,660 tons); two flotilla leaders and six destroyers, ranging from 935 to 1850 tons, together with about 5700 officers and men, including rear-admirals Hood and Arbuthnot.

The German losses are not definitely known but the following were admitted by the German admiralty: battleship "Pommern," battle cruiser "Lutzow," four fast cruisers and five destroyers, and about 2500 officers and men.

JUNE—1916

4-30. Russian offensive in Volhynia and Bukowina.

5. British cruiser "Hampshire" destroyed by torpedo or mine near the Orkney Islands. Lord Kitchener, British field-marshal and secretary of state for war, his staff, and other prominent men en route to Russia on a secret mission lose their lives. Only 12 out of 670 persons on board survive.

6. The Russians recapture fortress of Lutsk.

10. The Russians capture Dubno and other fortresses, taking 35,000 prisoners.

15. Russians defeat Austrians on the Stripa, taking 14,000 prisoners.

17. Czernowitz taken by the Russians who occupy all Bukowina.

22. Arabian tribes in revolt against the Turks capture Mecca.

23-24. The Germans, northeast of Verdun, capture Thiaumont Redoubt and Fleury.

27. King Constantine of Greece decrees complete demobilization of the Greek army.

30. Russians capture Kolomea, in Galicia.

JULY—1916

1. French and British begin powerful offensive, known as the Battle of the Somme, which continues until November. This relieves the German pressure on Verdun but fails to break the German lines.

5. The French storm German second-line positions on the Somme, capturing Hem and Estrées.

14. The British, using cavalry for the first time since 1914, penetrate German second line north of the Somme on a 4-mile front.
17. The Russians repulse the Austrians southwest of Lutsk, taking 13,000 prisoners.
25. The British occupy Pozières captured from the Germans on the Somme front.
28. Capt. Charles Fryatt is executed by the Germans at Bruges, following his conviction by court-martial of attempting to ram a German submarine on March 28, 1915.

AUGUST—1916

1. British naval forces occupy the port of Sadani, German East Africa.
5. The British rout the Turks at Romani, near the Suez canal, capturing 3000 prisoners.
9. The Italians capture Gorizia, taking 10,000 prisoners.
16. The French advance around Maurepas on the Somme front.
19. The British advance at Thiepval and High Wood on the Somme front.
British cruisers "Nottingham" and "Falmouth" sunk by German submarines in the North sea.
27. Rumania declares war on Austria and strikes at the passes of the Transylvania Alps.
Italy declares war on Germany.
31. Turkey and Bulgaria declare war on Rumania.

SEPTEMBER—1916

2. Bulgarian and German forces enter Rumania on the Dobrudja frontier.
6. The Bulgarians and Germans capture Turtukai, taking 20,000 Rumanian prisoners.
12. Bulgarians and Germans occupy the Greek port of Kavala.
15. The British, using a new type of armored car, capture positions on the Somme front.
23. German Zeppelins raid England.
26. Combles, on the Somme front, captured by the Allies.
29. Rumanian forces severely defeated in Transylvania.

OCTOBER—1916

7. The Rumanians in Transylvania withdraw to the Carpathian frontier.
8. The German submarine U-53 sinks, off Nantucket, Mass., four British and two neutral steamers.
10. The Italians capture Novavilla, taking 6400 prisoners.
11. The Allies demand the surrender of the Greek fleet.
22. The Rumanians lose their important Black Sea port, Constanza, to the Germans.
24. The French under Gen. Mangin recapture Fort Douaumont, Fleury, Caillette Wood, Thiaumont, Damloup, and all the other important positions lost to the enemy during the siege of Verdun. In less than seven hours three French divisions recover the ground which the flower of the German armies had struggled in terrific daily battles for seven months to obtain, at a loss to the Germans estimated at 250,000 to 500,000 men, and to the French of nearly an equal number. In this final operation which marked the climax of the costly German failure, the French took 6000 prisoners with total casualties of less than 5000. The moral effect was a humiliating defeat to Germany while the French rejoiced that their battle-cry "Passeront pas!" (*They shall not pass*) had been proved true.

NOVEMBER—1916

1. The Italians advance east of Gorizia, capturing Bossvica and 5000 prisoners.
6. British liner "Arabia" sunk without warning in the Mediterranean.
7. The French take Ablaincourt and Pressoire.
13. The British advance on the Ancre, taking 3500 prisoners.
18. Austro-Germans in Rumania reach the Wallachian plain.
25. Austro-German forces continue the invasion of Rumania, capturing important towns.
28. The Rumanian capital is removed from Bucharest to Jassy.
The Greek provisional government under Venizelos declares war on Germany and Bulgaria.

DECEMBER—1916

1. The Allies land marines in Greece, seizing Piræus and Athens. King Constantine agrees to the demands of the Allies.
6. Bucharest captured by the Austro-Germans.
10. Lloyd George, made British prime minister following the resignation of Asquith, announces new war cabinet.
12. Gen. Nivelle appointed commander-in-chief of the French armies.
15. The French, attacking northeast of Verdun, penetrate the German lines, capturing important works, 11,000 prisoners, and 115 cannon.
18. President Wilson asks the belligerent nations to state their war aims.
26. Germany, replying to President Wilson's note, ignores his request for definite statement of peace terms and suggests a peace conference.

Events of 1917

JANUARY—1917

8. Germans capture Fokchany, taking 4000 prisoners, and Gabresska with 5400 prisoners, practically completing the conquest of Rumania.
10. The allied governments state their terms of peace.
17. Great Britain repeats to President Wilson the allied demand for the expulsion of the Turks from Europe and mentions specifically the return of Alsace-Lorraine to France and of Italia Irredenta to Italy.
24. German troops thrust back the Russian lines near Riga.
25. The Germans capture Russian positions on the Galician front.
31. Germany proclaims unrestricted submarine warfare, declaring her intention to sink without warning all merchant ships in the war zone, specifying that one American vessel a week will be permitted to sail on a prescribed route under certain limited conditions.

FEBRUARY—1917

1. Ten vessels are sunk with the loss of 8 lives on the first day of unrestricted submarine warfare.
3. The United States severs diplomatic relations with Germany. Count von Bernstorff is given his passports.
6. Fourteen ships, including the passenger steamer "Port Adelaide," are sunk by submarines in the war zone.
8. Brazil, Peru, Chile, Uruguay, Bolivia, Panama, Cuba, and Argentina refuse to recognize the German blockade.
10. Ambassador Gerard leaves Germany.
16. British troops in Mesopotamia force the Turks back on the Tigris.
22. Seven Dutch steamers torpedoed by a German submarine while sailing supposedly under a safe conduct from Germany.
24. Kut-el-Amara captured by British.
25. The British attacking German positions on the Ancre capture Serre.
26. President Wilson asks authority to arm merchant ships.

28. The U. S. government publishes a communication from Zimmermann, German foreign minister, to the German minister at Mexico City, suggesting an alliance against the United States whereby Mexico would be given opportunity to reconquer Texas, New Mexico, and Arizona.

MARCH—1917

1. Submarine warfare during February resulted in the sinking of 134 entente vessels and 54 neutral vessels, total tonnage, 465,770.

11. The British under Gen. Maude capture Bagdad.

12. The American steamship "Algonquin" sunk by a German submarine.

15. Revolution in Russia compels abdication of Czar Nicholas II.

17. Allied forces in France advance on a front of 45 miles. The British capture Bapaume, and the French take Roye and Lassigny.

17-19. Germans in France retire to Hindenburg line, evacuating 1300 square miles of territory on a front of 100 miles, from Arras to Soissons.

21. The American steamer "Healdton" torpedoed by German submarine, with loss of 21 lives.

22. German raider "Moewe" returns from a second cruise in the Atlantic during which 27 vessels are said to have been sunk.

24. The British announce retaking of 54 towns and 600 square miles of territory in districts evacuated by the Germans in their strategic retreat to the Cambrai-St.Quentin-Laon line.

26. The "St. Louis," first American armed ship defying German submarine blockade, arrives in a British port.

29. The British in Palestine defeat the Turks near Gaza.

APRIL—1917

1. The armed American steamer "Aztec" is torpedoed without warning by a German submarine off Brest, with the loss of 11 lives.

3. The Germans repulse the Russians in Volhynia.

6. The United States declares a state of war exists with Germany.

9. Canadian troops capture Vimy Ridge. Other British attacks near Arras make important gains.

13. The British advancing between the Scarpe and the Loos, capture Vimy, Givenchy, and other positions about Lens.

14. War credit of $7,000,000,000 voted by Congress; loans of $3,000,000,000 to the Allies authorized.

18. After a three days' battle between Soissons and Rheims, the French announce the capture of 17,000 prisoners.

23. Strong British attacks near Vimy, supported by tanks, gain at all points on 8-mile front.

British airplanes destroy 39 German machines with a loss of two.

30. The Russians in Armenia evacuate Mush.

MAY—1917

4. American naval squadron begins operations in European waters.

The French capture Craonne, near Rheims.

12. The British and French announce captures, in operations since April 9, of a total of 49,579 men, 444 field guns, and 943 machine guns.

14. The Italians begin an offensive from Tolmino to the sea, advancing their lines east of Gorizia and on the Carso.

15. Gen. Pétain succeeds Gen. Nivelle as commander-in-chief of the French armies, with Gen. Foch as chief of staff.

16. The British capture Bullecourt.

18. Selective Service act passed by Congress.

24. The Italians capture important positions near Jamiano, taking 10,000 prisoners.

30. The armed American steamer "Silver Shell" destroys an enemy submarine in the Mediterranean.

JUNE—1917

4. Austrian counter-attacks regain positions lost to Italians near Jamiano.

Gen. Brusilov succeeds Gen. Alexeieff as commander-in-chief of the Russian armies.

5. Registration in United States of 9,587,000 men of draft age.

7. The British, storming the German lines on a 9-mile front, capture the whole Messines-Wytschaete ridge, taking 6400 prisoners. Nineteen mines, burrowed for a year beneath the ridge, and filled with hundreds of tons of explosives, were exploded at the moment of attack, the shock being perceptible in London.

13. Gen. Pershing and his staff arrive in France.

25. The French win an important position on the Chemin des Dames.

26. The first American troops are landed in France.

JULY—1917

1. Russian army, led in person by Kerensky, begins offensive in Galicia, capturing 10,000 prisoners but ending later in a disastrous retreat (July 19–Aug. 3).

3. German attacks on the Chemin des Dames are repulsed.

American expeditionary force reported to have safely arrived in a French port after defeating two submarine attacks en route.

7. Twenty-two German airplanes bombard London and the Isle of Thanet, killing 59 people.

10. By sudden attack the Germans capture British positions east of the Yser, north of Nieuport.

20. Kerensky becomes premier of Russia.

The Austro-Germans in Galicia advance against the Russians on a 26-mile front, capturing important positions.

23. The Russians in Galicia retreat on a 155-mile front from the Sereth to the Carpathians.

31. The French and British in attacks near Dixmude capture many villages, including Verlorenhoek, St. Julien, and Bixschoote.

AUGUST—1917

2. The Kerensky government in Russia renews its pledge to the Allies to continue the war.

3. The Austro-Germans capture Czernowitz which changes hands for the tenth time during the war.

8. German troops under Mackensen reach the Susitza river; Russo-Rumanian forces retire in the Okna valley.

14. China declares war on Germany and Austria.

15. The Canadians, advancing near Loos, capture Hill 70, dominating Lens. The Germans burn St. Quentin cathedral.

19-22. The Italians resume the offensive on a 37-mile front, capture Selo, and take 13,000 prisoners.

20. The French capture important positions north of Verdun, including Dead Man's Hill.

29. The Austro-Germans in Rumania occupy important positions abandoned by mutinous Russian troops.

SEPTEMBER—1917

1. The Italians on the Isonzo report the capture of 14 fortified mountains and 27,000 prisoners.

3. The Germans occupy Riga, evacuated by the Russians.

8. United States department of state publishes text of messages of Count Luxburg, German chargé d'affaires at Buenos Ayres, to the German foreign office in Berlin. These were sent by the Swedish legation in Argentina to the Swedish foreign office in Stockholm as their own official messages. They contained the recommendation of Count Luxburg

that Argentine merchant ships should either be allowed to pass the blockade or else be "sunk without a trace" (*spurlos versenkt*).

14. The Italians capture Monte San Gabriele.

Russia proclaimed a republic, with Kerensky premier.

21. The Germans on the Dvina capture Jacobstadt, and repulse the Russians on a 25-mile front.

26. The British, attacking the German lines near Ypres, capture Zonnebeke.

28. The British in Mesopotamia take Ramadie, capturing the Turkish army under Ahmed Bey.

29. The Italians take important heights on the edge of the Bainsizza plateau.

OCTOBER—1917

1. German airplanes raid London.

9. Franco-British attack near Ypres results in capture of Poelcappelle.

12. German navy lands forces in the Gulf of Riga.

17. The Russian fleet, defeated in the Gulf of Riga, is trapped in Moon Sound.

18. The Germans, attacking by land and sea, capture Moon Island. The Russians begin evacuation of Reval.

23. The French, near Soissons, take Malmaison fort and 8000 prisoners.

24. Austro-Germans inflict disastrous defeat upon the Italians at Caporetto, compelling their withdrawal on a wide front with heavy losses.

25. The French drive the Germans across the Oise-Aisne canal, taking 12,000 prisoners and 120 cannon.

26. The Austro-Germans reach the Italian frontier, increasing their captures to 60,000 prisoners and 300 guns.

Brazil declares war on Germany.

28. The Austro-Germans capture Gorizia. The Italian losses resulting from the Austro-German breach at Caporetto exceed 100,000 prisoners and 700 guns.

31. The Austro-Germans reach the line of the Tagliamento, capturing 60,000 prisoners and several hundred guns from the Italian rearguard.

NOVEMBER—1917

3. German raid on a front-line salient in France occupied by American troops repulsed with loss of Private Thomas F. Enright, of Pittsburgh, Corporal James B. Gresham, of Evansville, Ind., and Private Merle D. Hay, of Glidden, Iowa, the first Americans killed in action.

5. The Italians abandon their lines on the Tagliamento and begin to retreat on a 93-mile front.

7. Overthrow of Kerensky and provisional government of Russia by the Bolsheviki.

The Austro-Germans, outflanking the Italian rearguard on the Tagliamento, capture 17,000 prisoners.

8. Gen. Diaz appointed commander-in-chief of the Italian forces, succeeding Cadorna.

9. The Austro-Germans take Asiago and reach the line of the Piave which the Italians successfully defend.

16. Clemenceau made premier of France.

20-22. Battle of Cambrai. Successful surprise attacks delivered by British under Gen. Byng, between St. Quentin and the Scarpe, penetrate German positions west of Cambrai to a depth of five miles on a 10-mile front, tanks being employed to break down wire entanglements. Over 8000 prisoners and many guns were captured.

22. The Bolsheviki government in Russia announces demobilization of a part of the armies.

23. The Italians repulse powerful Austro-German attacks from the Asiago plateau to the Brenta.

27. Russian Bolshevik envoys enter German lines and arrange negotiations for an armistice.

30. German attacks south of Cambrai penetrate British line to a depth of two miles on a 7-mile front, taking 4000 prisoners.

DECEMBER—1917

1. First meeting of the Allies' supreme war council at Versailles.

2. Surprise counter-attack by Germans near Cambrai forces British to give up a fourth of the ground gained by Gen. Byng's advance of Nov. 20-22. Berlin claims the capture of 6000 British.

3. Bolshevik emissaries begin negotiations for an armistice with the Germans at Brest-Litovsk.

5. The British evacuate Bourlon Wood and other positions west of Cambrai.

6. Explosion of munitions vessel wrecks Halifax.

The Austro-Germans take Monte Sisemol on the Asiago plateau, capturing 4000 prisoners.

7. The United States declares a state of war exists with Austria-Hungary.

10. British forces under Gen. Allenby occupy Jerusalem.

11. Powerful Austrian attacks against the Italians between the Brenta and the Piave are repulsed.

14. Allied naval council formed.

23. Austro-German forces on the Asiago plateau storm Col del Rosso and Monte Valbella, cutting off 6000 Italians from the main army.

Events of 1918

JANUARY—1918

2. Germany demands of Russia Poland, Courland, Esthonia, and Lithuania.

8. President Wilson states to the Senate fourteen points or conditions in his view necessary for the establishment of peace.

18. Lloyd George declares to trades union conference: "We must either go on or go under."

20. British, in naval action at entrance to the Dardanelles, sink the Turkish cruiser "Midulla," formerly the German "Breslau," and disable the "Sultan Yawuz Selim," formerly the German "Goeben."

28-29. Italian forces capture Col del Rosso and Monte Valbella.

FEBRUARY—1918

6. Mackensen in ultimatum to Rumania demands that peace negotiations begin in four days.

9. Central Powers and Ukraine sign a treaty of peace.

11. Bolsheviki declare end of the war.

15. Germany renews war on Russia.

18. The Bolsheviki capture Kiev.

21. Germans advance in Russia, capturing Minsk and Rovno, with enormous food and war supplies.

23. The United States embassy leaves Petrograd for Vologda.

MARCH—1918

3. By treaty of peace with the four Central Powers, signed at Brest-Litovsk, the Bolshevik government pledges to evacuate Ukraine, Esthonia, Livonia, Finland, Erivan, Kars, Batum, and the Aland islands, also to pay a large indemnity.

9. Russian capital removed from Petrograd to Moscow.

13. German troops occupy Odessa.

18. Great Britain and the United States take over Dutch shipping in British and American ports.

21. Germans begin tremendous offensive on a 50-mile front from Arras to La Fère.

23. The Germans break the British front in the Cambrai-St. Quentin-La Fère sector, practically destroying Gen. Gough's army and taking Péronne and Ham. Berlin claims capture of 25,000 prisoners and 400 field guns. Paris bombarded by long-range guns placed at a distance of 75 miles.

24. The Germans continue to force back the British on the Somme front, capturing Bapaume, Nesle, Guiscard, and Chauny.

25. The Germans capture Barleux and Etalon. The French take over a portion of British front south of St. Quentin and around Noyon. Allies lose 45,000 men and 600 guns.

27. Lloyd George appeals to America for reenforcements.

28. Gen. Pershing places all American forces in France at the disposal of Gen. Foch.

29. Gen. Foch chosen commander-in-chief of all allied forces.

The German long-range gun kills 75 worshippers at Good Friday service in a church in Paris.

APRIL—1918

1. The Allies hold against all German attacks on the western front, inflicting enormous losses. The French estimate German casualties during 11-day offensive at about 300,000.

5. The Germans claim capture since March 21 of 90,000 prisoners and 1300 guns.

6. President Wilson states that Germany's challenge will be met with "force to the utmost."

10. British and Portuguese forced back six miles near Armentières and La Bassée canal.

12. Field-Marshal Haig issues his famous back-to-the-wall order: "All positions must be held to the last man." The Germans capture Armentières. German airplanes bombard London and Paris.

13. The British line holds against massed German attacks from Armentières to Hazebrouck.

16. Bolo Pasha executed in France for treason.

18. German attacks west of La Bassée and Givenchy fail to break the British line.

20. Americans repulse German raid at Seicheprey.

22. British naval raid blocks entrance to Zeebrugge, preventing exit of submarines.

24. German forces, attacking whole front south of the Somme, are held to slight local gains.

25. The Germans force back the French and British in the Lys salient.

26. The First Division of the American army goes into line on the Picardy front.

28. The Germans capture Kemmel Hill.

MAY—1918

1. Gavrio Prinzip, Servian assassin of the Austro-Hungarian archduke Franz Ferdinand, dies in an Austrian fortress.

6. Rumania signs treaty of peace with Central Powers.

14. Italian naval forces enter the harbor of Pola and sink an Austrian battleship.

19. Major Raoul Lufbery, American aviator, shot down near Toul.

Australian troops capture Ville-sur-Ancre.

25-June 14. German submarines sink 19 ships off the Atlantic coast of the United States.

27. The Germans capture the Chemin des Dames ridge, regarded as impregnable, and sweep forward toward Paris on a 40-mile front.

28. The great German "victory drive" reaches the Aisne. The American First Division wins the battle of Cantigny, capturing the town in a brilliant attack, the first American offensive.

29. The Germans take Soissons, with 25,000 prisoners. Allied retreat continues.

30. German counter-attacks on Cantigny repulsed by the Americans. The Fifth and Sixth regiments, United States Marines, ordered to the Marne battle front where the Germans are nearest Paris.

JUNE—1918

1. The great German drive, rolling forward 6 or 7 miles a day, reaches the heights of the Marne near Chateau Thierry, only 60 miles from Paris. Arriving at the battle front, American troops go into the fighting line at Chateau Thierry.

2. In the fierce battle of Chateau Thierry American soldiers block the German drive at the point of its nearest approach to Paris, hurling back the enemy's veteran battalions. This victorious stand electrifies France.

3. At Jaulgonne, German shock troops force the passage of the Marne but are driven back across the river by American counter-attacks.

6-7. American Marines, attacking strong positions in Belleau Wood, near Chateau Thierry, drive the Germans back more than 2 miles, capturing Bouresches and entering Torcy.

9. The Germans, compelled finally to notice the Americans, in a report referring to the attack of June 6-7 on Belleau Wood, say: "Americans who attempted to attack northwest of Chateau Thierry were driven back beyond their positions of departure with heavy losses."

The Germans begin a new drive between Montdidier and Noyon.

10-11. American troops attack, with bayonet and rifle, machine gun positions considered impregnable by the enemy and complete the capture of Belleau Wood, south of the Ourcq, putting out of action three crack German divisions and seriously damaging their morale. While in itself a minor engagement of the great war, this victory proved the fighting quality of the Americans and infused a new spirit of confidence into the Allies.

11. Allied counter-attacks regain much ground between Montdidier and Noyon. The Germans claim capture of 75,000 prisoners since May 27.

13. The German high command, regardless of losses, hurls specially selected divisions against the United States troops in Belleau Wood "in order to prevent at all costs the Americans being able to achieve success." Though depleted in numbers, the Americans not only withstand all attacks but continue to advance.

15. The Austrians launch a powerful offensive against the Italians on a 90-mile front but are everywhere held to unimportant gains.

19. The Germans, attacking Rheims from three sides with 40,000 men, are severely repulsed.

23. The Italians drive the Austrian armies across the Piave in full retreat from the Montello plateau to the Adriatic sea, inflicting losses estimated at 180,000 and ending German hopes of Austrian assistance on the Franco-Belgian front.

24. The American forces begin final series of attacks to clear the Germans from positions about Belleau Wood.

28. British surprise attack gains important positions between Pont Tournant and La Becque.

30. In honor of the bravery and sacrifice of the American Marines in capturing Bouresches and Belleau Wood, the French order the forest officially renamed *Bois de la Brigade de Marine*, or Marine Brigade Wood.

English and Japanese troops land at Vladivostok.

JULY—1918

1. The American Second Division captures Vaux.

4. Australian and American troops recapture Hamel and Vaire Wood, strengthening the allied positions near Amiens.

12. Former czar Nicholas II. of Russia reported slain by Bolsheviki.

14. Lieut. Quentin Roosevelt, son of Theodore Roosevelt, is killed in aerial flight on the French front.

15. The fifth great German drive of the year begins on a 50-mile front from Vaux to the Champagne. In this final offensive the Germans force the passage of the Marne but are soon outfought by the French, Americans, and Italians and held to narrow gains purchased at staggering cost while Foch makes ready for his counter-stroke.

At Dormans the Americans, after withdrawing

four miles, in a furious counter-attack drive the Germans back to the Marne, inflicting severe losses.

18. Gen. Foch begins the long series of increasingly effective attacks which finally crush Teutonic resistance on all fronts in the greatest offensive campaign in military history.

18-22. In the victorious allied thrust towards Soissons, made on a front of 25 miles in the Marne salient, the American First and Second Divisions are given the place of honor with picked French divisions. Without artillery preparation the infantry attacked at dawn everywhere forcing back the Germans from 3 to 6 miles during the first day. At the end of the fifth day of continuous advance, the First Division gained the heights above Soissons, while the Second had taken Vierzy. The two divisions captured 7000 prisoners and 100 field guns, greatly shattering the morale of the opposing German troops.

19. British troops capture Meteren.

20. The American troops, attacking on the Aisne-Marne front, have captured 17,000 prisoners and 560 guns. The defeated Germans withdraw completely from the south bank of the Marne.

20-29. British and French troops attacking on the Ardre, southwest of Rheims, advance 4 miles.

24. German losses since the beginning of Gen. Foch's counter-attack estimated at 180,000.

24-27. The Forty-second American division fights its way through the Forêt-de-Fère to the Ourcq.

28. Fère-en-Tardenois captured by French and Americans.

29. The First Australian division takes Merris.

AUGUST—1918

2. Soissons retaken by the French.

3. The Allies advance on a 30-mile front to the Aisne and the Vesle, regain 50 villages, and complete the capture of the Marne salient.

4. American troops capture Fismes.

5. Foch made marshal of France.

7. American troops cross the Vesle.

8-12. The British win the important battle of Amiens. Sixteen Canadian, Australian, and other British divisions, assisted by tanks and motor machine guns, heavily defeat twenty German divisions, forcing them back 12 miles, freeing the Paris-Amiens railway, and taking about 22,000 prisoners and over 400 guns. This victory added to the French-American success in the Marne salient greatly stimulates the confidence of the Allies.

8. The French, under Gen. Debeney, attacking in cooperation with the British in the Amiens sector capture Pierrepont, Plessier, and Fresnoy.

10. The French take Montdidier and advance to Chaulnes. Americans capture Chipilly and Fismette.

13. Estimates place the captures made by the allied armies in France since July 18 at 70,000 prisoners, 1000 guns, and 10,000 machine guns.

15. The Canadians capture Damery and Parvillers, near Roye.

17. American Fifth Division captures Frapelle.

19. The French reach Lassigny.

20. Gen. Foch begins successful attack on a 15-mile front between the Aisne and the Oise; 8000 prisoners captured.

Czecho-Slovak forces in western Siberia capture Shadrinsk.

21-31. The British under Gen. Byng win the hard-fought battle of Bapaume, overwhelming the Germans on a 33-mile front from Lihons to Mercatel. In this decisive action 23 British divisions, assisted by tanks, drove 35 picked German divisions entirely across the old Somme battle field, inflicting terrible losses, taking Bapaume and many other important positions, and capturing 34,000 prisoners and 270 field guns.

22. The British under Byng recapture Albert.

25. The British advance 10 miles on a 30-mile front, capture La Boisselle, Sapignies, and St. Leger, and take 17,000 prisoners.

26. Canadian troops attack on the Scarpe and recapture the stronghold of Monchy-le-Preux.

27. French troops capture Roye.

28. The French take Chaulnes and Nesle and 40 villages, reaching the Canal du Nord.

30. Gen. Pershing's army takes over the allied line from Port sur Seille, east of the Moselle, west through St. Mihiel to Verdun.

31. The British capture Kemmel Hill.

The French cross the Canal du Nord.

The Australians storm Mt. St. Quentin.

SEPTEMBER—1918

1. American forces advance beyond Juvigny. Péronne captured by the Australians. The British during August take 57,318 prisoners, 659 guns, and about 6000 machine guns.

2. The Canadians capture the powerful Drocourt-Quéant line of defenses, taking 8000 prisoners.

Republic of Czecho-Slovakia formally recognized by the United States.

3. The battle of the Scarpe ends with the Germans in a wide retreat to the Hindenburg line. Attacking with 10 divisions, the British overthrow 13 German divisions and take 16,000 prisoners.

5. The Allies advance on a 90-mile front.

6. The French occupy Ham and Chauny. The Germans withdraw from the Lys salient.

8. American troops capture Glennes.

10. The French forces close on the Hindenburg line near St. Quentin, La Fère, and St. Gobain.

12. Gen. Pershing, having concentrated 600,000 American troops on a 40-mile front, from Les Eparges to the Moselle, attacks and captures the supposedly impregnable St. Mihiel salient, taking 16,000 prisoners, 443 guns, and immense war stores. The success of this first independent offensive conducted by American troops greatly heartened the Allies and convinced the Germans at last that they had a formidable new army to fight.

New Zealand troops win the battle of Havrincourt, opening the way for operations against the Hindenburg line.

16. The British cross the St. Quentin canal.

18. The British win the desperate battle of Epéhy, breaking through elaborate defense systems on a 17-mile front from Holnon to Gouzeaucourt, further clearing the way for attacks on the Hindenburg line.

Franco-Servian forces advance 10 miles on a 20-mile front against the Bulgarians.

18-22. Gen. Allenby, commanding British forces in Palestine, routs the Turks at the battle of Samaria, eventually capturing 75,000 prisoners and vast war supplies, thereby destroying the military power of Turkey.

25. The Bulgarians in Macedonia retreat on a 130-mile front as a result of crushing defeat in the battle of Cerna-Vardar.

26. The American forces under Gen. Pershing begin the great Meuse-Argonne offensive, with the specific object of breaking through the Hindenburg line and the Argonne forest defenses in order to cut the vitally important railroad communications of the German armies through Mézières and Sedan. The accomplishment of this would not only endanger the entire German plan of retreat but might actually compel the surrender of the German armies. On the first day the Americans drove through the barbed-wire entanglements and mastered all the first line defenses.

27-28. Americans on the Meuse-Argonne front penetrate heavily fortified German lines to a depth of from 3 to 7 miles, capturing 10,000 prisoners.

27. British begin attacks between Cambrai and St. Quentin which result in the rupture of the Hindenburg defense system.

28. Gen. Haig's forces cut the Cambrai-Douai road. The French capture Fort Malmaison. Canadian troops take Raillencourt and Sailly.

29-Oct. 1. The 27th and 30th American divisions given place of honor with the Australian corps under British command in powerful attacks which break through the Hindenburg line along the St. Quentin canal near Gouy and Le Catelet.

29. An English division breaks through the Hindenburg line near Bellenglise tunnel.

French pierce Hindenburg line between St. Quentin and La Fère.

30. Bulgaria ceases hostilities under armistice terms equivalent to surrender.

The Belgians capture Roulers and take 300 guns.

OCTOBER—1918

1. Gen. Allenby captures Damascus.

2. The French enter St. Quentin.

3. The British enter Lens and Armentières.

King Ferdinand of Bulgaria abdicates.

4. The Americans renew attacks on entire Meuse-Argonne front, meeting with desperate resistance along the Aire.

6. The German chancellor asks President Wilson for an armistice.

7. British, French, and Americans, attacking between St. Quentin and Cambrai, advance on entire front, taking Beaugard and Prémont. Hindenburg line penetrated south of Cambrai.

8. Allies under British command crush the Cambrai-St. Quentin front, forcing the Germans to the rear of the Hindenburg line.

9. The British take Cambrai.

10. Americans capture Argonne Forest.

The British advance 12 miles beyond Cambrai, completely smashing the famous Hindenburg line and capturing Le Cateau.

12. Americans on the Meuse front gain 5 miles on a 40-mile front, defeating 7 German divisions and capturing 10,000 prisoners.

13. The French capture Laon and La Fère.

The 77th American division takes Grandpré.

14. American troops break the Kriemhilde line.

17. Allied armies capture Ostend, Bruges, Lille, and occupy Douai.

18. Allied forces take Zeebrugge, Thielt, Tourcoing, and Roubaix.

The Americans capture Bantheville.

19. German armies in full retreat from the North sea to the Sambre.

American Second Army Corps, at the end of two weeks' attacks against Hindenburg defense system, completes an advance of 13 miles, taking 6000 prisoners.

24. British armies defeat Germans on a 25-mile front between the Sambre and the Scheldt, taking 7000 prisoners and 100 field guns.

Allied armies under Gen. Diaz begin a tremendous offensive against entire Austrian line in Italy.

25. The Germans flood river valleys in the Argonne region in vain attempts to stop the American advance.

26. Ludendorff, failing to extricate the German armies from the ever tightening grip of Foch's forces, is compelled to resign the chief command.

28. Italian armies under Gen. Diaz drive Austrians back 5 miles on a 45-mile front.

30. The Italians advance 12 miles beyond the Piave on a 50-mile front.

Austria asks Italy for an armistice.

31. Turkey virtually surrenders to the Allies under the terms of an armistice.

NOVEMBER—1918

1. The Americans begin final advance on the Meuse-Argonne front.

2. Gen. Diaz, commanding 54 Italian and 4 allied divisions, routs the Austrian armies on a 125-mile front.

Paris report announces that, since July 15, the Allies on the western front have taken 362,355 prisoners, including 7990 officers, 6217 cannon, 3907 mine-throwers, and 38,622 machine guns.

3. Austria signs terms of truce amounting to full military surrender.

In defeating the Austrians in the great offensive begun Oct. 24, the Italians captured over 300,000 prisoners and 5000 guns.

4. The British capture Valenciennes, and advance 5 miles on a 30-mile front.

American armies arrive within 9 miles of Sedan.

5. Attacking between the Sambre and the Argonne, the French take 4000 prisoners.

6. Gen. Pershing's forces, in an advance of 25 miles since Nov. 1, arrive opposite Sedan and cut the main line of German communications, thereby winning the decisive battle of the Meuse. In desperate attempts to hold back 20 divisions of Americans on the Meuse-Argonne front, Sept. 26-Nov. 6, the Germans used, in all, 40 first class divisions, or more than a half million of their best troops.

7. The Americans enter Sedan and push toward the Briey iron mines.

The French armies advance 10 miles, gravely menacing German communications in the center.

On the Franco-Belgian border, the British drive the Germans practically out of France.

With their main communications with Lorraine cut, and the division of their forces into three inferior armies threatened, the once powerful German military machine, now hopelessly defeated, faces annihilation or surrender.

8. Germany's peace delegates meet Marshal Foch and receive the Allies' terms.

9. British forces capture Maubeuge.

French cavalry pursues German rearguard across Belgian border.

The retiring German chancellor, Prince Maximilian, announces that the Kaiser has decided to abdicate his throne. Friedrich Ebert assumes office as chancellor and proclaims that a new government at Berlin has taken charge to prevent war and famine.

10. Gen. Pershing begins movements to capture the iron fields of Briey and to isolate Metz.

The British reach the outskirts of Mons, where in 1914 the original "contemptibles" made their first stand against Von Kluck.

The former Kaiser flees to Amerongen, Holland.

11. German envoys sign armistice terms near Rethondes, about six miles east of Compiègne, at 5 A. M. Paris time, to take effect at 11 A. M.

Emperor Charles I of Austria abdicates.

16. Belgian troops enter Brussels.

19. Marshal Pétain, at head of French army, enters Metz.

21. German fleet under Admiral Meurer, manned by 14,000 officers and men, surrenders to the British fleet under Admiral Beatty.

22. King Albert, with Queen Elizabeth, enters Brussels, opens parliament with Gen. Pershing at his side, and reviews the allied troops.

24. Advance units of American army of occupation enter Rhenish Prussia.

25. Marshal Pétain, accompanied by Gen. Castelnau, makes formal entry into Strasbourg.

29. British army reaches the German frontier.

DECEMBER—1918

1. American troops occupy Treves.

3. The American army of occupation takes up a line 60 miles in length, centering around Coblenz.

4. President Wilson sails from New York, on the "George Washington," to attend the Peace Conference at Versailles.

6. British cavalry enters Cologne.

8. Belgian troops enter Düsseldorf.

10. The French army occupies Mainz.

Events of 1919

Jan. 18. The International Peace Conference, composed of delegates from the nations associated in the war against the Central Powers, formally opens at Versailles. The first sessions were held in the palace where, in 1871, during the siege of Paris, William VII of Prussia was proclaimed emperor of Germany.

The five members of the American delegation were President Wilson, Secretary of State Robert Lansing, General Tasker H. Bliss, Colonel Edward M. House, and former Ambassador Henry White.

Prominent delegates from other nations were Premier Clemenceau of France, Premier Lloyd George and Foreign Secretary Balfour of England, Premier Orlando and former premiers Sonnino and Salandra of Italy, Premier Venizelos of Greece, Premier Borden of Canada, and Premier Hughes of Australia.

Upon motion of President Wilson, seconded by Premier Lloyd George, Premier Clemenceau was chosen chief presiding officer.

Jan. 19. Parliamentary elections in Germany.

Feb. 7. Jugoslavia recognized by the United States.

Feb. 11. German Parliament adopts provisional constitution. Friedrich Ebert chosen president.

Feb. 14. President Wilson submits draft of League of Nations to Peace Conference.

Feb. 21. Supreme Council of Allies decides to recognize Polish government under Paderewski.

Mar. 13. President Wilson returns to Peace Conference after trip to United States.

Mar. 21. Italian delegation notifies Peace Conference that it will withdraw unless Fiume is assigned to Italy.

Apr. 22. Italian delegates withdraw from Peace Conference, as a protest against rejection of their demand for Fiume.

Apr. 23. President Wilson issues statement regarding Fiume, denying Italian demand.

May 6. Chinese Cabinet instructs delegates not to sign Peace Treaty awarding German rights in Shantung to Japan.

May 7. Peace Treaty delivered to German Delegation at Versailles. Italian delegates rejoin Peace Conference.

June 28. Peace Treaty with Germany signed at Versailles.

July 10. German National Assembly ratifies Peace Treaty.

July 20. Complete Peace Treaty delivered to Austrian Delegation at St. Germain.

July 31. Peace Treaty ratified by British Parliament.

Aug. 4. Rumanian forces, invading Hungary in violation of armistice terms, occupy Budapest.

Aug. 24. Kiev captured from Bolsheviki by the Ukranians.

Sept. 10. Peace Treaty with Austria signed at St. Germain.

Sept. 12. D'Annunzio, with a force of volunteer Italian soldiers, occupies Fiume in defiance of the Italian government and the decisions of the Peace Conference.

Oct. 7. Italy ratifies Peace Treaty.

Oct. 13. France ratifies Peace Treaty.

Oct. 30. Japan ratifies Peace Treaty.

Nov. 8. Czecho-Slovak National Assembly ratifies peace treaties with Germany and Austria.

Nov. 19. Peace Treaty refused ratification by the United States Senate.

Nov. 27. Peace Treaty with Bulgaria signed.

Dec. 5. Jugoslavia signs treaties with Austria and Bulgaria.

See LEAGUE OF NATIONS, PEACE CONFERENCE, and ARMS CONFERENCE, pages 127-129.

FINANCIAL COST OF THE WAR

According to bulletins issued by the Federal Reserve Board, the total cost of the war from the outset to the signing of the armistice can be estimated at between 170 and 180 billions of dollars. Other estimates vary from 150 billions to 250 billions. Estimates of the final total monetary costs to the leading nations involved have been made as follows:

Allies	
Great Britain,	$ 52,000,000,000
United States,	40,000,000,000
France,	32,000,000,000
Russia,	30,000,000,000
Italy,	12,000,000,000
Rumania,	3,000,000,000
Servia,	3,000,000,000
	$172,000,000,000
Central Powers	
Germany,	$ 45,000,000,000
Austria-Hungary,	25,000,000,000
Turkey,	5,000,000,000
Bulgaria,	2,000,000,000
	$ 77,000,000,000

Reckoning the dead and the permanently disabled through battle, disease, and famine at 15,000,000, and assuming the economic productive value of each at only $3,000, the world has been further impoverished by the war in the sum of 45 billions. The total cost is claimed by some to have exceeded that of all former wars of history combined.

GROWTH OF U. S. ARMY AND EXPEDITIONARY FORCES

According to the report of the Secretary of War, at the date of the signing of the armistice over 25 per cent of the entire male population of the country between the ages of 18 and 31 were in military service. This indicates a growth in the size of the army in 19 months of nearly twentyfold. The steps in this amazing growth are shown in the following table:

Date	In U. S. and Possessions	In the Am. Ex. Forces	Total
1917			
Apr. 1	190,000	.....	190,000
July 1	480,000	20,000	500,000
Aug. 1	516,000	35,000	551,000
Sept. 1	646,000	45,000	691,000
Oct. 1	883,000	65,000	948,000
Nov. 1	996,000	104,000	1,100,000
Dec. 1	1,060,000	129,000	1,189,000
1918			
Jan. 1	1,149,000	176,000	1,325,000
Feb. 1	1,257,000	225,000	1,482,000
Mar. 1	1,386,000	253,000	1,639,000
Apr. 1	1,476,000	320,000	1,796,000
May 1	1,529,000	424,000	1,953,000
June 1	1,390,000	722,000	2,112,000
July 1	1,384,000	996,000	2,380,000
Aug. 1	1,365,000	1,293,000	2,658,000
Sept. 1	1,425,000	1,576,000	3,001,000
Oct. 1	1,599,000	1,834,000	3,433,000
Nov. 1	1,672,000	1,993,000	3,665,000

The following table shows registrations and enlistments by states according to tabulations made by the War Department:

SELECTIVE SERVICE REGISTRATION AND ENLISTMENTS IN THE UNITED STATES, 1917-1918

With Alaska, Porto Rico, and Hawaii included, the grand total of registrations approximated 23,709,000. Slightly more than 2,800,000 registrants were inducted into service through local draft boards and through inductions of individuals. The column showing number of soldiers furnished by states includes voluntary enlistments by men who had registered but does not include soldiers previously in the army, or the marine corps, or other naval enlistments.

State	June 5, 1917	June 5, 1918	Aug. 24, 1918	Sept. 12, 1918	Total	Number of soldiers obtained
Alabama	182,499	15,358	3,914	235,753	437,524	67,000
Arizona	37,355	1,695	335	52,870	92,255	10,000
Arkansas	149,097	13,208	2,797	193,569	358,671	59,000
California	298,989	18,834	3,923	478,410	800,156	102,000
Colorado	84,125	6,923	1,356	122,244	214,648	31,000

LANGUAGE

It has been estimated that more than twelve hundred languages were spoken in the two Americas. These languages give evidence of no continuously progressive type of culture. The many tribes have changed their vocabularies; but the identical method of putting words together has survived without change. One striking characteristic is the frequency of long words. This is well illustrated by the Aztec word for letter-postage — *amatlocuilolitquitcatlaxtlahuilli*, the literal meaning of which is, "the payment received for carrying a paper on which something is written." By comparison and classification of the countless dialects and languages, they are reduced to a few great groups: the Tuméh group covers the northern part of the Rocky Mountains; the Aztec group has its seat in Central Mexico and Central America; the Maya group has its seat in Central America and Yucatan; the Appalachian tribes include all those with which the English and the French first came into contact from the Atlantic to the basin of the Mississippi, and also the tribes of the northern part of South America; the Amazonian tribes occupy a large part of South America.

The Hamitic race belongs historically to the northern parts of Africa, the southern parts of Europe, and the western parts of Asia. The Hamitic people were called, by the historic Greeks, Pelasgic. Their civilization has been so overlaid by that of the Aryans as to be almost wholly obscured. The great Hamitic civilization was that of Egypt, long considered the earliest of all the civilizations.

HAMITIC TONGUES

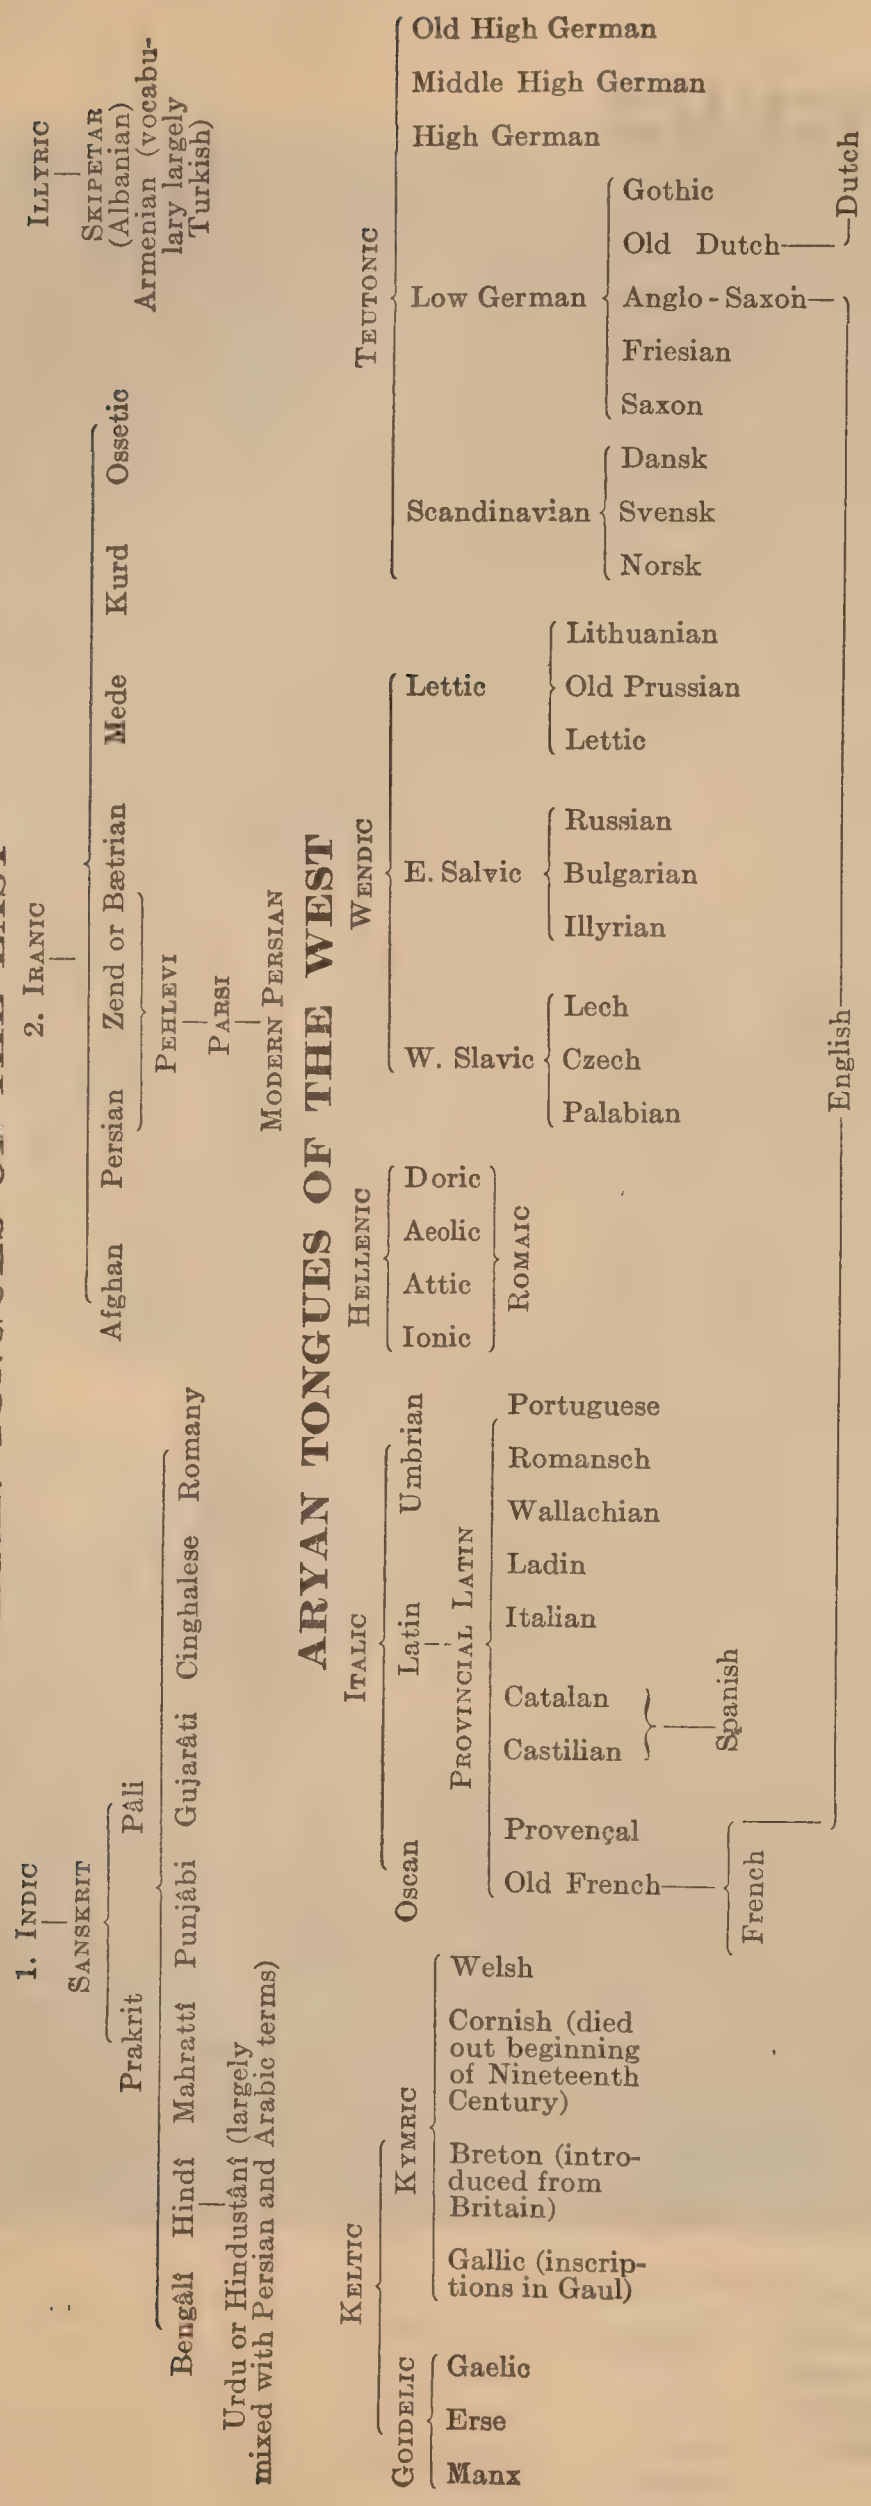
Sidonian, Egyptian, or Rotic | Koptic, Berber, or Libyan, Iberian, or Biscayan

Pelasgian, (probably) Minæan, (probably) Galla (probably)

Before the Nineteenth Century we knew little more of Semitic literature than what was contained in the ancient Hebrew Scriptures and in that body of Arabic literature that grew up after the era of Mohammed. Our knowledge has been greatly added to by the numerous inscriptions which have been found and deciphered. The Semitic races first appear historically in the great desert region covering Arabia and extending to the border of the Mesopotamian River valleys. The Semitic tongues are different dialects, rather than different languages.

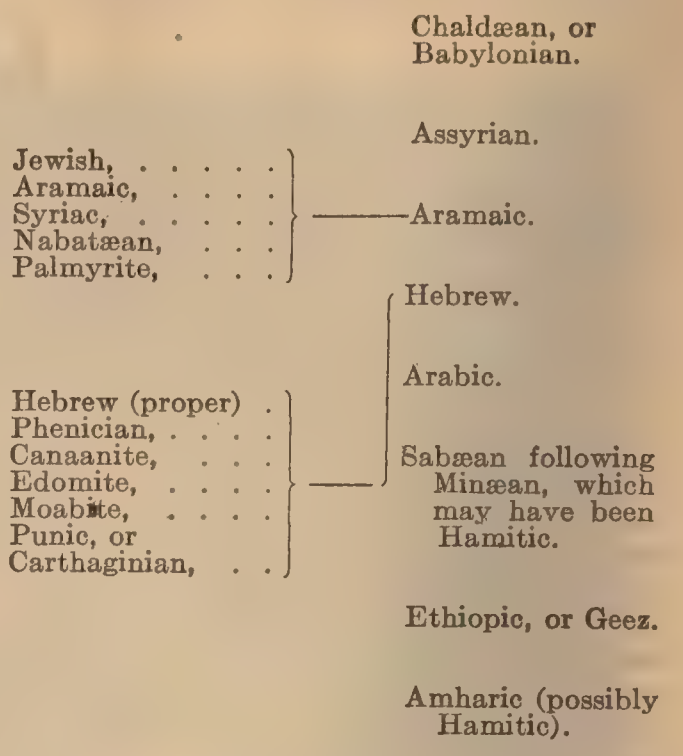
The Koran made the Arabic language sacred, as well as classic. About the Eleventh Century that treasure-house of tales, "The Thousand Nights and a Night," was produced. From the Canaanite family came our Hebrew Bible, a library of very varied literature.

AMERICAN LANGUAGES



1 TINNET
- Blackfeet, Cree, Montagnoi, Micmoc, Ottawa, Abenaki, Passamaquoddy, Pequoid, Mohegan, Lenape, Nanticoke, Powhatan, Miami, Sac, Fox, Kickapoo, Shawnee
- Chippewa, Kutchin, Kenai, Tacullie, Umpqua, Hoopab, Apache, Navajo, Lipan

2 NAHUAEL
- Toltec, Aztec, Chichimec, Pipile, Nicarao, Alaguilac



3 QUICHÉ-MAYA
- Seneca, Cayuga, Onondaga, Oneida, Mohawk, Tuscarora, Huron

SEMITIC LANGUAGES

Aryan (*Indo-European, Indo-Germanic*) **Family.** To this family belongs the first place. From the Aryans sprang both Persians and Greeks midway in its development; this family rules both Europe and America, the African coasts and Australia, as well as the north and south of Asia. Its literature, both in abundance and quality, is unsurpassed by those of any of the other world families of language. From the Aryans have come the great world literatures in politics, art, letters, science, and religious truth. From them came the Iliad and the Odyssey, the Vedas of India, and the Sháh-námeh of Persia, the Eddas of the Norsemen, the Gudrun, the Lay of the Nibelungs, the Beowulf, the Romaunt of Roland, the Arthurian Tales, and the Keltic Mabinogion.

One group of the Aryan family conquered and civilized India and Ceylon. Sanskrit was the language in their day of greatness. The group that traveled farthest west was the Kelts. These were soon followed by the Teutonic tribes. Then came the Slav, Serb, or Wend.

"The care of the national language I consider as at all times a sacred trust and a most important privilege of the higher orders of society. Every man of education should make it the object of his unceasing concern, to preserve his language pure and entire, to speak it, so far as is in his power, in all its beauty and perfection. * * * A nation whose language becomes rude and barbarous, must be on the brink of barbarism in regard to everything else. A nation which allows her language to go to ruin, is parting with the best half of her intellectual independence, and testifies her willingness to cease to exist."—*F. Schlegel.*

"It is with words as with sunbeams, the more they are condensed the deeper they burn."—*Southey.*

"Though our comparison might be bold,

it would be just as if we were to say that the English language is a conglomerate of Latin words bound together in a Saxon cement; the fragments of the Latin being partly portions introduced directly from the parent quarry, with all their sharp edges, and partly pebbles of the same material, obscured and shaped by long rolling in a Norman or some other channel."—*Whewell.*

The English language is a conglomerate. Whenever there is an invention made or a psychological truth discovered, or a new article of commerce is introduced, or contact or intercourse with a new nation or people is established, a new word or set of words is added to our vocabulary. Every new game or fashion creates new names. Our complex civilization is reflected in a complex vocabulary or language. It is important that we should familiarize ourselves with the sources of our language, and with the sources of its strength, and each do his share towards preserving it in its purity and beauty. We should have an intelligent interest in our mother tongue in order that we may use it intelligently. We must spend a little time in the study of the past of our language, because it is only in the light of that past that the present is intelligible. Few of us are conscious of the changes taking place now, yet these changes must be taking place, for ours is the same language used by Chaucer, yet how different. New words are coming in, and old ones becoming obsolete every year.

Slang is responsible for the introduction of many new words. When we first hear a slang phrase, we are surprised; but in this day of great surprises, we quickly grow accustomed to it, and soon adopt it as an integral part of our language. We use it as though it were not a thing of yesterday, but had existed as long as the language itself. If we were to examine some of these slang terms, we should find that many of them have been incorporated into the language, and are properly used in polite society and in serious composition.

Trench says, "If the English language were to be divided into a hundred parts, forty-five of these might be Anglo-Saxon, or Old English, as now some prefer to call them; forty-five Latin (including, of course, the Latin which has come to us through the French); five perhaps would be Greek. We should, in this way, have allotted ninety-five parts, leaving the other five to be divided among all the other languages, which have made their smaller contributions to the vocabulary of our English tongue." It will be interesting to find what classes of words come from the different sources.

The Anglo-Saxon is the basis of the English language; it is the warp while the Latin is the woof. The monosyllables in great part are Anglo-Saxon. The articles, conjunctions, pronouns, prepositions, numerals, and auxiliary verbs are Saxon. Verbs of action and words that relate to the primary action of the senses are Saxon, as think, feel, sing, see, talk, walk, run, and the like.

Ever since the English language began we have been filibusters; we have plundered every other tongue for words to make our meaning plain; we have raided where we would, and have never hesitated to put ourselves under obligation to all strangers coming to our shores, or whose shores we have visited. The history of the English language is, in fact, but the history of the English people, and of their doings.

The early British language was under debt to the Celts, first of all; and we find in our present-day vocabulary such words as apply to Celtic things, as, bard, shamrock, whiskey, clan, dirk, cromlech, kilt, etc. The Anglo-Saxons, while they eagerly discarded words of Celtic orgin, as did the French later, enriched their language from the Latin. The Roman occupation of Britain, from about A. D. 43 to A. D. 410, bequeathed to us five or six terms: *castra,* a camp, has been retained in Doncaster, Lancaster, Gloucester, Winchester, Bibchester, Exeter, formerly Excestre; *strata,* a paved road, in street, Park street, Stratford, Stretford, Streatham, Stradbroke; *colonia,* a colony, in Lincoln; *portus,* a harbor, in Portsmouth, Portchester, Portsea; *pons,* a bridge, in Pontefract; *fossa,* a ditch, in Fossway, Fossbridge; *vallum,* a rampart, in Wallbury.

The conversion of the British to Christianity is marked by another influx of Latin words and terms relating to the Church: abstinence, avarice, bounty, cardinal virtues, conscience, charity, chastity, confession, consistory, contemplation, contrition, indulgence, recreant, relic, reverence, sanctity, spirtual, unity, etc. Then the Danes lent a hand, giving us: to plough, to ask.

Nor is it without a strange irony that the lawless Vikings gave us our word "law." The early supremacy of the Dutch in agriculture, in horticulture, and in ship building is made evident by the fact that a large proportion of the English words, dealing with the farm, the garden, and the ship, are of Dutch origin, and were borrowed from the brave little republic when the English went to school to the Hollander, to learn what he had to teach. A few of the words they give us are: ahoy, aloof, ballast, bluff, blunderbuss, boom, brack, brackish, brandy, bruin, duck (a fabric), golf, growl, hoarding, knapsack, landscape, leaguer, loiter, manikin, measles, mope, mumps, pink, sheer, slim, sloop, swab, switch, uproar, wagon, yacht, dock, hull, skipper, fly boat.

During the First Century that followed the Conquest in 1066, the language of the native population was, as they were themselves, utterly crushed and trodden under foot. The Conquest revolutionized our language as it did our life. A foreign dynasty, speaking a foreign tongue, and supported by an army of foreigners, was on the throne of England; Norman ecclesiastics filled all the high places of the Church, and places of honor and emolument. This meant that French became the language of the court, of society, and even of the many Norman families who employed the Saxons as servants. But the masses of England still spoke their native tongue.

The better or richer families of the Anglo-Saxons began to adopt the French fashions and manners, and to speak the French language, as a mark of gentility. The many churches and castles, which the Normans built in different parts of England, meant that the French would

there be used, and add to the influence at work to make a new English language. The language of chivalry was exclusively French, and brought in such words as honor, glory, renown, host, champion, valiant, feat, achievement, courtesy, gentle, etc. With the lawyer, who was a great power during this time of transition, came such words as advocate, alliance, chattels, demise, devise, demurrer, domain, estate, fief, homage, liege, loyalty, manor, personality, pursuit, realty, treaty, voucher, etc.

The words which describe the pursuits of gentlefolk are mostly of French origin; and it is a curious comment on history that, as Wamba points out in "Ivanhoe," while live animals — ox, sheep, calf, swine, deer — retain their native names, they are described by French words — beef, mutton, veal, pork, venison — when they are brought to table. The "Saxon" serf had the care of the animals while they were alive, but when killed they were eaten by his "French" superiors. Abundant words relating to law, government, and property have their origin in the Conquest. Such are: custom, prime, court, assize, tax, county, city, judge, jury, justice, prison, goal, parliament, manor, money, rent, chattel, mortgage, council, bill, act, etc. The French had shown their greater genius for war, and so, very naturally, their military terms were accepted. Army, battle, fortress, cannonade, assault, siege, hauberk, ambuscade, brigadier, colonel, arms, armor, standard, banner, harness, glaive, tower, and lance are some of them.

From the fact that butcher, grocer, mason, carpenter, barber, chandler, cutter, draper, and tailor are of French extraction, we should conclude that the strangers were superior to the natives in the industrial occupations.

"It is owing to the coming of William," says Dr. Freeman in his "History of the Norman Conquest," "that we cannot trace the history of our native speech, that we cannot raise our wail of its corruption without borrowing largely from the store of foreign words which, but for his coming, would never have crossed the sea. So strong a hold have the intruders taken on our soil that we cannot tell the tale of their coming without their help."

Nearly all the scholarly writers of to-day have been classically educated, and they write for readers presumed to have more or less knowledge of Latin, hence they do not hesitate to use Latin derivatives, and often anglicize a Latin word rather than invent a native English compound. It is this tendency which has kept us from forming compound words, as do the Germans for each new idea. But recently the German Emperor put forth a strong plea for the use of the native words instead of the foreign words, which the people were adopting so readily. He even wanted them to use a native compound in place of the cosmopolitan word *telephone*.

The English tongue is fortunate in that it is an ingenious and partial compound of German and Latin. The German gives force, the Latin sonority to our verse and prose, while an interchanging of German and Latin gives a variety which every other language may seek in vain.

Most of our scientific nomenclature is from the Greek. Not only do we get our scientific terms from the Greek, but also the names for the new instruments and processes; as, lithography, photography, telephone, cinemotograph, etc.

Our musical vocabulary is largely from the Italian, as the following words bear witness: contralto, duet, opera, piano, quartet, solo, sonata, soprano, stanza, trio, trombone, allegro, adagio, baritone, cantata, canto, fugue, canzonet, etc.

The French give us terms of dress and cooking: flounce, jewel, pattern, plait, toilet, tonsure, vesture, trousseau, costume, model, peruke, drape, embroider, furbelow, jacket, apparel, apron, bracelet, brooch, buckle, fricassee, fritter, gem, jelly, juice, omelet, parboil, peel, pie, ragout, sauce, sausage, victuals, salad, etc.

The advent of the English in the New World is known by the adoption of tobacco, potato, tepee, wigwam, toboggan, moccasin, pemmican, etc.

Were it wise to use the space for it, illustrations of words taken from every language could be given. But enough has already been done to show the composite make-up of our mother tongue, and to show the sources of its strength.

Every American should speak English. If a foreign word has been adopted into the English language, why not let it take the English forms? Let the plural of syllabus be syllabuses; of cactus, cactuses; of focus, focuses; etc. Let others take on the English spelling; as, technic, not technique; grip, not grippe; conservatory, not conservatoire; exposure, not exposé, etc. Only a pedant will use serviette in place of napkin.

Let the student or would-be author not try to adorn his style with foreign words; let him use the most usual terms to produce the desired effect. Let him remember that, though English has borrowed a great deal of French, though it has lost a large stock of English words, though it has adopted many a French idiom, and has been influenced by French in endless indirect ways, it still remains English.

In former times "hard work made one sweat"; now-a-days excessive labor causes profuse perspiration. If a man, thus overheated, were to stand in a draught, he might catch his death of cold, get very sick, and even die. This reads well enough as an ordinary warning; but in a treatise on hygiene for popular use, the matter is now presented as follows: "If a person, whose system is excited by vigorous exertion, should suddenly expose himself to a current of air, he would probably check his perspiration and contract a disease which might involve the most serious and even fatal consequences." Which form of expression shall we cultivate? Which recommends itself to you?

Dr. Freeman says: "In almost every page I have found it easy to put some plain English word, about whose meaning there can be no doubt, instead of those needless French and Latin words which are thought to add dignity to style, but which in truth only add vagueness. I am in no way ashamed to find that I can write purer and clearer English now than I did fourteen and fifteen years back; and I think it well

to mention the fact for the encouragement of younger writers. The common temptation of beginners is to write in what they think a more elevated fashion. It needs some years of practice before a man fully takes in the truth that for real strength, and above all, for real clearness, there is nothing like the old English speech of our fathers."

CAPITALS

1. The first word of every full sentence should begin with a capital, unless a literal reprint of the writing of an illiterate person, who does not begin a sentence with a capital, is to be made.

Two lines of invasion were adopted. Montgomery descended Lake Champlain with 2,000 men, and after a campaign of two months captured Montreal.

2. Every line or verse of poetry should begin with a capital.

Morning, evening, noon, and night,
"Praise God!" sang Theocrite.
Then to his poor trade he turned,
Whereby the daily meal was earned.

The initial letter in the first word of a poetical quotation, though not beginning a line, should be capitalized.

But that's not enough:
Give my conviction a clinch!

3. The name of the Deity in every person, and in every synonym or attribute, should begin with a capital; as, God, Christ, Jesus, Son, Holy Ghost, Jehovah, Heaven, Creator, Providence, Infinite One, Supreme Being, etc.

When the attributes of the Deity or of the Saviour are expressed, not by adjectives, but in the Hebrew style, by nouns, they should begin with small letters, as Father of mercies, God of wisdom, Prince of peace.

Also write Son of man, Spirit of God, Lord of lords, King of kings, etc.

4. Pronouns referring to God and Christ should not begin with capitals, unless they are used emphatically without a noun.

Shepherd! with thy tenderest love,
Guide me to thy fold above;

* * * * * * * * * * * * * * * *

Jesus said, I and my Father are One.

5. The pronoun I and the interjection O always take a capital letter. Oh does not unless it begins a sentence.

The heavens and earth, O Lord! proclaim thy boundless power.

6. The proper names of the days of the week and of the months of the year, and of days of feasts and fasts, festivals and holidays, both religious and civic, should begin with capitals; as, Monday, March, Arbor Day, New Years, Whitsunday, Decoration Day, Labor Day, Easter, Black Friday, etc.

The names of the seasons are not capitalized.

7. All proper nouns and adjectives derived from these nouns should begin with capitals; as, a Greek, a Roman, a Hebrew, a Christian, a Mohammedan, an Elizabethan.

Names of all geographical zones or sections of the world, when used as proper nouns, take a capital; as, the Occident, the Orient, the Levant, etc.

Names of political parties should be capitalized; as, Tory, Republican, Federalist, Free Soiler, etc.

Geographical, national, or personal qualities, when used as nouns or before nouns in common use that specify merchandise, do not need a capital; as, china, india ink, prussian blue, turkey red, majolica, delft, oriental rugs, castile soap, etc.

There are some verbs derived from proper nouns that have lost their reference to the noun, and so are printed with small letters; as, to hector, to philippize, to romance, to japan, to galvanize. But Judaize and Christianize are exceptions to this rule.

8. Capitalize the first word in all titles of books, periodicals, plays, and pictures, and also every other word in the titles except articles, prepositions, and conjunctions.

Fiske's The War of Independence.

This rule is contrary to the custom of the American Library Association's rules, used in cataloguing books. They capitalize only the first word and proper nouns and proper adjectives; as, Fiske's The war of independence.

9. The first word and all important words in the titles of corporations and societies, should begin with a capital letter; as, The Society for the Prevention of Cruelty to Animals, the Synod, the Government (when it stands in place of the title of the divisions of the government). In general, one should use a capital in the last illustrations when the definite article is used, and a small letter if the indefinite article is used.

10. Titles of office or honor should be capitalized if used before the name of the person; as, Mr. Smith, President Roosevelt, Messrs. A. K. Bidwell & Co., Brother George, Aunt Hannah.

If used after, they are better written with a small letter; as, Hon. James G. Blaine, ex-senator from Maine; James Brown, roundsman, Broadway squad.

When titles occur frequently on a page, and are used without any particular expression of honor, they should be written with small letters.

In official documents the titles of potentates are often capitalized, even though they follow the name of the ruler; as, Victoria, by the grace of God, Queen of Great Britain and Ireland, Empress of India, etc.

When sir, friend, boy, and the like words are used in the salutation of a letter, they should be capitalized; as, My dear Sir, My dear Boy.

A title used in place of the person's name should begin with a capital; as, Good morning, Captain; Mr. President, I call for the question.

Abbreviated titles of honor or respect should be capitalized: James Bryce, D. C. L.; Henry Northam, M. D., LL. D.; Gen., Hon., Dr., etc.

11. Words of primary importance, especially if they indicate some great event, or remarkable change in religion or government, are commenced with capital letters; as, The Reformation, effected by Luther, is one of the most wonderful events in modern times.

12. The names of the points of the compass when used to indicate direction should begin with small letters. When used to indicate a

section of the country, they should begin with capitals; as, I am going West; he is a representative man of the South; the river flows southwest.

13. Appellatives used either before or after geographical nouns are capitalized; as,

Erie Canal, Hudson River Railroad, Strait of Magellan, Coe Place, Shenandoah Valley, though many publishers omit the capital for the generic word, when it precedes the specific term; as, county of Winchester, state of New York, empire of Russia.

14. Abstract qualities, when personified, should be capitalized; as,

O Death! where is thy sting? Then Crime ran riot.

15. All quotations that are intended to be emphatic, or that consist of a complete sentence, should begin with a capital; as,

Coleridge said, "Friendship is a sheltering tree."

These two questions, "What are we?" and "Whither do we tend?" will at all times press painfully upon thoughtful minds.

When a quotation is introduced by that it should begin with a small letter; as,

"He said that this great patriot bequeathed to his heirs the sword which he had worn in the war for liberty, and charged them never to take it from the scabbard but in self defense, or in defense of their country and her freedom."

16. In writing resolutions, the word immediately following Resolved, should begin with a capital. See Punctuation, Comma, Rule 13.

Resolved, That the discovery of smokeless gunpowder has increased the horrors of war.

PUNCTUATION

Punctuation is the art of breaking up a sentence by means of points and stops, so as to convey to the reader's mind, as quickly and easily as possible, the writer's meaning. There are two systems of punctuation, the close and the open. The close system is used in legal documents, laws, ecclesiastical formularies, and in precise composition of every sort. Even the omission of a hyphen from a compound word may make a serious error. The insertion of a comma in place of a hyphen between "fruit" and "seeds" in an enactment of Congress cost the government thousands of dollars. The loose punctuation should be used in ordinary descriptive writing. Formerly too many marks were used; to-day the tendency is toward the use of too few marks. Punctuation can surely not be classed among the exact sciences. It is not even an established system, for many of the rules of the teachers differ, and the practice of their pupils differs still more. Points may be omitted or inserted in a catalogue in a way that would not be tolerated in a history.

However, there are some explicit directions that may be given that all writers should follow. The points should be used to show the grammatical relation of words, and never solely to indicate rhetorical pauses in reading.

The necessity for a knowledge of correct punctuation is well illustrated by this anecdote: "The following request is said to have been made at church: 'A sailor going to sea, his wife desires the prayers of the congregation for his safety.' But, by an unhappy transposition of the comma, the note was read thus: 'A sailor going to sea his wife, desires the prayers of the congregation for his safety.' "

The marks used for punctuation are the period [.], colon [:], semicolon [;], comma [,], interrogation point [?], exclamation point [!], dash [—], parentheses (), brackets [], hyphen [-], double quotation marks [" "], single quotation marks [' '], apostrophe ['].

Period. 1. All declarative and imperative sentences, and sentences that are interrogative in form, but to which an answer is not expected, should be followed by a period; as, He has gone. Go at once. Ah! whither now are fled those dreams of happiness. The Cyprians asked me why I wept.

2. All abbreviations, unless the ellipsis of intermediate letters in the words has been indicated by using the apostrophe, should be followed by the period; 7th, 9th, 3d, etc., are not followed by the period.

3. When capitals are used for numerals, it was customary formerly to follow them by a period; e. g., Henry VIII., John IV. 3. The latest usage seems to omit the period, especially in the possessive construction; as, Henry VIII's reign.

Comma. 1. All nouns of direct address should be set off by commas; as, John, come here. I say, Mary, can you go now? Sir, I cannot do it.

2. When there are three or more parts in the subject of a sentence, and the conjunction is used between the last two only, a comma should be used after each part except the last.

Mary Lee and Laura came yesterday. As the sentence stands, you may think that there are but two persons that came yesterday; viz., Mary Lee and Laura. If the sentence is written, Mary, Lee and Laura came yesterday, then Mary may be a noun of direct address, and the boy Lee and the girl Laura came; but if it is written, Mary, Lee, and Laura came, you know that three persons came. The comma before the *and* is frequently omitted by rapid writers; but it should not be omitted in this compound construction.

3. Parenthetical or additional expressions, that is, those expressions that break the directness of the statement, require to be cut off by commas; as, Christopher Columbus, an Italian by birth, discovered America. It is mind, after all, that does the work of the world. In this sentence, 'after all' does not modify 'does,' but shows a connection between this sentence and something gone before. Another illustration would be, It was not necessary, however, for you to go.

Some of the phrases in common use that are usually set off by commas are: in short, in fact, in reality, in brief, as it happens, no doubt, in a word, to be sure, to be brief, etc. Some of the words used parenthetically, which, according to the close punctuation should be set off by commas, and, according to the loose, should not be, are: therefore, then, however, perhaps, namely, indeed, too, moreover, etc.

Most of these words named last are capable of two constructions,— they may either belong to the proposition as a whole, or to a single word

in it. It is only when used in the former sense that they require to be set off by commas; e. g., On this assistance, then, you may rely. Then I believed you, now I do not.

4. Independent adverbs at the beginning of the sentence should be set off by a comma; as, Well, I will go. Why, you may if you want to.

NOTE.— Used in this way it would be better to omit them from all sentences.

5. The nominative, the infinitive, and the participle used absolutely should be set off by commas: The wind having gone down, we may go sailing. To tell the truth, I must remain here. Generally speaking, he is a good fellow.

6. Nouns in apposition are set off by commas: George, my brother, can do it for you. We, the people of the United States, do ordain and establish this constitution.

7. If the subordinate clause in a complex sentence comes first, it should be followed by a comma: If I go, you must remain. While he stays, you must stay.

8. A series of words used in the same construction should be separated by commas; as, Ulysses was wise, eloquent, cautious, and intrepid, as was requisite in a leader of men. He stood, walked, ran, and jumped.

If the words are used in pairs, only the pairs should be separated; as, Ulysses was wise and eloquent, cautious and intrepid, as was, etc.

9. When two statements, each with its own subject, verb, and object, are put in one sentence, the comma should be used to show their distinctiveness, even when the sentence is very short; as, You may go, and I will stay.

10. Use a comma between two words in the same construction when they are differently modified; as, He sold a horse, and wagon of wood. If the comma is omitted, the horse was of wood.

11. When the subject consists of two or more nouns not joined by a conjunction, use a comma before the predicate; as, Riches, pleasures, health, become evils to those, etc.

12. A comma is put before a relative clause, when it is explanatory of the antecedent, or presents an additional thought.

But the point is omitted before a relative clause which restricts the general notion of the antecedent to a particular sense.

To make clear the difference between an additional and a restrictive clause, let us use this sentence: Her entrance was unnoticed by the officer who sat gazing into the fire. We restrict when we wish to separate one object from other objects of the same sort. If there were several officers in the room, and you wish me to know that her entrance was unnoticed by but one of them, you wish to separate or distinguish him from the others. Then the clause is used restrictively and should not be set off by a comma. But if there was but one officer in the room, you use this same clause to tell an additional fact about him; then it is used additionally and should be set off by commas.

Much confusion arises in this sort of sentence because authors on punctuation say that a descriptive or additional clause should be set off by commas. A descriptive clause may be used to express either an additional or a restrictive thought. Bring me the dress that is made of red silk. This sentence requires no comma because there are several dresses there, and I want the red silk one. Bring me the dress, which is made of red silk. Here I have used the same descriptive clause, but the use of "which" and the comma shows that that is the only dress there.

NOTE: — In all *restrictive* relative clauses the pronoun "that" should be used; and in all *additional* relative clauses use "who" when referring to people and "which" when referring to animals or inanimate objects. If writers would bear this use of these pronouns in mind, the matter of the comma would be immaterial because the pronoun would sufficiently indicate the use of the clause.

13. One good authority says do not use a comma after Whereas, It appears, etc.; Resolved, That, etc.; Ordered, That, etc. He also says, Do not use a capital after these words. Write, Resolved that women, etc.

14. When a clause is used as the subject of a verb, it should not, even though long, be followed by a comma, unless it ends with a verb; as, That the governor of this great State of Illinois should make this unworthy appeal to the passions and prejudices of the foreign-born citizens of the nation must always be a cause of mortification to every lover of his country.

The second part of the rule is illustrated by, Whatever is, is right.

15. A comma is used before a short direct quotation: He said, "I will go."

NOTE.— A colon is used before a long direct quotation.

16. The comma shows the omission of words; as, Her address is 718 Norwood Ave., Rochester, N. Y., which means *in* Rochester, *in the State of* New York. Reading maketh a full man; writing, an exact man.

NOTE.— The latest authority says omit the comma in the last sentence because no misunderstanding can arise thereby; but custom still uses it.

Semicolon. This mark is used to separate such parts of a sentence as are somewhat less closely connected than those separated by a comma.

1. When two clauses are joined by *for*, *but*, *and*, or an equivalent word, the one clause perfect in itself, and the other added as a matter of inference, contrast, or explanation,— they are separated by a semicolon: Economy is no disgrace; for it is better to live on a little than to outlive a great deal.

2. When the parts of a compound sentence, even though they are short, are not closely connected in thought, they should be separated by a semicolon; as, I live to die; you dye to live.

3. Use the semicolon to separate the parts of a compound sentence, when one or both members contain commas: Men are not judged by their looks, habits, and appearances; but by the character of their lives and conversations, and by their works.

4. If a series of expressions depend on a commencing or concluding portion of the sentence, they should be separated by a semicolon: Philosophers assert, that nature is unlimited in her operations; that she has inexhaustible treasures in reserve; that, etc. Also in such a sentence

as, If we think of glory in the field; of wisdom in the cabinet; of the purest patriotism; of the highest integrity, public and private; of morals * * * the august figure of Washington presents itself as the personation of all these ideas.

5. All of the older authorities say use a semicolon before and comma after *as, viz., to wit, namely, i. e.,* or *that is,* when they precede an example or an illustration. The latest authority says use the comma in both places. This is but another illustration of the changes in punctuation that are coming in.

Colon. 1. When a sentence is long, and one or both of the parts contain semicolons, the greater division should be marked by a colon: Art has been to me its own exceeding great reward: it has soothed my afflictions; it has refined my enjoyments; it has endeared my solitude; and it has given me the habit of wishing to discover the good and the beautiful in all that surrounds me.

2. A colon should follow a clause that is complete in itself, but is followed, without a conjunction, by some remark, inference, or illustration: Nor was the religion of the Greek drama a mere form: it was full of truth, spirit, and power.

3. A colon should be used before a long direct quotation, or a list of articles formally introduced: She finished her helpful talk with the song from "Pippa Passes":

> "The year's at the spring
> The day's at the morn;
> Morning's at seven;"
> Etc.

Will you kindly send me the following articles:

> 2 lbs. of granulated sugar,
> 1 lb. of coffee,
> Etc.

4. The words *yes* and *no* should be followed by a colon, provided the words that follow are a continuation or repetition of the question: Can these words add vigor to your hearts? Yes: they can do it; they have often done it.

5. The colon is more often used than any other mark after the salutation in a letter: My dear Sirs:

Interrogation Point. 1. An interrogation mark is placed at the end of every direct question: Will you go? He asked me, "Will you go?"

2. The mark of interrogation should not be used when it is only affirmed that a question has been asked, and the expression denoting inquiry is put in any other form than that of a direct question: I was asked if I would go to Europe next summer.

NOTE.— It should be placed inside of the quotation marks if it belongs properly to the quotation, and outside in other cases;— He asked, "Will you return by nine o'clock?" What can be more interesting than "the passing crowd"?

Exclamation Point. This point is used after any expression of strong emotion, and after interjections: Friends, countrymen, and lovers! hear me for my cause, and be silent that you may hear. The heavens and earth, O Lord! proclaim Thy boundless power. Oh! nothing is further from my thoughts than to deceive you. Oh, that all classes of society were both enlightened and virtuous!

The Marks of Parentheses. If an expression is inserted in the body of a sentence, with which it has no connection in sense or construction, it should be enclosed by the marks of parentheses. The test is, can the words to be enclosed be omitted without injury to the sense? I have clearly seen charity (if charity it may be called) insult with an air of pity. She had managed this matter so well (oh, how artful a woman she was), that my father's heart was gone before I suspected it was in danger.

Notice the use of the mark of interrogation in this sentence: "While the Christian desires the approbation of his fellow-men (and why should he not desire it?), he disdains to receive their good-will by dishonorable means."

The Dash. 1. The dash is used to show an abrupt break in a sentence; to show a suspension in the thought; or an epigrammatic turn in sentiment. Closely following came — what do you suppose? The eye of the child — who can look unmoved into that "well undefiled," in which heaven itself seems to be reflected?

2. The dash is used where there is an ellipsis of such words as, *namely, that is,* etc. To separate adjectives in apposition but closely connected. These poets — Homer and Virgil — wrote epics.

Brackets. These marks, used for nearly the same purposes as the parentheses, are usually confined to expressions inserted in or appended to a quotation, and not belonging to it. They are intended to give an explanation, to rectify a mistake, or to supply an omission; as, He had the finest head [of hair] I ever saw; * * * because the people love the principles of the Constitution [long continued applause] and to-day, etc.

Hyphen. 1. The hyphen is used in forming compound words. When each of the words of which a compound is formed retains its original accent, they should be united by a hyphen: The all′-pow′erful God; In′cense-breath′ing morn. Everlasting, notwithstanding, and a few other words are exceptions to this rule.

2. If a prefix ends in a vowel, and the word to which it is joined begins with a vowel, the hyphen, or the diæresis over the second vowel is used: co-operate or coöperate.

3. The hyphen is used to show the division of words into syllables: hy-phen.

Double and Single Quotation Marks. 1. Every direct quotation should be enclosed in double quotation marks: To me he said, "I cannot believe it is true."

2. If the thought, but not the words of another are given, quotation marks are not used: He said that he could not believe it true.

3. You may use italics, or double, or single quotation marks if you are quoting a single word or short expression. "Petticoat" (literally 'little coat'), in itself a sufficiently inoffensive term, has shown a tendency to give way to "skirt." In this illustration "petticoat" and "skirt" may be italicized and the quotation marks omitted.

4. If a quotation occurs within a quotation, enclose the second one in single quotation marks: In his letter he wrote, "If the physi-

cian sees you eat anything that is not good for you, he says, 'It is poison!'"

5. When several paragraphs are quoted, use double marks at the beginning of each paragraph, and at the end of the last paragraph only.

Apostrophe. 1. The apostrophe is used to mark the possessive case: John's.

2. To show the contraction of words and omission of letters: I'll, you'd, etc.

3. To show the clipping of words in dialect: He wa' singin' to 'em.

4. To form plurals of letters, signs, and figures: There are twenty a's on this page. Count the 2's in this sum. Your x's or 0's were not well made.

The foregoing are the generally accepted rules. It should be kept in mind, however, that we are in a stage of transition in regard to capitalization and punctuation, there being a marked tendency toward simplification.

RIGHT USE OF SOME COMMON WORDS

A. Use the article before both nouns or both adjectives when they denote different objects. "*A* coat and *a* hat" not "*a* coat and hat." "*A* black and white dress" (one dress); "*a* black and *a* white dress" (two dresses).

Abortive. A ridiculous perversion of this word is creeping into use through the newspapers. "A lad was yesterday caught in the act of *abortively* appropriating a pair of shoes." That is *abortive* that is untimely in its birth; and, by figure of speech anything is abortive which is brought out before it is well matured. *Abortive* should not be used indiscriminately of failure.

Accept of. Never use the preposition after this verb. We *accept* invitations, presents, hospitality, and the like.

Accept and Except. *Accept* means to take when offered; *except* means to leave out, to exclude. I *accepted* the gift. All *except* two will go.

Accord. To *accord* means to render or bestow upon another, as honor: therefore one should never say, "The information he desired was *accorded* him."

Administer. The man died from blows *administered* by the policeman. Oaths, medicine, affairs of state are *administered.* Blows are *dealt.*

Adopt. This word is often used instead of *to decide upon* and *to take;* thus, "The measures *adopted* by Congress as the result of this inquiry will be productive of good." Better, "The measures *decided upon*, etc." Instead of "What course shall you *adopt* to get your pay?" say, "What course shall you *take*, etc.?" In the newspapers one may see "Wanted to *adopt* — A beautiful female infant." The advertisers meant to say that they wanted the child mentioned in their advertisement *adopted.* The word is correctly used in "The measures proposed by the senator were *adopted* at once."

Affect. See effect.

Aggravate. This word is often used when the speaker means to provoke, irritate, or anger. Thus, "It *aggravates* (provokes) me to be continually found fault with"; "He is easily *aggravated* (irritated)."

Agree. Do not use *agree* for *admit.* "That a flat brick façade pierced by a few windows does not make an inspiring picture, all will *agree.*" Say, "all will *admit.*"

Agriculturist is to be preferred to *agriculturalist.* The same is true of *conversationist.*

Ain't. This is not a contraction, and cannot take the place of *I'm not.*

Alike. This word should not be used with *both*, nor with *both just*, as in "These hats are both *alike*" or "*both just alike*"; say, "These hats are *alike.*"

All of. The *of* is a superfluity. "I have them *all*," not "I have *all of* them"; "Take it *all*," not "Take *all of* it."

All Over. *All* should modify the noun, and not the prepositional phrase in "The disease spread *over all* the country," not "*all over* the country."

Allege. Do not use this word as a synonym for *say* or *tell*, as in "He *alleges* that the engine ran sixty miles an hour." Instead, "He *says* or *tells* us that, etc."

Allow. This word is frequently misused in the West and the South for *think; to be of opinion; to admit;* as, "He *allows* his horse can beat yours." Instead of this say, "He *thinks* or *is of the opinion* that, etc."

Almost — Nearly. These two adverbs should not be used indiscriminately. *Almost* regards the ending as an act; *nearly*, its beginning. A man that receives an injury so severe that he comes off with barely his life is *almost* killed; a man that escapes what would have killed him is *nearly* killed. These words are correctly used in "I am *almost* done with my work"; "I *nearly* ran over the child."

Alone — Only. That is *alone* that is unaccompanied; that is *only*, of which there is no other. "Virtue *only* makes us happy" means that nothing else can do it. If we say, "Virtue *alone* makes us happy," we mean that virtue unaided makes us happy. "This means of locomotion is used by man *only.*"

Alternative. Do not use this word when more than two things are referred to. You may have the choice of three courses, not of three *alternatives.*

Always. Often used redundantly. "Whenever I see her, I think of mother," not "I *always* think of mother."

Ameliorated. "Her troubles are greatly *ameliorated*" should be "are *lessened.*"

Among. "He was there *among* the rest" should be "*with* the rest."

Among One Another. "They exchanged votes *among one another*" should be "*with one another.*"

Amount. "A surprising *amount* of perfection has been reached" should be "A surprising *degree* of perfection, etc."

And. Do not use *and* in place of the particle *to.* "Come *to* see me," not "Come *and* see me."

And should never introduce a relative clause unless it joins it to a coördinate relative clause. "I have a dress worn by my aunt, *and which* is forty-five years old." In this sentence leave out *and* and use *that* instead of *which.* (See Rule 12 for the comma, under Punctuation.)

Antecedents. This word used as a sub-

stantive means those persons or things which have preceded any person or thing of the same kind in a certain position. Thus the *antecedents* of General Sherman in the army of the United States are General Washington, General Scott, and General Grant. To call the course of a man's life until the present moment *his antecedents* is nearly as absurd a misuse of language as can be compassed. If, instead of "What do you know of his *antecedents?*" it is asked "What do you know of his *previous life?*" or better, "What do you know of *his past?*" there is sense instead of nonsense, and the purpose of the question is fully conveyed.

Anticipate. This word is often used in place of *expect*, or *foresee*. *Anticipate* means to go before, so as to preclude another; to get the start of, or to get ahead of; to enjoy, possess, or suffer, in expectation. It is therefore misused in "By this means it is *anticipated* that the time for Europe will be lessened two days"; and in "Her death is hourly *anticipated*." It is correctly used in "If not *anticipated*, I shall hereafter make an attempt at a magazine paper on the Philosophy of Point"; and in "Why should we *anticipate* our sorrows? 'Tis like those who die through fear of death." "Were Greeley's movements those that it was *anticipated* (*expected*) he would make?"

Anxious is often used where *desirous* would better express the meaning. *Anxious* means full of anxiety; suffering from suspense or uncertainty; concerned about the future. "I am not *anxious* to get to Canada" should be "I am not *desirous*, etc." "I am still more *anxious* to have you live in New York" should be "still more *desirous*."

Anyhow is permissible in conversation, though incompatible with dignified diction, in which such phrases as "*in any event*," "*be that as it may*," "*at any rate*," and the like are to be preferred.

Appeals is used in this sentence instead of *drafts:* "There are constant *appeals* upon the resources of the government."

Approach is sometimes improperly used in the sense of *address, petition, appeal to;* thus, "The teachers have *approached* the Educational Department in some matters that concern their interest."

Apt is often misused for *likely*, and sometimes for *liable*. "What is he *apt* (*likely*) to be doing?" "Where shall I be *apt* (*likely*) to find him?" "If you go there, you will be *apt* (*liable*) to get into trouble."

Aren't in colloquial use is admissible, but *are you not* is preferable. I'll, I'm, etc., are good form because they are contractions of the verb only.

As—as; So—as. Use the former in affirmative propositions, and the latter in negative propositions. He is *as* tall *as* you are. He was never *so* happy *as* now.

Aside is sometimes misused for *apart*. "Words have a potency of association *aside* (*apart*) from their significance as representative signs."

As Though is often used for *as if*. In the sentence, "The child looked *as though* her hair had never been combed," supply the elliptical clause, and you will see the need of using *if* in place of *though*. "The child looked *as* (she would look) *though* her hair, etc." "The woman looks *as* (she would look) *though* (*if*) she were tired."

At. "They do things differently *in* (not *at*) the South."

At all is superfluous in such sentences as, "She had no friends *at all*"; "I do not want any *at all*"; "If she had any desire *at all* to see, she would have waited."

At Best. At Worst. These phrases require the article or a possessive pronoun used in them. Always say, "I did *the* best I could," etc. "He was at *his* worst."

Audience is often used in place of *spectators*. The *audience* hears; the *spectators* see: therefore say, "The *spectators* at the ball game," not "the *audience*." "The *audience* at the concert, etc."

Avenge and Revenge. We *avenge* the wrong done to others, and *revenge* the wrong done to ourselves.

Avoid is often used in the place of *prevent* or *hinder;* as, "There shall be nothing lost if I can *avoid* it." It should be "if I can *prevent* it."

Awful is too frequently used as an intensive. Avoid this use of it; e. g., I was *awfully* glad to see you.

A While Since should be *a while ago*.

Bad Cold. Say a *slight* or a *severe* cold. Colds are never *good*.

Badly is inelegantly used for *very much*. "I shall miss you *very much*," not "I shall miss you *badly*."

Balance means the excess of one thing over another, and should be used in this sense only: hence it is improper to talk about the *balance* of the edition. In this case say *rest* or *remainder*. You may speak of the *balance* of the account.

Beastly. One may properly say "*beastly* drunk" but not "*beastly* weather."

Before is sometimes used in place of *rather than*. "War *before* peace at that price" should be "War *rather than* peace at that price."

Between in its literal sense applies to only two objects; as, "The candy was divided *between* the two boys, or *among* the four children." When used of more than two objects, it brings them severally and individually into the relation expressed; as, "a treaty *between* three powers."

When used to express contrast—"The three boys are brothers, but there is a great difference *between* them."

Black—Blacken. We *black* stoves and *blacken* reputations.

Blame it on is a vulgarism used in place of *accuses* or *suspects*. "He *blames it on* his brother" should be "He *suspects* or *accuses* his brother."

Both is often used in such sentences as "They are *both* alike"; "They *both* ran away from school," etc. Omit *both* from each sentence. It is incorrect in "He lost all his fruit — *both* plums, peaches, and pears."

Bound should not be made to do service for *doomed, determined, resolved, certain*, or *will be compelled*. "He is *bound* to do it" should be "He is *certain, resolved*, or *determined* to do it." "He is *bound* to fail" should be "He is *doomed, destined*, or *sure* to fail."

But is often misused. "I do not doubt *but*

he will be here" should read "doubt *that*." "I should not wonder *but* he will succeed" should read "wonder *if*." In "I have no doubt *but* that he will go" suppress *but*. Change *but* to *than* in "The mind no sooner entertains any proposition *but* it presently hastens, etc."

But is correctly used in "I have no fear *but* that she will succeed," which means a very different thing from "I have no fear that she will succeed."

By should be *with* in "The room was filled *by* ladies and children"; also in "The ball ended *by* a waltz." There is a difference of meaning in these two sentences: "I know a man *by* the name of Brown," and "I know a man *of* the name of Brown." Which do you mean?

Calamity means in an abstract sense source of misery or of loss, but it is often misused to mean *loss*. *Calamities* are causes, *losses* are results. "The fire caused a great *calamity*" should read "caused a great *loss*." It is correctly used in "The falling of the building, which caused the death of two firemen, was a great *calamity*."

Calculate is wrongly used in "He *calculates* to get off to-morrow." "The sentence should read "*expects, purposes*, or *intends* to get off."

Caliber is often misused for *order*, as in "His work is of a higher *caliber* than hers is."

Capable is often used in place of susceptible. "We need more articles *capable* of illustration" should read "*susceptible* of illustration."

Condone is sometimes misused for *compensate* and *atone for*. It means to pardon, to forgive. "The abolition of the income tax more than *condones* for the turmoil of an election" should read "*atones for*, etc."

Congregate Together. In "A large number of people *congregated together* in the hall," omit the word *together*, because to *congregate*, unaided, means to collect, or gather together.

Consequence is sometimes used instead of *importance* or *moment;* as, "They were all persons of more or less *consequence*" should be "of more or less *importance*." "It is a matter of no *consequence*" should be "of no *moment*."

Consider means to meditate, to deliberate, to reflect, to revolve in the mind; and yet it is made to do service for *think, suppose*, and *regard*. Thus: "I *consider* his course very unjustifiable" should read "*think* his course." "I have always *considered* it my duty, etc." should read "*thought* it my duty."

Conversationist. See Agriculturist.

Co-operate Together means *co-operate* or *operate together*, and can mean no more, which makes it plain that the *co* or the *together* serves no purpose — is a superfluity.

Creditable should not be used instead of *credible*. Say, "two *credible* witnesses," not "*creditable* witnesses." Say, "I am *credibly* informed," not "*creditably* informed."

Crushed out. The rebellion was finally *crushed out*. Out of what? We may crush the life out of a man, or crush a man to death, and crush — not *crush out* — a rebellion.

Dandy. This adjective belongs properly to the "gushers." It is their sole adjective. He is a *dandy* man; The refreshments were *dandy*; The sunset was *dandy*.

Dangerous is misused in the sentence "He is *dangerous*," when we mean "He is *sick*." Say, "He is not *in danger*," or "not *dangerously* ill."

Dearest. Do not begin a letter "My *dearest* John," unless he is the dearest of three or more Johns with whom you are acquainted.

Deceiving should not be used in place of *trying to deceive*. It is when we do not suspect deception that we are deceived. "He is *deceiving* me" should read "He is *trying to deceive* me."

Deprecate means to endeavor to avert by prayer, and so should not be used in the sense of *disapprove, censure*, or *condemn*. Do not say, "He *deprecates* the whole proceeding."

Desperately. Do not say, "He was *desperately* wounded," but "*badly* wounded."

Despite should not be, as it often is, preceeded by *in*, and followed by *of*. Say, "*Despite* all our efforts," not "*In despite of* all our efforts."

Detect is often misused for *distinguish, recognize, discover, see*. "I did not *detect* anything wrong in his appearance" should be "I did not *discover* anything wrong in his appearance." "I could not *detect* any difference between them" should be "I could not *see* any difference between them."

Die with — from. Man and brute *die of*, and not *with* or *from*, fevers, old age, and so on.

Differ—Different. The prepositions *from* and *with* are both used with the verb *differ*, but the weight of authority is on the side of using *from*. *Different to* is sometimes used instead of *different from;* but it is incorrect. "She is *different than* you would expect her to be" should be "*different from* what you would expect her to be." The word *than* implies comparison and demands the comparative degree. Different is in no way a comparative. We say greater *than* but different *from*. We may differ *with* a person, but things differ *from* one another.

Dock—Wharf. A *dry dock* is a place where vessels are drawn out of the water for repairs. A *wet dock* is a place where vessels are kept afloat at a certain level, while they are being loaded or unloaded. A *wharf* is a sort of quay built by the side of the water. Vessels lie at *wharfs* and *piers*, not at *docks*.

Don't. This is the contraction for *do not*, and not for *does not*: therefore do not say, "He *don't* want it."

Each other is properly applied to two only; *one another* must be used when the number considered exceeds two. We say, "Great authors address themselves to *one another*," unless we refer to only two authors.

Effect — Affect. *Effect* means to bring about; as, "to *effect* a reform." *Affect* means to influence; as, "His ideas will *affect* the character of the reform."

Elegant. "This is a *fine* morning," not "This is an *elegant* morning."

Emigrant — Immigrant. These two words are not infrequently confounded. *Emigrants* are persons going out of the country; *immigrants* are persons coming into the country.

Ending of Sentences. Sentences ending with prepositions are always more terse, always quite as idiomatic, and always simpler,

than they would be if differently constructed. "The man I gave it *to*," not "The man to whom I gave it." "The verb it belongs *to*," not "The verb to which it belongs," etc.

Enjoy Bad Health. Does anyone *enjoy bad health?* Say, "He is in feeble or delicate health."

Equally as Well. *As well*, or *equally well*, expresses quite as much as *equally as well.*

Everlastingly means perpetually, eternally, forever. Do not say, "The horse was *everlastingly* running away."

Every. "*Every* one of us has this in common" should be "*All* of us have this in common."

Except. See Accept.

Excessively. Say, "The weather is very warm," not "*excessively* hot." "My friend was *exceedingly* popular," not "*excessively* popular."

Excise Laws. An *excise* is a tax levied on domestic products; it is an internal revenue tax. New York has *license* laws and *license* commissioners, and properly they should be so called. New York's *excise* laws, so called, are properly *license* laws.

Exercise—Exorcise. Do not use these words interchangeably. *Exercise* means a putting into use, action, or practice; *exorcise* to cast or drive out (an evil spirit), by religious or magical formulas or ceremonies.

Expect. We cannot *expect* backwards. "I *expect* you thought I would come to see you yesterday" should be "I *suppose*, etc." "I *expect* you know all about it" should be "I *suspect* you know, etc."

Experience. "We *experienced* great hardships" should read "We *suffered.*"

Extend. "They *showed* me every kindness" is better than "They *extended* every kindness to me."

Farther—Further. Use *farther* for all distances that can be measured either great or small. Use *further* in all other sentences.

Female applies to animals, as well as to women, and so should not be used in such sentences as, "With the dislike not unnatural to *females*, etc."

Fewer—Less. *Fewer* refers to number, and *less* to quantity. Instead of "There were not *less* than twenty scholars absent," we should say, "There were not *fewer* than twenty scholars absent." Instead of "There were not *less* than ten chapters in the book," we should say, "There were not *fewer* than ten chapters in the book."

Find. "I think the men *find* everything" should be "*supply* everything."

Fixed. This word is often misused for *arranged;* as, "I must *fix* the books." "Who *fixed* the dishes on the shelves?" It is vulgarly used thus: "I will *fix* him." "The jury was *fixed.*" "You must *fix up*, if you go." "Your affairs are in a bad *fix.*"

Former—Latter. The less the writer uses these words the better. In the interest of force and clearness their use should be studiously avoided. It is nearly always better to repeat the noun. This avoids the reader's going back to see which is *former* and which is *latter.*

Got—Have. If a man inherits a fortune, you say he *has* money; if he obtains money through his own effort, you say "He has *gotten* money." "He *has* books" means merely that he *possesses* them; "He has *gotten* his books" means that he has *obtained* them through effort. *Have* shows simple possession; *got* shows possession plus the effort to obtain the thing.

Had Ought. This expression is incorrect because *had* is used with the past participle of the principal verb to form the compound tense. *Ought* is a defective verb and has no participle: therefore *ought* cannot be used with *had.*

Hain't is a very objectionable vulgarism.

Handy should not be used in the sense, *near, near by, close at hand;* as, "The store is *handy.*" Say, "The store is *near.*"

Have to Have or Had to Have. Better than "I *have to have* my work done by three o'clock" is "I *should, must*, or *ought* to have my work, etc." *Got to get* is another unpleasant repetition.

Hence is superfluous in the sentence, "It will be many years *hence*, we apprehend, before he returns."

How. "I have heard *how*, in Italy, one is beset on all sides by beggars," should read "I have heard *that*, in Italy, etc."

However. Use *how*, not *however*, in such a sentence as, "*However* could you tell such a story!"

If. Use *whether* in place of *if* in these sentences: "I doubt *if* the book will suit you"; "I wonder *if* he has come."

Ill—Sick. Almost all British speakers and writers limit the meaning of sick to the expression of qualmishness, sickness at the stomach, nausea, and lay the proper burden of the adjective *sick* upon the word *ill.* They sneer at us for not joining in the robbery and the imposition. Richard Grant White says, "I was present once when a British merchant, receiving in his own house a Yankee youth at a little party, said, in a tone that attracted the attention of the whole room, 'Good evening! We haven't seen you for a long while. Have you been *seeck*' (the sneer prolonged the word), 'as you say in your country?' 'No, thank you,' said the other, frankly and promptly, 'I've been *hill*, as they say in yours.'"

In—Into. *In* is sometimes an adverb and sometimes a preposition. As an adverb it is correctly used in these sentences: "Come *in*"; "Go *in.*" As a preposition *in* should be used with verbs of rest and *into* with verbs of motion. These words are correctly used in: "He sat *in* his chair"; "He ran *into* the house."

Incite—Insight. Incite means to rouse to a particular action; as, "The mob was *incited* to set the house on fire." Insight is a noun and means the power or faculty of immediate and acute perception or understanding; as, "The strongest *insight* we obtain into nature is that which we receive, etc."

In Our Midst is not according to the genius of our language. It should be written *in the midst of us.* Also *in the midst of them*, and not *in their midst.*

Inaugurate should not be used in place of *begin* for the simple things of daily life. It is a big word misused.

Individual should not be used for *person.*

The word is used correctly in "Changes both in *individuals* and communities are often produced by trifles"; incorrectly in "That *individual* left here several hours ago."

Innumerable Number should not be used. Say instead *innumerable times* or *numberless times.*

In so far as. The *in* is superfluous in this phrase. "*In so far as* I know" should be "*So far as* I know."

Intend is often misused for *purpose.* "I *intend* to attend college this winter" should read "I *purpose* to attend college this winter." We *purpose* seriously; we *intend* vaguely.

Just Going to Go is better expressed by *just about to go. Just going to say* by *just about to say,* etc., or by *about to go.*

Just Next. Doesn't "He was *next* me" express as much as "He was *just next* me"?

Kids. It is better usage to speak of one's *gloves* than of one's *kids.* Silk gloves are not *silks.*

Kind of. "What *kind of* man is he?" is correct. "What kind of *a* man is he?" is incorrect.

Lady. Address a stranger as *madam,* and not as *lady.* People of culture and refinement will never say, "She is a fine *lady,*" a "clever *lady,*" etc. Ladies say, "The *women* of America," "*women's* apparel." In similar instances *men* should be used in place of *gentlemen.*

Lie—Lay. By a vulgar error these verbs have been so confounded as to deserve some notice. To *lie* is neuter, and designates a state: to *lay* is active, and denotes an action on an object; it is properly to cause to *lie.* "A thing *lies* on the table"; "Some one *lays* it on the table"; "He *lies* with his fathers"; "They *laid* him with his fathers." In the same manner, when used idiomatically, we say, "A thing *lies* by us until we bring it into use"; "We *lay* it by for some future purpose."

The confusion arises probably from the fact that *lay* appears in both verbs. The words are correctly used in the following sentences:

I *lay* myself upon the bed (action). I *lie* upon the bed (rest).

I *laid* myself upon the bed (action). I *lay* upon the bed (rest).

I *have laid* myself upon the bed (action). I *have lain* upon the bed (rest).

A hen *lays* an egg (action). A ship *lies* at the wharf (rest).

The murdered Lincoln *lay* in state (rest); The people *laid* the crime upon the rebels (action).

Learn—Teach. The uncultured often change these verbs. To *teach* is to give instruction; to *learn* is to take instruction. "I will *learn* if you will *teach* me" is correct.

Leave. The vulgar say, "*Leave* me be"; "*Leave* it alone"; "*Leave* me see it." Of course *let* is the verb to be used here.

Lend. Frequently confused with *loan. Lend* is a verb, *loan* a noun. A *loan* is the completed act of lending, or is the thing lent. "Friends, Romans, Countrymen, *lend* me your ears." "The Anglo-French *loan* was negotiated in New York."

Reference to best authorities invariably shows that *loan* as a verb is objectionable, and, though commonly used in the United States, is not approved except perhaps in financial terms.

Less. See fewer.

Like—Love. We *like* acquaintances, horses, flowers, pictures, etc. We *love* wives, sweethearts, kinsmen, truth, justice, and country.

Like—As. "He looks *like* you." This sentence may mean either "He looks as you look," or "He resembles you in his appearance." The sentence should read "He looks *as* you look," or "He is *like* you." *Like* is followed by an object only, and does not admit of a verb in the same construction. *As* must be followed by a verb expressed or understood.

Like is sometimes improperly used in the sense of *as though,* thus: "It looks *like* it was caused by fire."

Loan. See Lend.

Lot—Lots. Very inelegantly used for *a great many, a great deal:* "He had a *lot* of money left him"; "*Lots* of trouble came her way."

Luncheon is a more elegant form than *lunch,* especially in the sense of a formal repast.

Make a Visit. We do not *make* visits, we *pay* them.

May and *can* are often confused. *May* expresses permission or probability; *can* expresses power or ability. "*May* I go?" asks, for permission. "*Can* he do this?" questions his ability to do it. Similar distinction should be made between *might* and *could.*

Middling. This word is an adjective, not an adverb; hence we cannot say a thing is *middling* good, or that a thing was *middling* well done. "He resided in a town of *middling* size" is correct.

Mind is often misused for *obey.* To *mind* is to attend to a thing so it will not be forgotten. "Will you *obey* me?" not "Will you *mind* me?"

Mistaken. "If I *am not mistaken*" should be "If I *mistake not.*" You *are mistaken* is a correct form of expression; it means you have been led into error.

Most. This word should usually be omitted from conversation and writing. *Very* is the better word in almost every instance. "It would *most* (*very*) seriously affect us." This word is often misused for *almost.* "He comes here *most* every day" should be "He comes here *almost* every day."

Mutual. This word is often confounded with *common.* These words are correctly used in these sentences: "Our former correspondence was renewed, with the most hearty expression of *mutual* good will." "We have two friends in *common.*" "They met at the house of a *common* friend." "Their *mutual* dislike (not dislike *for each other*) was well known."

Myself. This pronoun should be used only where increased emphasis is aimed at, as in "I will do it *myself,*" etc. It is incorrect to say, "Mary and *myself* were satisfied."

Nicely. This word is frequently misused in the attempt to make it do service for *well,* in this wise: "How do you do?" "*Nicely.*" "How are you?" "*Nicely.*"

Numerous is often used in place of *large* or *many.* "We have *numerous* acquaintances," should be "We have *many* acquaintances."

Of All Others. "*Of all others* she is the last one you would expect." Is she one of the *others?* If not, why class her as such?

Of Any is often used in place of *all.* "She is the smallest *of any* I have known" should be "the smallest *of all,* etc."

Off of. The latter of these words should be omitted from the sentence. Say, "The pears fell *off* the tree," not "The pears fell *off of* the tree."

On to. "We get *on* a horse, *on* a chair," etc., not "*on to.*"

One should be followed by *one* and not by *he.* "Can *one* visit *his* friends there?" should be "Can *one* visit *one's* friends there?"

Only. This word is probably more often misplaced than any other word in the language. "He *only* sang for us." "He sang *only* for us." The first means that he *sang,* but did not *play* for us; the second one means he sang for *us* and *not for any one else.* A change in the position of *only* in almost any sentence will effect the meaning of the sentence the same as in this illustration.

Other. This word should not be omitted in sentences like the following: "He said that his wife was dressed better than any (*other*) woman there."

Ought—Should. *Ought* is the stronger term. "What we *ought* to do, we are morally bound to do." "We *ought* to be truthful and honest, and *should* be respectful to our elders."

Over. Do not use *over* in the sense of *more than.* "It is *over* a yard long" should read "*more than* a yard long."

Own is often misused in place of *confess.* "I *own* I saw her do it" should be "I *confess* I saw her do it."

Pair. "A new pair of shoes" should be "a pair of new shoes." The *shoes* are new, not the *pair.*

Pants is a vulgar abbreviation for pantaloons.

Party is often used by the ignorant where good taste would use the word *person.* Not "the *party* that I saw," but "the *person.*"

Past. This word is incorrectly used for *last* in such expressions as, "The *past* three days," "The *past* year."

Pell-mell means mixed or mingled together. It cannot properly be applied to an individual. "He rushed *pell-mell* into my arms" would be to say "He rushed into my arms mixed together."

Per. *Per* day, *per* man, *per* pound, etc., are better expressed by the plain English *a* day, *a* man, *a* pound, etc. Ten dollars *per* is the slang for ten dollars a week, a month, apiece, etc.

Perform. The short word *play* is to be preferred in "She *performs* on the piano beautifully." This sentence would be improved by using *well* or *admirably* in place of *beautifully.*

Peruse is often used when the word *read* would be in better taste.

Place is misused for *where* in "Let's go some *place.*" "I want to go some *place.*"

Polite should not be used for *kind* before the word invitation.

Posted is incorrectly used for *inform* in such expressions as, "The man *posted* me"; "If I had been better *posted.*"

Prejudice should not be used in a favorable sense. You cannot say "The man is *prejudiced* in his favor." We should say, "He is *prepossessed* in his favor."

Prepositions. If you are in doubt what preposition to use after any verb, or with any noun, always consult the dictionary.

Preventive and not **Preventative.** This adjective, in common with *subsequent, independent, relative, antecedent,* and possibly others, is often incorrectly used as an adverb. "*Previous* to our visit" should be "*previously* to our visit." "*Independent* of this reason" should be "*independently* of this reason."

Procure is often made to do the work of the Anglo-Saxon word *get.* "Where did you *procure* it?" should be "Where did you *get* it?"

Promise often does duty for *assure.* "I *promise* you I was agreeably surprised" should be "I *assure* you, etc."

Providing should be *provided* in such sentences as, "He offered to provide a stable and supply the necessities of the company *providing* the control of the board should be turned over to him."

Purchase—Buy. Use *purchase* in reference to great matters, as, "the Louisiana purchase"; use *buy* with reference to ordinary matters, as, "He bought a book, his dinner, etc."

Railroad Depot. A *depot* is properly a place where goods or stores of any kind are kept; and the places at which the trains of a railroad —or, better, railway— stop for passengers, or the points they start from or arrive at, are properly the *stations.*

Raise—Rear. We *rear* children and *raise* animals. *Raised* the rent is incorrectly used for *increased* the rent.

Real should not be used for *very* in such phrases as *real* pretty, *real* nice, *real* angry.

Resurrect is still marked colloquial in the recent dictionaries.

Retire. It is only the over nice that *retire* in the sense of *go to bed.*

Sunday is the first day of the week, and **Sabbath** is the last day of the week.

Saw is sometimes carelessly used for *have seen.* "I never *saw* anything like it before" should be "I *have* never *seen* anything like it until now." We say properly, "I never *saw* anything like it when I was in Paris."

Set—Sit. These verbs, like *lie* and *lay,* are often confounded in their use. To *set* is transitive; to *sit* is intransitive. "I *set* the hen, but she *sits* on her eggs." Incorrectly we speak of a *setting* hen, instead of a *sitting* hen. In Matthew, it was prophesied that Christ should come "*sitting* upon an ass" and, therefore, His disciples took a colt and "they *set* Him thereon." The verb is correctly used in these sentences: "My dress *sits* well"; "We will *sit* up," that is, will not go to bed; "Congress *sits.*" "We *set* down figures," but "We *sit* down on the ground."

An apparent contradiction is found in the sentence, "The sun *sets*"; but the verb *sets* in this sentence has a different origin from the verb *set* that we have been discussing. Long ago they used to say, "The sun *settles*"; but *settle* has been shortened to *set.*

Shall—Will. The radical signification of *will* is purpose, intention, determination; that of *shall* is obligation. I *will* do means I purpose doing — I am determined to do. I *shall* do means, radically, I ought to do; and as a man is supposed to do that which he ought to do, I *shall* do came to mean, I am about doing — to be, in fact, a mere announcement of future action, more or less remote. Always keep in mind that I *shall*, you *will*, and he *will*, are the forms of the future, and that I *will*, you *shall*, and he *shall*, imply volition on the part of the speaker. *Will* and *shall* in the first person are properly used in the following quotations from "The Absentee," one of Miss Edgeworth's novels: — "Gone! Forever gone from me," said Lord Colambre, as the carriage drove away. "Never *shall* I see her more — never *will* I see her more, till she is married."

"We *will* do our best to make you happy, and hope we *shall* succeed."

They are also used properly in "I *shall* be drowned"; "We *shall* have to go"; "Is the time coming when we *shall* desert Thackeray?"

These two words are coming more and more to be used interchangeably, so that one authority says there is no distinction to be made in their use; but this is not yet true. There is determination expressed in *shall* as well as in *will*. Suppose you had put a book upon the table, and had told me not to take it from the table, not to read it. I might say, "I *shall* go to the table; I *shall* take the book; and I *will* read it." *Shall* here indicates a future action with intention added to the thought; and *will* expresses determination. "I *will* go to the table for supper" indicates that you have been told not to go to the table, but that you will go in spite of this prohibition; while "I *shall* go to the table" indicates only futurity of action. Where there is nothing to rouse the will or to show a prohibition, *shall* is often used interchangeably with *will*, as in "*Will* you come to the table?" "Yes, I *will* come to the table," in which sentence *will* expresses futurity, and not determination.

You *shall* do it shows intention on the part of the speaker to make the other person do his will, and not his own will. "You *will* do it" usually shows simple futurity. Still, in the case of the child and its mother, the child says, "I *won't* do it!" and the mother puts her will into operation and says, "You *will* do it," meaning I *will* that you will to do it.

"He *shall* do it" and "He *will* do it" follow the same rules as the second person.

The words are incorrectly used in "*Will* I cut myself?" "I *will* drown, and nobody *shall* help me."

Will cannot be used interrogatively in the first person singular or plural, as can be seen by the sentence, "*Will* I put some more coal on the fire?"

To determine whether to use *would* or *should*, express your thought, whenever possible, in the present tense, and then use *would* for *will* and *should* for *shall*. These words are used correctly in the following sentences: "I *would* come to you if I could." "I *should* have been sorry if I had gone." "I *would* I were there." "I *should* go hunting to-day if the weather were good." "I *should* prefer to hear the music."

Sick — Ill. See Ill.

Since when should not be used for *since that time*, or *since what time*, according to the meaning.

Smell of. We *smell* the rose, not *smell of* it.

Splendid. *Splendid*, *awful*, and *dandy* seem to be about the only adjectives some of our superlative young women have in their vocabularies.

Standpoint. This idea is better expressed by *view point* or *point of view*.

Stop for *stay* is a Briticism. To *stop* is to arrest motion; to *stay* is to remain where motion is arrested. We may *stop* at a hotel; but how long we *stay* depends upon circumstances.

Storm. To a *storm* a violent commotion of the atmosphere is indispensable; so say *rains* or *snows*, unless it really *storms*.

Street. We live *in* not *on* a street. Things occur *in* not *on* a street.

Stricken is used when misfortune is implied; as, "He was *stricken* with death." *Struck* is used in all other cases; as, "He was *struck* by a stone."

Such. "I have never seen *such a small* man" should be "I have never seen *so small a* man," as may be seen by transposing the words of the first sentence which then becomes "I have never seen a man such small."

Such a Pretty, Such a Lovely, are incorrect, and should be *so* pretty, *so* lovely.

Sure. "He will *surely* be here," not "He will be here *sure*."

Sustain. We do not *sustain* injuries; we *receive* them.

Teach. See Learn.

That. This word is not an adverb, and so cannot modify an adjective; so, *that* good, *that* worthy, etc., should be *so* good, *so* worthy etc.

The, like *a*, should be used before both nouns or both adjectives when they denote different objects. "*The* fish and monkey" should be "*the* fish and *the* monkey"; "*the* secretary and treasurer" (if one man), "*the* secretary and *the* treasurer" (if two men).

The should be used before Reverend, Honorable, etc. *The* Reverend James Smith, D. D.

Thence. Do not use *thence* with the preposition *from*. "He came *thence*" is correct.

Think for. "He hears more than you *think for*" is wrong. Omit the *for*.

Those Kind. "*That* kind of shoes is good," not "*those* kind." "*This* sort of people (not *these* sort) will suit you."

To. Never say, "She was *to* my house yesterday." Use *at* in place of *to*.

Try. We *make* experiments, not *try* them.

Twice Over. The *over* serves no purpose in "He said it *twice over* in different ways."

Under the Circumstances. Better *in the circumstances*.

Universally — All. "He was *universally* praised by *all* who heard him" is better expressed by "He was *universally* praised," or "He was praised by *all* who heard him."

Upon — On. We call *on* persons, and speak *on* subjects, and stand *upon* the table.

Use to. *Use to* should be *used to.* "We *used to* live there" is correct.

Vocation — Avocation. A man's *vocation* is his profession, his calling, his business; and his *avocations* are the things that occupy him incidentally. Miss Brown's *vocation* is teaching; her *avocations* are embroidering and painting.

Ways. Wrongly used for *way;* as, "The house is a long *ways* off" should be "*way* off."

Well — Why. These two words are used by Americans in almost every sentence. Unless they are absolutely necessary in a sentence leave them out.

Wharf. See Dock.

What. "He would not think but *what* I said it" should be "but *that.*"

Whence. "*Whence* came ye?" not "*From whence* came ye?" *Whence* means from what place, source, or cause.

Whole of. "*All* of the school," not "the *whole* of the school."

Widow Woman. Are not *widows* always women? Another error of this sort is *brother men.*

Without is a preposition and should not take the place of the connective *unless;* as, "I shall not go *without* my father consents" should read "*unless* my father consents," or "*without* my father's consent." In this last expression *without* is a preposition.

Worst Kind. A vulgarism we sometimes hear used in the sense of *very much.* "I want to go the *worst kind.*"

Worst Way. This belongs in the same category with *worst kind.*

FORMS OF LANGUAGE COMPOSITION

The following table includes the principal forms of language composition:—

I. PROSE.
- (1) NARRATION.— Letters, journals, memoirs, biographies, history, travel, news, fiction.
- (2) DESCRIPTION.— Descriptions of external objects, of character and its development, of intellectual processes.
- (3) EXPOSITION.— Essays, treatises, editorials, reviews, criticism.
- (4) ARGUMENT.— Argumentative essays, debates, briefs, etc.
- (5) PERSUASION OR ORATORY.— Orations, addresses, lectures, sermons.

II. POETRY.
- (1) EPIC AND NARRATIVE POETRY.— The great epics, metrical romances, metrical tales, ballads, pastorals, idylls, etc.
- (2) DRAMATIC (including all narrative poetry which presents actors as speaking and acting for themselves).— Tragedy, comedy, farce, opera, melodrama, mask, interlude, etc.
- (3) LYRIC.— Odes, sacred and secular songs, elegy, sonnets, simple lyrics.
- (4) DIDACTIC.— Moral essays in verse, satiric poetry, etc.

It is the object of words to convey thought; but in order to present connected thought, words must be properly arranged with a definite end in view. Such an arrangement of words is called a language composition. There are two types of composition, prose and poetry. Prose is the plain language of every-day speech in distinction from the more emotional and artistic language of poetry.

The chief varieties of prose composition are: narration, description, exposition, argument, persuasion.

Narration presents events in sequence of time, it presents a story; description paints a picture; exposition defines a term or explains a proposition; argument establishes the truth or falsity of a statement; persuasion arouses the emotions, and influences the will. Narration presents events with special reference to time and place and persons, with their attendant motives and circumstances. It is the aim of narration to make the reader an eye-witness of the events related.

Under narration may be classed letters, journals, memoirs, biographies, history, travel, news, fiction, and that great body of literature comprehended under the term "stories."

The sequence of events in narration may be with or without plot. If it be simply a sequence of time, then the narration is said to be without plot, as in letters, diaries, news of the day, journals, memoirs, biographies; but if there be a subtle relation of cause and effect, which binds together the sequence of events, then we have a narrative with a plot, such as stories, and novels, and dramas. A plot has been defined as "any arrangement of the parts of a narrative so that the reader's interest is aroused concerning the result of the series of events detailed."

Letters, books of travel, memoirs, and biographies owe their interest to the charm with which they are told, and the real worth of the successive incidents treated. Letters of Thoreau to his friends, of Emerson, Hawthorne, Channing, Alcott, give us the charm of Concord life in the golden days of those philosophers, and also give us a model of letter-writing in their simple beauty of style, and the value of their subject matter.

Books of Travel have all the personal charm of letters, and added to that the deep interest of new scenes, visited by an appreciative narrator. Travels consist largely of description, which should be well selected and accurate. Stanley's "In Darkest Africa," Roberts's "Forty-one Years in India," Grey's "Travels in Australia," are interesting books of travel.

Memoirs relate chiefly to matters of memory, events that have come under the author's personal experience. Memoirs are related to history, but are less systematic and more conversational in style. "Yesterdays with Authors," by J. T. Fields, is a volume of memoirs of noted literary men he knew.

Biography is a history of an individual life, somewhat more extended than a memoir. An autobiography is the life history of the writer himself. Biographies form a very important branch of history. If one would know the history of a time he must know the men of that time. The Autobiography of Benjamin Franklin furnishes a much better picture of life in his times than pages of our best histories. American Men of Letters series, American Statesmen series, give a fine study of the development of the American nation.

History is a formal and connected account of the life of a nation. Historical narration ex-

plains the sequence of events, their cause and effect, and their bearing on civilization. The historian records truth for the instruction of mankind. It is, therefore, required of him that he make his records with impartiality and accuracy, and with the highest regard for morality. Gibbon's "Decline and Fall of the Roman Empire," Motley's "Rise of the Dutch Republic," are histories written with the charm of romance, because they are narrated with the vividness of an eye-witness and are aglow with human sympathies.

News forms a most important branch of letters. The editorial and the news columns influence more people to-day than any other form of literature. Thousands, who are utterly unacquainted with books, read with eagerness the daily news, so the newspaper of to-day has become a popular educator. It is the privilege of the newspaper to present a high standard of pure grammatical English, and of morality.

Clearness, brevity, accuracy, are the essential qualities in a news reporter. He must choose language that will convey his exact meaning, and give all essential details in as brief a manner as is consistent with accuracy and clearness. Daily news is read for the information it conveys, and not for beauty of style, yet it is desirable that the news writer cultivate ease and the charm of naturalness in writing up the simplest occurrences of the day, if he can do all this in quick and graphic sentences. News writing differs greatly from the writing of editorials or leaders. The news reporter simply gathers up the facts of the day and presents them without bias of opinion, whereas it is the business of the editor to discuss facts and give opinions. Editorials properly belong under exposition and persuasion, rather than under the division of prose narration.

Fiction, from the earliest dawn of literature, has been the favorite form of composition. The mind revels in the creations of the imagination, and myths and folk tales are the delight of all peoples. Modern fiction has had phenomenal development, and the growth of the short story has been without parallel.

Fiction includes stories, novels, and romances, both in prose and verse. The aim of fiction is principally to entertain. The general reader of fiction does not want instruction, he is seeking diversion. Incidentally, however, to the entertainment that is furnished by a modern novel, there is much instruction given by our best writers of historical novels, concerning customs and manners, and domestic and social life, and the history of the time in the midst of which the plot is set; but more valuable than these outer facts of life is the study of motives and behavior, and development of character, and the insight, which is given into human nature, and the conditions of human society which lie beyond our range of observation. If well selected, and not read to excess, novels form a valuable means of education, as well as of intellectual entertainment. The novels of Dickens, Victor Hugo, Tolstoi, have opened the eyes of the public to unsuspected social conditions. Bunyan, Goldsmith, Eliot, Hawthorne, have given us a deeper insight into human nature. We see how men and women behave under certain circumstances, and the relation of good and evil conduct.

The Short Story is not, as often claimed, a creation of recent date. Myths, legends, fables, folk-tales, are all forms of short stories, which were invented when language was young.

Myths are old-world fairy tales, and have for their heroes gods and goddesses, and for their agencies the forces of nature. Homer's "Odyssey," Virgil's "Æneid," Longfellow's "Hiawatha," are poems woven out of mythic fancies.

Fables are stories in which animals and inanimate things are represented as having the attributes of human beings. Æsop's fables have been translated into every language.

Parables are concrete examples of spiritual truths. They are frequently used in the Bible.

Allegories are concrete stories to illustrate abstract truths, but more extended than parables or fables. An allegory gives a detailed description of one thing under the image of another. Spenser's "Faërie Queene," Swift's "Tale of a Tub," are good types of allegories. Bunyan's "Pilgrim's Progress" is the best known allegory of modern times.

Legends and Folk-Tales are the stories of daily life and heroic adventure that are common among all people.

The field of the short-story writer has been greatly extended in modern times, and now includes every domain of fact and fancy. The short story of domestic life, or a brief chapter in personal history, may be said to characterize the modern short story, and is the favorite form of fiction. Newspapers and magazines contribute largely to this form of literature. It is to be greatly regretted that the popularity of the short story has led to its abuse, and that much that is unworthy both in plot and workmanship is found in active circulation. But literature has been enriched by the number of really worthy short-story writers, and American literature is especially rich in the number who have preserved for us tones of local coloring and contemporary characters. Bret Harte, Mark Twain, Frank Stockton, have contributed the riches of their humor, and Nathaniel Hawthorne, Richard Harding Davis, Sarah Orne Jewett, Robert Louis Stevenson, George W. Cable, have added the beauty of their most delicate touch to the creation of the modern short story. "A New England Nun" by Mary E. Wilkins, "Story-tell Lib" by Annie Trumbull Slosson, "The Blue Flower" by Henry Van Dyke, "Christmas Stories" by Charles Dickens, and incidents related in story by Maupassant are a few of the long list of excellent short stories.

Description follows narration and has already been included in narration. Every story must contain word pictures of persons or places or objects of interest. Description of external objects is simpler than the delineation of character. In a few strokes of the pen Sir Walter Scott places before us the person of Rebecca, but her thoughts, her feelings, her inner struggles, are revealed to us by a slower process of description. We are quickly introduced to Silas Marner and his home; but the real man

and his nobility of soul, we do not comprehend until he stands before Godfrey Cass and offers to give up to him his daughter. It is because George Eliot can describe such moments as this that she is ranked among the world's greatest novelists. Shakespere stands first of all writers in his power to describe soul experiences.

Exposition differs from narration or description in this that it does not deal with concrete things, but with ideas, either separately or in combination. Exposition presents definitions, doctrines, principles, or views, with the aim to instruct. Exposition is often introduced into the midst of narration or description for the purpose of explanation, to give a point of view, or to present a situation more fully.

An Essay is a composition which aims to set forth the author's views on a certain subject. It is less elaborate than a treatise, and varies in length from the brief school exercise to the elaborate essays of Macaulay, or Emerson, or Carlyle. Editorials, reviews, criticisms, are familiar forms of the essay.

An Editorial may be called a short essay, giving the views of the editor on some subject of the day. The editorial is very different from the news item which was classed under narration. The reporter simply records facts without personal comment, whereas it is the business of the editor to record facts and give opinions, explaining where necessary, and commending or condemning as occasion requires. Newspapers set forth social and political problems of a local or national character, and it is the aim of the editorial to shape public thought. Back of the editorial "we" is the personality of the writer; but sometimes the writer himself is lost in the political party or organization which the paper or magazine represents.

Reviews are more elaborate forms of editorials, they deal with the subject at greater length, and are more exhaustive in the discussions. Reviews often treat of literary subjects, as book reviews, music, art, lives of noted men, explorations, etc.

Criticisms are for the purpose of setting forth excellences and defects, and are designed to be constructive rather than destructive, as defects are pointed out that the true principles upon which the work is constructed may be better understood.

Argumentative Discourse is for the purpose of establishing the truth or falsity of a proposition. Its aim is to modify or induce belief. It is assumed that there is reasonable doubt in the minds of the hearers, and by reasonable argument they must be convinced. In the conduct of such a discourse the subject or proposition is first stated briefly and concisely, then follow the arguments drawn up in order and, finally, the conclusion, which consists of a restatement of the proposition reinforced by the strength of the arguments. In the presentation of a debate, both sides must agree on the preliminary statement or proposition, and then each side must furnish proof to establish the truth of the main proposition as presented affirmatively or negatively by that side.

Persuasion is the highest type of argumentative discourse, and includes addresses, lectures, sermons, orations. The aim of persuasion is so to move upon the feelings of the audience as to influence the will. In exposition and argumentation the appeal is to the will, but the end of oratory has a view to action. Mark Antony, over the dead body of Cæsar, aimed to excite the populace to violence.

Orations are elaborate compositions and are delivered on formal occasions, as Daniel Webster's Bunker Hill oration, Edward Everett's Gettysburg oration, the orations delivered by Burke, and Peel, and Fox. Clearness and force are strong qualities in an oration, but, in addition to these, all the beauties of composition are in place. As oratory is the highest form of prose composition, nothing trivial or low in language or thought should be allowed. The main idea should be developed by both language and gesture. Words must be made alive.

Addresses and Speeches are less formal than orations, yet they all admit of the three-fold structure into introduction or exordium, body or argument, and conclusion or peroration. The strength of the discourse depends upon the skill with which each part is handled. Ready and fluent speech are desirable qualities in all public speaking; but the ornate language of an oration would, on ordinary occasions, be out of place.

A Lecture is less formal than an oration, but it demands a scholarly presentation of a subject in a clear and logical manner. The subject presented should be of importance, not too familiar, and presented in such a way as to interest and instruct.

Sermons are the most familiar forms of discourse. They are founded usually upon some passage of Scripture, and are intended for instruction. Besides their expository character, sermons usually contain appeals to the listener, and admonitions. The theme of the sermon is presented in the Bible text; and, in addition to this, it is often necessary for the minister to make explanatory remarks before he begins the body of his argument. The introduction must contain a clear putting of the question, all necessary explanation must be made, and usually an outline is given of the plan to be followed in the body of the sermon. It is interesting to note the three kinds of arguments used in the body of a sermon.

First, there is the argument of fact. This is an argument which appeals directly to sense and reason, and not to prejudice. The audience is assumed to be impartial, and concrete questions are presented to their judgment.

Second, argument of principle is also addressed to the reason of the audience, and not to feelings or interests. Arguments of facts establish or disprove some concrete matter of human experience, whereas argument of theory or principles establishes the fundamental law upon which the judgment of those facts is based.

Third, argument of policy aims to persuade by appeals to motives of action. It aims to influence the will to act in harmony with the principles outlined in the previous arguments of fact and theory. What is right is presented as the expedient. The "I ought" becomes an obliga-

tion. It is through the medium of the feelings that most men are moved to action.

The conclusion of the sermon sums up the main points of the argument, clearly and concisely. It may at times be done in a single sentence; sometimes it is best done by the repetition of the opening text which has been established.

Poetry differs from prose in form and diction. The form of poetry is verse. It is arranged in lines of regularly recurring accented and unaccented syllables. The language of poetry differs from prose. Certain privileges are granted to the poet which are called "poetic licenses." Words are chosen for their beauty of sound or association. Figures of speech are more frequent in poetry than in prose, and inverted structure is frequently employed. The essential difference between prose and poetry is, however, in the writer's aim. The chief aim of prose is to instruct and to convince; the aim of poetry is to appeal to the emotions, to touch the heart of the reader, to play upon his sympathies.

Epic Poetry recites some great and heroic enterprise. Epic poetry is the longest and, except the drama, the most complex of all poetic composition. Its theme is noble, its underlying plot simple; it has one hero but many actors; supernatural agencies are often introduced. The treatment of the story is grave and dignified. There are but few great world epics. Homer's "Iliad" and "Odyssey," Virgil's "Æneid," Dante's "Divine Comedy," Tasso's "Jerusalem Delivered," Milton's "Paradise Lost," are the greatest, and their themes are of universal interest.

Metrical Romances and Narrative Poetry are inferior to the epic. They present plot and story, but with less complication of action, and with simpler theme. Spenser's "Faërie Queene," Scott's "Lay of the Last Minstrel," Longfellow's "Evangeline," Lowell's "Sir Launfal," Mrs. Browning's "Aurora Leigh," are examples of this kind of composition.

The Ballad and the Tale are the simplest forms of metrical romance. "Chevy Chase," "Robin Hood," Chaucer's "Canterbury Tales," Macaulay's "Lays of Ancient Rome," Coleridge's "Rime of the Ancient Mariner," are good illustrations.

Narrative poems of a mixed character have been variously classed under minor epics or pastoral poems: Tennyson's "Idylls of the King," Scott's "Lady of the Lake," Longfellow's "Tales of a Wayside Inn," Whittier's "Snowbound," William Morris's "Earthly Paradise." These classifications are not binding.

Dramatic poetry presents action, what men do and say, and, in our greater dramas, motives and the moral train of consequences. Passion is strong, incident exciting, thought vigorous. Scenery, costume, dialogue, aid in the presentation of the story. The drama lives its life upon the stage.

The main divisions of the drama are tragedy and comedy. Comedy itself has the subordinate divisions: farce, opera, melodrama, mask.

The Greek drama presents to us the highest form of dramatic art before the age of Shakespere. In the golden age of Pericles we have the tragedies of Æschylus, Euripides, Sophocles, and the comedies of Aristophanes, later we have the comic plays of Menander. Greek drama, like our own English drama, was written in poetic form.

Tragedy deals with grave topics, and stirs the deepest feelings. It presents the unusual struggle between good and evil. Some crime has been committed, and the consequences of this act are worked out upon the stage in a chain of events which involves many people. The plot becomes more or less complicated, yet in Shakespere's dramas the skill with which the leading characters and the central theme are presented, preserves for the audience unity of action throughout the play. King Lear, Othello, Macbeth, Hamlet, present the great drama of Good versus Evil, and will make a good beginning for the student who wishes to become acquainted with tragedy.

Comedy, unlike tragedy, has a happy ending. The passions of men, love, hate, jealousy, ambition, are still the hidden springs of action, but there is a happy turn in the current of events, and Good triumphs without violence or bloodshed. Browning's "Pippa Passes" presents Good and Evil, and the superior power of the good, but it is not for the stage — it is too analytic. Shakespere's plays again present to us the best study. "Merchant of Venice," "Midsummer Night's Dream," "As You Like It," "All's Well that Ends Well," "The Tempest," "Taming of the Shrew," "Merry Wives of Windsor," also Sheridan's "Rivals," Goldsmith's "She Stoops to Conquer," will repay many times reading. Shakespere's historic dramas may be classed among comedies or tragedies, according to the relation of good and evil working out of the theme. "King Henry, the Eighth," "King John," "Richard II," and "Richard III" should be studied.

The Farce is a minor comedy, which presents ridiculous and extravagant situations. It is familiar to the modern stage.

The Mask is usually a presentation of some pastoral scene, and introduces supernatural characters. The "Mask of Comus" by John Milton is our best example.

Opera and Melodrama are forms of drama where music and action are combined. In an opera the parts are usually sung, while in melodrama the parts are ordinarily spoken, with orchestral accompaniment. Wagner's operas are the noblest conception we have of the power of music combined with dramatic art.

Lyric Poetry, as the words suggest, is poetry set to music. Originally the voice of the singer was accompanied by some musical instrument, as the harp or lyre, hence lyric. Lyric poems express the personal feeling of the author, and are moved by some fervor of emotion that must sing itself out. Not only are all song poems, both religious and secular, classed as lyrics, but odes and sonnets belong to this group.

Odes express so wide a range of feeling that it is difficult to form an exact definition. The Greek odes of Pindar and Anacreon differ from our modern conception of the ode, which we regard as more stately and dignified. Examples of odes found in our own English are Milton's "Hymn on the Nativity," Wordsworth's "Intimations of Immortality," Shelley's "Ode to a

Nightingale," Collins's "Ode to the Passions," Dryden's "Ode in Honor of St. Cecilia's Day," Tennyson's "Ode to Memory."

Elegy is a reflective poem on some mournful subject, or, as in modern elegies, a eulogy over the dead. Milton's "Lycidas" belongs to this class, also Gray's "Elegy written in a Country Churchyard," Shelley's "Adonais," a tribute to Keats, and Tennyson's "In Memoriam," a tribute to his friend, Arthur Hallam.

A Sonnet is a complete poem of fourteen lines. The personal element is strong, and the themes are tenderness of emotion and beauty of thought and expression. The sonnet is the poet's poem. Shakespere, Spenser, Milton, Wordsworth, Tennyson, Browning, and other great poets have delighted in this form of verse. Read "What is a Sonnet?" by Richard Watson Gilder to understand its charm.

Didactic Poetry is the least poetic of all poetic forms. It aims to teach, while the higher aim of poetry is to reveal life and beauty and joy. Pope's "Essay on Man," Cowper's "Task," Dryden's "Absalom and Achitophel," are examples of poems which are so didactic that they are little read. Lyric poems like Shelley's "Cloud," Wordsworth's "Daffodils," Longfellow's "Rain in Summer," Burns's "To a Wee Mousie's Nest," Tennyson's "Crossing the Bar," Newman's "Lead, Kindly Light," will always remain popular, because they appeal to the emotions and the imagination, rather than to critical thought. The aim of poetry is to arouse the emotions and to give pleasure.

ABBREVIATIONS, CONTRACTIONS, AND DEGREES

A., *a.* Adjective.
A. Alto.
A., *ans.* Answer.
a., @. (Lat. *ad*), To; At.
ā, *āā.* The like quantity of each.
A. A. G. Assistant Adjutant General.
A. A. A. & L. American Academy of Arts and Letters.
A. A. A. S. American Association for the Advancement of Science.
A. & A. S. R. Ancient and Accepted Scottish Rite.
A. A. S. S. (*Lat. Academiæ Antiquarinæ Societatis Socius*), Member of the American Antiquarian Society.
A. A. U. Amateur Athletic Union.
A. B. (*Lat. artium baccalaureus*), Bachelor of Arts.
A. B. Able-bodied Seaman.
Abbr., *Abbrev.* Abbreviated, Abbreviation.
Abl., *ablat.* Ablative.
Abp. Archbishop.
A. B. S. American Bible Society.
A. C. (Lat. *ante Christum*), Before Christ; Analytical Chemist.
Acad. Academy.
A. C. A. American Congregational Association.
Acc., *Accus.* Accusative.
Acc., *Acct.* Account.
A. D. (Lat. *anno Domini*), In the year of our Lord.
A. D. C. Aide-de-camp.
Ad., *advt.* Advertisement.
Adj. Adjective.
Adjt. Adjutant.
Adjt. Gen. Adjutant General.
Ad lib., *Ad libit.* (Lat. *ad libitum*). At pleasure.
Adm. Admiral.
Admr. Administrator.
Admx. Administratrix.
Ads. Advertisements.
Adv. Adverb.
Æ., *Æt.* (Lat. *ætatis*), Of Age, Aged.
A. E. F. American Expeditionary Force.
A. G., *Agt. Gen.* Adjutant General.
Ag. (Lat. *argentum*), Silver.
Agl. Dept. Agricultural Department.
Agr., *Agric.* Agriculture, Agricultural.
Agt. Agent.
A. H. (Lat. *anno Hegiræ*), In the year of the Hegira, or flight of Mohammed.

FIGURES OF SPEECH

The first and most obvious use of language is to convey thought, but it is not enough that words should be correct and precise and appropriately chosen. The plainest language is not always the most impressive. There is often a warmth and glow accompanying thought which demands imagery and vivacity of speech. It has been said that the life, color, flavor, and fragrance of literature have been secured by the skillful use of figurative language. The picturesque in poetry and prose is due in a large measure to figures of speech. Vividness, strength, beauty, clearness, force, elegance, often lie in the effective use of imagery.

Origin of Figures. Figures of speech are common in every-day conversation. We are all familiar with such phrases as these:— fleecy cloud; roaring wind; flight of time; mad idea; driving a bargain; slow as a snail; eloquent eye; soft voice; piercing tongue; uneven temper; morning of life; ship of state; bright idea; as hungry as a bear; as true as steel; as quick as thought. We find from such expressions that figures of speech originate in the very necessities of language. Words in their bare literal meaning are not capable of rendering every phase of thought. In the beginning of language men gave names to different objects. As ideas multiplied words were increased; but no language could be adequate to supply a separate word for every separate idea, hence arose the figurative or secondary use of words. The word "bright" in its primary meaning signifies that which sends out light, a luminous body or a reflecting surface. When we speak of a "bright" mind we imagine the influence of such a mind upon others as of a light in the midst of darkness. In this way the old word was called into use in a new sense.

Our language has been greatly enriched by the vast number of figurative words which we use unconsciously every day.

Another source of figures is the pleasure which they give. Words in their literalness are incapable of rendering delicate shades of thought or feeling. Figures of speech not only add to the picturesqueness of language but seem to be the natural mode for expressing the emotions. Primitive people, as well as little children, the most illiterate as well as the most learned, talk in figures. When the imagination is awakened or the passion inflamed, then it is natural to turn to the figurative. When figures are appropriately used they strengthen and adorn expression.

Briefly, then, the origin of figures lies, first, in the barrenness of language, the need for more copious expression than in the literal meaning of words; and, second, in the desire to give pleasure, force, and animation. Figures are the ornaments of speech, but they should not be used unless they adorn in an appropriate way.

Definition of Figure of Speech. A figure of speech is any deviation from the literal or ordinary mode of expression for the purpose of making the thought clearer or more attractive or more forceful.

Thinking in concrete images is more vivid and for the most part more interesting than thinking in abstract or in general terms; but for exact thinking we need to cultivate the ability to use expressions that are general, abstract, and literal. So it is well to practice one's self occasionally in converting the figurative into the literal or the reverse.

Comparison between Literal and Figurative Language.

1. Literal, I am growing old.
   Figurative, "My May of life
   Is fallen into the sere, the yellow leaf."
2. Literal, I am in great need of a horse.
   Figurative, "A horse! a horse! my kingdom for a horse!"
3. Literal, Longing for peace.
   Figurative, "O thou sword of the Lord, how long will it be ere thou be quiet? Put up thyself into thy scabbard, rest, and be still."
4. Literal, He was a man to be despised.
   Figurative, "The Chief-Justice was rich, quiet, and infamous."
5. Literal, There is a conceit peculiar to the Boston people.
   Figurative, "Boston State House is the hub of the solar system. You couldn't pry that out of a Boston man if you had the tire of all creation straightened out for a crowbar."
6. Literal, A picture of autumn leaves blowing about.
   Figurative, "Innumerable tawny and yellow leaves skimmed along the pavement, and stole through people's doorways into their passages, with a hesitating scratch on the floor, like the skirts of timid visitors."
7. Literal, Promise of divine protection.
   Figurative, "As the mountains are round about Jerusalem, so the Lord is round about His people, from henceforth even forever."
8. Literal, Promise of abundance.
   Figurative, "And it shall come to pass in that day that the mountains shall drop down new wine, and the hills shall flow with milk."
9. Literal, A great ado about nothing.
   Figurative, "Ocean into tempest wrought,
   To waft a feather or to drown a fly."
10. Literal, A feeling of tenderness when looking at a violet wet with dew.
    Figurative, "Violet, sweet violet!
    Thine eyes are full of tears."
11. Literal, I wish I had the power of seeing myself as other people see me.
    Figurative, "O wad some power the giftie gie us,
    To see oursels as ithers see us!"
12. Literal, The cannon ball shot through the air.
    Figurative, "Whistling so airily,
    Past the air warily,
    Watching me narrowly,
    Crashing I come!" (Song of the Cannon Ball.)

Classifications of Figures. Figures of Grammar. A figure of grammar is an intentional deviation from the ordinary spelling, formation, construction, or application of words. There are, accordingly, figures of orthography, figures of etymology, figures of syntax.

Figures of Orthography. A figure of orthography is an intentional deviation from the ordinary or true spelling of a word. The principal figures of orthography are mi-me'sis and ar'cha-ism.

Mimesis. Mimesis is a ludicrous imitation of some mistake or mispronunciation of a word, in which the error is mimicked by a false spelling, or the taking of one word for another; as, "I will *description* the matter to you, if you will be *capacity* of it."—Shakespere. "We will not anticipate the past; so mind, young people,—our retrospection will all be to the future."—Mrs. Malaprop.

Figures of this kind were formerly called tropes, i. e., turns; because certain words are turned from their original signification.

Archaism. An archaism is a word or phrase expressed according to ancient usage, and not according to our modern orthography; as, "Exceeding was the love he *bare* to him"; "*Albeit* of a stern, unbending mind"; "We have, *thou knowest*, another kinsman."

Figures of Etymology. A figure of etymology is an intentional deviation from the ordinary formation of a word. The principal figures of etymology are: a-phær'e-sis, pros'the-sis, syn'co-pe, a-poc'o-pe, par-a-go'ge, di-ær'e-sis, syn-ær'e-sis, and tme'sis.

Aphæresis is the elision of some initial letter or letters of a word; as, *'gainst* for *against*.

Prosthesis is the prefixing of an expletive syllable to a word; as, *yclad* for *clad*.

Syncope is the elision of a middle letter or letters of a word; as, *o'er* for *over*.

Apocope is the omission of the final letter or letters of a word; as, *th'* for *the*.

Paragoge is the annexing of an expletive syllable to a word; as, *dearie* for *dear*.

Diæresis is the separating of two vowels that might be supposed to form a dipthong; as, *co-operate* or *coöperate*, not *cooperate*.

Synæresis is the sinking of two syllables into one; as, *I'll* for *I will*.

Tmesis is the inserting of a word between the parts of a compound, or between two words which should be united if they stood together; as, *to us ward*.

Figures of Syntax. A figure of syntax is an intentional deviation from the ordinary construction of words. The principal figures of syntax are: el-lip'sis, ple'o-nasm, syl-lep'sis, en-al'la-ge, and hy-per'ba-ton.

Ellipsis is the omission of some word or words which are necessary to complete the construction, but not necessary to convey the meaning: "Prythee, peace."

Pleonasm is the introduction of superfluous words; as, "All ye inhabitants of the world, and *dwellers on the earth*."

Syllepsis is agreement formed according to the figurative sense of a word, and not according to literal use. "Then Philip went down to the *city* of Samaria, and preached Christ unto *them*."

Enallage is the use of one part of speech, or of one modification, for another. "They fall *successive* (ly), and *successive* (ly) rise."

Figures of grammar are in common use and have the sanction of good authority, but it is not at all important that we remember their various names.

Figures of Rhetoric. A figure of rhetoric is an intentional deviation from the literal or ordinary forms of expression. Figures of rhetoric are usually implied whenever we speak of figurative language. Departures from perfect simplicity occur in almost every kind of composition. They are mostly founded on some similitude or relation of things which, by the power of the imagination, makes the thought more attractive or more striking.

Classification of Figures of Rhetoric.

1. Figures based on resemblance; simile, metaphor, personification, allegory.

2. Figures based on contiguity or association; metonymy, synecdoche.

3. Figures based on contrast or surprise; antithesis, epigram, irony.

4. Figures based on emphasis or strength of emotion; hyperbole, interrogation, exclamation, apostrophe, vision.

5. Other deviations from the plain or literal mode of speech which contribute to force or beauty and are sometimes ranked among figures of speech; climax, anticlimax, allusion, litotes, euphemism, onomatopoeia, alliteration.

Figures Based on Resemblance.

Simile. A simile expresses a figurative resemblance between two things essentially different in kind. The comparison is usually introduced by such words as *like* and *as*:

> "Sweet are the uses of adversity,
> Which, like the toad, ugly and venomous,
> Wears yet a precious jewel in his head."

The best similes are those that compare things which are in most respects unlike, but which have at least one strong point of resemblance. Adversity and a toad are as unlike as the mind can well conceive, but Shakespere's creative fancy discovers in them an unexpected relation of precious use. The discovery of such an unexpected likeness gives the reader the pleasure of an agreeable surprise. Similes are appropriate when, without violating truth, they make the subject clearer or bring its relation more strikingly before us. When the similes are too remote or too obvious or too fantastic or even too worn-out from over repetition, then they are not appropriate. The joy of the imagery lies in the mind's surprise because of its unexpectedness and fitness. Any one looking at a cloud may see its resemblance to a fleece or to a bank of snow, but how much better pleased we are with Lowell's less common imagery:

> "A sky above,
> Where one white cloud like a stray lamb doth move."

Wordsworth discovers a close relation between evening and a nun at her devotion,—

> "The holy time is quiet as a nun
> Breathless with adoration."

Ossian discovers a likeness between music and memory: "Like the memory of joys that are past, sweet and mournful to the soul." More beautiful still is the discovery by Shakespere of a resemblance between music and the odor from a bed of violets:

> "It came o'er my ear like the sweet sound
> That breathes upon a bank of violets,
> Stealing and giving odor."

A study of the great similes found in classic literature will teach one how to avoid the trite and commonplace. The Bible forms the richest source from which we draw our figurative language. Greek literature, especially Homer, is our next source, and probably Shakespere the next.

Several of the Homeric similes have been traced through their use by later poets,— the simile of the leaves, the bees, the growth of rumor. They illustrate "the power of a great thought, adequately expressed in one language, to influence thought and expression for centuries in other languages."

Metaphor. A metaphor is founded upon the resemblance of one thing to another. It differs from the simile in that the comparison is implied rather than formally stated:

1. Simile. She sang like a nightingale.
   Metaphor. She had the voice of a nightingale.
2. Simile. "As cold water to a thirsty soul, so is good news from a far country."
   Metaphor. Good news from a far country refreshes the soul.
3. Simile. The temper of the nation, loaded already with grievances, was like a vessel that is now full; and this additional

provocation, like the last drop infused, made their rage and resentment as waters of bitterness overflow.

Metaphor. The vessel of the nation's wrath was now full, and this last drop made the waters of bitterness overflow.

4. Simile. Contentment is like a precious pearl.

Metaphor. Contentment is a pearl of great price.

Metaphors are sometimes called condensed similes. We find them in all speech. They are fitted for the expression of the most intense passion or the simple unconscious use of every day. There are two grades of metaphors. In the first. attributes properly belonging to one thing are applied to another; as, unbridled passion, hard heart, soft answer, black omen, striking thought, clear head. A large class of such phrases, originally metaphorical, have been so widely adopted that they have ceased to be regarded as figurative. In the second degree, one thing is completely identified for the time being with another. "We cannot all be cabin passengers in the voyage of life. Some must be before the mast."

Metaphors are more common than any other figure of speech. Indeed, it has been said that they enter into all figurative language and that nearly all figures are founded upon them. "An unmetaphorical style," says Carlyle, "you shall in vain seek for."

PERSONIFICATION. Personification may be considered as a higher form of metaphor. It consists in attributing life or animation to inanimate things or in transferring the attributes of human beings to lower animals. Examples of personification:

1. "All day the sea-waves sobbed with sorrow."

2. "The wind grumbled and made itself miserable all last night, and this morning it is still howling as ill-naturedly as ever, and roaring and rumbling in the chimneys."

3. "Joy and Temperance and Repose
Slam the door on the doctor's nose."

4. "The Worm, aware of his intent,
Harangued him thus, right eloquent."

The highest form of personification combines direct address and is known as apostrophe. "Put on thy strength, O Zion; put on thy beautiful garments, O Jerusalem, the holy city."

ALLEGORY. Allegory is an extended metaphor generally accompanied by personification. Under this head fall fables and parables.

Resemblance between allegory, metaphor, and simile:

These three figures of speech are all founded upon resemblance, a primary and a secondary object being likened to each other. In simile this resemblance is formally expressed, "Israel is like a vine." In metaphor the formal word of comparison is dropped, "Israel is a vine." In allegory, both the formal comparison and the principal subjects are dropped, and the secondary subject is described by itself, as in the allegory of Israel found in the eightieth Psalm: "Thou hast brought a vine out of Egypt: thou hast cast out the heathen, and planted it. Thou preparedst room for it, and didst cause it to take root, and it filled the land."

It will be noted that there are two marked differences between the metaphor and the allegory. First, the allegory is carried out into great variety of particulars, making usually a complete and connected story, as in "Prodigal Son," "Paradise Lost," Bunyan's "Pilgrim's Progress." Second, it suppresses all mention of the principal subject, leaving that to the imagination of the reader, as vices and virtues are represented in Tennyson's "Idylls of the King" as prominent persons at the court of King Arthur.

Figures Based on Contiguity or Association.

METONYMY. Metonymy is a figure by which the name of one object is given to another, not by way of comparison as in metaphors, but on some such relation as that of cause and effect, of progenitor and posterity, of subject and adjunct, of place and inhabitant, of container and thing contained, of sign and thing signified:

1. Cause for effect. He was basking in the sun.

2. Effect for cause. Children should be taught to respect gray hairs.

3. Sign for thing signified. Sceptre and crown shall tumble down.

4. Container for thing contained. With dignity he addressed the chair.

5. Name of an author for his works. The class is reading Milton.

6. Progenitor and posterity. We are the seed of Abraham.

SYNECDOCHE. Synecdoche, like metonymy, is founded on contiguity rather than resemblance. It is naming a part for the whole or the whole for a part or a definite number for an indefinite; as, "Give us this day our daily *bread*"; i. e., food. "The same day there were added unto them about three thousand *souls*"; i. e., persons. The figures of synecdoche and metonymy are so closely related that there is often no clear distinction between them, or rather some figures of metonymy may also be called figures of synecdoche. The following quotations owe their beauty to the skillful use of these figures:

1. "Our flag of stripe and star
Shall bear to coasts that lie afar
The fruitage of this apple-tree."

2. "Kind hearts are more than coronets,
And simple faith than Norman blood."

3. "Out of this silence yet I picked a welcome;
And in the modesty of fearful duty,
I read as much as from the rattling tongue
Of saucy and audacious eloquence."

Figures Based on Contrast or Surprise.

ANTITHESIS. Antithesis is founded on contrast. It places unlike things in opposition to heighten the effect. Our natural love of variety or surprise is illustrated by the frequent recurrence in literature of this figure. Thus we contrast "life and death," "heat and cold," "youth and age," "peace and war." The only practical rule in regard to antithesis is to give

the contrasted ideas a similar verbal construction. Let nouns be contrasted with nouns, adjectives with adjectives, verbs with verbs, and so on, and let the arrangement of the words in the contrasted clauses be also as nearly alike as possible.

Famous illustrations of antithesis:

From Bunyan: "I will talk of things heavenly, or things earthly; things moral, or things evangelical; things sacred, or things profane; things past, or things to come; things foreign, or things at home; things more essential, or things circumstantial; provided that all be done to our profit."

From Macaulay: "The Puritans hated bear-baiting, not because it gave pain to the bear, but because it gave pleasure to the spectators."

From Pope: "Homer was the greater genius; Virgil, the better artist; in the one, we most admire the man; in the other, the work."

Parallel. An extended antithesis is called a parallel. Dr. Samuel Johnson was inclined to use this form of comparison to the point of weariness.

Epigram. Closely allied to antithesis is the epigram. Epigram originally meant an inscription on a monument. As such inscriptions are usually short, epigram came next to mean any brief saying remarkable for brevity and point. Epigram, in this sense, is akin to antithesis, because in both of these figures there is the element of contrariety. But in antithesis it is the contrariety between two different things brought together; in epigram it is the contrariety between the apparent meaning of the words and the real meaning. The power of the epigram lies very largely in the comparative rarity of its employment. It is too artificial, too elaborate, to be made common; it should be reserved for those thoughts which need to be compressed into especially striking and rememberable statements. To be epigrammatic an expression must have fundamentally two qualities. It must be brief, and it must give some unexpected turn to the idea.

Epigram leads naturally to the pun which turns entirely upon using words in a double meaning:

"Beneath this stone my wife doth lie;
She's now at rest, and so am I."— Old Epitaph.

Examples of epigram that have passed into current speech:

"The more haste the less speed."

"He was so good, he was good for nothing."

"The easiest way of doing nothing is to do it."

"Language is the art of concealing thought."

"A new way to contract debts — pay them off."

"The fastest colors are those that won't run."

"The child is father to the man."

"Beauty unadorned is adorned the most."

"Nothing is so difficult as doing nothing."

Irony. Irony is a figure in which the speaker sneeringly utters the direct reverse of what he intends shall be understood; as, "We have, to be sure, great reason to believe the modest man would not ask him for a debt, when he pursues his life."

The true meaning in irony is indicated mainly by the tone of the voice the words being spoken with a sneer, and hence it is sometimes called a figure of elocution. We have a perfectly finished example of irony in Antony's speech over the dead body of Cæsar:

"Good friends, sweet friends, let me not stir you up
To such a sudden flood of mutiny.
They that have done this deed, are honourable;
What private griefs they have, alas! I know not,
That made them do't; they are wise and honourable,
And will, no doubt, with reasons answer you."

Figures Based on Emphasis or Strength of Emotion.

Hyperbole. Hyperbole is extravagant exaggeration for rhetorical effect:

1. "They were swifter than eagles; they were stronger than lions."

2. "Rivers of waters run down mine eyes, because they keep not thy law."

3. "And it shall come to pass in that day that the mountains shall drop down new wine, and the hills shall flow with milk."

Such passages are strong and effective and do not deceive any more than any other figure of rhetoric as metaphor or personification.

Frequent use of hyperboles, so often indulged in both in conversation and in writing, is a bad habit. Language is cheapened whenever there is an extravagance of modifiers. Such phrases as "awfully cold," "tired to death," "magnificent eyes," "cold as ice," "splendid mince pie," "hideous spider," "stunning hat," "killing effect," are gross and absurd.

Interrogation. Interrogation is a question asked, not for the purpose of obtaining an answer, but for rhetorical effect. "Am I not an apostle? am I not free? have I not seen Jesus Christ our Lord? are not ye my work in the Lord?" asks the apostle Paul. The answer is already known, but this interrogative form of putting a well-known truth emphasizes it. An affirmative interrogation is an emphatic denial, whereas a negative interrogation is an affirmation:

"Hath he not always treasures, always friends — the good great man?" Ans., Yes.

"Can the Ethiopian change his skin or the leopard his spots?" Ans., No.

Exclamation. Exclamation is a more passionate form of emphasis than interrogation. It must be noted that as with interrogation every exclamative sentence is not a rhetorical figure. When the thought springs from real emotion, then we call it a figure of exclamation. "Oh, yes! What a pity!" is exclamative in form but lacks the intensity of emotion. Many exclamative sentences may be found in orations and speeches, but the choicest examples are found in poetry:

1. "How sweet the moonlight sleeps upon this bank!"

2. "How dear to my heart are the scenes of my childhood!"

3. "How firm a foundation, ye saints of the Lord,
Is laid for your faith in His excellent word!"

Apostrophe. Apostrophe is a turning from the regular course of the subject into an animated address. The same excited state of feel-

ing which causes exclamation and interrogation leads also to apostrophe. In this form of address the absent is spoken to as though present, the inanimate as though animate, the dead as though alive. Apostrophe is often combined with metaphor and personification and is often put into the form of interrogation or exclamation. It usually indicates a high degree of excitement or an exalted state of the imagination:

1. "My country, 'tis of thee,
Sweet land of liberty,
Of thee I sing."

2. "O Death, where is thy sting? O Grave, where is thy victory?"

3. "Thus, O Genius, are thy footprints hallowed."

VISION. Vision, or imagery, is a figure by which the speaker represents the objects of his imagination, as actually before his eyes, and present to his senses. It is akin to apostrophe, yet lacks the direct address:

1. "I seem to myself to behold this city, the ornament of the earth, and the capital of all nations suddenly involved in one conflagration."

2. "I see before me the gladiator lie;
He leans upon his hand — his manly brow
Consents to death, but conquers agony,
And his drooped head sinks gradually low."

Other Deviations from the Plain or Literal Mode of Speech.

CLIMAX. Climax is a series of words or statements which advance by successive steps to what is more and more important and interesting or descend to what is more and more minute and particular. "And besides this, giving all diligence, add to your faith, virtue; and to virtue, knowledge; and to knowledge, temperance; and to temperance, patience; and to patience, godliness; and to godliness, brotherly kindness; and to brotherly kindness, charity."

ANTICLIMAX. Anticlimax reverses the order of the expression, ending with the weakest or least important thought or circumstance. This is often used in humorous writings:

"Alas, alas, what shall I do?
I've lost my wife and seed corn too."

ALLUSION. Allusion is a reference to some historical or literary fact so well known that it may be denoted by word or phrase without explanation. The following passage is a fine combination of vision and allusion:

"I see the pyramids building; I hear the shoutings of the army of Alexander; I feel the ground shake beneath the march of Cambyses. I sit as in a theatre,— the stage is time, the play is the world."

All great literature is enriched by allusions.

LITOTES. Litotes may, in itself, be a plain statement but it strengthens a proposition by denying the negative:

"The immortal names
That were not born to die." i. e., that will live.

The force of this construction lies in its suggesting more than it says. Carlyle says, "The editor is clearly no witch at a riddle," meaning that he is obtuse.

EUPHEMISM. Euphemism is the mention of a disagreeable thing in a more agreeable way than by the plain statement of fact. It is not in itself a figure of speech but is usually based on some other figure, as synecdoche, metonomy, or metaphor. Thus, death is called a sleep; theft, a misappropriation; lie, a prevarication. An untruthful person is sometimes said to have "an unreliable imagination," or to be "liable to blunders," as, "I hope he thought he was speaking the truth; but he is rather a dull man and liable to make blunders."

ONOMATOPOEIA. Onomatopoeia is the use of a word, phrase, or sentence, the sound of which resembles, or intentionally imitates, the sound of the thing signified or spoken of: as, words denoting sounds, whiz, roar, splash, thud, buzz, hubbub, murmur, hiss, rattle, boom; names taken from sounds: cuckoo, whip-poor-will, bumble-bee, humming-bird, crag; words so arranged that the sound expresses the meaning, as,

"Singing through the forests,
Rattling over ridges,
Shooting under arches,
Rumbling over bridges;
Whizzing through the mountain,
Buzzing o'er the vale,
Bless me! this is pleasant,
Riding on the rail!"
—Saxe's "Song of the Rail."

Southey's "Cataract of Lodore" and Poe's poem, "The Bells," are fine examples of this figure:

"Hear the sledges with the bells—
Silver bells—
What a world of merriment their melody foretells!
How they tinkle, tinkle, tinkle,
In the icy air of night!
While the stars that oversprinkle
All the heavens, seem to twinkle
With a crystalline delight.
Keeping time, time, time,
In a sort of Runic rhyme,
To the tintinnabulation that so musically wells
From the bells, bells, bells, bells,
Bells, bells, bells—
From the jingling and the tinkling of the bells."

ALLITERATION. Alliteration is the name given to a near recurrence of the same initial sound. It is a very natural device in English and has proved so attractive that many authors have chosen alliterative titles for their books, "Pride and Prejudice," "Nicholas Nickleby." A recent pamphlet is entitled, "Dirt, Darkness, Disease, Death." All early English poetry was alliterative. Modern poets use it sparingly but with effect, as in the following lines from Swinburne:

"The mother of months in meadow or plain
Fills the shadows and windy places
With lisp of leaves and ripple of rain."

The Value of Figurative Language.

Like a sunset or a June day the beauty of figurative language cannot be described. It must be enjoyed. A comparative reading of a plain literal passage by the side of a similar thought rendered in highly imaginative and poetic verse is the best summary that can be given of the value of figurative language.

What is a Sonnet? Answered in literal prose

definition: The sonnet stanza consists of fourteen lines, iambic pentameter. It is divided into two distinct portions, called the major and the minor. The major division consists of eight lines, called an octave, and has usually but two rhymes. The minor division consists of six lines, called the sextette, and has sometimes three rhymes, sometimes two. The rhymes are arranged in prescribed order. To prevent the two parts from swaying apart, care is usually taken that there shall be no grammatical break in passing from the one to the other, and thus the whole structure is made one.

What is a Sonnet? Answered by Mr. Richard Watson Gilder in his "Sonnet Upon a Sonnet", written in the most exquisite imagery and in perfect verse:

"What is a sonnet? 'Tis a pearly shell
That murmurs of the far-off murmuring sea.
A precious jewel carved most curiously;
It is a little picture painted well.
What is a sonnet? 'Tis the tear that fell
From the great poet's hidden ecstacy;
A two-edged sword, a star, a song — ah me!
Sometimes a heavy-tolling funeral bell.

"This was the flame that shook with Dante's breath,
The solemn organ whereon Milton played,
And the clear glass where Shakespere's shadow falls;
A sea this is — beware who ventureth!
For like a fiord the narrow floor is laid
Deep as mid-ocean to sheer mountain walls."

LETTER WRITING

It would be foolish to waste time on the importance of letter writing. It is the one form of composition that appeals to every one. You may never be called upon to write an essay or a novel or a page of history, but you will often have occasion to write a letter. To be able to write a letter correctly and attractively is an art worth cultivating. It increases one's personality and popularity. Put yourself into a letter and you command those who are at a distance from you. In no art does individuality count for more, yet, as in all arts, the letter writer must conform to a few general principles which have been laid down for those who would write well.

Materials. A careful letter writer gives attention to the minutest details, the sum total of which makes up a good letter. The first consideration is the size and quality of the stationery to be used. White or cream-colored paper, or paper of a light blue tint, may be used for both business and social correspondence. Let it be of good quality, and always have the envelopes to match. Business paper should have a simple, neat heading; if possible, one that will contain an advertisement that may bring in an inquiry, if not an order. Unruled paper is always preferred for all forms of correspondence. The ordinary size of paper for business purposes is about 8½ inches by 11 inches, or about 6 inches by 9 inches. Both sizes may be used with a number 6½ envelope. For notes and short letters, 6 by 10 is a suitable size, and for invitations, acceptances, and regrets, 5½ by 8. This is not an arbitrary matter, but, in general, adapt the size of the paper to the length of the communication. Two-page paper is preferred for business, and four-page paper for social letters.

Pale ink and illegible writing are inexcusable, so care should be taken to provide good black ink or blue copying ink that turns black with age, and a pen that suits the writer.

The Form of a Letter. Convenience and custom have prescribed a certain definiteness of form in the arrangement of a letter. It must consist of the following parts: (1) heading, (2) address, (3) salutation, (4) body, (5) complimentary close, (6) signature.

The Heading. This contains the address of the person writing and the date of the letter. For convenience of reference the address is usually placed in full in the upper right hand corner of the first page and the date written after it either on the same line or the next line below.

Examples showing the proper method of spacing, and the proper punctuation of the heading:

Poughkeepsie, N. Y., July 1, 1921.

123 Pall Mall, London, Eng.,
Sept. 4, 1921.

The Address. In business correspondence the address of the person to whom the letter is sent should be written on the line below the date and well to the left of the page. In informal letters it may be omitted altogether. Some prefer to place the address of the writer or of the person written to after the signature, but it is usually considered more convenient to have them both precede the body of the letter. As in the heading, the address should be written with every necessary detail, including place of residence, street, and number. In the simplification of capitals the word street or place or avenue may or may not be begun with a capital. This is left to the choice of the writer, as custom is not uniform.

The Salutation. The form of the salutation depends upon the relation of the writer to the recipient of the letter. Custom permits a variety of forms even in letters addressed to strangers. Appropriate salutations for formal letters:

My dear Sir, or *Dear Sir:*
My dear Madam, or *Dear Madam:*
Gentlemen, or *Dear Sirs:*

Most formal of all are Sir or Honorable Sir or His Excellency, addressed to persons in high position. The President of the United States is addressed without any complimentary salutation. His high office does not require it, though foreign rulers are usually addressed with very elaborate phrases.

My dear Mr. Jones, or My dear Miss Jones, are proper terms of address between entire strangers, as they are understood to signify respect rather than affection. My dear Mr. Snow is regarded as a rather more formal address than Dear Mr. Snow, though curiously enough if one were writing in England just the opposite would be true. There the pronoun "my" signifies a greater degree of intimacy. These are arbitrary matters, but it is well to note the customs of the place where one is writing.

It was formerly the custom to begin each word of the salutation with a capital, but now

good usage prescribes greater simplicity in the use of capitals and punctuation. No absloute rules can be given as there is great variation among good writers. The first word of every salutation should begin with a capital. If "sir," "sirs," or "madam" is used, you may follow the dictates of your own taste about capitalizing it. If the phrase, "My dear sir," were to occur in the body of the letter, sir would not be capitalized, therefore it need not be in the salutation. General usage prefers the capital, but the modern tendency in writing is to lessen the number of capitals, as well as the number of punctuation marks used. Great freedom is allowed in the punctuation mark which follows the salutation. Some prefer the colon, while others use only the comma. The dash adds nothing, so should be omitted.

The following are good forms for the introduction of a letter:

MR. F. G. ABLE,
Rochester, N. Y.
My dear Sir:

MR. S. P. CRAIG,
27 Windsor Ave., Toledo, Ohio.
My dear Mr. Craig,

The Body of the Letter. The first requisite in good letter writing is a clear, definite knowledge of what you want to say; the second is to say it in such a way that no one can possibly misunderstand what you have said. Most errors of grammar are made because the writer's thought is illogical and confused. One cannot be too careful about the English he uses in his letters. Every letter should be written legibly, properly punctuated, accurately spelled, and divided into suitable paragraphs, each paragraph treating of its subject clearly and definitely.

Do not burden a letter with apologies for not writing. Make your style easy and conversational. It has been said that the best letter writing is like the best conversation. Touches of humor and bright glimpses of thought are very attractive in social letters. A touch of humor, quick and to the point, is attractive in any letter, but care must be taken that in business letters there is no wandering from the point.

The body of the letter may be begun on the same line with the salutation or on the line below. The size and shape of the sheet of paper will determine which is the better arrangement. A uniform margin of one-half inch or more should be reserved at the left-hand side of each page of the letter.

The Complimentary Close. This consists of the concluding words of affection or respect, and indicates the relation in which the writer stands to his correspondent. "Yours truly," or "Very truly yours," are the forms most frequently used in business correspondence to-day. The complimentary close, "Yours respectfully," or "Very respectfully yours," should be used when respect is intended. It is proper in writing to persons older or higher in rank. "Yours sincerely," is common in letters of business between persons who really have some acquaintance with each other. "Your humble servant," "Your obedient servant," are entirely out of date as meaningless conventionalities.

The words of the complimentary close should be written on the line below the last line of the letter. The first word should be begun with a capital and the last word should be followed by a comma.

The Signature. The signature should be written on the line below the complimentary close and a little to the right. Except in the most informal letters it should give the full name of the writer in the form which he would use in signing a document. Business men would be saved a great many embarrassments if people were more considerate about signatures.

In writing to a stranger, a lady should sign her name so that there can be no doubt about the proper way to address her. Alma D. Bowen may be written (Miss) Alma D. Bowen if unmarried, or (Mrs.) Alma D. Bowen if married and writing in her own name, or Alma D. Bowen (Mrs. Frank Bowen) if she wishes to be known by her husband's name.

The Superscription. The address on the envelope should contain every item necessary to insure the prompt delivery of the letter. It usually consists of four lines arranged in the following order: name of individual or firm, street and number, city, state. The firm's or person's name should be written in the middle of the envelope, both with reference to the top and bottom, and the right and left edges. Each added line should follow a slant to the right.

Every year millions of letters and packages find their way to the Dead Letter Office because of incorrect or incomplete address. Illegible writing or any deviation from the correct form of addressing a letter may add one more to these millions already counted. Envelopes used for business purposes should have the name and address of the sender either written or printed in the upper left-hand corner.

In punctuating the lines of the superscription it is now considered good form to omit all commas as unnecessary, though they are usually retained in the punctuation of the address in the introduction. It is left to personal judgment whether to retain them or not, though it is along the advance line to prefer the simpler form when there is a choice.

Note the omission of commas in the following superscription:

MR. CLARENCE D. ROXBURY
University Block
Los Angeles
California

Titles. It is sometimes embarrassing in addressing a letter to know what title to give or how to arrange the title. Where there are a number of titles the higher presupposes the lower, as, D. D. or LL. D. extinguishes the A. B. or A. M. It is customary, however, to retain both the higher titles, D. D., LL. D., if one happens to reach them both, and the LL. D. in such a case is written last. Clergymen always have the prefix Rev., and Bishops that of Rt. Rev. When a Bishop has the added title D. D. the two are combined as, D. D., LL. D. Judges, members of Congress, and some other high officers

of government, have the prefix Honorable. With this title the designation Esq. is never affixed, though one may with entire propriety say Hon. Henry Somers, LL. D.

When such prefixes are used as Hon. or Rev., the full name should be given, Hon. James Boyd, not Hon. Judge Boyd. When the full name is not known then it is better to insert the customary title Mr., as Rev. Mr. Jones, not Rev. Jones. It is contrary to American etiquette to address a woman with her husband's title, although it is permissible in some parts of Europe to do so. Do not say Mrs. Dr. Brown or Mrs. Major Kent but simply Mrs. Brown or Mrs. Kent.

Dame Etiquette in some things is very exacting. In a letter addressed by one military man to another, an exact form is prescribed by law. The person written to is addressed at the beginning of the letter simply by his title. Then, at the end of the letter, on the line below the signature of the writer, the name of the person addressed is given, with his full official title, and his location, just as it is to be on the envelope.

HEADQUARTERS, MILITARY DIVISION OF THE MISSISSIPPI,
IN THE FIELD, MANCHESTER, VA., May 9, 1865.

General:

I have joined my army at Manchester, opposite Richmond, and await your orders.

W. T. SHERMAN,
Major-General Commanding.

LIEUT.-GENERAL U. S. GRANT,
Commander-in-Chief,
Washington City.

The following exact form has been prescribed for addressing the President of the United States.

On the outside of the letter:

TO THE PRESIDENT
Executive Mansion
Washington, D. C.

On the inside of the letter:

Mr. President,
I have the honor, etc.

The governor of any State is addressed as "His Excellency."

His Excellency
NATHAN L. MILLER
Governor of New York

This same title is also applied to ministers to foreign countries. "Honorable" is applied to the Vice-President, members of the cabinet, members of Congress, mayors of cities, judges, consuls, and other high dignitaries.

BUSINESS LETTERS

A business letter should at all times be a model of clearness, conciseness, completeness, good form and courtesy. The reply should be prompt, courteous and definite. As a rule never let a business letter remain more than twenty-four hours without an answer. If you cannot give the man the information he has asked for, drop him a line saying that his letter has been received and will have the proper attention as soon as the information desired can be obtained. Be prompt, evermore, be prompt, and to this add the injunction be brief, evermore, be brief.

In all business letters that answer an order or an inquiry, the date of the letter you are answering should be mentioned. This can be done anywhere in the first paragraph; e. g., "We regret that we cannot supply you the pattern of wall paper for which you wrote on July 17th;" or, "We are shipping you by fast express to-day the groceries you ordered on the 4th inst."

An Order for Goods.

486 MAIN ST., ROCHESTER, N. Y.,
November 13, 1921.

MILLER, GREINER & Co.,
Wholesale Grocers,
Buffalo, N. Y.

Dear Sirs:

The last invoice of groceries was so satisfactory that we are glad to send you another order. Kindly send at once, by express, the following:

4 bbls. granulated sugar,
3 large boxes of boneless codfish,
300 lbs. of the best Java coffee,
200 lbs. best Mocha coffee,
12 cases of Baker's cocoa.

Trusting you will fill this order as promptly as you did the last one, we remain,

Yours very truly,
THE EASTSIDE MARKET Co.

Acknowledging Receipt of Order.

BUFFALO, N. Y.,
November 14, 1921.

THE EASTSIDE MARKET Co.,
486 Main St., Rochester, N. Y.

Gentlemen:

Your order of the 13th inst. at hand. Inclosed find invoice for same amounting to two hundred forty-eight dollars ($248).

Trusting that the goods will arrive promptly and in good condition, we are,

Very truly yours,
MILLER, GREINER & Co.,
Wholesale Grocers.

Inclosing Remittance.

468 MAIN ST., ROCHESTER, N. Y.,
November 27, 1921.

MILLER, GREINER & Co.,
Wholesale Grocers,
Buffalo, N. Y.

Gentlemen:

In payment of your invoice of the 14th inst., find Buffalo exchange for two hundred forty-eight dollars ($248).

Kindly return receipted bill.

Yours truly,
THE EASTSIDE MARKET Co.

Acknowledging Remittance.

BUFFALO, N. Y., November 28, 1921.

THE EASTSIDE MARKET Co.,
486 Main St., Rochester, N. Y.

Gentlemen:

We inclose receipted bill for your payment of two hundred forty-eight dollars ($248). Accept our thanks for your prompt remittance.

Hoping that we shall have the privilege of serving you again soon, we are,

Sincerely yours,
MILLER, GREINER & Co.,
Wholesale Grocers.

Requesting Payment.

OAKLAND, CALIFORNIA,
January 6, 1922.

MR. JOSEPH W. DUFFY,
Tacoma, Washington.

My dear Sir,

You may have overlooked the fact that your account, amounting to thirty-six dollars and forty-eight cents ($36.48), is past due. We trust that you will be able to pay in full at once.

Assuring you of our appreciation of past favors, we are, with the wish to serve you,

Sincerely yours,
HENRY HULL & Co.

Apologizing for not Paying an Account When Due.

TACOMA, WASHINGTON, Feb. 1, 1922.

HENRY HULL & Co.,
Oakland, Cal.

My dear Sirs,

I owe you an apology for tardiness in paying my account so long overdue. My only excuse is that my customers have been "slow" with me.

Thank you for the courtesy you have shown. It will be my effort to be more prompt in the future.

Yours truly,
JOSEPH W. DUFFY.

Renewing a Subscription.

92 ELM AVE., WORCESTER, MASS.,
December 20, 1921.

THE OUTLOOK COMPANY,
287 Fourth Ave., New York City.

Gentlemen:

Inclosed you will find money order for two dollars for which please renew my subscription to "The Outlook."

Yours truly,
WILLIAM WARING.

A Follow-up Letter.

THE LUNDSTRUM SECTIONAL BOOKCASE CO.,
LITTLE FALLS, N. Y., January 6, 1922.

MRS. G. W. BROWN,
486 Norwood Ave.,
Albany, N. Y.

My dear Madam:

Ten days ago, in reply to your inquiry for our catalogue, we mailed one to you. Not having heard from you, we write to learn whether you received it. If not, let us know and we will mail another. If it has been received, kindly advise us whether you find quoted in it anything fitting your needs. If not, write us what you want, and we will quote you prices.

Hoping to hear from you within a few days, we are,

Yours truly,
THE LUNDSTRUM SECTIONAL BOOKCASE CO.

A Reply to a Letter of Complaint.

THE KELLOGG LITHOGRAPH CO., CLEVELAND, O.,
November 22, 1921.

MR. E. DAKIN HOAG,
Security Mutual Life Ins. Co.,
Providence, R. I.

My dear Sir:

We are sorry that you cannot let us have the specifications for your letter headings until the first of the year. We trust, however, that you will let us have the specifications at as early a date as possible so we can order the paper, and get our transferring and printing done in plenty of time to have the headings in your hands by the time you need them.

In your letter you say that the paper is not so good as you formerly had from us. We cannot understand this, as we thought the last lot of stock we received from the mill was of a very good quality, right up to the mark. If you will send us some of the sheets that you think are light weight, we will have them tested; and if we find there is anything wrong with the paper, we will take it up with the mill. So far as we know, the only trouble there has been with any of this "security" paper was with the first lot, where a small portion of the headings had little specks on them. This, you know, we took up with the mill, and they promised to see that the balance of the paper on the contract should be O. K. in every respect. We certainly want to hold them, if this is not the case.

We know that at the present time we should not be able to secure nearly so good a paper as this is at the price you are paying for this lot; and we want to say that you are very fortunate, indeed, in having placed your order when you did, because, if you were to place a contract now, we could not give you nearly so low a price on it on account of the marked advance in price.

Awaiting your reply, we remain,

Yours very truly,
THE KELLOGG LITH. CO.

Letters of Application.

LAPORTE, MO., January 2, 1922.

MESSRS. HOWE & HOWE,
St. Louis, Mo.

Gentlemen: In reply to your advertisement in Tuesday's "Tribune," I respectfully apply for the position you offer.

I have had two years' experience in the crockery business as salesman and bookkeeper, and I am acquainted with your city, for I lived there three years and worked for the firm of Betz & Co. I refer you to them now should you wish to know more of my fitness for the work. If you decide to hire me, I will work hard to succeed.

Hoping for a favorable answer,

Yours respectfully,
WILLIAM R. STONE.

417 COLLEGE ST., TROY, N. Y.,
January 31, 1922.

MESSRS. WYBURN & Co.,
Spokane, Washington.

Dear Sirs:

My friend, Mr. Bidwell, who is in your office, writes me that you are in need of an expert accountant. I shall be very glad to come West to take the position if you will give me a trial. I am a Yale man, 37 years old, married, and have had five years' experience as an expert accountant with the New York Life Insurance Co., for which I am now working.

If you will write Mr. F. C. Green, who is at the head of the New York Life in Troy, he will tell you of my ability and willingness to work for the interests of the firm that employs me.

Trusting you will send me a favorable answer, I am,

Yours very truly,
SAMUEL H. GORDY.

Notes of Introduction.

MR. CHAS. R. ANDREWS,
Trustee of School District No. 9, Trenton, N. Y.

My dear Sir,

Miss Emily Smith desires to secure a position as assistant in your school. She holds a first-grade certificate and has had three years' successful experience in our school. We regret to lose her, but she prefers your district because it is nearer to her home. I can recommend Miss Smith as an excellent teacher who will be a refining influence in any school.

Very truly yours,
CHARLES J. MAJOR,
Trustee of School District No. 4.

NORTH CORNWALL, VERMONT, July 6, 1922.

MR. WALTER C. STRONG,
84 Arlington Ave., Pittsburg, Pa.

My dear Friend,

It gives me great pleasure to introduce to you my friend, Mr. Weston Beach, who is to become a resident in your city. You will find him a delightful gentleman. I shall greatly appreciate whatever courtesy you may show in helping him to become acquainted.

Cordially yours,
HENRY B. JOHNSON.

Letters of Recommendation. Recommendations are sometimes included in notes of introduction, but often they are written as separate letters. They may be written as general letters addressed "To whom it may concern," or written as special letters to some definite person.

General Recommendations.

To Whom It May Concern:

This is to certify that the bearer of this note, Miss Lillian Glades, was graduated from The Teachers' College, Cumberland University, and has since taught in the schools of this city. For the past three years she has taught in the Straymore school, and I have had the opportunity to closely observe her work. I can recommend her as capable of filling any position in a city graded school.

JOHN W. GROVE,
Principal of Straymore School.

To Whom It May Concern:

Mr. Henry Henrys has been in our employ as bookkeeper the past six years. He is a faithful accountant, and in every way has served us well. We regret to part with him. He goes at his own request because he feels that he ought to receive a higher salary than we can afford to pay.

We wish him every success.

JONES, JONES & Co.
Troy, New York.

Special Recommendation.

Mr. Harvey W. Jonson,
Superintendent of Public Works,
Topeka, Kansas.

My dear Sir,

We have in our school a young man, Mr. Thomas Redding, who has done excellent work in the engineering department. He is a fine, clean young man and has commanded the respect of instructors and students, alike. His home is in Nebraska; and he is anxious, on account of his parents, to get work near home.

I shall greatly appreciate it if you will interest yourself in him, and help him to get work.

Very truly yours,
Thomas Benedict.

Lehigh University, Pennsylvania,
January 1, 1922.

Excuse for Absence from School.

Will Miss Stringer kindly excuse Frances for absence from school on account of illness in the family and greatly oblige,

Sarah C. Prescott.
(Mrs. J. W.)

Invitations and Replies. Formal invitations are written in the third person, and for large gatherings are usually engraved or printed and mailed a week or ten days in advance. An invitation sent out by a school, or class in the school, a club, or any group of persons, is usually in the third person; and if the invitation be to an entertainment, as at a church or a commencement program, no formal reply is needed. Formal replies, however, should always be sent where entertainment has been provided for each individual, for the host or hostess will need to know how to provide.

The letters R. S. V. P. are sometimes put in the lower left-hand corner of an invitation. They stand for the French phrase, "Respondez s' il vous plait": Reply, if you please. The English words, "An answer will oblige," are perhaps in better taste.

Invitations to class commencements furnish happy occasions for friends to send notes of congratulation. The feeling of obligation to present gifts is very much to be regretted. No gifts should be expected unless it may be from near family friends. The formal wording of engraved cards can best be left to the engraver, as the form changes slightly from year to year.

The reply to an invitation should follow the form of the note received, and should repeat the date and hour mentioned in the invitation. In declining an invitation it is not essential to repeat the hour.

Invitation to Commencement Exercises.

The Senior Class of
Columbia Seminary
requests the pleasure of your presence at the
Commencement Exercises
June fifteenth to eighteenth
nineteen hundred seven
Washington, District of Columbia

The Faculty and Graduating Class
of the
Boston Teachers' Training School
invite you to attend the
Seventeenth Annual Commencement Exercises
Friday evening, April fifteenth, 1922
at half past eight o'clock
Teachers' Training School
1124 Tremont Avenue

Formal Invitation to a Reception and Dance.

The Epsilon Mu Sorority
invites you to be present
at a reception and dance
to be held at the
Colonial Club
Tuesday evening, April twelfth
at half after eight o'clock

Wedding Invitations and Announcements.

Mr. and Mrs. Joseph Suffolk
request the honor of your presence at the
marriage of their daughter
Mabel Grace
to
Mr. Andrew Jackman
Wednesday afternoon, June seventeenth
at three o'clock
Saint-Mary's-on-the-Hill Church
Baltimore

Announcements.

Mr. Andrew Jackman
Miss Mabel Grace Suffolk
Married
on Wednesday, June the seventeenth
Nineteen hundred and twenty-one
Baltimore

Mrs. George Sampson
announces the marriage of her daughter
Margaret Louise
to
Mr. William Randolph Holmes
of Roxbury, Massachusetts
Wednesday, December the twenty-sixth
nineteen hundred and twenty-one
At home, Roxbury, Massachusetts.

For a Formal At-home.

Mrs. Jacques Randolph Stearns
At Home
on Wednesday the fifth of December
from three until six o'clock
1106 Ballston Heights
to meet
Mrs. James Winchell Toynbee

Formal Note of Invitation.

Miss Belle Coe requests the pleasure of Miss Hinman's company on Thursday evening at eight o'clock.
128 Fremont St., January nine.

The Invitation Accepted.

Miss Hinman accepts with pleasure the invitation for Thursday evening at eight o'clock.
Wellington Place, January ten.

The Invitation Declined.

Miss Hinman sincerely regrets that she cannot accept Miss Coe's invitation for Thursday evening at eight o'clock.
Wellington Place, January ten.

Calling cards are often used for small informal gatherings of friends.

To meet Miss Wells.

MISS ALICE SMYTHE

Friday, May twenty-ninth, at four o'clock.

40 College Street.

Acceptance.

MISS ELLEN YATES.

The Arlington.

Informal Invitation.

My dear Mr. Collier,
Dr. Hartman, who has just returned from Europe, will dine with us on Saturday next at 6 o'clock, and we shall feel highly honored and pleased if we can have your company.
With the greatest respect, I am,
Yours sincerely,
WILLIAM J. LATTIMER.
190 West Ave., September 6, 1921.

Acceptance.

My dear Dr. Lattimer,
It will give me great pleasure to dine with you on Saturday and to meet our friend, Dr. Hartman.
Thanking you for the pleasure in store, I am,
Very cordially yours,
RALPH A. COLLIER.
86 Union St., September 7, 1921.

Formal Note with Birthday Gift.

Miss Henry presents her compliments to Miss Brinkman, and begs her to accept these flowers with her love and with the wish that she may enjoy many returns of this happy day.

Such a note accompanying a gift that gives so much pleasure will naturally call forth a cordial letter of warm appreciation.

Reply to Note Accompanying Birthday Gift.

My dear Miss Henry,
Your note and beautiful gift of flowers completed a day of perfect happiness. It is good to grow old when friends emphasize the years with increasing kindness. Thank you, dear friend, for the love which has never failed me.
Yours, CELIA BRINKMAN.

Letters of Condolence. Letters of condolence are always difficult to write. Write only what is in your heart to say. Don't use any stereotyped form to be found in a book on etiquette. There is a tendency to-day to overdo this kind of letter writing, and the answering of so many letters is becoming a great burden. In many instances the kindest thing is silence. The following letter of sympathy, now preserved in Oxford university, is a model of this kind of expression and appeals to us all.

EXECUTIVE MANSION,
WASHINGTON, November 21, 1864.

Dear Madame: I have been shown on the file of the war department a statement of the Adjutant-General of Massachusetts, that you are the mother of five sons who have died gloriously on the field of battle. I feel how weak and fruitless must be any word of mine which should attempt to beguile you from the grief of a loss so overwhelming, but I cannot refrain from tendering to you the consolation that may be found in the thanks of the republic they died to save. I pray that our Heavenly Father may assuage the anguish of your bereavement and leave only the cherished memory of the loved and lost, and the solemn pride that must be yours to have laid so costly a sacrifice upon the altar of freedom.
Yours very sincerely and respectfully,
A. LINCOLN.

To Mrs. Bixby,
Boston, Mass.

My dear, dear Friend,
A little girl came home from a neighbor's house where her little friend had died. "Why did you go?" questioned the father. "To comfort her mother," said the child. "What could you do to comfort her?" "I climbed up into her lap and I cried with her." Dear friend, I, too, can weep with you, and I do.
Yours in loving sympathy,
SARAH A. HUME.

To Miss Cornelia Y. Maxon.

Letter of Congratulation. A letter of congratulation is easier to write. Here again let the letter come from your heart.

My dear Old Jack:
Could anything be finer than the result of yesterday's election? I don't know which to congratulate more, you or the city. The voters were satisfied with your past record, and have endorsed your worth by giving you this greater honor.
Continue to live up to your high ideals, and you will soon go to Washington to protect the people in their rights.
Remember me to the little woman at the head of the house, and accept my warmest congratulations and heartiest wishes for success.
Very sincerely yours,
ANDREW LANGTRY.
November 7, 1921.

Letters of congratulation are often very brief, sometimes only a telegram—just the single message of sympathetic joy and nothing else. Such congratulations are often sent to high officials after an election or following some notable success.

Telegram to William Howard Taft from Governor Charles E. Hughes, sent June 18, 1908:

"I heartily congratulate you upon your nomination. Under your administration the welfare of the country will be assured."

Letters of Friendship. The joy of letter writing is in letters of friendship, for which, most fortunately, there can be no exact rules. Write to your friend as if you were talking—good, bright, happy talk about the things you are both interested in. No friendship can be so close as to excuse one for indifference or carelessness. Models of good letter writing are found in the memoirs of noted men and women. They form a valuable body of literature and will repay the reading.

Letter writing has been rightly called the "gentlest art." It is the art of giving joy to those who are dear to us, yet far away. An interchange of letters between members of the same family or between friends does more than anything else to keep alive the deep affections. Even brothers and sisters drift apart and hopelessly lose sight of each other when they forget to be faithful in their letters. Whatever the pressure of pleasure or of duties, the absent ones should make time for at least one letter every week to those who are left at home. Write cheerfully, never sharply or pettishly. The word once committed to paper may remain when the irritation has passed away. Never write unnecessarily of bad news. Letter writ-

ing, you remember, in its highest mission, is the "blessed art of giving joy." Answer home letters in detail. Many questions are asked which seem trifling, but they tell the very things about your life that the home people want to know.

The chief charm in letters of friendship is their naturalness. They should make the person who receives them feel that he has had a delightful visit with his friend who wrote. The following passage taken from a letter written by Henry W. Longfellow is full of the charm of simplicity: "I have just had the pleasure of receiving your photograph. It is so good, it could hardly be better. I wish the one I send you in return were as good. But that is wishing I were a handsome man, six feet high, and we all know the vanity of human wishes." Again he writes in a letter, "If 'Long Pond' were called Loch Long, it would be a beautiful lake. This and Sebago are country cousins to the Westmoreland lakes in England, quite as lovely, but wanting a little more culture and good society." This is simple language, but the thought is by no means common-place. Our best thoughts belong to our friends whether in conversation or in letters. Of Hawthorne's letters it is said, "They were full of passages of beauty and of details of his own plans and purposes, hopes and disappointments."

Bayard Taylor thus commends a friend for his naturalness in writing: "You somehow manage to bring your own bodily self before me when you write; I see your eyes and the changing expression of your face, as I read, and the sound of your voice accompanies the written word." Who would not, if he could, write letters that by their naturalness recall both face and voice? Charles Dickens thanks a friend for his letter "which is like a pleasant voice coming across the Atlantic, with that domestic welcome in it that has no substitute on earth."

One likes letters written for the very joy of correspondence and not because the time has come and one must write. How welcome this passage must have been in one of Lowell's letters: "Somehow, this cool, beautiful summer day I feel my heart go out towards you all, and am not writing because I ought." Of the closeness and the intimacy of written thoughts that may be exchanged in letters, Lowell again writes: "I think it fortunate to have dear friends far away. For not only does absence have something of the sanctifying privilege of death, but we dare speak in the little closet of a letter what we should not have the face to at the corner of the street."

Playfulness and humor and lack of formality are charming qualities in home letters when they can be naturally introduced. These opening lines taken from a letter written by Benjamin Franklin to his wife, delight us by their very unexpectedness of humor: "I wrote you a few days since by a special messenger and enclosed letters for all our wives and sweethearts, expecting to hear from you by his return,—— but he has just now returned without a scrap for poor me." Further on he adds in the same light vein of hidden laughter a postscript: "I have scratched out the loving words, having written in haste by mistake when I forgot I was angry." How it brightens life to stop in the busy day for such innocent sparkle of fun! It makes one appreciate the great Benjamin Franklin even more because we know of such genial letters sent to those who were dear to him.

Occasions multiply for writing letters to our friends: birthdays, festivals, anniversaries, betrothals, weddings, funerals; any occasion for peculiar joy or sorrow when sympathy and love are called into expression. One of the most pleasing of the growing customs is the writing of letters to friends to accompany them on their journeys. Now-a-days, those who go abroad in ships are showered with "steamer" letters, which keep them mindful of home and friends throughout their long voyage. The brightness and sweetness of such letters enrich a whole lifetime with pleasant memories.

The mission of the letter has been summed up by Whittier in a letter to a friend: "I am thankful every day of my life that God has put it into the hearts of so many whom I love and honor to send me so many messages of good-will and comfort."

In this day of complex living when so much is said but so little realized of the "simpler life," we sometimes forget the joy which these simple "messages of good will and comfort" bring and unnecessarily burden ourselves to overload our friends with purchased gifts: whereas, Christmas letters, birthday letters, any letters into which we put our best selves, are the most acceptable gifts that we can choose. Beyond compare is the joy of such written words as these sent as a Christmas offering by a young girl to an older friend: "What can I wish for you that you have not already? Your heart is so full of good things that it needs no wish. Some day I may tell you just what you have done for me, my dear friend. Many a door have you opened for me, and these things cheapen in the telling.

"A blessed Christmas time to you and a New Year rich with God's best gifts."

The gift of "things" is forgotten but of such words never.

Postal Cards. Postal cards (post cards the English call them) are often very convenient for a word of greeting or for general business matters which anyone may read, but nothing private should ever be committed to them. To write on a postal a term of warm affection or family news or any message which one would not wish to tell at large is very indelicate.

Picture postal cards furnish pleasant exchanges between friends, and postal cards which bear printed sentiments of refinement or the line of bright humor, are pleasant reminders; but the cheap word or picture of coarse fun should be strictly forbidden, not only by the authority of law, but delicacy of thought for one's friend, as well as for one's own self, should never select what is in any way rude or coarse. In this busy world where there is so much need of frequent intercourse, postal cards have their place and their use will multiply, but they should never be used as substitutes for the well-written letter or the note of social obligation.

SYNONYMS

For *complete* Alphabetical list of Synonyms, see Index under that title—Synonyms.

To Abandon, Desert, Forsake, Relinquish. The idea of leaving or separating oneself from an object is common to these terms, which vary in the circumstances of the action; the two former are more positive acts than the two latter. To abandon may be an act of necessity or discretion, as a captain abandons a vessel when it is no longer safe to remain in it. Abandoning is a violation of the most sacred ties, and exposes the object to every misery: desertion is a breach of honor and fidelity; it deprives a person of the assistance or the countenance which he has a right to expect. By forsaking, the kindly feelings are hurt, and the social ties are broken. A bad mother abandons her offspring; a soldier deserts his comrades; a man forsakes his companions. Things as well as persons may be abandoned, deserted, or forsaken; things only are relinquished. To relinquish is an act of prudence or imprudence; men often inadvertently relinquish the fairest prospects in order to follow some favorite scheme which terminates in their ruin.

To Abase, Humble, Degrade, Disgrace, Debase. To abase expresses the strongest degree of self-humiliation. To humble marks a prostration to the ground, and figuratively a lowering of the thoughts and feelings. Abase and humble have regard to persons considered absolutely, degrade and disgrace to their relative situation. To degrade signifies to lower in the estimation of others. To disgrace is always attended with circumstances of more or less ignominy. To debase is to reduce from a higher to a lower state or grade of worth, dignity, value, etc. The penitent man humbles himself; the contrite man abases himself; the man of rank degrades himself by a too familiar deportment with his inferiors; he disgraces himself by his vices; he debases his character by crime.

To Abhor, Detest, Abominate, Loathe. These terms equally denote a sentiment of aversion. What we abhor is repugnant to our moral feelings; what we detest is opposed to our moral principles; what we abominate does violence to our religious and moral sentiments; what we loathe offends our physical taste. We abhor what is base and ungenerous, we detest hypocrisy; we abominate profanation and open impiety; we loathe food when we are sick.

To Abide, Sojourn, Dwell, Live, Reside, Inhabit. Abide is to make an indefinite stay. Sojourn signifies to pass the day, that is, a certain portion of one's time, in a place. Dwell conveys the idea of a movable habitation, such as was the practice of living formerly in tents. At present it implies a stay in a place by way of residence, which is expressed in common discourse by the word live, for passing one's life. Reside conveys the full idea of a settlement. Inhabit signifies to have or occupy for a permanency. The length of stay implied in these terms is marked by a certain gradation. Abide is to make a continuous stay whether long or short; to sojourn is to remain temporarily; dwell comprehends the idea of perpetuity in a given place, but reside and inhabit are partial and local — we dwell only in one spot, but we may reside at or inhabit many places.

Ability, Capacity, Faculty, Talent. Ability is to capacity as the genus to the species. Ability comprehends the power of doing in general, without specifying the quality or degree; capacity is a particular kind of ability. Ability may be either physical or mental; capacity, when said of persons, is mental only. Ability respects action, capacity respects thought. Ability always supposes something able to be done; capacity is a mental endowment, and always supposes something ready to receive or hold. Ability relates to human power generally, by which a man is enabled to act; it may vary in degree and quality with times, persons, and circumstances. Health, strength, and fortune are abilities; faculty is a gift of nature directed to a certain end, and following a certain rule. An ability may be acquired, and consequently is properly applied to individuals, as an ability to speak extempore or an ability to write; but a faculty belongs to the species, as a faculty of speech, or of hearing, etc. Talent imitates but does not originate.

Able, Capable, Capacious. Able is said of that which one can do, as to be able to write or read; capable is said of that which either a person or a thing can take, receive, or hold. A person is capable of an office, or capable of great things; a thing is capable of improvement. Capacious is used only of the property having the amplitude of space, or a power to take in or comprehend. A hall may be said to be capacious, or, figuratively, a man has a capacious mind.

To Abolish, Abrogate, Repeal, Revoke, Annul, Cancel. The word abolish conveys the idea of putting a total end to a thing, and is applied properly to those things which have been long in existence, and firmly established. An abolition may be effected either by an act of power, as to abolish an institution, or an order of men, and the like; or it may be a gradual act, or effected by indirect means, as to abolish a custom, practice, etc. Laws are either repealed or abrogated, but repealing is a term of modern use, applied to the acts of public councils or assemblies, where laws are made or unmade by the consent or open declaration of numbers. Abrogate is a term of less definite import; to abrogate a law is to render it null by any act of the legislature; thus, the making of a new law may abrogate the old one. Revoking is an act of individual authority — edicts are revoked; annulling is an act of discretion, as official proceedings or private contracts are annulled; cancelling is a species of annulling, as in the case of cancelling deeds, bonds, obligations, etc.

Abridgment, Compendium, Epitome, Digest, Summary, Abstract. The first four terms are applied to a distinct work, the two latter to parts of a work. An abridgment is the reduction of a work into a smaller compass. A compendium is a general and concise view of any science, as geography or astronomy. An epitome is a compressed view of all the substantial parts of a thing, or, in other words, the whole of any matter brought into a small compass. A digest is any materials systematized in order. A summary comprehends the heads and subdivisions of a work. An abstract includes a brief but comprehensive view of any particular proceeding. It is necessary to make abstracts of deeds or judicial proceedings.

Absolute, Despotic, Arbitrary, Tyrannical. Absolute power is independent of and superior to all other power; an absolute monarch is uncontrolled, not only by men, but by things. When this absolute power is assigned to any one according to the constitution of a government, it is despotic. Despotic power is something less than absolute power; a prince is absolute of himself; he is despotic by the consent of others. With arbitrariness is associated the idea of caprice and selfishness. With tyranny is associated the idea of oppression and injustice.

To Abstract, Separate, Distinguish. We abstract what we wish to regard particularly and individually; we separate what we wish not to be united; we distinguish what we wish not to confound. The mind performs the office of abstraction for itself; separating and distinguishing are exerted on external objects. Arrangement, place, time, and circumstances serve to separate; the ideas formed of things, the outward marks attached to them, the qualities attributed to them, serve to distinguish.

To Abuse, Disuse, Misuse. Everything is abused which receives any sort of injury; it is disused if not used at all, misused if turned to a wrong use.

Acceptable, Grateful, Welcome. Acceptable signifies worthy to be accepted. Grateful, pleasing, signifies altogether pleasing; it is that which recommends itself. The acceptable is a relative good; the grateful is positive: the former depends upon our external condition, the latter on our feelings and taste. Welcome signifies come well or in season for us; it refers to whatever happens according to our wishes. It is a grateful task to be the bearer of welcome intelligence to our friends.

To Accomplish, Effect, Execute, Achieve. To accomplish an object signifies more than simply to effect a purpose, both as to the thing aimed at and the means employed in bringing it about. Extraordinary means are requisite for accomplishing, and ordinary means for effecting. To accomplish is properly said of that which a person sets before himself; but to effect, execute, and achieve do not relate to the views of a person acting, but to the thing brought about. What is executed is complicated in its nature, as to execute a design or project; what is achieved is of greater and worthier conception, as to achieve an enterprise.

To Accuse, Charge, Impeach, Arraign. The idea of asserting something to the prejudice of another is common to these terms; but accuse is said of acts, charge of moral qualities constituting the character. We accuse a person of murder; we charge him with dishonesty. High officials are impeached; criminals are arraigned.

To Act, Do, Make. We always act when we do, but we do not always do when we act. To act is applied either to persons or things, as a spring or a lock acts; to do applies in this sense to persons only. To act is also mostly intransitive or reflective, as to act well or ill in this or that manner; to do is always transitive, as to do right or wrong, to do one's duty. To make is to bring a thing to pass, as to make a pen.

To Act, Work, Operate. A machine works, but

each of its parts is said to act; so beer works, and bread works. Sometimes act as well as work is taken in the sense of exerting a power upon other bodies and producing changes, as the sun acts on the plants. Operate is applied to matters of a general nature in science or morals, as a measure operates; or words may operate on the mind, or reasons may operate on the understanding.

Action, Gesture, Gesticulation, Posture, Attitude. All these terms are applied to the state of the body; the three former indicate a state of motion, the two latter a state of rest. Action respects the movements of the body in general; gesture is an action indicative of some particular state of mind; gesticulation is a sort of artificial gesture. Raising the arm is an action; bowing is a gesture. Actions may be ungraceful, gestures indecent. Posture and attitude both imply a mode of placing the body, but the posture is either natural or assumed; the attitude is always assumed or represented. We assume a sitting posture or an attitude of prayer.

Active, Diligent, Industrious, Assiduous, Laborious, Busy, Officious. We are active if we are only ready to exert our powers, whether to any end or not; we are diligent when we are active for some specific end; we are industrious when no time is left unemployed in some serious pursuit; we are assiduous if we do not leave a thing until it is finished; we are laborious when the bodily or mental powers are regularly employed in some hard labor. Busy is opposed to leisure. Officious implies being busy without discretion.

Actual, Real, Positive. What is actual has proof of its existence within itself, and may be exposed to the eye; what is real may be satisfactorily proved to exist; and what is positive precludes the necessity of a proof. Actual is opposed to the supposititious, conceived, or reported; real to the feigned, imaginary; positive to the uncertain, doubtful.

To Actuate, Impel, Induce. One is actuated by motives, impelled by passions, and induced by reason or inclination. Whatever actuates is the result of reflection; it is a steady and fixed principle. Whatever impels is momentary and vehement, and often precludes reflection. Whatever induces is not vehement, though often momentary.

Acute, Keen, Shrewd. In the natural sense, a fitness to pierce is predominant in the word acute; and that of cutting, or a fitness for cutting, in the word keen. The shrewd man exposes follies. Arguments may be acute, reproaches keen, and replies or retorts shrewd. A shrewd understanding is quicker at discovering new truths, than at distinguishing truth from falsehood.

Address, Application. An address may be made for an indifferent purpose or without any express object; but an application is always occasioned by some serious circumstance. An address may be rude or civil; an application may be frequent or urgent. It is impertinent to address any one with whom we are not acquainted, unless we have a reason for making an application to him.

To Adhere, Attach. A thing is adherent by the union which nature produces; it is attached by arbitrary ties which keep it close to another thing. What adheres to a thing is closely joined to its outward surface; but what is attached may be fastened to it by the intervention of a third body.

Adjacent, Adjoining, Contiguous. What is adjacent may be separated altogether by the intervention of some third object; what is adjoining must touch in some part; and what is contiguous must be fitted to touch entirely on one side.

To Admit, Receive. Persons are admitted to the tables, and into the familiarity or confidence of others; they are hospitably received by those who wish to be their entertainers. We admit willingly or reluctantly; we receive politely or rudely.

To Admit, Allow, Permit, Suffer, Tolerate. We admit simply by not refusing or preventing; we allow by positively granting or complying with. We admit that which concerns ourselves, or is done towards ourselves; we allow that which is for the convenience of others, or what they wish to do. What is suffered may be burdensome to the sufferer, if not morally wrong; what is tolerated is bad in itself, and suffered only because it cannot be prevented. No earthly power can permit that which is prohibited by the divine law.

Admittance, Admission. Admittance is properly confined to receiving a person or a thing into a given place; admission includes in itself the idea not only of receiving, but also the purpose of receiving. Whoever is admitted, or has the liberty of entering any place, whether with or without an object, has admittance; but a person has admission to places of trust, or into offices and the like.

Adoration, Worship, Reverence, Veneration. Adoration is the service of the heart toward a Superior Being, in which we acknowledge our dependence and obedience by petition and thanksgiving; worship consists in the outward form of showing reverence to some supposed superior being. Reverence differs from adoration inasmuch as it has a mixture of awe, arising from consciousness of weakness and dependence, or of obligations for favors received. The contemplation of any place rendered sacred by its antiquity awakens veneration.

To Advancé, Proceed. To advance is to go toward some point; to proceed is to go onward in a certain course.

Advantage, Benefit, Utility. Advantage respects external or extrinsic circumstances of profit, honor, and convenience; benefit respects the consequences of actions and events; utility respects the good which can be drawn from the use of any object. A large house or a particular situation may have its advantages; suitable exercise is attended with benefit; sun-dials have their utility in ascertaining the hour precisely by the sun.

Adverse, Contrary, Opposite. Adverse respects the feelings and interests of persons; contrary regards their plans and purposes; opposite respects the situation and relative nature of things. Fortune is adverse; an event turns out contrary to what was expected; sentiments are opposite to each other.

Adverse, Inimical, Hostile, Repugnant. We are adverse to a proposition, or circumstances are adverse to our advancement; partisans are inimical to the proceedings of government, and hostile to the possessors of power. In respect to persons, adverse denotes merely the relation of being opposed; inimical, the spirit of the individual in private matters; and hostile, the situation, conduct, and temper of individuals or bodies in public matters. Repugnant means offensive to taste or feelings.

Advice, Counsel, Instruction. Advice flows from superior professional knowledge, or from an acquaintance with things in general; counsel regards superior wisdom, or a superior acquaintance with moral principles and practice; instruction respects superior local knowledge in particular transactions. A medical man gives advice to his patients; a father gives counsel to his children; in points of law a counselor gives advice to his client who receives instructions from him in matters of fact.

Affair, Business, Concern. An affair is what happens; a business is what busies; a concern is what is felt. An affair is general; it respects one, many, or all: every business or concern is an affair, though not vice versa. Business and concern are personal; business is that which engages the attention; concern is that which interests the feelings, prospects, and condition, advantageously or otherwise. To make one's peace with one's Maker is the concern of every individual.

To Affect, Concern. Things affect us which produce any change in our outward circumstances; they concern us if connected with our circumstances in any shape. The price of corn affects the interest of the seller; and therefore it concerns him to keep it up, without regard to the public good or injury.

To Affect, Assume, Pretend. To affect is to use forced efforts to appear to have that which one has not; to assume is to appropriate to oneself that which one has no right to have. One affects to have fine feelings, and assumes great importance. We pretend by making a false declaration. One affects the manners of a gentleman, and pretends to gentility of birth.

Affectionate, Kind, Fond. Affectionate characterizes the feelings; kind has mostly a reference to the action. Affectionate is directed to a particular object; kind to objects generally. Fond is a strong liking.

To Affirm, Assert. To affirm is said of facts; to assert, of opinions. We affirm what we know; we assert what we believe.

To Afflict, Distress, Trouble. People are afflicted with grievous maladies. The mariner is distressed for want of water in the midst of the wide ocean; an embarrassed tradesman is distressed for money to maintain his credit. The mechanic is troubled for want of proper tools; the head of the family is troubled for want of good domestics.

Affliction, Grief, Sorrow. Affliction lies deeper in the soul than grief. It is too deep to be vehement. Continued sickness of our friends will cause affliction; the failure of our favorite schemes will occasion grief; the loss of a fortune, or our own mistake will cause sorrow.

Affront, Insult, Outrage. An affront is a mark of reproach shown in the presence of others; it piques and mortifies: an insult is an attack made with insolence; it irritates and provokes: an outrage combines all that is offensive; it wounds and injures.

Afraid, Fearful, Timorous, Timid. Afraid may be used either in a physical or moral application, either

as it relates to ourselves only or to others; fearful and timorous are applied only physically and personally; timid is mostly used in a moral sense. It is the character of the fearful or timorous person to be afraid of what he imagines would hurt himself. Between fearful and timorous there is little distinction, either in sense or application, except that we say fearful of a thing, not timorous of a thing.

To Aggravate, Irritate, Provoke, Exasperate, Tantalize. The crime of robbery is aggravated by any circumstances of cruelty. Whatever comes across the feelings irritates; whatever awakens anger provokes; whatever heightens this anger extraordinarily exasperates; whatever raises hopes in order to frustrate them tantalizes.

To Agree, Accede, Consent, Comply, Acquiesce. To agree is the general term, meaning to fall in with. We accede by becoming a party to a thing; those who accede are on equal terms one objects to that to which one does not accede. We consent to a thing by authorizing it, we comply with a thing by allowing it; those who consent or comply are not on equal terms with those in whose favor the consent is given or compliance made. Consenting is an act of authority, complying an act of good-nature or weakness. To acquiesce is quietly to admit; it is a passive act, dictated by prudence or duty.

Agreeable, Pleasant, Pleasing. Agreeable expresses a feeling less vivid than pleasant; pleasing marks a sentiment less vivid and distinct than either. A pleasing countenance denotes tranquillity and contentment; a pleasant countenance bespeaks happiness.

Aim, Object, End, View. The aim is that which the person has in his own mind; it depends upon the character of the individual whether it be good or bad, attainable or otherwise. The object lies in the thing; it is a matter of choice; it depends upon accident as well as design, whether it be worthy or unworthy. The end is that which follows or terminates any course or proceeding; it depends upon the means taken, whether the end is arrived at or not. It is the aim of the Christian to live peaceably; it is a mark of dullness or folly to act without an object; it is sophistry to suppose that the end will justify the means. The view is, generally speaking, whatever the mind sets before itself, whether by way of opinion or motive; a person's views may be interested or disinterested, correct or false; the view is a matter rather of contemplation than of practice.

To Aim, Point, Level. Aim expresses more than the other two words, inasmuch as it denotes a direction toward some minute point in an object, and the others imply direction toward the whole objects themselves. We aim at a bird; we point a cannon toward a fortress; we level a cannon at a wall.

To Aim, Aspire. We aim at a certain proposed point by endeavoring to gain it; we aspire after that which we think ourselves entitled to, and flatter ourselves with gaining. Many men aim at riches and honor; it is the lot of but few to aspire to a throne.

Air, Manner. Air lies in the whole person; manner is confined to the action or the movement of a single limb. A man has the air of a common person; it discovers itself in all his manners. An air is noble or simple; it marks an elevation or simplicity of character: a manner is rude, rustic, or awkward, for want of culture good society, and good example. We assume an air, and affect a manner.

Air, Mien, Look. Air depends not only on the countenance, but on the stature, carriage, and action; mien respects the whole outward appearance, not excepting the dress; look depends altogether on the face and its changes.

Alarm, Terror, Fright, Consternation. Alarm springs from any sudden signal that announces the approach of danger. Terror springs from any event or phenomenon that may serve as a prognostic of some catastrophe; alarm makes us run to our defense, and terror disarms us. Fright is a less vivid emotion than either, as it arises from the simple appearance of danger; we may be alarmed or terrified for others, but we are mostly frightened for ourselves. Consternation springs from the view of some very serious evil, and commonly affects many. Alarm affects the feelings, terror the understanding, and fright the senses; consternation seizes the whole mind, and benumbs the faculties.

Alertness, Alacrity. We proceed with alertness when the body is in its full vigor; we proceed with alacrity when the mind is in full pursuit of an object.

All, Whole. All respects a number of individuals; whole respects a single body with its components.

All, Every, Each. It is not within the limits of human capacity to take more than a partial survey of all the interesting objects which the whole globe contains. All men are not born with the same talent, either in degree or kind; but every man has a talent peculiar to himself. A parent divides his property among his children, and gives to each his due share.

To Allay, Soothe, Appease, Mitigate, Assuage. All these terms indicate a lessening of something painful. In a physical sense an irritating pain is allayed; a wounded part is soothed by affording ease and comfort. Extreme heat or thirst is allayed; extreme hunger is appeased; a punishment or a sentence is mitigated. In a moral sense one allays what is fervid and vehement; one soothes what is distressed or irritated; one appeases what is tumultuous and boisterous; one mitigates the pains of others, or what is rigorous and severe; one assuages grief or afflictions.

To Alleviate, Relieve. A pain is alleviated by making it less burdensome; a necessity is relieved by supplying what is wanted. Alleviate respects our internal feelings only; relieve respects our external circumstances. That alleviates which affords ease and comfort; that relieves which removes the pain.

Alliance, League, Confederacy. Alliances are formed for the mutual conveniences of parties, as between states to promote commerce. Leagues and confederacies are entered into mostly for purposes of self-defense or for common safety against the attacks of a common enemy; but a league is mostly a solemn act between two or more states and for general purposes of safety, and may, therefore, be both defensive and offensive. A confederacy is mostly the temporary act of several uniting in a season of actual danger to resist a common adversary.

To Allot, Appoint, Destine. Allot is used only for things, appoint and destine for persons or things. A space of ground is allotted for cultivation; a person is appointed as steward or governor; a youth is destined for a particular profession. Allotments and appointments are made for immediate purposes, destinations for a future purpose.

To Allow, Grant, Bestow. That is allowed which may be expected, if not directly required; that is granted which is desired, if not directly asked for; that is bestowed which is wanted as a matter of necessity. A grant comprehends in it something more important than an allowance, and passes between persons in a higher station; what is bestowed is of less value than either. A boy is allowed money for expenses; a king grants pensions to his officers; relief is bestowed on the indigent.

Allowance, Stipend, Salary, Wages, Hire, Pay. All these terms denote a stated sum paid according to certain stipulations. An allowance is gratuitous; it ceases at the pleasure of the donor. All the rest are the requital for some supposed service; they cease with the engagement made between the persons. Stipend is more fixed and permanent than salary, and salary than wages, hire, or pay; a stipend depends upon the fulfilling of an engagement, rather than on the will of an individual. A salary is a matter of contract between the giver and the receiver; an allowance may be given in any form, or at any stated times. Stipend and salary are paid yearly, or at even portions of a year; wages, hire, and pay are estimated by days, weeks, or months, as well as by years.

To Allude, Refer, Hint, Suggest. To allude is not so direct as to refer, but it is more clear and positive than either hint or suggest. We allude to a circumstance by introducing something collaterally allied to it; we refer to an event by expressly introducing it into one's discourse; we hint at a person's intentions by darkly insinuating what may possibly happen; we suggest an idea by some expressions relative to it.

Alone, Solitary, Lonely. Alone, compounded of all and one, signifies altogether one, or single, that is, by oneself. Alone marks the state of a person; solitary the quality of a person or a thing; lonely the quality of a thing only. A person walks alone, or takes a solitary walk in a lonely place.

Ambassador, Envoy, Plenipotentiary, Deputy. Ambassadors, envoys, and plenipotentiaries speak and act in the name of their sovereigns, with this difference: the first is invested with the highest authority, acting in all cases as the representative; the second appears only as a simple authorized minister acting for another, but not always representing him; the third is a sort of envoy used by courts only on the occasion of concluding peace or making treaties. Deputies are not deputed by sovereigns, although they may be deputed to sovereigns; they have no power to act or speak but in the name of some subordinate community or particular body. The functions of the first three belong to the minister, those of the latter to the agent.

Ambiguity, Equivocation. An ambiguity arises from a too general form of expression, which leaves the sense of the author indeterminate; an equivocation lies in the power of particular terms used, which admit of a double

interpretation, or an application to two different things. The ambiguity leaves us in entire uncertainty as to what is meant; the equivocation misleads us in the use of a term in the sense which we do not suspect.

To Amend, Correct, Emend, Improve, Mend, Better. Amend, emend, and correct are all applied to works of the understanding, with this distinction, that amend signifies to remove faults or defects generally, either by adding, taking away, or altering, as to amend a law; to emend is to remove particular faults in any literary work by the alteration of letters or single words; to correct is to remove gross faults, as to correct the press. To mend is employed in respect to any works in the sense of putting that right which either is or has become faulty; to improve is said either of persons or things which are made better, as to improve the mind, morals, etc.; to better is mostly applied to the outward condition on familiar occasions.

Amicable, Friendly. Amicable implies a negative sentiment, a freedom from discordance; friendly implies a positive feeling of regard, the absence of indifference. We make an amicable accommodation, and a friendly visit.

Ample, Spacious, Capacious. Ample is opposed to scanty, spacious to narrow, capacious to small. What is ample suffices and satisfies; it imposes no constraint. What is spacious is free and open; it does not confine. What is capacious readily receives and contains; it is liberal and generous.

To Amuse, Divert, Entertain. Whatever amuses serves to kill time, to lull the faculties and banish reflection; whatever diverts causes mirth and provokes laughter; whatever entertains acts on the senses, and awakens the understanding.

Anger, Resentment, Wrath, Ire, Indignation, Rage, Fury. Anger is a sudden sentiment of displeasure; resentment is a continued anger; wrath is a heightened sentiment of anger, which is poetically expressed by the word ire. Indignation is a sentiment awakened by the unworthy and atrocious conduct of others; as it is exempt from personality, it is not irreconcilable with the temper of a Christian. Rage is a vehement ebullition of anger; and fury is an excess of rage.

Animadversion, Criticism, Stricture. Animadversion includes censure and reproof; criticism implies scrutiny and judgment, whether for or against; and stricture comprehends a partial investigation mingled with censure.

To Animate, Inspire, Enliven, Cheer, Exhilarate. To be animated in its physical sense is simply to receive the first spark of animal life in however small a degree; to be animated in the moral sense is to receive the smallest portion of the sentiment or thinking faculty; to inspire expresses the communication of a strong moral sentiment or passion; to enliven respects the mind; cheer relates to the heart; exhilarate regards the spirits, both animal and mental.

To Announce, Proclaim, Publish. We announce an event that is expected and just at hand; we proclaim an event that requires to be known by all the parties interested; we publish what is supposed likely to interest all who know it.

Answer, Reply, Rejoinder, Response. An answer is given to a question; a reply is made to an assertion; a rejoinder is made to a reply; a response is made in accordance with the words of another. We answer either for the purpose of affirmation, information, or contradiction; we always reply, or rejoin, in order to explain or confute; responses are made by way of assent or confirmation.

Answerable, Responsible, Accountable, Amenable. Answerable and responsible convey the idea of a pledge given for the performance of some act, or the fulfillment of some engagement, a breach of which subjects the defaulter to loss, punishment, or disgrace. A person is accountable to his employer for the manner in which he has conducted any business intrusted to him. To be amenable is to be accountable as far as laws and regulations bind a person; one is amenable to the laws of society, or he is amenable to the rules of the house in which he is only an inmate.

To Apologize, Defend, Justify, Exculpate, Excuse, Plead. We apologize for an error by acknowledging ourselves guilty of it; we defend ourselves against a charge by proving its fallacy; we justify our conduct against any imputation by proving that it was blameless; we exculpate ourselves from all blame by proving that we took no part in the transaction. Excuse and plead are not grounded on any idea of innocence; a plea is frequently an idle or unfounded excuse, a frivolous attempt to lessen displeasure; we excuse ourselves for a neglect by alleging indisposition.

Apparel, Attire, Array. Apparel is the dress of every one; attire is the dress of the great; array is the dress of particular persons on particular occasions.

Apparent, Visible, Clear, Plain, Obvious, Evident, Manifest. That which is simply an object of sight is visible; that which presents itself to our view in any form, real or otherwise, is apparent. The stars themselves are visible to us; but their size is apparent. What is clear is to be seen in all its parts and in its proper colors; what is plain is seen by a plain understanding; what is obvious presents itself readily to the mind of every one; what is evident is seen forcibly, and leaves no hesitation on the mind. Manifest is a greater degree of the evident; it strikes on the understanding and forces conviction.

Applause, Acclamation. These terms express a public demonstration, the former by means of a noise with the hands or feet, the latter by means of shouts and cries. The former is employed as a testimony of approbation; the latter as a sanction, or an indication of respect.

To Appoint, Order, Prescribe, Ordain. To appoint is either the act of an equal or a superior; we appoint a meeting with any one at a given time and place; a king appoints his ministers. To order is the act of one invested with a partial authority; a master gives his orders to his servant. To prescribe is the act of one who is superior by virtue of his knowledge; a physician prescribes for his patient. To ordain is an act emanating from the highest authority; kings and councils ordain; but their ordinances must be conformable to what is ordained by the Divine Being.

To Apprehend, Conceive, Suppose, Imagine. To apprehend is simply to take an idea into the mind; thus we may apprehend any object that we hear or see; to conceive is to form an idea in the mind, as to conceive the idea of doing anything, to conceive a design. What one supposes may admit of a doubt; it is frequently only conjectural: what one imagines may be altogether improbable or impossible; that which cannot be imagined may be too improbable to admit of being believed.

Approach, Access, Admittance. Approach signifies the coming near or toward an object, and consequently is an unfinished act, but access and admittance are finished acts; access is the coming to, that is, as close to an object as is needful; and admittance is the coming into any place, or into the presence or society of any person. An approach may be quick or slow, an access easy or difficult, an admittance free or exclusive.

To Approach, Approximate. To approach denotes simply the moving of an object toward another; but to approximate denotes the gradual moving of two objects toward each other.

To Argue, Evince, Prove. To argue is to serve as an indication amounting to probability; to evince denotes an indication so clear as to remove doubt; to prove marks an evidence so positive as to produce conviction.

Argument, Reason, Proof. An argument serves for defense; a reason for justification; a proof for conviction. Arguments are adduced in support of an hypothesis or a proposition; reasons are assigned in matters of belief and practice; proofs are collected to ascertain a fact.

To Arise, or Rise, Mount, Ascend, Climb, Scale. Arise is used only in the sense of simply getting up, but rise is employed to express a continued motion upward. A person arises from his seat or his bed; a bird rises in the air; a person mounts a hill, and ascends a mountain. To climb is to rise step by step, by clinging to a certain body; to scale is to rise by an escalade, or species of ladder, employed in mounting the walls of fortified towns. Trees and mountains are climbed; walls are scaled.

Arrogance, Presumption. Arrogance is the act of the great; presumption that of the little. The arrogant man takes upon himself to be above others; the presumptuous man strives to be on a level with those who are above him.

Art, Cunning, Deceit. Art implies a disposition of the mind to use circumvention or artificial means to attain an end; cunning marks the disposition to practice disguise in the prosecution of a plan; deceit leads to the practice of dissimulation and gross falsehood, for the sake of gratifying a desire.

Artist, Artisan, Artificer, Mechanic. The artist ranks higher than the artisan; the former requires intellectual refinement, the latter nothing but to know the common practice of art. The sculptor is an artist; the sign-painter is an artisan. Manufacturers are artificers. The mechanic is one

whose work involves manual skill, or skill in the use of tools.

To Ask, Inquire, Question, Interrogate. We perform all these actions in order to get information; but we ask for general purposes of convenience; we inquire from motives of curiosity; we question and interrogate from motives of discretion. Indifferent people ask of each other whatever they wish to know; learners inquire the reasons of things which are new to them; masters question their servants, or parents their children, when they wish to ascertain the real state of any case; magistrates interrogate criminals when they are brought before them.

To Assemble, Muster, Collect. Assemble is said of persons only; muster and collect of persons or things. To assemble is to bring together by a call or invitation; to muster is to bring together by an act of authority, or by a particular effort, into one point of view at one time, and from one quarter; to collect is to bring together at different times, and from different quarters.

Assent, Consent, Approbation, Concurrence. Assent respects matters of judgment; consent respects matters of conduct. We assent to what we admit to be true; we consent to what we allow to be done. Approbation is a species of assent, concurrence of consent. To approve is not merely to assent to a thing as right, but to determine upon it positively to be so; concurrence is properly the consent of many. Assent is given by equals or inferiors; consent by superiors; approbation by equals or superiors; concurrence by equals.

To Assert, Maintain, Vindicate. We assert anything to be true; we maintain it by adducing proofs, facts, or arguments; we vindicate our own conduct or that of another when it is called in question.

Association, Society, Company, Partnership. Whenever we habitually or frequently meet together for some common object, it is an association. Whenever association is used in distinction from the others, it denotes that which is partial in its object and temporary in its duration. It is founded on unity of sentiment as well as on unity of object; but it is mostly unorganized, and kept together only by the spirit which gives rise to it. A society requires nothing but unity of object, which is permanent in its nature; it is organized, and set on foot to promote the cause of humanity, literature, or religion. Companies are brought together for the purposes of interest, and are dissolved when that object ceases to exist; their duration depends on the contingencies of profit and loss. Partnerships are altogether of an individual and private nature. As they are without organization and system, they are more precarious than any other association. Their duration depends not only on the chances of trade, but on the compatibility of individuals to co-operate in a close point of union.

Astronomer, Astrologer. The astronomer studies the course and movement of the stars; the astrologer reasons on their influence.

Asylum, Refuge, Shelter, Retreat. Asylum is chosen by him who has no home; refuge by him who is apprehensive of danger. Shelter is a cover or a protection. Fatigues and toils of life make us seek retreat.

To Atone for, Expiate. Both these terms express a satisfaction for an offense; but atone is general; expiate is particular. We may atone for a fault by any form of suffering; we expiate a crime only by suffering a legal punishment.

To Attack, Assail, Assault, Encounter, Onset, Charge. To attack is to make an approach in order to do some violence to the person; to assail or assault is to make a sudden and vehement attack; to encounter is to meet the attack of another. One assails by means of missile weapons; one assaults by direct personal violence. Onset is employed for the commencement of the battle; charge for an attack from a particular quarter.

Attempt, Trial, Endeavor, Effort, Essay. An attempt is the act of setting about a thing with a view of effecting it; a trial is the act of setting about a thing with a view of seeing the result; an endeavor is a continued attempt. An effort is to an attempt as a means to an end; it is the act of calling forth those powers which are required in an attempt. An essay is an imperfect attempt, or attempt to do something which cannot be done without difficulty. It is applied either to corporeal or intellectual matters.

To Attend, Hearken, Listen. To attend is to have the mind engaged on what we hear; to hearken and listen are to strive to hear. People attend when they are addressed; they hearken to what is said by others; they listen to what passes between others.

Attentive, Careful. We are attentive in order to understand and improve; we are careful to avoid mistakes. Attention respects matters of judgment; care relates to mechanical action: we listen attentively; we read or write carefully.

To Attract, Allure, Invite, Engage. That is attractive which draws the thoughts toward itself; that is alluring which awakens desire; that is inviting which offers persuasion; that is engaging which takes possession of the mind.

To Augur, Presage, Forebode, Betoken, Portend. Augur signifies either to serve or make use of as an augury; to forebode, or to presage, is to form a conclusion in one's own mind; to betoken or portend is to serve as a sign. Persons or things augur; persons only forebode or presage; things only betoken or portend. Auguring is a calculation of some future event, in which the imagination seems to be as much concerned as the understanding. Presaging is rather a conclusion or a deduction of what may be from what is; it lies in the understanding more than in the imagination. Foreboding lies altogether in the imagination. Things are said to betoken, which present natural signs; those are said to portend which present extraordinary or supernatural signs.

Auspicious, Propitious. Those things are auspicious which are casual, or only indicative of good; persons are propitious to the wishes of others who listen to their requests and contribute to their satisfaction.

Austere, Rigid, Severe, Rigorous, Stern. The austere man mortifies himself; the rigid man binds himself to a rule. The manners of a man are austere when he refuses to take part in any social enjoyments; his probity is rigid, that is, inaccessible to the allurements of gain, or the urgency of necessity. Severe is used with reference to conduct: he is severe in the restraints he imposes, and the punishments he inflicts; rigorous implies harshness, severity, as vigorous treatment, a vigorous officer of justice, namely, in the infliction of punishment. Sternness is a species of severity more in manner than in direct action; a commander may issue his commands sternly, or a despot may issue his stern decrees.

Avaricious, Miserly, Parsimonious, Niggardly. An avaricious man shows his love of money in his ordinary dealings; but the miser lives for his money, and suffers every privation rather than part with it. The avaricious man indulges his passion for money by parsimony, that is, by saving out of himself, or by niggardly ways in his dealings with others.

To Awaken, Excite, Provoke, Rouse, Stir Up. We awaken by a simple effort; we excite by repeated efforts or forcible means; we provoke by words, looks, or actions. The tender feelings are awakened; affections, or the passions in general, are excited; the angry passions are commonly provoked. We are roused from an extraordinary state by extraordinary means; we are stirred up from an ordinary to an extraordinary state.

Awe, Reverence, Dread. Awe and reverence both denote a strong sentiment of respect, mingled with some emotions of fear; but the former marks the much stronger sentiment of the two. Dread is an unmingled sentiment of fear for one's personal security.

Awkward, Clumsy, Crooked, Perverted, Untoward, Cross. Awkward respects outward deportment; clumsy the shape and make of the object. A person has an awkward gait, is clumsy in his whole person. What is crooked springs from a perverted judgment; what is untoward is independent of human control. We are cross when partially irritated, resulting from the state of the humors, physical and mental.

Axiom, Maxim, Aphorism, Apophthegm, Saying, Adage, Proverb, By-word, Saw. The axiom is a truth of the first value, a self-evident proposition which is the basis of other truths. A maxim is a truth of the first moral importance for all practical purposes; an aphorism is a truth set apart for its pointedness and excellence. Apophthegm is, in respect to the ancients, what saying is in regard to the moderns; it is a pointed sentiment pronounced by an individual, and adopted by others. Adage and proverb are vulgar sayings, the former among the ancients, the latter among the moderns. The by-word is a casual saying, originating in some local circumstance; the saw, which is a barbarous corruption of saying, is the saying formerly current among the ignorant.

To Babble, Chatter, Chat, Prattle, Prate. Babbling denotes rapidity of speech, which renders it unintelligible; chatter is an imitation of the noise of speech properly applied to magpies or parrots, and figuratively to a corresponding vicious mode of speech in human beings. The winter's fireside invites neighbors to assemble and chat away many an hour which might otherwise hang heavy on hand, or be spent less inoffensively. The prattling of babes has an interest for every feeling mind, but for parents it is one of their highest enjoyments;

prating, on the contrary, is the consequence of ignorance and childish assumption. A prattler has all the unaffected gayety of an uncontaminated mind; a prater is forward, obtrusive, and ridiculous.

Badly, Ill. These terms are both employed to modify the actions or qualities of things, but badly is always annexed to the action, and ill to the quality; as, to do anything badly, the thing is badly done, an ill-judged scheme, an ill-contrived measure, an ill-disposed person.

Band, Company, Crew, Gang. All these terms denote a small association for a particular object. A band is an association in which men are bound together by some strong obligation, whether taken in a good or a bad sense, as a band of soldiers, a band of robbers; a company marks an association for convenience, without any particular obligation, as a company of travelers, a company of strolling players. A crew marks an association collected by some external power, or by coincidence of plan and motive; in the former case it is used for a ship's crew, in the latter and bad sense of the word it is employed for any number of evil-minded persons met together from different quarters, and co-operating for some bad purpose. Gang is used in a bad sense for an association of thieves, murderers, and depredators in general, or in a technical sense for those who work together.

Banishment, Exile, Expulsion. Banishment follows from a decree of justice; exile either by the necessity of circumstances or by an order of authority; banishment is a disgraceful punishment inflicted by tribunals upon delinquents; exile is a disgrace incurred without dishonor; exile removes us from our country; banishment or expulsion drives us from it ignominiously.

Bare, Scanty, Destitute. Bare respects what serves for ourselves; scanty that which is provided by others. A subsistence is bare; a supply is scanty; destitute is generally said of one who wants. One is destitute of friends, of resources, or of comforts.

To Be, Exist, Subsist. We say of qualities, of forms, of actions, of arrangement, of movement, and of every different relation, whether real, ideal, or qualificative, that they are; we say of matter, of spirit, of body, and of all substances, that they exist. Man is man, and will be man under all circumstances and changes of life; he exists under every known climate and variety of heat or cold in the atmosphere. Everything which subsists depends for its existence upon the chances and changes of life.

To Be, Become, Grow. Be is positive; become is relative: a person is what he is without regard to what he was; he becomes that which he was not before. To grow is to become by a gradual process. A man may become a good man from a vicious one, in consequence of a sudden action on his mind; but he grows in wisdom and virtue by means of an increase in knowledge and experience.

To Bear, Yield. Bear conveys the idea of creating within itself; yield, that of giving from itself. Animals bear their young; inanimate objects yield their produce.

To Beat, Defeat, Overpower, Rout, Overthrow. A general is beaten in important engagements; he is defeated and may be routed in partial attacks; he is overpowered by numbers, and overthrown in set engagements.

Beautiful, Fine, Handsome, Pretty. When taken in relation to persons, a woman is beautiful who, in feature and complexion, possesses a grand assemblage of graces; a woman is fine who, with a striking figure, unites shape and symmetry; a woman is handsome who has good features; and pretty if with symmetry of feature be united delicacy. Beautiful, fine, and pretty are applied indifferently to works of nature and art; handsome mostly to those of art only: a beautiful picture, a fine drawing, a pretty cap, and handsome furniture.

Becoming, Comely, Graceful. Becoming respects the decorations of the person, and the exterior deportment; comely respects natural embellishments; graceful, natural or artificial accomplishments. Manner is becoming; figure is comely; air, figure, or attitude is graceful.

To Beg, Desire. To beg marks the wish; to desire, the will and determination. Beg is the act of an inferior, or one in a subordinate condition; desire is the act of a superior. We beg a thing as a favor; we desire it as a right.

To Beg, Beseech, Solicit, Entreat, Supplicate, Implore, Crave. To beg denotes a state of want; to beseech, entreat, and solicit, a state of urgent necessity; supplicate, and implore, a state of abject distress; crave, the lowest state of physical want. One begs with importunity, beseeches with earnestness, entreats by the force of reasoning and strong representation; one solicits by virtue of one's interest, supplicates by an humble address, implores by every mark of dejection and humiliation.

To Begin, Commence, Enter Upon. To begin respects the order of time; to commence, the exertion of setting about a thing. Begin is opposed to end; commence, to complete. A person begins a thing with a view of ending it; he commences a thing with a view of completing it. To enter upon denotes that of first doing what has not been tried before.

Belief, Credit, Trust, Faith. Belief and credit are particular actions or sentiments; trust and faith are permanent dispositions of the mind. Things are entitled to our belief; persons are entitled to our credit; but people repose a trust in others, or have a faith in others. Belief is purely speculative; and trust and faith are operative: the former operates on the mind; the latter on the outward conduct. Trust in God serves to dispel all anxious concern about the future.

Beneficent, Bountiful or Bounteous, Munificent, Generous, Liberal. The sincere well-wisher to fellow-creatures is beneficent according to his means; he is bountiful in providing for the comfort and happiness of others; he is munificent in dispensing favors; he is generous in imparting his property; he is liberal in all he does. Beneficence and bounty are characteristics of the Deity as well as of His creatures.

Benevolence, Benignity, Humanity, Kindness, Tenderness. Benevolence lies in the will. Benignity in the disposition or frame of mind; humanity lies in the heart; kindness and tenderness in the affections. Benevolence indicates a general good-will to all mankind; benignity, particular goodness or kindness of disposition. Humanity is a general tone of feeling; kindness and tenderness are particular modes of feeling.

To Bereave, Deprive, Strip. To bereave expresses more than deprive, but less than strip, which denotes a total and violent bereavement. One is bereaved of children, deprived of pleasures, and stripped of property. We are bereaved of that on which we set most value; the act of bereaving does violence to our inclination. We are deprived of the ordinary comforts and conveniences of life; they cease to be ours. We are stripped of the things which we most want; we are thereby rendered, as it were, naked.

Besides, Except. Besides, which is here taken as a preposition, expresses the idea of addition; except expresses that of exclusion. There were many there besides ourselves; no one except ourselves will be admitted.

Bishopric, Diocese. Both these words describe the extent of an episcopal jurisdiction, the first with relation to the person who officiates, the second with relation to the charge. There may, therefore, be a bishopric either where there are many dioceses or no diocese; but, according to the import of the term, there is properly no diocese where there is no bishopric.

To Blame, Censure, Condemn, Reprove, Reproach, Upbraid. To blame is simply to ascribea fault to; to censure is to express disapprobation: the former is less personal than the latter. The thing more than the person is blamed; the person more than the thing is censured. A person may be blamed for his good nature, and censured for his negligence. That which is condemned is of a more serious nature, and produces a stronger and more unfavorable expression of displeasure or disapprobation, than that which is blamed; reprove is even more personal than censure. A reproof passes from one individual to another, or to a certain number of individuals. Reproaching and upbraiding are as much the acts of individuals as reproving, but the former denote the expression of personal feelings, and may be just or unjust; the latter is presumed to be divested of all personal feelings.

Blemish, Stain, Spot, Speck, Flaw, Defect, Fault. Whatever detracts from the seemliness of appearance is a blemish. In works of art the slightest dimness of color, or want of proportion, is a blemish. A stain or spot sufficiently characterizes itself, as that which is superfluous and out of its place; a speck is a small spot; and a flaw, which is confined to hard substances, consists mostly of a faulty indenture on the outer surface. A blemish tarnishes; a stain spoils; a spot, speck, or flaw disfigures. Defect consists in the want of some specific essential in an object; fault conveys the idea not only of something wrong, but also of its relation to the author. There is a blemish in fine china, a defect in the springs of a clock, and a fault in the contrivance.

To Blot Out, Expunge, Rase or Erase, Efface, Cancel, Obliterate. Letters are blotted out, so that they cannot be seen again; they are expunged, so as to signify that they cannot stand for anything; they are erased, so that the space may be reoccupied with writing. Efface does not designate either the manner or the object:

inscriptions on stone may be effaced, which are rubbed off so as not to be visible. Cancel is principally confined to written or printed characters; they are cancelled by striking through them with the pen. Letters are obliterated which are in any way made illegible.

Bold, Fearless, Intrepid, Undaunted. Boldness is a positive characteristic of the spirit; fearlessness is a negative state of the mind, that is, simply an absence of fear. A person may be bold through fearlessness, but he may be fearless without being bold: he may be fearless where there is no apprehension of danger or no cause for apprehension, but he is bold only when he is conscious or apprehensive of danger, and prepared to encounter it. A man is intrepid who has no fear where the most fearless might tremble; he is undaunted whose spirit is unabated by that which would make the stoutest heart yield.

Booty, Spoil, Prey. Booty and spoil are used as military terms in attacks on an enemy, prey in cases of particular violence. The soldier gets his booty; the combatant his spoils; the carnivorous animal his prey. Booty respects what is of personal service to the captor; spoils whatever serves to designate his triumph; prey includes whatever gratifies the appetite and is to be consumed.

To Bound, Limit, Confine, Circumscribe, Restrict. Bound applies to the natural or political divisions of the earth: countries are bounded by mountains and seas. Limit applies to any artificial boundary: landmarks in fields serve to show the limits of one man's ground. To confine is to bring the limits close together, to part off one space absolutely from another; in this manner we confine a garden by means of walls. To circumscribe is literally to surround, in this manner a circle may circumscribe a square. To restrict is to exercise a strong degree of control: a person is restricted by his physician to a certain portion of food in a day; laws often restrict privileges.

Boundless, Unbounded, Unlimited, Infinite. The ocean is a boundless object so long as no bounds to it have been discovered; desires are often unbounded which ought always to be bounded; power is sometimes unlimited which would be better limited. Nothing is infinite but that Being from whom all finite beings proceed.

Brave, Gallant. Gallantry is extraordinary bravery or bravery on extraordinary occasions: the brave man goes willingly where he is commanded; the gallant man leads on with vigor to the attack. Bravery is common to vast numbers and whole nations; gallantry is peculiar to individuals or particular bodies.

Bravery, Courage, Valor. Bravery lies in the blood; courage lies in the mind: the latter depends on the reason, the former on the physical temperament: the first is a species of instinct; the second is a virtue. A man is brave in proportion as he is without thought; he has courage in proportion as he reasons or reflects. Valor is a higher quality than either bravery or courage, and seems to partake of the grand characteristics of both; it combines the fire of bravery with the determination and firmness of courage.

Breach, Break, Gap, Chasm. A breach and a gap are the consequence of a violent removal, which destroys the connection; a break and a chasm may arise from the absence of that which would form a connection. A breach in a wall is made by means of cannon; gaps in fences are commonly the effect of some violent effort to pass through; a break is made in a page of printing by leaving off in the middle of a line; a chasm is left when an earthquake causes a gaping fissure.

To Break, Bruise, Squeeze, Pound, Crush. Break always implies the separation of the component parts of a body; bruise denotes simply destroying the continuity of the parts. Hard brittle substances, as glass, are broken; soft pulpy substances, as flesh or fruits, are bruised. Squeeze is used for soft substances or for gentle compression. To pound is properly to bruise in a mortar, so as to produce a separation of parts. To crush is the most violent and destructive of all operations, which amounts to the total dispersion of all the parts of a body.

To Break, Burst, Crack, Split. To break does not specify any particular manner or form of action; what is broken may be broken in two or more pieces, broken short or lengthwise, and the like: to burst is to break suddenly and with violence, frequently also with noise. To crack and split are modes of breaking lengthwise: the former in application to hard or brittle objects, as clay, or the things made of clay; the latter in application to wood, or that which is made of wood.

Breeze, Gale, Blast, Gust, Storm, Tempest, Hurricane. A breeze is gentle; a gale is brisk, but steady: we have breezes on a calm summer's day; the mariner has favorable gales, which keep the sails on the stretch. A blast is impetuous: the blare of a trumpet, the breath of bellows, are blasts. A gust is sudden and vehement; storm, tempest, and hurricane include other particulars besides wind. A storm throws the whole atmosphere into commotion; it is a war of the elements, in which wind, rain, hail, and the like conspire to disturb the heavens. Tempest is a species of storm which has also thunder and lightning to add to the confusion. Hurricane is a species of storm which exceeds all the rest in violence and duration.

Brightness, Luster, Splendor, Brilliancy. Brightness and luster are applied properly to natural lights; splendor and brilliancy have been more commonly applied to that which is artificial or unusual: there is always more or less brightness in the sun or moon; there is an occasional luster in all the heavenly bodies when they shine in their unclouded brightness; there is splendor in the eruptions of flame from a volcano or from an immense conflagration; there is brilliancy in a collection of diamonds.

To Bring, Fetch, Carry. To bring is simply to take with oneself from the place where one is; to fetch is to go first to a place and then bring a thing; to fetch, therefore, is a sort of bringing: whatever is near at hand is brought; whatever is at a distance must be fetched. To carry respects always a motion directly from the place or at a distance from the place: he carries a parcel from home.

Bulky, Massive. Whatever is bulky has a prominence of figure; what is massive has compactness of matter.

Burial, Interment, Sepulture. We bury in order to conceal. Interment and sepulture are accompanied with religious ceremonies. Burial is confined to no object or place; interment may be used when a body is deposited in a vault; sepulture is an abstract term confined to particular cases, as in speaking of the rites and privileges of sepulture.

Business, Occupation, Employment, Engagement, Avocation, Vocation. Business occupies all a person's thoughts as well as his time and powers; occupation and employment occupy only his time and strength: the first is mostly regular, it is the object of our choice; the second is casual, it depends on the will of another. Engagement is a partial employment, avocation a particular engagement. Vocation is applied to one's regular work; and avocation to the occupation or pleasures that call one away from the regular routine of work.

Business, Trade, Profession, Art. Buying or selling of merchandise is inseparable from trade; but the exercise of one's knowledge and experience for purposes of gain constitutes a business. When learning or particular skill is required, it is a profession; and when there is a peculiar exercise of art, it is an art.

Bustle, Tumult, Uproar. Bustle has most of hurry in it; tumult most of disorder and confusion; uproar most of noise: the hurried movements of one, or many, cause a bustle; the disorderly struggles of many constitute a tumult. The loud elevation of many opposing voices produces an uproar; uproar is the consequence either of general anger or mirth.

To Buy, Purchase, Bargain, Cheapen. Buy may always be substituted for purchase without impropriety; but purchase would be sometimes ridiculous in the familiar application of buy: necessaries of life are bought; luxuries are purchased. To bargain is to make a contract for exchange. To cheapen is not only to lower the price asked, but to deal in such things as are cheap.

Calamity, Disaster, Misfortune, Mischance, Mishap. A calamity is a great disaster or misfortune; a misfortune is a great mischance or mishap. Whatever is attended with destruction is a calamity; whatever occasions mischief to the person, defeats or interrupts plans, is a disaster; whatever is accompanied with a loss of property, or the deprivation of health, is a misfortune; whatever diminishes the beauty or utility of objects is a mischance or a mishap.

To Calculate, Reckon, Compute, Count. To calculate denotes any numerical operation in general, but is particularly applicable to the abstract science of figures. The astronomer calculates the motions of the heavenly bodies; the mathematician makes algebraic calculations. To reckon is to enumerate and set down things in detail; reckoning is applicable to the ordinary business of life: tradesmen keep their accounts by reckoning; children learn to reckon by various simple processes. Calculation is therefore the science, reckoning the practical art of enumerating. To compute is to come at the result by calculation. We count one by one; we count the minutes.

Calendar, Almanac, Ephemeris. The calendar

is a book which registers events under every month; the almanac is a book which registers times, or the divisions of the year; and an ephemeris is a book which registers the planetary movements every day.

To Call, Cry, Exclaim. Call is used on all ordinary occasions in order to draw a person to a spot, or for any other purpose, when one wishes to be heard. To cry is to call loudly on particular occasions: a call draws attention; a cry awakens alarm. To exclaim is the expression of some particular feeling.

To Call, Invite, Bid, Summon. In the act of calling, any sounds may be used; we may call by simply raising the voice. Inviting may be a direct or indirect act; we may invite by looks or signs as well as by words, by writing as well as by speaking. To bid and summon require the express use of words; the former is always directly addressed to the person, the latter may be conveyed by an indirect channel. To summon is an act of authority, as to summon witnesses.

Calm, Composed, Collected. These terms agree in expressing a state; but calm respects the state of the feelings, composed the state of the thoughts and feelings, and collected the state of the thoughts more particularly. Calmness is peculiarly requisite in seasons of distress, and amidst scenes of horror; composure, in moments of trial, disorder, and tumult; collectedness in moments of danger.

Calm, Placid, Serene. Calm and serene are applied to the elements; placid only to the mind. Calmness respects only the state of the winds, serenity that of the air and the heavens. The weather is calm when it is free from agitation; it is serene when free from noise and vapor. Calm respects the total absence of all perturbation; placid the ease and contentment of the mind; serene, clearness and composure of the mind. We speak of a calm state of mind, and of a serene temper.

Can, May. Can denotes possibility, may liberty and probability: he who has sound limbs can walk; but he may not walk in places which are prohibited.

Candor, Openness, Sincerity. Candor obliges us to acknowledge even that which may make against ourselves; it is disinterested. Openness impels us to utter whatever passes in the mind; it is unguarded. Sincerity prevents us from speaking what we do not think; it is positive.

Capacity, Capaciousness. Capacity is an indefinite term designating the property of being fit to hold or receive, as applied to bodies generally; but capaciousness denotes a fullness of this property as belonging to a particular object in a great degree. Measuring the capacity of vessels belongs to the science of mensuration: the capaciousness of a room is to be observed by the eye.

Captious, Cross, Peevish, Petulant, Fretful. Captious marks a readiness to be offended; cross indicates a readiness to offend or come across the wishes of others; peevish expresses a strong degree of crossness; fretful a complaining impatience; petulant a quick or sudden impatience. Captiousness is the consequence of misplaced pride; crossness of ill-humor; peevishness and fretfulness of a painful irritability. Petulance is either the result of a naturally hasty temper or of a sudden irritability.

Capture, Seizure, Prize. A capture is made by force of arms; a seizure is made by direct and personal force. Prize relates only to the thing taken, and its value to the captor.

Care, Solicitude, Anxiety. Care is the most indefinite of the three; it may be accompanied with pain or not, according to the nature of the object or the intensity of the application. Solicitude and anxiety are accompanied with a positive degree of pain, the latter still more than the former. Care may be exercised with or without feeling; solicitude has desire, mixed with fear; anxiety has distress for the present, mixed with fear for the future.

Care, Charge, Management. Care will include both charge and management; but, in the strict sense, it comprehends personal labor. Charge involves responsibility; management includes regulation and order. A gardener has the care of a garden; a nurse has the charge of children; a steward has the management of a farm.

Careful, Cautious, Provident. Careful, or full of care, that is, having care, is the general term; to be cautious is to be careful in guarding against danger; to be provident is to be careful in preventing straits and difficulties. The term careful is applied for the most part to present matters, but provident only to that which is future. One is careful of his money, but provident toward a time of need.

Carnage, Slaughter, Massacre, Butchery. Carnage respects the number of dead bodies made; it is the consequence of any impetuous attack from a powerful enemy. Slaughter respects the act of taking away life, and the circumstances of the agent; massacre and butchery respect the circumstances of the objects who are the sufferers of the action. The latter three are said of human beings only: defenseless women and children are commonly butchered by the savage furies who are most active in this work of blood.

Carriage, Gait, Walk. Carriage is here the most general term; it respects the manner of carrying the body, whether in a state of motion or rest. Gait is the mode of carrying the limbs and the body whenever we move. Walk is the manner of carrying the body when we move forward to walk.

Case, Cause. The case is matter of fact; the cause is matter of question. A case involves circumstances and consequences; a cause involves reasons and arguments. A case is something to be learned; a cause is something to be decided.

Cast, Turn, Description. Cast, as applicable to persons, respects that which they are made by circumstances; turn, that which they are by themselves: thus there are many casts of religion, that is, men cast in a certain form of religion; and men of a particular moral cast, that is, such as are cast in a particular mold as respects their thinking and acting: so in like manner men of a particular turn, that is, as respects their inclinations and tastes. The description is that by which a man is described or made known to others.

Cause, Reason, Motive. Cause respects the order and connection of things; reason the movements and operations of the mind; motive the movements of the mind and the body. Cause is said of all inanimate objects; reason and motive of rational agents. Whatever happens in the world happens from some cause mediate or immediate; the primary or first cause of all is God: whatever opinions men hold, they ought to be able to assign a substantial reason for them; and for whatever they do, they ought to have a sufficient motive. As the cause gives birth to the effect, so does the reason give birth to the conclusion, and the motive gives birth to the action.

To Cause, Occasion, Create. What is caused seems to follow naturally. What is occasioned follows incidentally, or what occasions may be incidental, but necessary. What is created receives its existence arbitrarily. A wound causes pain; accidents occasion delay; busy bodies create mischief.

Cautious, Wary, Circumspect. We must be cautious on all occasions where there is danger, but we must be wary where there is great danger. A tradesman must be cautious in his dealings with all men, but he must be wary when he has to deal with designing men. Circumspect is used in reference to matters of theory or contemplation, when the mind is principally employed; a man must be circumspect when he transacts business of particular importance and delicacy.

To Cease, Leave Off, Discontinue. Cease is used either for particular actions or general habits; leave off more usually and properly for particular actions; discontinue for general habits. A restless spoiled child never ceases crying until it has obtained what it wants; it is a mark of impatience not to cease lamenting when one is in pain. A laborer leaves off his work at any given hour. A delicate person discontinues his visits when they are found not to be agreeable.

To Celebrate, Commemorate. Everything is celebrated which is distinguished by any marks of attention, without regard to the time of the event, whether present or past; but nothing is commemorated but what has already passed in point of time.

Celestial, Heavenly. Celestial is applied mostly in the natural sense of the heavens; heavenly is employed more commonly in a spiritual sense. Hence, we speak of the celestial globe as distinguished from the terrestrial; and of the celestial bodies. But, on the other hand, we speak of the heavenly habitation, of heavenly joys or bliss, of heavenly spirits, and the like.

To Censure, Carp, Cavil. To censure respects positive errors; to carp and cavil have regard to what is trivial or imaginary: the former is employed for errors in persons; the latter for supposed defects in things. Carping and caviling are resorted to only to indulge ill-nature or self-conceit: party politicians carp at the measures of administration; infidels cavil at the evidences of Christianity, because they are determined to disbelieve.

Certain, Sure, Secure. Certain and sure have regard to a person's convictions; secure to his interests or condition. One is certain from actual knowledge or from a belief in others; one is sure from a reliance upon others; one is secure when free from danger. We can be certain of nothing future but death; we may be sure that God will fulfill His promises in His own way; we may be

secure against any loss or mischief if we use proper precautions.

Cessation, Stop, Rest, Intermission. Cessation respects the course of things; whatever does not go on has ceased; things cease of themselves: stop respects some external action or influence; nothing stops but what is supposed to be stopped or hindered by another: rest is cessation that regards labor or exertion; whatever does not move or exert itself is at rest: intermission is cessation only for a time or at certain intervals. That which ceases or stops is supposed to be at an end; rest or intermission supposes a renewal.

Chance, Fortune, Fate. Chance applies to all things, personal or otherwise; fortune and fate are mostly said of that which is personal. Chance neither forms, orders, nor designs; neither knowledge nor intention is attributed to it; its events are uncertain and variable. Fortune forms plans and designs, but without choice; we attribute to it an intention without discernment; it is said to be blind. Fate forms plans and chains of causes; intention, knowledge, and power are attributed to it; its views are fixed, its results decisive.

Chance, Hazard. Both these terms are employed to mark the course of future events, which are not discernible by the human eye. With the Deity there is neither chance nor hazard. His plans are the result of omniscience; but the designs and actions of men are all dependent on chance or hazard. Chance may be favorable or unfavorable, more commonly the former: hazard is always unfavorable; it is properly a kind of chance.

To Change, Exchange, Barter, Substitute. To change in respect to persons is to take one for another, without regard to whether they are alike or different, as a king changes his ministers; any person may change his servants: to exchange is to take one person in return for another who is in like condition, as prisoners are exchanged in time of war. In respect to things, to change is to take anything new or fresh, whether alike or different. Clothes may be changed. To exchange is to take one thing for another, that is, either of the same kind or equivalent in value, as to exchange one commodity for another. To change may often be the result of caprice, but to exchange is always an act either of discretion or necessity. To barter is to give any commodity for other commodities. To substitute is to put one person in the place of another for the purpose of doing any service or filling any office, as to substitute one for another who has been drawn for the militia.

Change, Variation, Vicissitude. Change consists simply in ceasing to be the same; variation consists in being different at different times; vicissitude consists in being alternately or reciprocally different and the same.

Character, Letter. Character is any written or printed mark that serves to designate something; a letter is a species of character which is the constituent part of a word.

Character, Reputation. Character lies in the man; it is the mark of what he is; it shows itself on all occasions: reputation depends upon others; it is what they think of him.

To Chasten, Chastise. Chasten has most regard to the end, chastise to the means; the former is an act of the Deity, the latter a human action: God chastens His faithful people, to cleanse them from their transgressions; parents chastise their children, to prevent the repetition of faults.

To Cheat, Defraud, Trick. One cheats by direct and gross falsehood or artifice; one defrauds by a settled plan or contrivance; one tricks by a sudden invention.

To Check, Chide, Reprimand, Reprove, Rebuke. A person is checked that he may not continue to do what is offensive; he is chidden for what he has done, that he may not repeat it. People are checked by actions and looks, as well as by words; they are chidden by words only. A person may chide or reprimand in anger, he reproves and rebukes with coolness: great offenses call forth chidings. Omissions or mistakes occasion or require a reprimand; irregularities of conduct give rise to reproof; and improprieties of behavior demand rebuke.

To Check, Stop. Check signifies to impede the course of a body in motion, that is, to cause it to move slowly; to stop (v. cessation), is to cause it not to move at all.

To Cheer, Encourage, Comfort. To cheer regards the spirits; to encourage the resolution: the sad require to be cheered; the timid to be encouraged. To cheer and to comfort have regard to the spirits, but the latter differs in degree and manner: to cheer expresses more than to comfort, the former signifying to produce a lively sentiment, the latter to lessen or remove a painful one. We are cheered in the moments of despondency, whether from real or imaginary causes; we are comforted in the hour of distress.

Chief, Principal, Main. Chief respects order and rank; principal has regard to importance and respectability; main to degree or quantity. We speak of a chief clerk; a commander-in-chief; the chief person in a city: but the principal people in a city; the principal circumstances in a narrative, and the main object.

Chief, Leader, Chieftain, Head. Chief denotes precedency in tribal or civil matters; leader regards the direction of enterprises: chieftain is a kind of leader; and head is the superior in general concerns.

To Choose, Prefer. To choose is to take one thing from among others; to prefer is to take one thing before or rather than another.

To Choose, Pick, Select. We may choose whatever comes in our way without regard to the number of the objects to be chosen from, but we pick or select out of a number only, as to pick or select books from a library. We may pick one or many out of a number, but we mostly select a number. We select with even greater care than we pick.

Circuit, Tour, Round. A circuit is made for a specific end of a serious kind; a tour is always made for pleasure; a round, like a circuit, is employed in matters of business, but of a more familiar and ordinary kind.

To Circumscribe, Inclose. The extent of any place is drawn out for the eye by a circumscription; its extent is limited to a given point by an inclosure. A garden is circumscribed by any ditch, line, or posts, that serve as its boundaries; it is inclosed by wall or fence.

Circumstance, Situation. Circumstance is to situation as a part to a whole; many circumstances constitute a situation: a situation is an aggregate of circumstances. A person is said to be in circumstances of affluence who has an abundance of everything essential to his comfort; he is in an easy situation when nothing exists to create uneasiness.

Circumstance, Incident, Fact. Incident is what happens; fact is what is done; circumstance is not only what happens and is done, but whatever is or belongs to a thing. To everything are annexed circumstances, either of time, place, age, color, or other collateral appendages, which change its nature. Everything that moves and operates is exposed to incidents; effects are produced, results follow, and changes are brought about; these are incidents: whatever moves and operates, does and what it produces is done or is the fact.

Circumstantial, Particular, Minute. Circumstantial expresses less than particular, and particular less than minute. A circumstantial account contains all leading events; a particular account includes every event and movement, however trivial; a minute account omits nothing as to person, time, place, form, and every other trivial circumstance connected with the events.

To Cite, Quote. To cite is employed for persons or things; to quote for things only; authors are cited, passages from their works are quoted: we cite only by authority; we quote for general purposes of convenience.

Civil, Polite. These two epithets are employed to denote different modes of acting in social intercourse. Polite expresses more than civil; it is possible to be civil without being polite. Civility is contented with pleasing when the occasion offers: politeness seeks the opportunity to please; it prevents the necessity of asking by anticipating the wishes; it is full of delicate attentions, and is an active benevolence in the minor concerns of life.

Civil, Obliging, Complaisant. Civil applies to words or manner as well as to the action; obliging to the action only. As civil is indefinite in its meaning, so it is often used indiscriminately in its application; obliging, on the other hand, is confined to what passes between particular persons or under particular circumstances. Civil and obliging both imply a desire to do a kindness; complaisant signifies the desire of receiving pleasure, which is a refined mode of doing a kindness.

Clandestine, Secret. To do a thing clandestinely is to elude observation; to do a thing secretly is to do it without the knowledge of any one: what is clandestine is unallowed, which is not necessarily the case with what is secret.

To Clasp, Hug, Embrace. To clasp makes the act of enclosing another on one's arms when it is performed with the warmth of true affection. To hug is to clasp tightly to the bosom; the more refined term, to embrace, is to infold in the arms in token of friendship or affection.

To Class, Arrange, Range. The general qualities and attributes of things are to be considered in classing; their fitness to stand by each other must be considered in arranging; their capacity for forming a line is the only thing to be attended to in ranging. Classification serves the purposes either of public policy or science; arranging

is a matter of convenience to the individual himself; ranging is a matter of convenience for others.

Clean, Cleanly, Pure. Clean expresses a freedom from dirt or soil; cleanly the disposition or habit of being clean. A person who keeps himself clean is cleanly. Pure is used in a moral sense; the heart should be pure.

Clearly, Distinctly. That is seen clearly of which one has a clear view independent of anything else; that is seen distinctly which is seen so as to distinguish it from other objects. We see the moon clearly whenever it shines; but we cannot see the spots in the moon distinctly without the help of glasses.

Clearness, Lucidity, Brightness, Vividness. A mere freedom from stain or dullness constitutes clearness; the return of light, and consequent removal of darkness, constitutes lucidity; brightness supposes a certain strength of light; vividness a freshness combined with strength, and with a degree of brilliancy.

Clearness, Perspicuity. These epithets denote qualities equally requisite to render a discourse intelligible. Clearness respects our ideas, and springs from the distinction of the things themselves that are discussed: perspicuity respects the mode of expressing the ideas, and springs from the good qualities of style.

Clever, Skillful, Expert, Dexterous. Cleverness is mental power employed in the ordinary concerns of life: a person is clever in business. Skill is both a mental and corporeal power, exerted in mechanical operations and practical sciences: a physician, a lawyer, or an artist, is skillful: one may have a skill in divination, or a skill in painting. Expertness and dexterity require more corporeal than mental power exerted in minor arts and amusements: one is expert at throwing the quoit; dexterous in the management of horses.

Cloister, Convent, Monastery. The proper idea of cloister is that of seclusion; the proper idea of convent is that of community; the proper idea of a monastery is that of solitude. One is shut up in a cloister, put into a convent; one retires to a monastery. Whoever wishes to take an absolute leave of the world shuts himself up in a cloister; whoever wishes to attach himself to a community that has renounced all commerce with the world goes into a convent; whoever wishes to shun all human intercourse retires to a monastery. In the cloister our liberty is sacrificed; in the convent our worldly habits are renounced, and those of a regular religious community being adopted, we submit to the yoke of established orders: in a monastery we impose a sort of voluntary exile upon ourselves; we live with the view of living only to God.

Close, Near, Nigh. Close is more definite than near: houses which are almost joined stand close to each other; men stand close when they touch each other. Objects are near which are within sight; persons are near each other when they can converse together. Near and nigh, which are but variations of each other in etymology, admit of little or no difference in their use.

To Close, Shut. To close signifies simply to put close together; to shut to stop or prevent admittance: closing is therefore a partial shutting, and shutting a complete closing.

To Close, Conclude, Finish. We may close at any point by simply ceasing to have any more to do with it; but we conclude in a definite and positive manner. To conclude is to bring to an end by determination; to finish is to bring to an end by completion: what is settled by arrangement and deliberation is properly concluded; what is begun on a certain plan is said to be finished.

Coarse, Rough, Rude. In the proper sense coarse refers to the composition and materials of bodies, as coarse bread, coarse meat, coarse cloth; rough respects the surface of bodies, as rough wood and rough skin; rude respects the make or fashion of things, as a rude bark, a rude utensil. Coarse is opposed to fine, rough to smooth, rude to polished.

Cogent, Forcible, Strong. Cogency applies to reasons individually considered; force and strength to modes of reasoning or expression. Cogent reasons impel to decisive conduct; strong conviction is produced by forcible reasoning conveyed in strong language.

Colleague, Partner. Colleague is more noble than partner: men in the highest offices are colleagues; tradesmen, mechanics, and subordinate persons, are partners: every Roman Consul had a colleague; every workman has commonly a partner. Colleague is used for community of office; partner for community of interest.

Colorable, Specious, Ostensible, Plausible, Feasible. The first three of these words are figures of speech drawn from what naturally pleases the eye; plausible is drawn from what pleases the ear; feasible takes its signification from what meets the judgment or conviction. What is colorable has an aspect or face upon it that lulls suspicion and affords satisfaction; what is specious has a fair outside when contrasted with that which it may possibly conceal; what is ostensible is that which presents such an appearance as may serve for an indication of something real.

To Combat, Oppose. A person's views or attitudes are combated; his interests or his measures are opposed.

To Come, Arrive. Persons or things come; persons only, or what is personified, arrive. To come specifies neither time nor manner; to arrive is employed with regard to some particular period or circumstances.

Comfort, Pleasure. The main feature of comfort is substantiality; the main feature of pleasure is warmth. Pleasure is quickly succeeded by pain; it is the lot of humanity that to every pleasure there should be an alloy: comfort is that portion of pleasure which seems to lie exempt from this disadvantage; it is the most durable sort of pleasure. Comfort must be sought for at home; pleasure is pursued abroad.

Command, Order, Injunction, Precept. A command is an exercise of power or authority; it is imperative and must be obeyed: an order serves to direct; it is instructive and must be executed. A sovereign issues his commands. Orders may be given by a subordinate or by a body, as orders of a court. Order is applied to the common concerns of life; injunction and precept to the moral conduct or duties of men. Injunction imposes a duty by virtue of the authority which enjoins. The precept lays down or teaches such duties as already exist.

To Commission, Authorize, Empower. We commission in matters where our own will and convenience are concerned; we authorize in matters where our personal authority is requisite; and we empower in matters where the authority of the law is required.

Commodious, Convenient. Commodious is mostly applied to that which contributes to the bodily ease and comfort; convenient to whatever suits the purposes of men in their various transactions.

Commonly, Generally, Frequently, Usually. What is commonly done is an action common to all; what is generally done is the action of the greatest part; what is frequently done is either the action of many, or an action many times repeated by the same person; what is usually done is done regularly by one or many.

To Communicate, Impart. A thing may be communicated directly or indirectly, and to any number of persons, as to communicate intelligence by signal or otherwise. Impart is a direct action that passes between individuals, as to impart instruction.

Communion, Converse. Both these terms imply a communication between minds; but the former may take place without corporeal agency, the latter never does. Spirits hold communion with each other; people hold converse.

Comparison, Contrast. Likeness in the quality and difference in the degree are requisite for a comparison; likeness in the degree and opposition in the quality are requisite for a contrast.

Compatible, Consistent. Compatibility has principally a reference to plans and measures; consistency to character, conduct, and station. Everything is compatible with a plan which does not interrupt its prosecution; everything is consistent with a person's station by which it is neither degraded nor elevated.

To Compel, Force, Oblige, Necessitate. To compel denotes moral rather than physical force; but to force is properly applied to the use of physical force or a violent degree of moral force. A man may be compelled to walk if he have no means of riding; he may be forced to go at the will of another. Oblige expresses only an indirect influence, which may be resisted or yielded at discretion. We are compelled to do that which is repugnant to our will and our feelings. That which one is obliged to do may have the assent of the judgment if not of the will. We are necessitated by circumstances, or by anything which puts it out of our power to do otherwise.

Compensation, Amends, Satisfaction, Recompense, Remuneration, Requital, Reward. A compensation is a return for a loss or a damage sustained; amends is a return for anything that is faulty in ourselves or toward others. Satisfaction is that which satisfies the individual requiring it — it is given for personal injuries; a recompense is a voluntary return for a voluntary service — it is made from a generous feeling. Remuneration is estimated rather according to the condition of the person and the dignity of the service, than for its positive worth. Authors often receive a remuneration for their works according to the reputation they have previously acquired, and not according to the real merit of the work. A reward conveys no idea of an obligation on the part of the person making it; whoever rewards acts optionally. When evil is

returned for good, that is a bad requital, and, as a proof of ingratitude, wounds the feelings.

Competent, Fitted, Qualified. Competent mostly respects the mental endowments and attainments; fitted, the disposition and character; qualified, the artificial acquirements or natural qualities.

To Complain, Lament, Regret. Complaint marks most of dissatisfaction; lamentation most of grief; regret most of pain. Complaint is expressed verbally; lamentation either by words or signs; regret may be felt without being expressed. Complaint is made of personal grievances; lamentation and regret may be made on account of others as well as ourselves. We complain of our ill health, of our inconveniences, or of troublesome circumstances; we lament our inability to serve another; we regret the absence of one whom we love.

Complaint, Accusation. A complaint is mostly made in matters that personally affect the complainant; an accusation is made of matters in general, but especially those of a moral nature. A complaint is made for the sake of obtaining redress; an accusation is made for the sake of ascertaining a fact or for the sake of bringing to punishment.

Complaisance, Deference, Condescension. Complaisance signifies the act of complying with, or pleasing others; deference marks the inclination to defer, or acquiesce in the sentiments of another in preference to one's own; condescension marks the act of conceding one's point to yield to the satisfaction of others, rather than rigorously to exact one's rights. The necessities and the allurements of society and of intimacy lead to complaisance; it makes sacrifices to the wishes, tastes, and personal feelings of others. Complaisance is the act of an equal; deference that of an inferior; condescension that of a superior.

Complete, Perfect, Finished. That is complete which has no deficiency; that is perfect which has positive excellence; and that is finished which is at an end.

To Complete, Finish, Terminate. The characteristic idea of completing is that of making a thing altogether what it ought to be; that of finishing, the doing all that is intended to be done toward a thing; and that of terminating, simply putting an end to a thing.

Compliant, Yielding, Submissive. A compliant person may want command of feeling; a yielding person may want fixedness of principle; a submissive person may want resolution. A too compliant disposition will be imposed upon by the selfish and the unreasonable; a too yielding disposition is most unfit for commanding; a too submissive disposition exposes a person to the exactions of tyranny.

To Comply, Conform, Yield, Submit. To comply is to act from inclination; to conform is to act from judgment. Compliance is altogether optional; we comply with a thing or nor, at pleasure. Conformity is binding on the conscience; it relates to matters in which there is a right and a wrong. To yield is to give way to another, either with one's will, judgment, or outward conduct. To submit is to give up oneself altogether; it is the substitution of another's will for one's own.

To Compose, Settle. We compose that which has been disjointed and separated, by bringing it together again; we settle that which has been disturbed and put in motion, by making it rest.

Composed, Sedate. Composed is opposite to ruffled or hurried, and is a temporary state; sedate is opposed to buoyant or volatile, and is a permanent habit of the mind or the body.

To Compound, Compose. Compound is used in the physical sense only; compose in the proper or the moral sense. A medicine is compounded of many ingredients; society is composed of various classes.

Comprehensive, Extensive. Comprehensive respects quantity; extensive regards space. A comprehensive view of a subject includes all branches of it; an extensive view of a subject enters into minute details. The comprehensive is associated with the concise; the extensive with the diffuse.

To Comprise, Comprehend, Embrace, Contain, Include. A library comprises a variety of books; the whole is comprised within a small compass. Laws comprehend a number of cases. A discourse embraces a variety of topics. A society contains very many individuals; it includes none but those of a certain class, or it includes some of every class.

To Conceal, Dissemble, Disguise. To conceal is simply to abstain from making known what we wish to keep secret; to dissemble and disguise signify to conceal, by assuming some false appearance. We conceal facts; we dissemble feelings; we disguise sentiments.

To Conceal, Hide, Secrete. To conceal is to keep from observation; to hide is to put under cover; to secrete is to set at a distance or in unfrequented places.

Concealment, Secrecy. Concealment has to do with what concerns others; secrecy with that which concerns ourselves. What is concealed is kept from the observation of others; what is secret is known only to ourselves.

Conceit, Fancy. Conceit applies only to internal objects; it is mental in the operation and the result; it is a species of invention: fancy is applied to external objects, or whatever acts on the senses. Nervous people are subject to strange conceits; timid people fancy they hear sounds or see objects in the dark, which awaken terror.

To Conceive, Understand, Comprehend. Conception is the simplest operation of the three: when we conceive we may have but one idea; when we understand or comprehend we have all the ideas which the subject is capable of presenting. The builder conceives plans; the scholar understands languages; the metaphysician attempts to explain many things which are not to be comprehended.

Conception, Notion. Conception is the mind's own work, what it pictures to itself from the exercise of its own powers; notion is the representation of objects as they are drawn from observation. Conceptions are the fruit of the understanding and the imagination; notions are the result of experience and information.

To Concert, Contrive, Manage. There is a secret understanding in concerting; invention in contriving; execution in managing. Measures are concerted; schemes are contrived; affairs are managed.

To Conciliate, Reconcile. To conciliate is to get the good-will and affections for oneself; to reconcile is to unite the affections of two persons to each other.

Conclusion, Inference, Deduction. Conclusions are drawn from real facts; inferences are drawn from the appearances of things; deductions only from arguments or assertions. Conclusions are practical; inferences ratiocinative; deductions are final.

Conclusive, Decisive, Convincing. Conclusive applies either to practical or argumentative matters; decisive to what is practical only; convincing to what is argumentative only. It is necessary to be conclusive when we deliberate, and decisive when we command. An argument is convincing, a chain of reasoning conclusive.

Concord, Harmony. Concord is generally employed for the union of wills and affections; harmony respects the aptitude of minds to coalesce. Harmony may be used in the sense of adaptation to things generally.

Condition, Station. Condition has most relation to circumstances, education, birth, and the like; station refers rather to the rank, occupation, or mode of life which is marked out.

To Conduce, Contribute. To conduce signifies to serve the full purpose; to contribute signifies only to serve a secondary purpose. Exercise conduces to the health; it contributes to give vigor to the frame.

To Conduct, Manage, Direct. Conducting requires most wisdom and knowledge; managing most action; direction most authority. A lawyer conducts the cause intrusted to him; a steward manages the mercantile concerns for his employer; a superintendent directs the movements of all the subordinate agents.

Confederate, Accomplice. A confederate is a partner in a plot or a secret association; an accomplice is a partner in some active violation of the laws.

To Confer, Bestow. Conferring is an act of authority; bestowing that of charity or generosity. Princes and men in power confer; people in a private station bestow.

Confidence, Trust. Confidence is an extraordinary trust, but trust is always ordinary unless the term be otherwise qualified. Confidence involves communication of a man's mind to another, but trust is confined to matters of action.

Confident, Dogmatical, Positive. Confidence implies a general reliance on one's abilities in whatever we undertake; dogmatism implies a reliance on the truth of our opinions; positivity a reliance on the truth of our assertions. A confident man is always ready to act, as he is sure of succeeding; a dogmatical man is always ready to speak, as he is sure of being heard; a positive man is determined to maintain what he has asserted, as he is convinced that he has made no mistake.

To Confirm, Corroborate. What confirms serves to strengthen the mind; what corroborates gives weight to the thing. An opinion or a story is confirmed; an evidence or the representation of a person is corroborated.

To Confirm, Establish. To confirm is applied to what is partial, if not temporary; to establish to that which is permanent and of importance, as to confirm a report, to establish a reputation, to confirm a treaty or alliance, to establish a trade or a government.

Conformable, Agreeable, Suitable. Conformable is employed for matters of obligation; agreeable for matters of choice; suitable for matters of propriety and discretion. What is conformable accords with some prescribed form or given rule of others; what is agreeable accords with the feelings, tempers, or judgments of ourselves or others; what is suitable accords with outward circumstances.

To Confound, Confuse. A person confounds one thing with another; objects become confused, or a person confuses himself. It is a common error among ignorant people to confound names, and among children to have their ideas confused on commencing a new study.

To Confront, Face. Confront implies to set face to face; and face signifies to set the face toward any object. Witnesses are confronted; a person faces danger.

Confusion, Disorder. Confusion supposes the absence of all order; disorder the derangement of order where it exists, or is supposed to exist.

To Confute, Refute, Disprove, Oppugn. To confute respects what is argumentative; refute what is practical and personal; disprove whatever is represented or related; oppugn what is held or maintained. An argument is confuted by proving its fallacy; a charge is refuted by proving the innocence of the party charged, an assertion is disproved by proving that it is incorrect; a doctrine is oppugned by a course of reasoning.

To Connect, Combine, Unite. What is connected and combined remains distinct, but what is united loses all individuality. Things the most dissimilar may be connected or combined; things of the same kind only can be united. Houses are connected by means of a common passage; the armies of two nations are combined; two armies of the same nation are united.

Connection, Relation. Families are connected with each other by the ties of blood or marriage; persons are connected with each other in the way of trade or business; objects stand in a certain relation to each other, as persons stand in the relation of giver and receiver, or of debtor and creditor.

Conqueror, Victor. A conqueror is always supposed to add something to his possessions; a victor gains nothing but the superiority. Those who take possession of other men's lands by force of arms make a conquest; those who excel in any trial of skill are the victors.

To Consent, Permit, Allow. As the act of an equal we consent to that in which we have a common interest with others. We permit or allow what is for the accommodation of others: we allow by not opposing; we permit by a direct expression of our will. Contracts are formed by the consent of the parties who are interested. The proprietor of an estate permits his friends to sport on his grounds; he allows a passage through his premises. A parent consents to the establishment of his children; he permits them to read certain books; he allows them to converse with him familiarly.

Consequence, Effect, Result, Issue, Event. A consequence is that which follows of itself, without any qualification or restriction; an effect is that which is effected or produced, or which follows from the connection between the thing effecting, as a cause, and the thing effected. A result is general, following from a whole; there may be many consequences from the same thing, with one result only. We speak of the issue of a negotiation or a battle, and the event of a war. The fate of a nation sometimes hangs on the issue of a battle; the measures of government are often unjustly praised or blamed according to the event.

To Consider, Reflect. To consider is employed for practical purposes; to reflect for matters of speculation or moral improvement. Common objects call for consideration; the workings of the mind itself, or objects purely spiritual, occupy reflection.

To Consider, Regard. There is more caution or thought in considering; more personal interest in regarding. To consider is to bear in mind all that prudence or propriety suggests; to regard is to bear in mind all that our wishes or interests suggest.

Consideration, Reason. The consideration influences particular actions; the reason determines a line of conduct.

Consonant, Accordant, Consistent. Consonant is employed in matters of representation; accordant in matters of opinion or sentiment; consistent in matters of conduct.

Constancy, Stability, Steadiness, Firmness. Constancy respects the affections; stability the opinions; steadiness the action, or the motives of action; firmness the purpose or resolution.

To Constitute, Appoint, Depute. To constitute is the act of a body; to appoint and depute, either of a body or an individual: a community constitutes any one their leader; a monarch appoints his ministers. Whoever is deputed has private and not public authority; his office is partial, often confined to the particular transaction of an individual, or a body of individuals.

To Consult, Deliberate. Consultations always require two persons at least; deliberations may be carried on either with a man's self or with numbers. An individual may consult with one or many; assemblies commonly deliberate.

To Consummate, Complete. Wishes are consummated; plans are completed.

Contagion, Infection. We consider contagion as to the manner of spreading from one body to another; we consider infection as to the act of its working itself into the system. Whatever acts by contagion acts immediately by direct personal contact; whatever acts by infection acts gradually and indirectly, or through the medium of a third body, as clothes, or the air when infected.

Contagious, Epidemical, Pestilential. The contagious applies to that which is capable of being caught, and ought not, therefore, to be touched; the epidemical to that which is already caught or circulated, and requires, therefore, to be stopped; the pestilential to that which may breed an evil, and is, therefore, to be removed. Diseases are contagious or epidemical; the air or breath is pestilential.

To Contaminate, Defile, Pollute, Taint, Corrupt. Whatever is impure contaminates; what is gross and vile in the natural sense defiles, and in the moral sense pollutes; what is contagious or infectious corrupts; and what is corrupted may taint other things.

To Contemn, Despise, Scorn, Disdain. Contemn signifies to pollute or render worthless, which is the cause of contempt. Despise signifies to look down upon, which is a strong mark of contempt; scorn signifies stripped of all honors and exposed to derision, which situation is the cause of scorn; disdain signifies to hold altogether unworthy.

To Contemplate, Meditate, Muse. Different species of reflection are marked by these terms. We contemplate what is present or before our eyes; we meditate on what is past or absent. The heavens and all the works of the Creator are objects of contemplation; the ways of Providence are fit subjects for meditation. One muses on events or circumstances which have recently passed.

Contemptible, Contemptuous. Contemptible is applied to the thing deserving contempt; contemptuous to that which is expressive of contempt. A production is contemptible; a sneer or a look is contemptuous.

To Contend, Contest, Dispute. To contend is simply to exert a force against a force; to contest is to struggle together for an object; to dispute, according to its original meaning, applies to opinions only, and is distinguished from contend in this, that the latter signifies to maintain one's own opinion, and the former to call in question the opinion of another.

Contentment, Satisfaction. Contentment lies in ourselves; satisfaction is derived from external objects. One is contented when one wishes for no more: one is satisfied when one has obtained all one wishes. Contentment is within the reach of the poor man, to whom it is a continual feast; but satisfaction has never been procured by wealth, however enormous, or ambition, however boundless.

Continual, Perpetual, Constant. What is continual admits of no interruption: what is perpetual admits of no termination. There may be an end to that which is continual, and there may be intervals in that which is perpetual. Constant, like continual, admits of no interruption, and it also admits of no change. What is continual may not always continue in the same state; but what is constant remains in the same state.

Continual, Continued. What is continual may have frequent pauses; what is continued ceases only to terminate.

Continuance, Continuation, Duration. The continuance is said of that which itself continues; the continuation of that which is continued by some other agency, as the continuance of the rain, the continuation of a history, work, line, etc. Things are of long or short duration by comparison.

To Continue, Remain, Stay. To continue is associated with a state of action; to remain with a state of rest. We are said to continue to speak, or do anything, to remain stationary, or in a position. Stay is a voluntary act, as to stay at a friend's, or with a friend.

To Continue, Persevere, Persist. We continue from habit or casualty; we persevere from reflection and the exercise of our judgment; we persist from attachment. A child perseveres in a new study until he has mastered it; he persists in making a request until he has obtained the object of his desire.

Contracted, Confined, Narrow. Contracted signifies drawn into a smaller compass than it might otherwise be in: confined signifies brought within unusually small bounds; it is said of that which is made or becomes so by circumstances. Narrow is the opposite of broad, in extent, scope, views, and resources. A limb is said to be contracted which is drawn up by disease; a situation is confined which has not the necessary or usual degree of open space; a road or a mind is narrow.

To Contradict, Deny. One contradicts in direct terms by asserting something contrary; one denies by advancing arguments, or by suggesting doubts or difficulties. These terms may, therefore, both be used in reference to disputations. We may deny the truth of a position by contradicting the assertions that are advanced in its support.

To Controvert, Dispute. To controvert has regard to speculative points; to dispute respects matters of fact: there is more of opposition in controversy; more of doubt in disputing. A sophist controverts; a sceptic disputes.

Contumacious, Rebellious. The contumacious resist only occasionally; the rebellious resist systematically: the contumacious stand only on certain points, and oppose the individual; the rebellious set themselves up against the authority itself.

Convenient, Suitable. Convenient regards the circumstances of the individual; suitable respects the established opinions of mankind, and is closely connected with moral propriety: nothing is convenient which does not favor one's purpose; nothing is suitable which does not suit the person, place, and thing.

Conversant, Familiar. A person is conversant in matters that come frequently before his notice; he is familiar with such as form the daily routine of his business.

Conversation, Dialogue, Conference, Colloquy. A conversation is always something actually held between two or more persons; a dialogue is mostly fictitious, and written as if spoken: any number of persons may take part in a conversation, but a dialogue always refers to the two persons who are expressly engaged. A conference is always specifically appointed and is mostly on public concerns. The colloquy has the same character as the dialogue but is not confined to two people.

Convert, Proselyte. Convert is more extensive in its sense and application than proselyte: convert in its full sense includes every change of opinion, without respect to the subject. Proselyte, in its original application, denoted changes only from one religious belief to another; proselyte now means a new convert to a religion, a religious sect, or to some particular system or party.

To Convict, Detect. A person is convicted by means of evidence; he is detected by means of ocular demonstration. One is convicted of having been the perpetrator of some evil deed; one is detected in the very act of committing the deed.

To Convict, Convince, Persuade. A person may be convicted of heresy, if it be proved to the satisfaction of others; he may be convinced that the opinion which he has held is heretical. So a person may be convicted who is involuntarily convinced of his error, but he is convinced if he is made sensible of his error without any force on his own mind. What convinces binds; what persuades attracts: our persuasion respects matters of belief or practice.

Convivial, Social. The prominent idea in convivial is that of sensual indulgence; the prominent idea in social is that of enjoyment from an intercourse with society. We speak of convivial meetings, convivial enjoyments, or the convivial board; but social intercourse, social pleasure, social amusements, and the like.

To Copy, Transcribe. To copy respects the matter; to transcribe respects simply the act of writing. What is copied must be taken immediately from the original, with which it must exactly correspond; what is transcribed may be taken from the copy, but not necessarily in an entire state. A copier should be very exact; a transcriber should be a good writer.

Copy, Model, Pattern, Specimen. The term copy is applied to that which is delineated, as writings or pictures, which must be taken faithfully and literally; a model is that which may be used as a guide or a rule; the pattern regards solely the outward form or the color of anything that is made or manufactured; the specimen is any portion of a material which serves to show the quality of that of which it forms a part.

Coquette, Jilt. The coquette makes a traffic of her own charms by seeking a multitude of admirers; the jilt sports with the sacred passion of love, and barters it for the gratification of any selfish propensity.

Correct, Accurate. What is done by the exercise of the judgment is said to be correct, as a correct style, a correct writer; what is done by the effort of the individual is more properly accurate, as accurate observations, an accurate survey.

Correction, Discipline, Punishment. As correction and discipline have commonly required punishment to render them efficacious, custom has affixed to them a strong resemblance in their application, although they are distinguished from each other by obvious marks of difference. The prominent idea in correction (v. to correct) is that of making right what has been wrong. In discipline, the leading idea is that of instructing or regulating. In punishment, the leading idea is that of inflicting pain. We remove an evil by correction; we prevent it by discipline.

To Correspond, Accord. To correspond is to answer or conform to the description of something else. Things that correspond must be alike in size, shape, color, and every minute particular. Appearance and reality seldom correspond. To accord is to make to agree or correspond, to suit one thing to another. Things that accord must be suited to each other. His disposition accords with his looks.

Cost, Expense, Price, Charge. The cost is what a thing costs, or what is to be laid out for it; the expense is that which a person actually lays out; the price is that which a thing may fetch or which it may be worth; the charge is that which a person or a thing is charged with. We do a thing at our own cost, but at another's expense; we can never set a price on anything until we have ascertained what it has cost us, nor can we know or defray the expense until the charge be made. In the moral acceptation, the attainment of an object is said to cost much pains; a thing is persisted in at the expense of health, of honor, or of life. The sacrifice of a man's quiet is the price which he must pay for the gratification of his ambition.

To Countenance, Sanction, Support. Persons are countenanced; things are sanctioned; persons or things are supported. Persons are countenanced in their proceedings by the apparent approbation of others; measures are sanctioned by the consent or the approbation of others who have due authority; measures or persons are supported by every means which may forward the object.

Courage, Fortitude, Resolution. Courage respects action; fortitude respects passion: a man has courage to meet danger, and fortitude to endure pain. Resolution simply marks the will not to recede: we require resolution not to yield to the first difficulties that offer.

To Cover, Hide. The ruling idea in the word cover is that of throwing or putting something over a body; in the word hide is that of keeping carefully to one's self, from the observation of others.

Cover, Shelter, Screen. Cover includes the idea of concealing; shelter comprehends that of protecting from some immediate or impending evil; screen includes that of warding off some trouble.

Credit, Favor, Influence. These terms mark the state we stand in with regard to others as flowing out of their sentiments toward ourselves: credit arises from esteem; favor from good-will or affection; influence from either credit or favor, or external circumstances. Influence is employed in directing others: weak people easily give their credit, or bestow their favor, by which an influence is gained over them to bend them to the will of others.

Crime, Vice, Sin. A crime is a social offense; a vice is a personal offense. Every action which does injury to others, either individually or collectively, is a crime; that which does injury to ourselves is a vice. Crime consists in a violation of human laws; vice in a violation of the moral law; sin in a violation of the Divine Law.

Criminal, Culprit, Malefactor, Felon, Convict. When we wish to speak in general of those who by offenses against the laws or regulations of society have exposed themselves to punishment, we denominate them criminals; when we consider them as already brought before a tribunal, we call them culprits; when we consider them in regard to the moral turpitude of their character, as the promoters of evil rather than of good, we entitle them malefactors; when we consider them as offending by the grosser violations of the law, they are termed

felons; when we consider them as already under the sentence of the law, we denominate them convicts.

Criterion, Standard. The criterion is employed only in matters of judgment; the standard is used in the ordinary concerns of life. The former serves for determining the characters and qualities of things; the latter for defining quantity and measure.

Cruel, Inhuman, Barbarous, Brutal, Savage. A person is cruel who neglects the creature he should protect and take care of; he is inhuman if he withholds from him the common marks of tenderness or kindness which are to be expected from one human being to another; he is barbarous if he finds amusement in inflicting pain; he is brutal or savage according to the circumstances of aggravation which accompany the act of torturing.

Crying, Weeping. Crying arises from an impatience in suffering corporeal pains; weeping is occasioned by mental grief.

Cultivation, Culture, Civilization, Refinement. Cultivation is with more propriety applied to the thing that grows; culture to that in which it grows. The cultivation of flowers will not repay the labor unless the soil be prepared by proper culture. Civilization is the first stage of cultivation; refinement is the last. We civilize savages by divesting them of their rudeness, and giving them a knowledge of such arts as are requisite for civil society; we refine them by the introduction of the liberal arts.

To Cure, Heal, Remedy. To cure is employed for what is out of order; to heal for that which is broken. Diseases are cured, wounds are healed; the former is a complex, the latter is a simple process. Whatever requires to be cured is wrong in the system; whatever requires to be healed is occasioned externally by violence, and requires external applications. To remedy, in the sense of applying remedies, has a moral application; an omission, a deficiency, or a mischief, requires to be remedied.

Cure, Remedy. A cure is performed by the application of a remedy.

Curious, Inquisitive, Prying. Curious respects all objects that can gratify the inclination, taste, or understanding; inquisitive respects such things only as satisfy the understanding; a prying temper is unceasing in its endeavors to get acquainted with the secrets of others.

Cursory, Hasty, Slight, Desultory. An author will take a cursory view of those points which are not necessarily connected with his subject; an author who takes a hasty view of a subject will mislead by his errors; he who takes a slight view will disappoint by the shallowness of his information. Between cursory and desultory there is the same difference as between running and leaping: we run in a line, but we leap from one part to another; so remarks that are cursory have more or less connection, but remarks that are desultory are without any coherence.

Custom, Habit. Custom is a frequent repetition of the same act; habit the effect of such repetition. Custom supposes an act of the will; habit implies an involuntary movement. A custom is followed; a habit is acquired.

Custom, Fashion, Manner, Practice. Custom is authoritative; it stands in the place of law, and regulates the conduct of men in the most important concerns of life. Fashion is arbitrary and capricious; it decides in matters of trifling import. Manners are rational; they are the expressions of moral feelings. Practice signifies actual doing or the thing done: it may be the practice of a person to do acts of charity, as the occasion requires; but, when he uniformly does a particular act of charity at any given period of the year, it is properly denominated his custom.

Daily, Diurnal. Daily is the colloquial term which is applicable to whatever passes in the daytime; diurnal is the scientific term, which applies to what passes within or belongs to the astronomical day.

Danger, Peril, Hazard. Danger signifies the chance of a loss; peril signifies either to go over or to perish; as, a critical situation, a rude trial, which may terminate in one's ruin. In all walks of life we are in danger; the explorer undergoes perils. Hazard respects the possibility of either good or evil. When we run the hazard of a battle, we may either win or lose.

Daring, Bold. He who is daring provokes resistance and courts danger; but the bold man is contented to overcome the resistance that is offered to him. A man may be bold in the use of words only; he must be daring in actions: he is bold in the defense of truth; he is daring in military enterprise.

Dark, Obscure, Dim, Mysterious. Dark is opposed to light; obscure to bright. What is dark is altogether hidden; what is obscure is not to be seen distinctly, or without an effort. Dim expresses a degree of darkness, but it is employed more in relation to the person seeing than to the object seen. Any intricate affair, which involves the characters and conduct of men, may be mysterious.

Deadly, Mortal, Fatal. Deadly is applied to what is productive of death; mortal to what terminates in or is liable to death; fatal applies not only to death, but to everything which may be of serious consequence.

To Debate, Deliberate. These terms equally mark the acts of pausing or withholding the decision, whether applicable to one or many. To debate (v. to controvert, dispute) supposes always a contrariety of opinion: to deliberate (v. to consult, deliberate) supposes simply the weighing or estimating the value of the opinion that is offered.

Debility, Infirmity, Imbecility. Debility is constitutional, or otherwise; imbecility is always constitutional; infirmity is accidental, and results from sickness or a decay of the frame. Debility may be either general or local; infirmity is always local; imbecility always general.

Debt, Due. Debt is commonly applied to that which is owing from the person spoken of; due is always applied to that which is owing to the person: to pay one's debts, and receive one's due.

Decay, Decline, Consumption. What is decayed is fallen or gone; what declines leads toward a fall, or is going. Consumption (v. to consume) implies a rapid decay.

Deceit, Deception. A person is said to be guilty of deceit who has sought to deceive another for his own purposes; but deceptions may be practiced in a diversity of ways, and from a diversity of motives. Deceitful and deceptive are employed with this distinction: a person is said to be deceitful, and a thing deceptive.

Deceit, Fraud, Guile. Deceit is practiced only in private transactions; fraud is practiced toward bodies as well as individuals, in public as well as in private. A child practices deceit toward its parents; frauds are practiced upon government. Guile marks a strong degree of moral turpitude in the individual; guileless is applied to characters which are the most diametrically opposed to, and at the greatest possible distance from, that which is false.

Deceiver, Impostor. A deceiver is any one who practices any sort of deception; but an impostor is a deceiver who studiously deceives by putting on a false appearance.

Decency, Decorum. Decency respects a man's conduct; decorum, his behavior.

Decided, Determined, Resolute. A man who is decided remains in no doubt; he who is determined is uninfluenced by the doubts or questions of others; he who is resolute (v. to determine, resolve) is uninfluenced by the consequences of his actions.

Decided, Decisive. Decided marks that which is actually decided; decisive that which appertains to decision. A person's aversion or attachment is decided; a sentence, a judgment, or a victory, is decisive.

Decision, Judgment, Sentence. A decision has no respect to the agent; it may be said of one or many; it may be the decision of the court, of the nation, of the public, of a particular body of men, or of a private individual. But a judgment is given in a public court, or among private individuals. A sentence is passed in a court of law, or at the bar of the public.

To Declaim, Inveigh. Declaim signifies literally to cry aloud in a set form of words; inveigh involves injurious censure or reproach. Public men and public measures are subjects for the declaimer; private individuals afford subjects for inveighing against.

To Declare, Publish, Proclaim. In declaring, the leading idea is that of speaking out that which passes in the mind; in publishing, the leading idea is that of making public or common; in proclaiming, the leading idea is that of crying aloud. Facts and opinions are declared; events and circumstances are published; the measures of government are proclaimed.

Decree, Edict, Proclamation. A decree is a more solemn and deliberative act than an edict; on the other hand, an edict is more authoritative than a decree. A decree is the decision of one or many; an edict speaks the will of an individual: councils and senates, as well as princes, make decrees; despotic rulers issue edicts. An edict is peculiar to a despotic government; a proclamation is common to a monarchical and aristocratic form of government.

To Dedicate, Devote, Consecrate, Hallow. There is something more solemn in the act of dedicating than in that of devoting; but less so than in that of consecrating. To dedicate and devote may be employed in

both temporal and spiritual matters; to consecrate and hallow only in the spiritual sense. We may dedicate or devote anything that is at our disposal to the service of some object; but the former is employed mostly in regard to superiors, and the latter to persons without distinction of rank. We dedicate a house to the service of God; we devote our time to the benefit of our friends, or to the relief of the poor. We may dedicate or devote ourselves to an object: the former always implies a solemn setting apart springing from a sense of duty; the latter an entire application of oneself from zeal and affection. To consecrate is to declare sacred by means of religious ceremony. The church is consecrated; particular days are hallowed.

Deduction, Abatement. Both these words imply a taking off from something. A person may make a deduction in an account for various reasons, but he makes an abatement in a demand when it is objected to as excessive.

To Deface, Disfigure, Deform. To deface is an act of destruction; it is the actual destruction of that which has before existed. To disfigure is either an act of destruction or an erroneous execution, which takes away the figure. To deform is altogether an imperfect execution, which renders the form what it should not be.

Defective, Deficient. Defective expresses the quality or property of having a defect; deficient is employed with regard to the thing itself that is wanting. A book may be defective, in consequence of some leaves being deficient. A deficiency is, therefore, often what constitutes a defect.

To Defend, Protect, Vindicate. A person may be defended in any particular case of actual danger or difficulty; he is protected from what may happen as well as what does happen. Defense respects the evil that threatens; protection involves the supply of necessities and the affording comforts. Vindicate respects a form of defense only in the moral sense of the word. Acts of importance are defended; those of trifling import are commonly vindicated.

Defendant, Defender. The defendant defends himself (v. to defend); the defender defends another.

Defender, Advocate, Pleader. A defender exerts himself in favor of one that wants support. An advocate signifies one who is called to speak in favor of another; he exerts himself in favor of any cause that offers. A pleader, from plea or excuse, signifies him who pleads in behalf of one who is accused or in distress.

Definite, Positive. Definite signifies that which is defined, or has the limits drawn or marked out; positive that which is placed or fixed in a particular manner. Definite is said of things as they present themselves or are presented to the mind, as a definite idea, a definite proposal. Positive is said of a person's temper of mind; a person is positive as to his opinions, or an assurance is positive which serves to make one positive.

Deity, Divinity. Deity signifies a divine person; divinity signifies the divine essence or power.

Dejection, Depression, Melancholy. Depression is but a degree of dejection. Slight circumstances may occasion a depression; distressing events occasion a dejection: the death of a near and dear relative may be expected to produce dejection in persons of the greatest equanimity. Melancholy is a disease which nothing but clear views of religion can possibly correct.

To Delegate, Depute — Delegate, Deputy. To delegate is applied to the power or the office which is given; depute to the person employed. Parents delegate their office to the instructor; persons are deputed to act for others. A delegate is the person commissioned, who is bound to act according to his commission; the deputy is the person deputed, who acts in the place of another, but may act according to his own discretion or otherwise, as circumstances require.

To Deliver, Rescue, Save. One may be delivered from any evil, whether great or small, and in any manner. To rescue is to deliver from a great impending danger or immediate evil, as to rescue from the hands of robbers, or from the jaws of a wild beast. To save signifies to keep from evil.

To Demand, Require. We demand that which is owing and ought to be given; we require that which we wish and expect to have done. The creditor makes a demand on the debtor; the master requires a certain portion of duty from his servant.

To Demur, Hesitate, Pause. We demur from doubt or difficulty; we hesitate from an undecided state of mind; we pause from circumstances. Demurring is a matter of prudence, it is always grounded on some reason; hesitating is rather a matter of feeling, and is oftener faulty than otherwise. When a request of a dubious nature is made of us, we hesitate in complying with it.

Demur, Doubt, Hesitation, Objection. Demurs often occur in matters of deliberation; doubt in regard to matters of fact; hesitation in matters of ordinary conduct; and objections in matters of common consideration. Artabanes made many demurs to the proposed invasion of Greece by Xerxes. Doubts have been suggested respecting the veracity of Herodotus as a historian. It is not proper to ask that which cannot be granted without hesitation. There are but few things which we either attempt to do or recommend to others that are not liable to some kind of an objection.

To Denote, Signify. Denote is employed with regard to things and their characters; signify with regard to the thoughts or movements. A letter or character may be made to denote any number, as words are made to signify the intentions and wishes of the person.

To Deny, Refuse. To deny respects matters of fact or knowledge; to refuse, matters of wish or request. We deny what immediately relates to ourselves; we refuse what relates to another.

To Deplore, Lament. Deplore is a much stronger expression than lament: the former calls forth tears from the bitterness of the heart; the latter excites a cry from the warmth of feeling. Deploring indicates despair; lamenting marks only pain or distress.

Deponent, Evidence, Witness. All these words are properly applied to judicial proceedings, where the deponent testifies generally to facts either in causes or otherwise. The evidence consists either of persons or things, which are brought before the court for the purpose of making a doubtful matter clear; the witness is always a person who bears witness to any fact for or against another.

Deposit, Pledge, Security. The term deposit has most regard to the confidence we place in another; pledge has most regard to the security we give for ourselves; security is a form of pledge. A security is whatever makes a person secure against a loss, and in the ordinary acceptation consists of any instrument or written document which legally binds a person.

Depravity, Depravation, Corruption. All these terms are applied to objects which are contrary to the order of Providence. But the term depravity characterizes the thing as it is; the terms depravation and corruption designate the making or causing it to be so. Depravity, therefore, excludes the idea of any cause; depravation always carries us to the cause or external agency: hence we may speak of depravity as natural, but we speak of depravation as the result of circumstances. There is a depravity in man which nothing but the grace of God can correct. The introduction of obscenity on the stage tends greatly to the depravation of morals. Bad company tends to the corruption of a young man's morals.

Depth, Profundity. Depth is indefinite in its signification; and profundity is a positive and considerable degree of depth. Moreover, the word depth is applied to objects in general; profundity is confined in its application to moral objects.

To Derive, Trace, Deduce. The act of deriving is immediate and direct; that of tracing a gradual process; that of deducing a ratiocinative process. We discover causes and sources by derivation; we discover the course, progress, and commencement of things by tracing; we discover the grounds and reasons of things by deduction.

Desert, Merit, Worth. Desert is taken for that which is good or bad; merit for that which is good only. We deserve praise or blame; we merit a reward. Worth is that which is absolutely valuable; it must be sought for on its own account.

To Design, Purpose, Intend, Mean. To design is to plan something studied and methodical, it requires reflection; to purpose is to propose or set before the mind; to intend signifies the act to which the mind bends or inclines. We purpose seriously; we intend vaguely; we set about that which we purpose; we may delay that which we have only intended. Mean, which is a term altogether of colloquial use, differs but little from intend, except that it is used for matters requiring but little thought.

To Desire, Wish, Long for, Hanker after, Covet. To desire is imperious; it demands gratification: to wish is less vehement; it consists of a strong inclination. To long for expresses strong and continued desire; to hanker after is to desire that which is set out of one's reach; to covet is to desire that which belongs to another, or what it is in his power to grant.

To Desist, Leave Off. To desist is voluntary or involuntary; to leave off is voluntary. We are frequently obliged to desist; but we leave off at our option. He who annoys another must be made to desist; he who does not wish to offend will leave off when requested.

Despair, Desperation, Despondency. Despair is

a state of mind produced by the view of external circumstances; desperation and despondency may be the fruit of the imagination: the former, therefore, always rests on some ground; the latter are sometimes ideal. Desperation marks a state of vehement and impatient feeling; despondency is a disease of the mind, which nothing but a firm trust in Providence can obviate.

Destiny, Fate, Lot, Doom. Destiny is used in regard to one's station and walk in life; fate in regard to what one suffers; lot in regard to what one gets or possesses; and doom is the final destiny which terminates unhappily, and depends mostly upon the will of another. Destiny is marked out; fate is fixed; a lot is assigned; a doom is passed.

Destiny, Destination. Destiny is the point or line marked out in the walk of life; destination is the place fixed upon in particular: as every man has his peculiar destiny, so every traveler has his particular destination. Destiny is altogether set above human control; destination is, however, the specific act of an individual, either for himself or another.

To Destroy, Consume, Waste. To destroy is to reduce to nothing that which has been artificially raised or formed as to destroy a house; to consume is to use up, as to consume food, or merchandise; to waste is to expend unnecessarily, extravagantly, to spend to no purpose, as to waste time or property.

Destruction, Ruin. Destruction is an act of immediate violence; ruin is a gradual process. A thing is destroyed by some external action upon it; a thing falls to ruin of itself.

To Detect, Discover. Detect is always taken in a bad sense; discover in an indifferent sense. A person is detected in what he wishes to conceal; a person or a thing is discovered that has been previously unknown or unperceived.

To Determine, Resolve. We determine how or what we shall do; this requires examination and choice. We resolve that we will do what we have determined upon; this requires a firm spirit.

To Deviate, Wander, Swerve, Stray. Deviate always supposes a direct path which is departed from; wander includes no such idea. The act of deviating is commonly faulty; that of wandering is indifferent. To swerve is to deviate from that which one holds right; to stray is to wander in the same bad sense. Men swerve from their duty to consult their interest; the young stray from the path of rectitude to seek that of pleasure.

To Devise, Bequeath. In the technical sense, to devise is to give lands by a will duly attested according to law; to bequeath is to give personalty after one's death by a less formal instrument.

To Dictate, Prescribe. Dictate, from the Latin "dictatus" and "dictum" (a word), literally signifies to make a word for another; and prescribe signifies to write down for another (v. to appoint): thus the former of these terms is used technically for a principal who gets his secretary to write down his words as he utters them; and the latter for a physician who writes down for his patient what he wishes him to take as a remedy. They are used figuratively for a sort of counsel given by a superior; to dictate is, however, a greater exercise of authority than to prescribe. He who dictates speaks with an adventitious authority; he who prescribes has the sanction of reason.

Dictate, Suggestion. Dictate signifies the thing uttered, and has an imperative sense; suggestion signifies the thing intimated, and conveys the idea of its being proposed secretly or in a gentle manner. These terms are both applied, with this distinction, to acts of the mind. When conscience, reason, or passion present anything forcibly to the mind, it is called a dictate; when anything enters the mind in a casual manner, it is called a suggestion.

Dictionary, Encyclopædia. The definition of words, with their various changes, modifications, uses, acceptations, and applications, are the proper subjects of a dictionary; the nature and properties of things, with their construction, uses, powers, etc., are the proper subjects of an encyclopædia.

Dictionary, Lexicon, Vocabulary, Glossary, Nomenclature. Lexicon is a species of dictionary appropriately applied to the dead languages. Dictionary is applied to the words of a modern language. A vocabulary is a partial kind of dictionary, which may comprehend a simple list of words, with or without explanation, arranged in order or otherwise. A glossary is an explanatory vocabulary, which commonly serves to explain the obsolete terms employed in any old author. A nomenclature is literally a list of names, and in particular a reference to proper names.

To Die, Expire. Die designates in general the extinction of being. Expire designates the last action of life in certain objects. Plants and trees die. The flame of a lamp expires.

Difference, Variety, Diversity, Medley. Difference and variety seem to lie in the things themselves; diversity and medley are created either by accident or design: a difference may lie in two objects only; a variety cannot exist without an assemblage: a difference is discovered by means of a comparison which the mind forms of objects to prevent confusion; variety strikes on the mind, and pleases the imagination with many agreeable images. Diversity arises from an assemblage of objects naturally contrasted; a medley is produced by an assemblage of objects so ill suited as to produce a ludicrous effect.

Difference, Distinction. Difference (v. difference) lies in the thing; distinction is the act of the person: the former is, therefore, to the latter as the cause to the effect. The distinction rests on the difference: those are equally bad logicians who make a distinction without a difference, or who make no distinction where there is a difference. A difference is either external or internal; a distinction is always external: the former lies in the thing, the latter is designedly made. We have differences in character, and distinction in dress.

Difference, Dispute, Altercation, Quarrel. A difference, as distinguished from the others, is generally of a less serious and personal kind; a dispute consists not only of angry words, but of much ill blood and unkind offices; an altercation is a wordy dispute, in which difference of opinion is drawn out into a multitude of words; a quarrel is the most serious of all differences, which leads to every manner of violence.

Different, Distinct, Separate. Different is opposed to similar; there is no difference between objects absolutely alike. Distinct is opposed to identical; there can be no distinction where there is only one and the same being. Separate is opposed to things united; there can be no separation between objects that coalesce or adhere.

Different, Unlike. Different is positive, unlike is negative: we look at what is different and draw a comparison; but that which is unlike needs no comparison. A thing is said to be different from every other thing, or unlike anything seen before.

Difficulties, Embarrassments, Troubles. These terms are all applicable to a person's concerns in life. Difficulties may relate to the obstacles that arise in conducting a business. Embarrassments may relate to the confusion attending a state of debt. Troubles may relate to the pain which is the natural consequence of not fulfilling engagements or answering demands.

Difficulty, Obstacle, Impediment. Difficulty signifies not easy to be done; obstacle signifies the thing that stands in the way between a person and the object he has in view; impediment signifies something that entangles the feet. A difficulty interferes with the completion of any work; an obstacle interferes with the attainment of any end; an impediment interrupts the progress, and prevents the execution of one's wishes.

Diffuse, Prolix. Both mark defects of style opposed to brevity. The diffuse is properly opposed to the precise; the prolix to the concise or laconic. A diffuse writer is fond of amplification, the prolix writer is fond of circumlocution, minute details, and trifling particulars.

To Digress, Deviate. Both in the original and the accepted sense, these words express going out of the ordinary course. We digress only in a narrative, whether written or spoken; we deviate in actions as well as in words, in our conduct as well as in writings.

To Dilate, Expand. A bladder dilates on the admission of air, or the heart dilates with joy. Knowledge expands the mind, or a person's views expand with circumstances.

Diligent, Expeditious, Prompt. Diligent marks the interest one takes in doing something; he is diligent who loses no time, who keeps close to the work from inclination. Expeditious marks the desire one has to complete the thing begun. Prompt marks one's desire to get ready; he is prompt who sets about a thing without delay, so as to make it ready.

Direction, Address, Superscription. A direction may serve to direct to places as well as to persons. An address is never used but in direct application to the person. A superscription has more respect to the thing than to the person. A direction is given to such as go in search of persons and places. An address is put either on a card, a letter, or in a book. A superscription is placed at the head of other writings, or over tombs and pillars.

Direction, Order. Direction contains most of instruction in it; order most of authority. Directions should be followed; orders obeyed.

Disaffection, Disloyalty. Disaffection may be said

with regard to any form of government; disloyalty with regard to monarchy, obligations, or vows. Many were disaffected to the usurpation of Oliver Cromwell, because they would not be disloyal to their king.

To Disappear, Vanish. A thing disappears either gradually or suddenly; it vanishes of a sudden; it disappears in the ordinary course of things; it vanishes by an unusual effort, a supernatural or a magic power.

To Disapprove, Dislike. Disapprove is an act of the judgment; dislike is an act of the will or of the affection. To approve or disapprove is peculiarly the part of a superior, or one who determines the conduct of others; to dislike is altogether a personal act, in which the feelings of the individual are consulted.

Disbelief, Unbelief. Disbelief properly implies the believing that a thing is not, or refusing to believe that it is. Unbelief expresses properly a believing the contrary of what one has believed before: disbelief is most applicable to the ordinary events of life; unbelief to serious matters of opinion.

To Disclaim, Disown. To disclaim is to throw off a claim; to disown is not to admit as one's own.

Discord, Strife. Discord consists mostly in the feeling; strife consists mostly in the outward action. Discord evinces itself in various ways, by looks, words, or actions; strife displays itself in words or acts of violence.

To Discover, Manifest, Declare. We discover by any means direct or indirect; we manifest by unquestionable marks; we declare by express words: talents and dispositions discover themselves; particular feelings and sentiments manifest themselves; facts, opinions, and sentiments are declared.

Discredit, Disgrace, Reproach, Scandal. Discredit interferes with a man's respectability; disgrace marks him out as an object of unfavorable distinction; reproach makes him a subject of adverse criticism; scandal makes him an object of offense or even of abhorrence.

To Discuss, Examine. Discuss signifies to shake asunder or to separate thoroughly so as to see the whole composition; examine is used where the judgment holds the balance. Discussion is altogether carried on by verbal and personal communication; examination proceeds by reading, reflection, and observation.

Disgust, Loathing, Nausea. Disgust is less than loathing, and loathing than nausea. When applied to sensible objects we are disgusted with dirt; we loathe the smell of food if we have a sickly appetite; we nauseate medicine. When applied metaphorically, we are disgusted with affectation; we loathe the endearments of those who are offensive; we nauseate all the enjoyments of life, after having made an intemperate use of them, and discovered their inanity.

Dishonest, Knavish. What is dishonest violates the established laws of man; what is knavish supposes peculiar art and design in the accomplishment.

Dishonor, Disgrace, Shame. Dishonor deprives a person of those outward marks of honor which men look for according to their rank and station; disgrace deprives a man of the favor and the kindness which he has heretofore received from others. Shame is occasioned by direct moral turpitude, or by that of which one ought to be ashamed.

To Disjoint, Dismember. A limb of the body may be disjointed if it be so put out of the joint that it cannot act; but the body itself is dismembered when the different limbs or parts are separated from each other.

Dislike, Disinclination. Dislike applies to what one has or does; disinclination only to what one does.

To Dismay, Daunt, Appall. We are dismayed by alarming circumstances; we are daunted by terrifying circumstances; we are appalled by horrid circumstances.

Disorder, Disease, Distemper, Malady. In a general sense disorder is altogether indefinite; but in its restricted sense it expresses less than all the rest: it is the mere commencement of a disease. Disease comprehends every serious and permanent disorder in the animal economy, and is, therefore, of universal application. The disorder is slight, partial, and transitory; the disease is deep-rooted and permanent. The disorder may lie in the extremities; the disease lies in the humors and the vital parts. Distemper is used for such particularly as throw the animal frame most completely out of its temper or course, and is consequently applied properly to virulent disorders, such as the small-pox. Malady has less of a technical sense than the other terms; it refers more to the suffering than to the state of the body.

Disparity, Inequality. Disparity applies to two objects which should meet or stand in coalition with each other; inequality is applicable to those that are compared with each other. The disparity of age, situation, and circumstances is to be considered with regard to persons entering into a matrimonial connection: the inequality in the portion of labor which is to be performed by two persons is a ground for the inequality of their recompense.

Dispassionate, Cool. Dispassionate is taken negatively, it marks merely the absence of passion; cool is taken positively, it marks an entire freedom from passion. When we meet with an angry disputant it is necessary to be dispassionate, in order to avoid quarrels; in the moment of danger our safety often depends upon our coolness.

To Dispel, Disperse. Dispel is a more forcible action than disperse: we destroy the existence of a thing by dispelling it; we destroy merely the junction by dispersing it.

To Dispense, Distribute. Dispense is an indiscriminate action; distribute is a particularizing action: we dispense to all; we distribute to each individually.

Displeasure, Anger, Disapprobation. Displeasure is always a softened and gentle feeling; anger is always a harsh feeling, and sometimes rises to vehemence and madness. Displeasure is always produced by some adequate cause, real or supposed; but anger may be provoked by every or any cause, according to the temper of the individual. Displeasure is an act of the will, it is an angry sentiment; disapprobation is an act of the judgment, it is an opposite opinion.

Disposal, Disposition. Disposal is a personal act; it depends upon the will of the individual: disposition is an act of the judgment; it depends upon the nature of the things. The removal of a thing from oneself is involved in a disposal; the good order of the things is comprehended in their disposition.

To Dispose, Arrange, Digest. We may dispose ordinary matters by simply assigning a place to each; in this manner trees are disposed in a row. We arrange and digest by an intellectual effort. We arrange by putting those together which ought to go together; and we digest by both separating that which is dissimilar, and bringing together that which is similar: in this manner books are arranged in a library according to their size or their subject; the materials for a literary production are digested.

Disposition, Temper. Disposition is permanent and settled; temper may be transitory and fluctuating. The disposition comprehends the springs and motives of actions; the temper influences the action of the moment: it is possible and not infrequent to have a good disposition with a bad temper, and vice versa.

Disposition, Inclination. We may always expect a man to do that which he is disposed to do; but we cannot always calculate upon his executing that to which he is merely inclined. We indulge a disposition; we yield to an inclination. The disposition comprehends the whole state of the mind at the time; an inclination is particular, referring always to a particular object.

To Disregard, Neglect, Slight. We disregard the warnings, the words, or opinions of others; we neglect their injunctions or their precepts. To disregard results from the settled purpose of the mind; to neglect from a temporary forgetfulness or oversight. Slight is altogether an intentional act toward an individual.

Dissension, Contention, Discord. A collision of opinions produces dissension; a collision of interests produces contention; a collision of humors produces discord.

Distant, Far, Remote. Distant is used to designate great space; far only that which is ordinary. Astronomers estimate that the sun is ninety-four millions of miles distant from the earth; a person lives not very far off, or a person is far from the spot. Remote expresses the relative idea of having disappeared from sight.

To Distinguish, Discriminate. To discriminate is in fact to distinguish specifically; hence we speak of a distinction as true or false, but of a discrimination as nice. We distinguish by means of the senses as well as by the understanding; we discriminate by the understanding only.

Distinguished, Conspicuous, Noted, Eminent, Illustrious. A thing is distinguished in proportion as it is distinct or separate from others; it is conspicuous in proportion as it is easily seen; it is noted in proportion as it is widely known. Eminent applies to those things which set a man high in the circle of his acquaintances; illustrious applies to that which makes him shine before the world.

Distress, Anxiety, Anguish, Agony. Distress is the pain felt when in a strait from which we see no means of extricating ourselves; anxiety is that pain which one feels on the prospect of an evil. Distress always depends upon some outward cause; anxiety often lies in the imagination; anguish arises from the reflection on the evil that is past; agony springs from witnessing or suffering intense mental or bodily pain.

To Distress, Harass, Perplex. A person is distressed either in his outward circumstances or his feelings; he is harassed mentally or corporeally; he is perplexed in his understanding, more than in his feelings. A deprivation distresses; provocations and hostile measures harass; stratagems and ambiguous measures perplex.

Distrust, Suspicion, Diffidence. Distrust is said either of ourselves or of others; suspicion is said only of others; diffidence only of ourselves. To be distrustful of a person is to impute no good to him; to be suspicious of a person is to impute positive evil to him. As regards oneself, a person may distrust his own powers for the execution of a particular office, or have a distrust of himself in company; he has a general diffidence, or he is naturally diffident.

To Disturb, Interrupt. We may be disturbed either inwardly or outwardly; we are interrupted only outwardly: our minds may be disturbed by disquieting reflections, or we may be disturbed in our rest or in our business by unseemly noises.

To Divide, Separate, Part. That is divided which has been or has been conceived to be a whole; that is separated which might be joined. An army may be divided into two or three divisions or portions: the divisions are frequently separated in their march. To part is to divide or separate into distinct portions or pieces.

To Divide, Distribute, Share. We divide the thing; we distribute to the person. To share is to make into parts, the same as divide, and it is to give those parts to some persons, the same as distribute: but the person who shares takes a part himself; he who distributes gives it all to others.

Doctrine, Precept, Principle. A doctrine requires a teacher; a precept requires a superior with authority; a principle requires only a maintainer or a holder. A doctrine is always framed by some one; a precept is enjoined or laid down by some one; a principle lies in the thing itself. A doctrine is composed of principles; a precept rests upon principles or doctrines.

Doctrine, Dogma, Tenet. A doctrine rests on the authority of the individual by whom it is framed; a dogma on the authority of the body by whom it is maintained; a tenet rests on its own intrinsic merits. A tenet is a species of principles maintained in matters of opinion by persons in general.

To Doubt, Question. Doubt lies altogether in the mind; it is a less active feeling than question: by the former we merely suspend decision; by the latter we actually demand proofs in order to assist us in deciding. We may doubt in silence; we cannot question without expressing it, directly or indirectly: we doubt the truth of a position; we question the veracity of an author.

Doubt, Suspense. Doubt respects that which we should believe; suspense that which we wish to know or ascertain. We are in doubt for the want of evidence; we are in suspense for the want of certainty. Doubt interrupts our progress in the attainment of truth; suspense impedes us in the attainment of our objects.

To Draw, Drag, Haul, or Hale, Pull, Pluck, Tug. Draw expresses here the idea common to the first three terms, namely, of putting a body in motion from behind oneself or toward oneself. To drag is to draw a thing with violence, or to draw that which makes resistance; to haul is to drag it with still greater violence. To pull signifies only an effort to draw without the idea of motion; horses pull very long sometimes before they can draw a heavily laden cart uphill. To pluck is to pull with a sudden twitch in order to separate; to tug is to pull with violence.

Dream, Reverie. Dreams and reveries are alike opposed to the reality, and have their origin in the imagination; but the former commonly passes in sleep, and the latter when awake.

Dull, Gloomy, Sad, Dismal. When applied to natural objects, dull and gloomy denote the want of necessary light or life: in this sense metals are more or less dull according as they are stained with dirt: the weather is dull when the sun is obscured by clouds, and gloomy when the atmosphere is darkened by fogs or thick clouds. Dismal denotes not merely the want of that which is necessary, but also the presence of that which is repugnant to the senses; as, a countenance or a sound may be dismal. Sad is not applied so much to sensible as moral objects; the loss of a parent is sad.

Durable, Lasting, Permanent. Durable is naturally said of material substances; and lasting of those which are spiritual, although in ordinary discourse sometimes they exchange offices. Permanent applies more to the affairs of men. That which perishes quickly is not durable; that which ceases quickly is not lasting; that which is only for a time is not permanent.

Durable, Constant. What is durable is so from its inherent property; what is constant is so by the power of the mind. No durable connections can be formed where avarice or lust prevails.

Duty, Obligation. Duty has to do with the conscience, and arises from the natural relations of society; an obligation arises from circumstances, and is a species of duty. He who guarantees to pay a sum of money contracts an obligation. He who marries contracts new duties.

Ease, Quiet, Rest, Repose. Ease and quiet respect action on the body; rest and repose respect the action of the body. Ease denotes an exemption from any painful agency in general; quiet denotes an exemption from that in particular which noise, disturbance, or the violence of others may cause; rest simply denotes the cessation of motion; repose is that form of rest which is agreeable after labor.

Easy, Ready. Easy marks the freedom of being done; ready the disposition or willingness to do. The former refers mostly to the thing or the manner, the latter to the person.

To Eclipse, Obscure. Heavenly bodies are eclipsed by the intervention of other bodies between them and the beholder; things are in general obscured which are in any way rendered less striking or visible. So, figuratively, real merit is eclipsed by the intervention of superior merit; it is often obscured by an ungracious exterior in the possessor, or by his unfortunate circumstances.

Education, Instruction, Breeding. Instruction and breeding are to education as parts to a whole. Instruction respects the communication of knowledge, and breeding respects the manners or outward conduct; education comprehends not only both these, but the formation of the mind, the regulation of the heart, and the establishment of the principles. Good instruction makes one wiser; good breeding makes one more polished and agreeable; good education makes one really good.

To Effect, Produce, Perform. To produce signifies to bring something forth or into existence; to perform to do something to the end. To effect is to produce a result by performing. Whatever is effected is the consequence of a specific design; it always requires, therefore, a rational agent to effect. What is produced may follow incidentally, or arise from the action of an irrational agent or an inanimate object; what is performed is done by specific efforts.

Effusion, Ejaculation. An effusion commonly flows from a heated imagination uncorrected by the judgment; it is, therefore, in general not only incoherent but extravagant and senseless. An ejaculation is produced by the warmth of the moment, but never without reference to some particular circumstance. Enthusiasts are full of extravagant effusions; contrite sinners will often express their penitence in pious ejaculations.

Elderly, Aged, Old. The elderly man has passed the meridian of life; the aged man is fast approaching the term of our existence; the old man has already reached this term, or has exceeded it.

Eligible, Preferable. What is eligible is desirable in itself, what is preferable is more desirable than another.

Embarrassments, Perplexities, Entanglements. Embarrassments depend altogether on ourselves; the want of prudence and presence of mind is the common cause. Perplexities depend on extraneous circumstances as well as on ourselves; extensive dealings with others are mostly attended with perplexities. Entanglements arise mostly from the evil designs of others.

Emissary, Spy. Both these words designate a person sent out by a body on some public concern among their enemies; but they differ in their office according to the etymology of the words. The emissary is sent so as to mix with the people to whom he goes, to be in all places, and to associate with every one individually as may serve his purpose. The spy takes his station wherever he can best perceive what is passing; he keeps himself at a distance from all but such as may particularly aid him in the object of his search. The emissary is generally employed by those who have some illegitimate object to pursue; spies, on the other hand, are employed by all regular governments in a time of warfare.

Empire, Reign, Dominion. Empire signifies command, or the power exercised in commanding; it properly refers to the country or the people commanded: reign signifies the act of reigning; it refers to the individual who reigns. Dominion may be applied in the proper sense to the power which man exercises over the brutes or inanimate objects, and figuratively to the power of the passions.

To Employ, Use. We employ whatever we take into our service, or make subservient to our convenience for a time; we use whatever we entirely devote to our purpose.

Encomium, Eulogy, Panegyric. We bestow encomiums upon any work of art or production of genius, without reference to the performer; we bestow eulogies on the exploits of a hero, who is of another age or country; but we write panegyrics either in a direct address, or in direct reference to the person who is panegyrized. The encomium is produced by merit, real or supposed; the eulogy may spring from admiration of the person eulogized; the panegyric may be mere flattery, resulting from servile dependence.

To Encourage, Embolden. To encourage is to give courage, and to embolden is to make bold; the former impels to action in general, the latter to that which is more difficult or dangerous.

To End, Terminate, Close. To end is indefinite in its meaning and general in its application. Terminate and close are modes of ending: to terminate is to end finally; to close to end gradually. Whatever is begun will end, and it may end in any way; but what terminates is that which has been designedly brought to an end. A string, a line, a verse, etc., may end; but a road is said properly to terminate.

To Endeavor, Aim, Strive, Struggle. An endeavor springs from a sense of duty; we endeavor to do that which is right, and avoid that which is wrong. Aiming is the fruit of an aspiring temper; the object aimed at is always something superior either in reality or imagination. Striving is the consequence of an ardent desire; the thing striven for is always conceived to be of importance. Struggling is the effect of necessity; it is proportioned to the difficulty of attainment; the thing struggled for is indispensably necessary.

Endeavor, Effort, Exertion. Endeavor expresses little more than this common idea, being a term of general import. Effort and exertion are particular modes of endeavor, the former being a special strong endeavor, the latter a continued strong endeavor.

Energy, Force, Vigor. With energy is connected the idea of activity; with force that of capability; with vigor that of health. Energy lies only in the mind; force and vigor are the property of either body or mind.

To Enlarge, Increase, Extend. Enlarge is applied to dimension and extent; increase is applicable to quantity, signifying to become greater in size by the junction of other matter; extend signifies to make greater in space. We speak of enlarging a house, a room, premises, or boundaries; of increasing an army, or property, capital, expense, etc.; of extending the boundaries of an empire.

Enmity, Animosity, Hostility. Enmity lies in the heart; it is deep and malignant. Animosity, from animus, a spirit, lies in the passions; it is fierce and vindictive. Hostility, from hostis, a political enemy, lies in the action; it is mischievous and destructive. Enmity is altogether personal; hostility respects public or private measures; enmity often lies concealed in the heart, and does not betray itself by any open act of hostility.

Enormous, Prodigious, Monstrous. The enormous contradicts our rules of estimating and calculating; the prodigious raises our minds beyond their ordinary standard of thinking; the monstrous contradicts nature and the course of things. What is enormous excites our surprise or amazement; what is prodigious excites our astonishment; what is monstrous does violence to our senses and understanding.

Enough, Sufficient. He has enough whose desires are satisfied; he has sufficient whose wants are supplied. Enough is in German genug, which comes from genügen, to satisfy. Sufficient, in Latin sufficiens, participle of sufficio, compounded of sub and facio, signifies made or suited to the purpose.

Enterprising, Adventurous. The enterprising character conceives great projects, and pursues objects that are difficult to be obtained; the adventurous character is contented with seeking that which is new, and placing himself in dangerous and unusual situations.

Epithet, Adjective. Epithet is the technical term of the rhetorician; adjective that of the grammarian. The same word is an epithet as it qualifies the sense; it is an adjective as it is a part of speech. Thus, in the phrase, "Alexander the Great," great is an epithet, inasmuch as it designates Alexander in distinction from all other persons; it is an adjective as it expresses a quality in distinction from the noun, Alexander, which denotes a thing.

Equal, Even, Equable, Like, or Alike, Uniform. Equal is said of degree, quantity, number, and dimensions, as equal in years; even is said of the surface and position of bodies; a board is made even with another board. Like is said of accidental qualities in things, as alike in color or in feature; uniform is said of things only as to their fitness to correspond; those which are unlike in color, shape, or make, are not uniform, and cannot be made to match as pairs. Equable is used only in the moral acceptation, in which all the others are likewise employed.

Error, Mistake, Blunder. Error in its universal sense is the general term, since every deviation from what is right in rational agents is termed error. Into whatever we attempt to do or think error will be sure to creep. The other terms designate modes of error, which refer mostly to the common concerns of life: mistake is an error of choice; blunder an error of action.

Error, Fault. Error respects the act; fault respects the agent: an error may lie in the judgment, or in the conduct; but a fault lies in the will or the intention.

Eruption, Explosion. Eruption is the coming into view, by a sudden bursting; explosion signifies bursting out with a noise: hence of flames there will be properly an eruption, but of gunpowder an explosion.

To Estimate, Compute, Rate. To estimate is to obtain the aggregate sum in one's mind, either by an immediate or a progressive act; to compute is to obtain the sum by the gradual process of putting together items; to rate is to fix the relative value in one's mind by deduction and comparison. A builder estimates the expense of building a house on a given plan; a proprietor of houses computes the probable diminution in the value of his property in consequence of wear and tear; the surveyor rates the present value of lands or houses.

Eternal, Endless, Everlasting. The eternal is set above time; the endless lies within time. That is properly eternal which has neither beginning nor end; that is endless which has a beginning, but no end; that which is everlasting has neither interruption nor cessation.

To Evade, Equivocate, Prevaricate. We evade by artfully turning the subject or calling off the attention of the inquirer; we equivocate by the use of expressions of double interpretation; we prevaricate by the use of loose and indefinite expressions. We avoid giving satisfaction by evading; we give a false satisfaction by equivocating; we give dissatisfaction by prevaricating.

Event, Incident, Accident, Adventure, Occurrence. These terms are expressive of what passes in the world, which is the sole signification of the term event; while to that of the other terms are annexed some accessory ideas. An incident is a personal event; an accident an event which happens by the way; an adventure an extraordinary event; an occurrence an ordinary or domestic event. Event, in its ordinary and limited acceptation, excludes the idea of chance; accident excludes that of design; incident, adventure, and occurrence are applicable in both cases.

To Exact, Extort. To exact is to demand peremptorily; it is commonly an act of injustice: to extort is to get with violence; it is an act of tyranny.

Exact, Nice, Particular, Punctual. To be exact is to arrive at perfection; to be nice is to be free from faults; to be particular is to be nice in certain particulars; to be punctual is to be exact in certain points. We are exact in our conduct or in what we do; nice and particular in our mode of doing it; punctual as to the time and the season for doing it.

Example, Pattern, Ensample. The example must be followed generally; the pattern must be followed particularly, not only as to what, but how a thing is to be done: the former serves as a guide to the judgment; the latter to guide the actions. The ensample is a form of example, the word being employed only in the solemn style.

Example, Instance. The example is set forth by way of illustration or instruction; the instance is adduced by way of evidence or proof.

To Excite, Incite, Provoke. To excite is said more particularly of the inward feelings; incite is said of the external actions; provoke is said of both. A person's passions are excited; he is incited by any particular passion to a course of conduct; a particular feeling is provoked, or one is provoked to a particular step by some feeling.

Excursion, Ramble, Tour, Trip, Jaunt. Excursion signifies going out of one's course; a ramble (from roam) is a going without any course or regular path; a tour, from the word turn or return, is a circuitous course; a trip, meaning a quick, light step, is properly a pedestrian excursion or tour, or any journey of short duration; those who have no better means of spending their time make jaunts.

To Excuse, Pardon. We excuse a person by exempting him from blame; we pardon by giving up the punishment of the offense one has committed. We excuse a small fault; we pardon a great fault; we excuse that which personally affects ourselves; we pardon that which offends against morals.

To Execute, Fulfill, Perform. To execute is to bring about an end; it involves active measures, and is peculiarly applicable to that which is extraordinary, or to that which requires particular spirit and talents. Schemes of ambition are executed. To fulfill is to satisfy a moral obligation. We fulfill the duties of citizens. To perform is to carry through by simple action or labor; it is more particularly applicable to the ordinary and regular business of life. We perform a work or a task.

To Exercise, Practice. We exercise in that where the powers are called forth; we practice in that where frequency and habitude of action are requisite.

Exigency, Emergency. The exigency is more common, but less pressing; the emergency is imperious when it comes, but comes less frequently. A prudent traveler will never carry more money with him than what will supply the exigencies of his journey; in case of an emergency he will borrow of his friends rather than risk his property.

To Exonerate, Exculpate. The first is the act of another; the second is one's own act. We exonerate him upon whom a charge has lain, or who has the load of guilt; we exculpate ourselves when there is any danger of being blamed: circumstances may sometimes tend to exonerate; the explanation of some person is requisite to exculpate.

Expediency, Fitness. The expediency of a thing depends altogether upon the outward circumstances; the fitness is determined by a moral rule.

To Explain, Expound, Interpret. Single words or sentences are explained; a whole work, or considerable parts of it, is expounded; the sense of any writing or symbolical sign is interpreted.

Expedient, Resource. The expedient is an artificial means; the resource is a natural means. A cunning man is fruitful in expedients; a fortunate man abounds in resources.

To Explain, Illustrate, Elucidate. To explain is simply to render intelligible; to illustrate and elucidate are to give additional clearness. Everything requires to be explained to one who is ignorant of it; but the best informed will require to have abstruse subjects illustrated, and obscure subjects elucidated.

To Expostulate, Remonstrate. We expostulate in a tone of authority; we remonstrate in a tone of complaint. He who expostulates passes a censure, and claims to be heard; he who remonstrates presents his case and requests to be heard.

Extraneous, Extrinsic, Foreign. The extraneous is that which forms no necessary or natural part of anything. The extrinsic is that which forms a part or has a connection with a thing, but only in an indirect form; it is not an inherent or component part. The foreign is that which forms no part whatever, and has no kind of connection with an object or an incident.

Extraordinary, Remarkable. The extraordinary is that which is out of the ordinary course, but it does not always excite remark, and is not, therefore, remarkable, as when we speak of an extraordinary loan; on the other hand, when the extraordinary conveys the idea of what deserves notice, it expresses what is remarkable.

Extravagant, Prodigal, Lavish, Profuse. The extravagant man spends his money without reason; the prodigal man spends it in excesses. One may be extravagant with a small sum where it exceeds one's means; one can be prodigal only with large sums. Lavish and profuse are properly applied to particular actions, the former to denote an expenditure more or less wasteful or superfluous, the latter to denote a full supply without any sort of scant.

Exuberant, Luxuriant. These terms are both applied to any flourishing growth or abundance: exuberance expresses the excess; luxuriance the perfection.

Facetious, Conversable, Pleasant, Jocular, Jocose. Facetious may be employed either for writing or conversation; the rest only in conversation. The facetious man deals in that kind of discourse which may excite laughter; a conversable man may instruct as well as amuse. The pleasant man says everything in a pleasant manner; his pleasantry even on the most delicate subject is without offense. The person speaking is jocose; the thing said, or the manner of saying it, is jocular.

Factious, Seditious. Factious is an epithet to characterize the tempers of men; seditious characterizes their conduct. The factious man attempts to raise himself into importance, he aims at authority, and seeks to interfere in the measures of government; the seditious man attempts to excite others, and to provoke their resistance to established authority: the first wants to be a law-giver; the second does not hesitate to be a law-breaker.

Fair, Clear. Fair is used in a positive sense; clear in a negative sense: there must be some brightness in what is fair; there must be no spots in what is clear. The weather is said to be fair, which is not only free from what is disagreeable, but somewhat enlivened by the sun; it is clear when it is free from clouds or mists.

Faith, Creed. These words are synonymous when taken for the thing trusted in or believed; but they differ in this: faith has always a reference to the principle in the mind; creed respects the thing which is the object of faith.

Faith, Fidelity. Faith here denotes a mode of action, namely, in acting true to the faith which others repose in us; fidelity, a disposition of the mind to adhere to that faith which others repose in us. We keep our faith; we show our fidelity.

Faithful, Trusty. Faithful respects the principle altogether; it is suited to all relations and stations, public and private. Trusty includes not only the principle, but the mental qualifications in general; it applies to those in whom particular trust is to be placed. It is the part of a Christian to be faithful to all his engagements; it is a particular excellence in a servant to be trusty.

Faithless, Perfidious, Treacherous. A faithless man is faithless only for his own interest; a perfidious man is expressly so to the injury of another. Perfidy may lie in the will to do; treachery lies altogether in the thing done. A friend is perfidious whenever he evinces his perfidy; but he is said to be treacherous only in the particular instance in which he betrays the confidence and interests of another.

Fall, Downfall, Ruin. Fall applies to that which has been erect; downfall to that which has been elevated. Everything which is set up, although as trifling as a stick, may have a fall; but we speak of the downfall of the loftiest trees or the tallest spires. A man may recover from his fall, but his downfall is commonly followed by the entire ruin of his concerns, and often of himself.

Fallacious, Deceitful, Fraudulent. The fallacious has respect to falsehood in opinion; deceitful to that which is externally false: our hopes are often fallacious; the appearances of things are often deceitful. Fallacious, as characteristic of the mind, excludes the idea of design; deceitful excludes the idea of mistake; fraudulent is a gross species of the deceitful.

Fame, Reputation, Renown. Fame may be applied to any object, good, bad, or indifferent; reputation is applied only to real eminence in some department; renown is employed only for extraordinary men and brilliant exploits.

Fame, Report, Rumor, Hearsay. Fame serves to form or establish a character either of a person or a thing; it will be good or bad, according to circumstances: the fame of our Saviour's miracles went abroad through the land. A report serves to communicate information of events; it may be more or less correct according to the veracity or authenticity of the reporter. A rumor serves the purposes of fiction; it is more or less vague according to the temper of the times and the nature of the events. The hearsay serves for information or instruction, and is seldom so incorrect as it is familiar.

Famous, Celebrated, Renowned, Illustrious. Famous signifies literally having fame or the cause of fame; it is applicable to that which causes a noise or sensation; to that which is talked of, written upon, discussed, and thought of; to that which is circulated among all ranks and orders of men. Celebrated signifies literally kept in the memory by a celebration or memorial, and is applicable to that which is praised and honored with solemnity. Renowned signifies literally possessed of a name, and is applicable to whatever extends the name, or causes the name to be often repeated. Illustrious signifies literally what has or gives a luster; it is applicable to whatever confers dignity.

Fanciful, Fantastical, Whimsical, Capricious. Fanciful is said of that which is irregular in the taste or judgment; fantastical is said of that which violates all propriety, as well as regularity: the former may consist of a simple deviation from rule; the latter is something extravagant. Whimsical is a form of the fanciful in regard to one's likes or dislikes; capricious respects errors of temper, or irregularities of feeling.

Fancy, Imagination. The fancy employs itself about things without regarding their nature; but the imagination aims at tracing a resemblance, and getting a true copy. The fancy consequently forms combinations, either real or unreal, as chance may direct; but the imagination is less often led astray. The fancy is busy in dreams, or when the mind is in a disordered state; but the imagination is supposed to act when the intellectual powers are in full play.

Fatigue, Weariness, Lassitude. Fatigue is an

exhaustion of the animal or mental powers; weariness is a wearing out of the strength, or a breaking of the spirits; lassitude is a general relaxation of the animal frame.

Fearful, Dreadful, Frightful, Tremendous, Terrible, Terrific, Horrible, Horrid. A contest is fearful when the issue is important, but the event doubtful; the thought of death is dreadful to one who feels himself unprepared. The frightful is less than the tremendous; the tremendous than the terrible; the terrible than the horrible. Shrieks may be frightful; thunder and lightning may be tremendous; the roaring of a lion is terrible; the glare of his eye terrific; the actual spectacle of killing is horrible or horrid. We may speak of a frightful, dreadful, terrible, or horrid dream; or frightful, dreadful, or terrible tempest; dreadful, terrible, or horrid consequences.

To Feel, be Sensible, Conscious. To feel is said of the whole frame, inwardly and outwardly; it is the accompaniment of existence: to be sensible is said only of the senses. It is the property of all living creatures to feel pleasure and pain in a greater or less degree; those creatures which have not the sense of hearing will not be sensible of sounds. One is conscious only of what passes inwardly; we are conscious of having fallen short of our duty.

To Feign, Pretend. One feigns in order to gain some future end: a person feigns sickness in order to be excused from paying a disagreeable visit. One pretends in order to serve a present purpose: a child who wishes to excuse himself for his idleness pretends to have lost his book.

To Felicitate, Congratulate. Felicitate signifies to make happy, and is applicable only to ourselves; congratulate is applicable either to ourselves or others: we felicitate ourselves on having escaped the danger; we congratulate others on their good fortune.

Female, Feminine, Effeminate. In the female character we expect to find that which is feminine. The female dress, manners, and habits, have engaged the attention of all essayists, from the time of Addison to the present period. The feminine is natural to the female; the effeminate is unnatural to the male.

Ferocious, Fierce, Savage. Ferocious marks the untamed character of a cruel disposition; fierce has a greater mixture of pride and anger in it; savage marks a more permanent, but not so violent a sentiment of either cruelty or anger as the two former. Ferocity and fierceness are in common applied to the brutes, to designate their natural tempers: savage is mostly employed to designate the natural tempers of man, when uncontrolled by the force of reason and a sense of religion.

Fervent, Ardent. The affections are properly fervent; the passions are ardent: we are fervent in feeling, and ardent in acting.

Final, Conclusive. Final designates simply the circumstance of being the last; conclusive the mode of finishing or coming to the last. A determination is final which is to be succeeded by no other; a reasoning is conclusive that puts a stop to further question.

To Find, Discover, Invent. The merit of finding or inventing consists in newly applying or modifying the materials, which exist separately; the merit of discovering consists in removing the obstacles which prevent us from knowing the real nature of the thing. Imagination and industry are requisite for finding or inventing; acuteness and penetration for discovering. Find is applicable to the operative arts; invent to the mechanical; discover to the speculative.

To Find Fault With, Blame, Object To. We find fault with a person for his behavior; we find fault with our house or servant; we blame a person for his temerity or his improvidence; we object to a measure that is proposed. We find fault with or blame that which has been done; we object to that which has been or is to be done.

Fine, Delicate, Nice. Fine, in the natural sense, denotes smallness in general. Delicate denotes a degree of fineness that is agreeable to the taste. Thread is said to be fine; silk is said to be delicate, when to fineness of texture it adds softness. Nice is said of what is agreeable to the appetite.

Finite, Limited. Finite is the natural property of things; and limited is the artificial property: the former is opposite only to the infinite; but the latter, which lies within the finite, is opposed to the unlimited or the infinite. This world is finite, and space infinite; the power of a prince is limited.

Firm, Fixed, Solid, Stable. Firm (v. constancy). Fixed denotes the state of being secure; solid, in Latin solidus, comes from solum, the ground, which is the most solid thing existing; stable (v. constancy). That is firm which is not easily shaken; that is fixed which is fastened to something else, and not easily torn; that is solid which is able to bear, and does not easily give way; that is stable which is able to make a stand against resistance, or the effects of time.

Fit, Apt, Meet. A house is fit for the accommodation of the family according to the plan of the builder; the young mind is apt to receive either good or bad impressions. Meet is a term of rare use, except in spiritual matters or in poetry: it is meet to offer our prayers to the Supreme Disposer of all things.

Flatterer, Sycophant, Parasite. The flatterer is one who flatters by words. The sycophant and the parasite are therefore always flatterers, and something more, for the sycophant adopts every mean artifice by which he can ingratiate himself, and the parasite submits to every degradation and servile compliance by which he can obtain his base purpose.

Flexible, Pliable, Pliant, Supple. Flexible is used in a natural or moral sense; pliable in the familiar sense only; pliant in the higher and moral application only. What can be bent in any degree, as a stick, is flexible; what can be bent as wax, or folded like cloth, is pliable. Supple, whether in a proper or a figurative sense, is an excess of pliability; what can be bent backward and forward, like osier twig, is supple.

To Fluctuate, Waver. To fluctuate conveys the idea of strong agitation; to waver, that of constant motion backward and forward. When applied in the moral sense, to fluctuate designates the action of the spirits or the opinions; to waver is said only of the will or opinions.

To Follow, Succeed, Ensue. Follow and succeed are used of persons and things; ensue of things only. Follow, in respect of persons, denotes the going in order; succeed denotes the going or being in the same place immediately after another: many persons may follow one another at the same time; but only one individual properly succeeds another. Ensue is used in specific cases; quarrels too often ensue from the conversations of violent men who differ either in religion or politics.

To Follow, Pursue. The idea of going after any object in order to reach or obtain it is common to these terms, but under different circumstances: to follow a person is mostly with a friendly intention; to pursue with a hostile intention.

Follower, Adherent, Partisan. A follower is one who follows a person generally; an adherent is one who holds to his cause; a partisan is the follower of a party.

Folly, Foolery. Folly is the abstract of foolish, and characterizes the thing; foolery is the abstract of fool, and characterizes the person. Young people are perpetually committing follies if not under proper control; fashionable people lay aside one foolery only to take up another.

Fool, Idiot, Buffoon. Fool is doubtless connected with our word foul, in German faul, which is either nasty or lazy, and with the Greek word, which signifies worthless or good for nothing. Idiot comes from the Greek word signifying either a private person or one that is rude and unskilled in the ways of the world. Buffoon, in French "bouffon," is in all probability connected with our word beef, buffalo, and bull, signifying a senseless fellow. The fool is either naturally or artificially a fool; the idiot is a natural fool; the buffoon is an artificial fool. Whoever violates common-sense in his actions is a fool; whoever is unable to act according to common-sense is an idiot; whoever intentionally violates common-sense is a buffoon.

Foolhardy, Adventurous, Rash. The foolhardy man ventures in defiance of consequences; the adventurous man ventures from a love of the arduous and the bold; the rash man ventures for want of thought.

Force, Violence. The arm of justice must exercise force in order to bring offenders to a proper account; one nation exercises violence against another in the act of carrying on war. Force is mostly conformable to reason and equity; violence is always resorted to for the attainment of that which is unattainable by law: force is always something desirable; violence is always something hurtful. We ought to listen to arguments which have force in them; we endeavor to correct the violence of all angry passions.

Forefathers, Progenitors, Ancestors. Forefathers signifies our fathers before us, and includes our immediate parents; progenitors signifies those begotten before us, exclusive of our immediate parents; ancestors is said of those from whom we are remotely descended.

To Foretell, Predict, Prophesy, Prognosticate. We may foretell common events, although we cannot predict or prophesy anything important: one foretells by a simple calculation or guess. To predict and prophesy are extraordinary gifts: one predicts by a supernatural power, real or supposed; one prophesies by means of inspiration. To prognosticate is an act of the under-

standing; it is guided by outward symptoms as a rule. A physician prognosticates the crisis of a disorder by the symptoms discoverable in the patient.

Forgetfulness, Oblivion. Forgetfulness characterizes the person, or that which is personal; oblivion the state of the thing: the former refers to him who forgets; the latter to that which is forgotten.

To Forgive, Pardon, Absolve, Remit. Individuals forgive each other personal offenses; they pardon offenses against law and morals: the former is an act of Christian charity; the latter an act of clemency. To remit is to refrain from inflicting; it has more particular regard to the punishment; it is granted either by the prince or magistrates; it arrests the execution of justice. To absolve is to free from penalty either by the civil judge or the ecclesiastical minister; it reestablishes the accused in the rights of innocence.

To Form, Fashion, Mold, Shape. As everything respects a form when it receives existence, so to form conveys the idea of producing. When we wish to represent a thing as formed in any distinct or remarkable way, we may speak of it as fashioned. God formed man out of the dust of the ground; he fashioned him after his own image. When we wish to represent a thing as formed according to a precise rule, we should say it was molded; thus the habits of a man are molded at the will of a superior. When we wish to represent a thing as receiving the accidental qualities which distinguish it from others, we talk of shaping it.

Form, Ceremony, Rite, Observance. Form respects all determinate modes of acting and speaking, that are adopted by society at large, in every transaction of life; ceremony respects those forms of outward behavior which are made the expressions of respect and deference; rite and observance are applied to national ceremonies in matters of religion. Every country has adopted certain rites founded upon its peculiar religious faith, and prescribed certain observances by which individuals can make a public profession of their faith.

Formidable, Dreadful, Terrible, Shocking. The formidable acts neither suddenly nor violently; the dreadful may act violently, but not suddenly: thus the appearance of an army may be formidable; but that of a field of battle is dreadful. The terrible and the shocking act both suddenly and violently; but the former acts both on the senses and the imagination, the latter on the moral feelings: thus, the glare of a tiger's eye is terrible; the unexpected news of a friend's death is shocking.

Forsaken, Forlorn, Destitute. To be forsaken (v. to abandon) is to be deprived of the company and the assistance of those we have looked to; to be forlorn is to be forsaken in time of difficulty, to be without a guide in an unknown road; to be destitute is to be deprived of the first necessaries of life.

To Forswear, Perjure, Suborn. To forswear is applied to all kinds of oaths; to perjure is employed only for such oaths as have been administered by the civil magistrate. A soldier forswears himself who breaks his oath of allegiance by desertion; a man perjures himself in a court of law who swears to the truth of that which he knows to be false. Suborn signifies to make to forswear: a perjured man has all the guilt upon himself; but he who is suborned shares his guilt with the suborner.

To Foster, Cherish, Harbor, Indulge. These terms are all employed here in the moral acceptation, to express the idea of giving nourishment to an object. To foster in the mind is to keep with care and positive endeavors; as when one fosters prejudices by encouraging everything which favors them: to cherish in the mind is to hold dear or set a value upon; as when one cherishes good sentiments, by dwelling upon them with inward satisfaction. To harbor is to allow room in the mind, and is generally taken in the worst sense, for giving admission to that which ought to be excluded; as when one harbors resentment by permitting it to have a resting-place in the heart: to indulge in the mind is to give the whole mind to it, to make it the chief source of pleasure; as when one indulges an affection, by making the will and the outward conduct bend to its gratifications.

Foundation, Ground, Basis. A report is said to be without any foundation which has taken its rise in mere conjecture, or in some arbitrary cause independent of all fact. A man's suspicion is said to be without ground when not supported by the shadow of external evidence: both foundation and basis are the lowest parts of any structure; but the former lies under ground, the latter stands above. The foundation supports some large and artificially erected pile; the basis supports a simple pillar.

Fragile, Frail, Brittle. Man, corporeally considered is a fragile creature, his frame is composed of fragile materials; mentally considered, he is a frail creature, for he is liable to every sort of frailty. Fragile applies to whatever will break from the effects of time; brittle to that which will not bear a temporary violence.

Frank, Candid, Ingenuous, Free, Open, Plain. The frank man is under no constraint; his thoughts and feelings are both set at ease, and his lips are ever ready to give utterance to the dictates of his heart: the candid man has nothing to conceal; he speaks without regard to self-interest or any partial motive; he speaks nothing but the truth. The ingenuous man throws off all disguise; he scorns all artifice, and brings everything to light; he speaks the whole truth. Free, open, and plain have not so high an office as the first three. The frank, free, and open men all speak without constraint; but the frank man is not impertinent like the free man, nor indiscreet like the open man. The frank man speaks only of what concerns himself; the free man speaks of what concerns others; the open man says all he knows and thinks, from the inconsiderate levity of his temper. The plain man speaks plainly but truly; he gives no false coloring to his speech.

Free, Liberal. To be free signifies to act or think at will; to be liberal is to act according to the dictates of an enlarged heart and an enlightened mind.

Free, Familiar. To be free is to be disengaged from all the constraints which the ceremonies of social intercourse impose; to be familiar is to be upon the footing of a friend, of a relative, or of one of the same family.

Free, Exempt. Free is applied to everything from which any one may wish to be free; but exempt, on the contrary, is applied to those burdens which we should share with others.

Freedom, Liberty. Freedom is personal and private; liberty is public. The freedom of the city is the privilege granted by the city to individuals; the liberties of the city are the immunities enjoyed by the city.

To Frequent, Resort To, Haunt. Frequent is more commonly used of an individual who goes often to a place; resort and haunt of a number of individuals. A man may frequent a theater, a club, or any other social meeting, innocent or otherwise; people from different quarters may resort to a fair, a church, or any other place where they wish to meet for a common purpose; but those who haunt any place go to it in privacy for some bad purpose.

To Frighten, Intimidate. The danger that is near or before the eyes frightens; that which is seen at a distance intimidates.

Funeral, Obsequies. We speak of the funeral as the last sad office which we perform for a friend; it is accompanied by nothing but by mourning and sorrow. We speak of obsequies as the greatest tribute of respect which can be paid to the person of one who was high in station or public esteem.

To Gape, Stare, Gaze. Gape and stare are taken in an ill sense: the former indicates the astonishment of gross ignorance; the latter not only ignorance but impertinence. Gaze is taken always in a good sense, as indicating a laudable feeling of astonishment, pleasure, or curiosity.

To Gather, Collect. To gather signifies to bring things of a sort together; to collect annexes also the idea of binding or forming into a whole. We gather that which is scattered in different parts: thus stones are gathered into a heap; vessels are collected so as to form a fleet.

General, Universal. What is general includes the greater part or number; what is universal includes every individual or part.

Genteel, Polite. Gentility respects rank in life; politeness the refinement of the mind and outward behavior. A genteel education is suited to the station of a gentleman; a polite education fits for polished society and conversation, and raises the individual among his equals.

Gentle, Tame. Any unbroken horse may be gentle, but not tame; a horse that is broken in will be tame, but not always gentle. Gentle signifies literally well-born, and is opposed either to the fierce or the rude; tame is opposed either to the wild or the spirited.

Gift, Present, Donation. The gift is an act of generosity or condescension; it contributes to the benefit of the receiver: the present is an act of kindness, courtesy or respect; it contributes to the pleasure of the receiver. The gift is private, and benefits the individual; the donation is public, and serves some general purpose. What is given to relieve the necessities of any poor person is a gift; what is given to support an institution is a donation.

To Give, Grant, Bestow. The idea of communicating to another what is our own, or in our power, is common to these terms; this is the whole signification of give. To grant is to give at one's pleasure; to bestow is to give from a certain degree of necessity. We give money, clothes, food, or whatever is transferable.

Granting is confined to such objects as afford pleasure or convenience; bestowing is applied to such objects only as are necessary to supply wants, which always consist of that which is transferable.

To Give, Present, Offer, Exhibit. We give to our domestics; we present to princes; we offer to God; we give to a person what we wish to be received; we present to a person what we think agreeable. A poem is said to exhibit marks of genius.

To Give Up, Abandon, Resign, Forego. To give up is applied to familiar cases; abandon to matters of importance: one gives up an idea, an intention, a plan, and the like; one abandons a project, a scheme, a measure of government. A man gives up his situation by a positive act of his choice; he resigns his office when he feels it inconvenient to hold it. So, likewise, we give up expectations, and resign hopes; we resign that which we have, and we forego that which we might have.

Glaring, Barefaced. Glaring designates the thing; barefaced characterizes the person: a glaring falsehood is that which strikes the observer in an instant to be a falsehood; a barefaced lie or a falsehood betrays the effrontery of him who utters it.

Glimpse, Glance. A glimpse is the action of the object appearing to the eye; a glance is the action of the eye seeking the object. One catches a glimpse of an object; one casts a glance at an object.

Glory, Honor. Glory is something dazzling and widely diffused; honor is something less splendid, but more solid. Glory impels to extraordinary efforts and to great undertakings; honor induces to a discharge of one's duty.

To Glory, Boast, Vaunt. To glory is to exult or to rejoice; to boast is to set forth to one's advantage; to vaunt is to set oneself up before others. To glory is more particularly the act of the mind, the indulgence of the internal sentiment; to boast denotes rather the expression of the sentiment; to vaunt is properly to proclaim praises aloud, and is taken either in an indifferent or in a bad sense.

Godlike, Divine, Heavenly. Godlike is a more expressive, but less common term than divine: the former is used only as an epithet of peculiar praise for an individual; divine is generally employed for that which appertains to a superior being, in distinction from that which is human. A heavenly being denotes the angels or inhabitants of heaven, in distinction from earthly beings. As divine is opposed to human, so is heavenly to earthly.

Good-nature, Good-humor. Good-nature and good-humor both imply the disposition to please and be pleased; but the former is habitual and permanent, the latter is temporary and partial. The former lies in the nature and frame of the mind, the latter in the state of the humors or spirits.

To Govern, Rule, Regulate. The exercise of authority enters more or less into the signification of these terms; but to govern implies the exercise likewise of judgment and knowledge. To rule implies rather the unqualified exercise of power, the making the will the rule. A king governs his people by means of wise laws and an upright administration; a despot rules over a nation according to his arbitrary decision. To regulate is to govern or control simply by judgment; the word is applicable to things of minor moment, where the force of authority is not so requisite: one governs the affairs of a nation, or a large body where great interests are involved; we regulate the concerns of an individual.

Government, Administration. Both these terms may be employed either to designate the act of governing and administering, or the persons governing and administering. In both cases government has a more extensive meaning than administration: the former includes every exercise of authority; administration implies only that exercise of authority which consists in putting the laws or the will of another in force. When we speak of the government, as it respects the persons, it implies the whole body of constituted authorities; and the administration, only that part which puts in execution the intentions of the whole.

Grace, Charm, Elegance. Grace is altogether corporeal; charm is either corporeal or mental: the grace qualifies the action of the body; the charm is an inherent quality in the body itself. A lady moves, dances, and walks with grace; the charms of her person are equal to those of her mind. A graceful figure is rendered so by the deportment of the body. A comely figure has that in itself which pleases the eye. Grace is a quality pleasing to the eye; but elegance is a quality of a higher nature, and inspires admiration. Elegant is applicable, like graceful, to the motion of the body, or like comely to the person, and is extended in its meaning also to language, and even to dress.

To Gratify, Indulge, Humor. To gratify is a positive act of the choice; to indulge is a negative act of the will, a yielding of the mind to circumstances. One gratifies his desires or appetites; he indulges his humors, or indulges in pleasures. We gratify and indulge others as well as ourselves, and mostly in the good sense. To gratify is for the most part in return for services; it is an act of generosity: to indulge is to yield to the wishes or be lenient to the infirmities of others; it is an act of kindness or good-nature. To humor is mostly taken in a bad sense.

Gratuitous, Voluntary. Gratuitous is opposed to that which is obligatory; voluntary is opposed to that which is compulsory, or involuntary.

Grave, Serious, Solemn, Grave expresses more than serious; it does not merely bespeak the absence of mirth, but that heaviness of mind which is displayed in all the movements of the body. Serious, on the other hand, bespeaks no depression, but simply steadiness of action, and a refrainment from all that is jocular. A judge pronounces the solemn sentence of condemnation in a solemn manner; a preacher delivers many solemn warnings to his hearers.

Great, Large, Big. Great applies to all sorts of dimensions by which things are measured: large may apply to generous giving; it usually refers to magnitude, bulk, or scope. Big denotes great as to expansion or capacity. A house, a room, is great or large; an animal or a mountain is great or big; a road, a city, a street, and the like, is termed great rather than large. We may speak of a large portion, or of a mind big with conception.

Great, Grand, Sublime. These terms are synonymous only in their moral application. Great simply designates extent; grand includes likewise the idea of excellence and superiority. A great undertaking characterizes only the extent of the undertaking; a grand undertaking bespeaks its superior excellence. Sublime designates the dimensions of height. A scene may be either grand or sublime; it is grand as it fills the imagination with its immensity; it is sublime as it elevates the imagination beyond the surrounding and less important objects.

To Groan, Moan. Groan is a deep sound produced by hard breathing; moan is a plaintive, long-drawn sound produced by the organs of utterance. The groan proceeds involuntarily as an expression of severe pain, either of body or mind; the moan proceeds often from the desire of awakening attention or exciting compassion.

Gross, Coarse. These terms are synonymous in the moral application. Grossness of habit is opposed to delicacy; coarseness to softness and refinement. A person becomes gross by an unrestrained indulgence of his sensual appetites, particularly in eating and drinking; he is coarse from the want of polish either as to his mind or manners.

To Guard, Defend, Watch. To guard, in its largest sense, comprehends both watching and defending, that is, both the preventing the attack and the resisting it when it is made. In the restricted sense, to guard is properly to keep off an enemy; to defend is to drive him away when he makes the attack. Watch, like guard, consists in looking to the danger, but it does not necessarily imply the use of any means to prevent the danger: he who watches gives an alarm.

Guard, Guardian. The guard only defends against external evils; the guardian takes upon him the office of parent, counselor, and director.

To Guess, Conjecture, Divine. We guess that a thing actually is; we conjecture that which may be: we guess that it is a certain hour; we conjecture as to the meaning of a person's actions. To guess and to conjecture are natural acts of the mind. To divine, in its proper sense, is a supernatural act; in this sense impostors in our time presume to divine in matters that are set above the reach of human comprehension. The term is, however, employed to denote a kind of guessing in different matters, as to divine the meaning of a mystery.

Guest, Visitor, or Visitant. Guest signifies one who is entertained; visitor or visitant is the one who pays the visit. The visitor simply comes to see the person, and enjoy social intercourse; but the guest partakes also of hospitality.

Guise, Habit. The guise is that which is unusual, and often only occasional; the habit is that which is usual among particular classes. A person sometimes assumes the guise of a peasant, in order the better to conceal himself; he who devotes himself to the clerical profession puts on the habit of a clergyman.

Habitation, Home, House, Residence. Habitation

implies merely a dwelling-place; house refers to a building constructed purposely for dwelling therein. Home is usually restricted to mean an endeared dwelling as the scene of domestic ties and family life. Residence is a more formal, though less exact, term than house.

To Happen, Chance. Happen respects all events, without including any collateral idea; chance comprehends likewise the idea of the cause and order of events. Whatever comes to pass happens, whether regularly in the course of things, or particularly and out of the order; whatever chances, happens altogether without concert, intention, and often without relation to any other thing.

Happy, Fortunate. Both words are applied to the external circumstances of a man: the former conveys the idea of that which is abstractly good; the latter implies rather what is agreeable to one's wishes. A man is happy in his marriage; he is fortunate in his trading concerns. Happy excludes the idea of chance; fortunate excludes the idea of personal effort.

Harbor, Haven, Port. The idea of a resting-place for vessels is common to these terms. Harbor carries with it little more than the common idea of affording a resting or anchoring place; haven conveys the idea of security; port conveys the idea of an enclosure. A haven is a natural harbor; a port is an artificial harbor.

Hard, Firm, Solid. That is hard which will not yield to a closer compression; that is firm which will not yield so as to produce a separation. Ice is hard, as far as it respects itself, when it resists every pressure; it is firm, with regard to the water which it covers, when it is so closely bound as to resist every weight without breaking. Hard and solid respect the internal constitution of bodies, and the adherence of the component parts; but hard denotes a much closer degree of adherence than solid: the hard is opposed to the soft; the solid to the fluid.

Hardly, Scarcely. Where the idea of practicability predominates, hardly seems most proper; where the idea of frequency predominates, scarcely seems preferable. One can hardly judge of a person's features by a single and partial glance; we scarcely ever see men lay aside their vices from a thorough conviction of their enormity.

To Hasten, Accelerate, Speed, Expedite, Dispatch. To hasten expresses little more than the general idea of quickness in moving toward a point; thus, he hastens who runs to get to the end of his journey. Accelerate expresses, moreover, the idea of bringing something to a point; thus, every mechanical business is accelerated by the order and distribution of its several parts. The word speed includes not only quick but forward movement. He who goes with speed goes effectually forward, and comes to his journey's end the soonest. This idea is excluded from the term haste, which may often be a planless, unsuitable quickness. Hence the proverb, "The more haste, the worse speed." Expedite and dispatch are terms of higher import, in application to the most serious concerns in life: expedite expresses a process, a bringing forward toward an end; dispatch implies a putting an end to, making a clearance. We do everything in our power to expedite a business; we dispatch a great deal of business within a given time.

To Hasten, Hurry. To hasten and to hurry both imply to move forward with quickness in any matter; the former may proceed with some design and good order, but the latter always supposes perturbation and irregularity.

To Hate, Detest. To hate is a personal feeling directed toward the object independently of its qualities; to detest (v. to abhor) is a feeling independent of the person, and altogether dependent upon the nature of the thing. One hates, but does not detest, the person who has done an injury to oneself; and one detests, rather than hates, the person who has done injuries to others.

Hateful, Odious. Hateful is properly applied to whatever violates general principles of morality; lying and swearing are hateful vices. Odious is more commonly applied to such things as affect the interests of others, and bring odium upon the individual.

Haughtiness, Disdain, Arrogance. Haughtiness is founded on the high opinion we entertain of ourselves; disdain, on the low opinion we have of others; arrogance is the result of both, but if anything, more of the former than of the latter. Haughtiness and disdain are properly sentiments of the mind, and arrogance a mode of acting resulting from a state of mind.

To Have, Possess. To have is sometimes to have in one's hand or within one's reach; but to possess is to have as one's own. A clerk has the money which he has fetched for his employer; the latter possesses the money which he has the power of turning to his use.

To Hazard, Risk, Venture. He who hazards an opinion or an assertion does it from presumptuous feelings and upon slight grounds; chances are rather against him than for him that it may prove erroneous. He who risks a battle does it often from necessity; he chooses the lesser of two evils; although the event is dubious, yet he fears less from a failure than from inaction. He who ventures on a mercantile speculation does it from a love of gain.

Healthful, Wholesome, Salubrious, Salutary. Healthful is applied to exercise, to air, situation, climate, and most other things except food, for which wholesome is commonly substituted. The life of a farmer is reckoned the most healthful; the simplest diet is the most wholesome. Healthful and wholesome are rather negative in their sense; salubrious and salutary are positive. That is healthful and wholesome which does no injury to the health; that is salubrious which serves to improve the health; that is salutary which serves to remove a disorder.

To Heap, Pile, Accumulate, Amass. To heap is an indefinite action; it may be performed with or without order: to pile is a definite action done with design and order; thus we heap stones, or pile wood. To accumulate is properly to bring or add heap to heap, which is a gradual and unfinished act; to amass is to form into a mass, which is a single complete act. A man may accumulate guineas or anything else in small quantities, but he properly amasses wealth.

Hearty, Warm, Sincere, Cordial. There are cases in which it may be peculiarly proper to be hearty as when we are supporting the cause of religion and virtue; there are other cases in which it is peculiarly proper to be warm, as when our affections ought to be roused in favor of our friends. In all cases we ought to be sincere, when we express either a sentiment or a feeling; it is peculiarly happy to be on terms of cordial regard with those who stand in any close relation to us. The man himself should be hearty; his heart should be warm; professions should be sincere; a reception cordial.

Heed, Care, Attention. Heed (v. to attend) applies to matters of importance to one's moral conduct; care (v. care, solicitude) to matters of minor import. A man is required to take heed; a child is required to take care: the former exercises his understanding in taking heed; the latter exercises his thoughts and his senses in taking care. We speak of giving heed and paying attention: the former is applied only to that which is conveyed to us by another, in the shape of a direction, a caution, or an instruction; the latter is said of everything which we are said to perform.

Heinous, Flagrant, Flagitious, Atrocious. A crime is heinous which seriously offends against the laws of men; a sin is heinous which seriously offends against the will of God. An offense is flagrant which is in direct defiance of established opinions and practice. It is flagitious if a gross violation of the moral law, or coupled with any grossness. A crime is atrocious which is attended with any aggravating circumstances.

To Help, Assist, Aid, Succor, Relieve. Help signifies to do good to; assist signifies to place oneself by another so as to give him our strength; aid signifies to profit toward a specific end; succor signifies to run to the help of anyone; relieve signifies to alleviate. We help a person to prosecute his work, or help him out of a difficulty; we assist in order to forward a scheme, or we assist a person in the time of his embarrassment; we aid a good cause, or we aid a person to make his escape; we succor a person who is in danger; we relieve him in time of distress.

To Hesitate, Falter, Stammer, Stutter. A person who is not in the habit of public speaking, or of collecting his thoughts into a set form, will be apt to hesitate even in familiar conversation; he who first addresses a public assembly will be apt to falter. Children who first begin to read will stammer at hard words; one who has an impediment in his speech will stutter when he attempts to speak in a hurry.

Heterodoxy, Heresy. To be of a different persuasion is heterodoxy; to have a faith of one's own is heresy.

High, Tall, Lofty. High expresses the idea of extension upward, which is common to them all. What is tall is high, but what is high is not always tall; that which attains considerable height by growing is tall; a thing may be high because on a pedestal. Lofty is said of that which is extended in breadth as well as in height. We say that a house is high, a chimney tall, a room lofty.

To Hinder, Stop. To hinder is to interfere with the progress of a person or a thing; to stop refers simply to the cessation of motions.

To Hold, Keep, Detain, Retain. To hold is a physical act; it requires a degree of bodily strength.

or at least the use of the limbs: to keep is simply to have by one at one's pleasure. Detain and retain are modes of keeping: the former signifies keeping back what belongs to another; the latter signifies keeping a long time for one's own purpose.

To Hold, Occupy, Possess. We hold a thing for a long or a short time; we occupy it for a permanence: we hold it for ourselves or others; we occupy it only for ourselves. We hold it for various purposes; we occupy only for the purpose of converting it to our private use. To occupy is only to hold under a certain compact; but to possess is to hold as one's own.

Holiness, Sanctity. Holiness is to the mind of a man what sanctity is to his exterior, with this difference, that holiness to a certain degree ought to belong to every man professing Christianity; but sanctity, as it lies in the manners, the outward garb, and the deportment, is becoming only to certain persons, and at certain times.

Hollow, Empty. That is hollow which has an empty space, or cavity, as a hollow tree. That which has nothing in it is empty, as an empty chair.

Holy, Sacred, Divine. Whatever is most intimately connected with religion and religious worship, in its purest state, is holy, unhallowed by a mixture of inferior objects, and elevated in the greatest possible degree, so as to suit the nature of an infinitely perfect and exalted Being. The sacred derives its sanction from human institutions, and is connected rather with our moral than with our religious duties. What is holy is altogether spiritual, and abstracted from the earthly. The divine is often contrasted with the human; but there are many human things which are denominated divine. What is divine, therefore, may be so superlatively excellent as to be conceived of as having the stamp of inspiration from the Deity.

To Honor, Reverence, Respect. To honor is only an outward act; to reverence is either an act of the mind or is the outward expression of a sentiment; to respect is mostly an act of the mind, though it may admit of being expressed by some outward act. We honor God by adoration and worship; we honor our parents by obeying them and giving them our personal service; we reverence our Maker by cherishing in our minds a dread of offending Him; we respect a person or a thing that is lofty, worthy, or honorable.

Hot, Fiery, Burning, Ardent. In the figurative application, a temper is said to be hot or fiery; rage is burning; the mind is ardent in pursuit of an object. Zeal may be hot, fiery, burning, or ardent; but in the first three cases it denotes the intemperance of the mind when heated by religion or politics. The latter is admissible so long as it is confined to a good object.

Human, Humane. The human race or human beings are opposed to the irrational part of the creation; a humane race or a humane individual is opposed to one that is cruel and fond of inflicting pain.

Humble, Modest, Submissive. A man is humble from a sense of his comparative inferiority to others in point of station and outward circumstances; or he is humble from a sense of his imperfections, and a consciousness of not being what he ought to be. He is modest, inasmuch as he sets but little value on his qualifications, acquirements, and endowments. Between humble and submissive there is this prominent feature of distinction, that the former marks a temper of mind, the latter a mode of action: we may be submissive because we are humble; but we may likewise be submissive from fear, from interested motives, and the like.

Humor, Temper, Mood. The humor is so fluctuating that it varies in the same mind perpetually; but the temper is so far confined that it always shows itself to be the same whenever it shows itself at all. The humor makes a man different from himself; the temper makes him different from others: hence we speak of the humor of the moment; of the temper of youth or of old age. Humor and mood agree in denoting a particular and temporary state of feeling; but they differ in the cause: the former is attributable rather to the physical state of the body, and the latter to the moral frame of the mind. Mood is a temporary or capricious state or condition of the mind in regard to passion or feeling. There is no calculating on the humor of a man; it depends upon his mood whether he performs ill or well.

Hurtful, Pernicious, Noxious, Noisome. Between hurtful and pernicious there is the same distinction as between hurting and destroying: that which is hurtful may hurt in various ways; but that which is pernicious necessarily tends to destruction. Confinement is hurtful to the health; bad company is pernicious to the morals. Noxious and noisome are forms of the hurtful: that which is noxious inflicts a direct injury; that which is noisome inflicts it indirectly. Noxious insects are such as wound; noisome vapors are such as tend to create disorders.

Idea, Thought, Imagination. The idea is the simple representation of an object; the thought is the reflection; and the imagination is the combination of ideas. We have ideas of the sun, the moon, and all material objects; we have thoughts on moral subjects; we have imaginations drawn from the ideas already existing in the mind.

Ideal, Imaginary. The ideal is not directly opposed to, but abstracted from, the real: the imaginary, on the other hand, is directly opposed to the real; it is the unreal thing formed by the imagination. Ideal happiness is the happiness which is formed in the mind without having any direct and actual prototype in nature; the imaginary is that which is opposite to some positive existing reality. The pleasure which a lunatic derives from the conceit of being a king is altogether imaginary.

Idle, Lazy, Indolent. One is termed idle who will do nothing useful; one is lazy who will do nothing at all without great reluctance; one is indolent who does not care to do anything or set about anything.

To Illuminate, Illumine, Enlighten. We illuminate by means of artificial lights: the sun illuminates the world by its own light. Preaching and instruction enlighten the minds of men. Illumine is but a poetic variation of illuminate.

Imminent, Impending, Threatening. All these terms are used in regard to some evil that is exceedingly near: imminent conveys no idea of duration; impending excludes the idea of what is momentary. A person may be in imminent danger of losing his life in one instant, and the danger may be over the next instant; but an impending danger is that which has been long in existence and gradually approaching. A threatening evil gives intimations of its own approach: we perceive the threatening tempest in the blackness of the sky.

To Impair, Injure. To impair is a progressive mode of injuring; to injure is to do harm either by degrees or by an instantaneous act. Straining of the eyes impairs the sight, but a blow injures rather than impairs the eye.

Imperious, Lordly, Domineering, Overbearing. A person's temper or his tone is denominated imperious; his air or deportment is lordly; his tone is domineering. Overbearing is employed for men in the general relations of society, whether superiors or equals. A man of an imperious temper and some talent will frequently be so overbearing in the assemblies of his equals as to awe the rest into silence.

To Implicate, Involve. Implicate, from plico, to fold, denotes to fold into a thing; and involve, from volvo, to roll, signifies to roll into a thing: by this explanation we perceive that to implicate marks something less entangled than to involve; for that which is folded may be folded only once, but that which is rolled is turned many times. In application, therefore, to human affairs, people are said to be implicated who have taken ever so small a share in a transaction; but they are involved only when they are deeply concerned.

To Impugn, Attack. He who impugns may sometimes proceed insidiously and circuitously to undermine the faith of others; he who attacks always proceeds with more or less violence. When there are no arguments wherewith to impugn a doctrine, it is easy to attack it with ridicule and scurrility.

Inability, Disability. The inability lies in the nature of the thing, and is irremediable; the disability lies in the circumstances, and may sometimes be removed.

Inadvertency, Inattention, Oversight. Anyone may be guilty of inadvertencies, since the mind that is occupied with many subjects equally serious may be turned so steadily toward some that others may escape notice; but inattention, which designates a direct want of attention, is always a fault, and belongs only to the young, or to such as are thoughtless by nature. An oversight is properly a species of inadvertency, which arises from looking over, or passing by, a thing: we must be guarded against oversights in business, as their consequences may be serious.

Inclination, Tendency, Propensity, Proneness. All these terms are employed to designate the state of the will toward an object. Inclination denotes its first movement toward an object; tendency is a continued inclination; propensity denotes a still stronger leaning of the will; and proneness characterizes an habitual and fixed state of the will toward an object. Propensity and proneness both designate a downward direction, and consequently refer only to that which is bad and low: a person has a propensity to drinking, and a proneness to lying.

To Inclose, Include. A yard is inclosed by a wall; particular goods are included in a reckoning.

To Inconvenience, Annoy, Molest. We inconvenience in small matters, or by omitting such things as might be convenient; we annoy or molest by doing that which is positively painful: we are inconvenienced by a person's absence; we are annoyed by his presence if he renders himself offensive; we are molested by that which is weighty and oppressive. The rude insults of ill-disposed persons may molest.

To Increase, Grow. To increase is either a gradual or an instantaneous act; to grow is a gradual process: a stream increases by the addition of other waters; but if we say that the river or the stream grows, it is supposed to grow by some regular and continual process of receiving fresh water, as from the running in of different rivulets or smaller streams.

To be Indebted, Obliged. Indebted is more binding and positive than obliged: we are indebted to whoever confers an essential service; we are obliged to him who does us any service. A man is indebted to another for the preservation of his life; he is obliged to him for an ordinary act of civility.

Indifferent, Unconcerned, Regardless. Indifferent respects only the will, unconcerned either the will or the understanding, regardless the understanding only. We are indifferent about matters of minor consideration; we are unconcerned or regardless about serious matters that have remote consequences. An author will seldom be indifferent about the success of his work; he ought not to be unconcerned about the influence which his writings may have on the public, or regardless of the estimation in which his own character as a man may be held.

Indubitable, Unquestionable, Indisputable, Undeniable, Incontrovertible, Irrefragable. When a fact is supported by such evidence as admits of no kind of doubt, it is termed indubitable; when the truth of an assertion rests on the authority of a man whose character for integrity stands unimpeached, it is termed unquestionable authority; when a thing is believed to exist on the evidence of every man's senses, it is termed undeniable; when a sentiment has always been held as either true or false, without dispute, it is termed indisputable; when arguments have never been refuted in any degree, they are termed incontrovertible; when arguments have never been satisfactorily answered, they are termed irrefragable.

Indulgent, Fond. Indulgence lies more in forbearing from the exercise of authority; fondness in the outward behavior and endearments: they may both arise from an excess of kindness or love. An indulgent parent is seldom a prudent parent; a fond parent is foolishly tender and loving. All who have the care of young people should occasionally relax from the strictness of the disciplinarian and show an indulgence where a suitable opportunity offers. A fond mother takes away from the value of indulgences by an invariable compliance with the humors of her children.

Infamous, Scandalous. Infamous and scandalous are both said of that which is calculated to excite great displeasure in the minds of all who hear it, and to degrade the offenders in the general estimation. But the infamous seems to be that which produces greater publicity and more general reprehension than the scandalous, consequently it is more serious in its nature, and a greater violation of good morals.

To Inform, Instruct, Teach. To inform is the act of persons in all conditions; to instruct and teach are the acts of superiors, either on one ground or another: one informs by virtue of an accidental superiority or priority of knowledge; one instructs by virtue of superior knowledge or superior station; one teaches by virtue of superior knowledge, rather than of station.

Information, Intelligence, Notice, Advice. Information is knowledge communicated from one person to another; intelligence is the active principle of the mind by which one is made to understand; notice is that which brings a circumstance to our knowledge; advice signifies that which is made known.

Ingenuity, Wit. Ingenuity comprehends invention; wit is the fruit of the imagination, which forms new and sudden conceptions of things. One is ingenious in matters either of art or science; one is witty only in matters of sentiment.

Ingenuous, Ingenious. We love the ingenuous character on account of the qualities of his heart; we admire the ingenious man on account of the endowments of his mind. One is ingenuous as a man, or ingenious as an author. A man confesses an action ingenuously; he defends it ingeniously. The ingenuous man is frank, candid; the ingenious man is clever, skillful.

Injustice, Injury, Wrong. The violation of justice, or a breach of the rule of right, constitutes injustice; but the quantum of ill which falls on the person constitutes injury. A wrong partakes both of injustice and injury; it is, in fact, an injury done by one person to another in express violation of justice.

Inside, Interior. The term inside may be applied to bodies of any magnitude, small or large; interior is peculiarly appropriate to bodies of great magnitude. We may speak of the inside of a nutshell, but not of its interior. The interior of the church was beautifully decorated.

To Insinuate, Ingratiate. A person who insinuates adopts every art to steal into the good-will of another; but he who ingratiates adopts natural means to conciliate good-will.

Insinuation, Reflection. An insinuation always deals in half words; a reflection is commonly open. They are both leveled at the individual with no good intent: the insinuation is general, and may be employed to convey any unfavorable sentiment; the reflection is particular, and commonly passes between intimates and persons in close connection.

To Insist, Persist. Both these terms being derived from the Latin "sisto," to stand, express the idea of resting or keeping to a thing; but insist signifies to rest on a point, and persist signifies to keep on with a thing, to carry it through. We insist on a matter by maintaining it; we persist in a thing by continuing to do it.

Insolvency, Failure, Bankruptcy. Insolvency is a state; failure, an act flowing out of that state; and bankruptcy an effect of that act. Insolvency is a condition of not being able to pay one's debts; failure is a cessation of business, from the want of means to carry it on; and bankruptcy is a legal surrender of all one's remaining goods into the hands of one's creditors, in consequence of a real or supposed insolvency.

Instant, Moment. A dutiful child comes the instant he is called; a prudent person embraces the favorable moment. When they are both taken for the present time, instant expresses a much shorter space than moment.

Insurrection, Sedition, Rebellion, Revolt. There may be an insurrection against usurped power, which is always justifiable; but sedition and rebellion are leveled against power universally acknowledged to be legitimate. Insurrection is always open; it is a rising up of many in a mass, but it does not imply any concerted, or any specifically active measure. Rebellion is the consummation of sedition; the scheme of opposition which has been digested in secrecy breaks out into open hostilities, and becomes rebellion. Revolt is mostly taken either in an indifferent or a good sense for resisting a foreign dominion which has been imposed by force of arms.

Intellect, Genius, Talent. Intellect is the power or faculty of knowing, improved by cultivation and exercise; in this sense we speak of a man of intellect, or of a work that displays great intellect. Genius is the particular bent of the intellect which is born with a man, as a genius for poetry, painting, music, etc. Talent is a particular mode of intellect which qualifies its possessor to do some things better than others, as a talent for learning languages, a talent for the stage, etc.

Interchange, Reciprocity. Interchange is an act; reciprocity is an abstract property: by an interchange of sentiment, friendships are engendered; the reciprocity of good services is what renders them doubly acceptable to those who do them, and to those who receive them.

Interest, Concern. We have an interest in whatever touches or comes near to our feelings or our external circumstances; we have a concern in that which demands our attention. Interest is that which is agreeable; concern, on the other hand, is something involuntary or painful.

Interval, Respite. The term interval respects time only; respite includes the idea of ceasing from action for a time. Intervals of ease are a respite to one who is oppressed with labor.

Intervention, Interposition. The light of the moon is obstructed by the intervention of the clouds; the life of an individual is preserved by the interposition of a superior.

To Intrude, Obtrude. To intrude is to go into any society unasked and undesired; to obtrude is to put oneself in the way of another by joining the company and taking a part in the conversation without invitation or consent.

Invalid, Patient. An invalid is so denominated because he lacks his ordinary share of health and strength; the patient is one who is laboring under some bodily suffering.

To Invest, Endue, or Endow. One is invested with that which is external; one is endued with that which

is internal. We invest a person with an office or a dignity: a person is endued with good qualities. Endow is but a variation of endue, and yet it seems to have acquired a distinct office: we may say that a person is endued or endowed with a good understanding; but as an act of the imagination endow is not to be substituted for endue, for we do not say that it endows but endues things with properties.

Irrational, Foolish, Absurd, Preposterous. Irrational is applicable more frequently to the thing than to the person, to the principle than to the practice. Foolish, on the contrary, is commonly applicable to the person as well as to the thing, to the practice rather than to the principle; absurd is applied to anything, however trivial, which in the smallest degree offends our understanding: the conduct of children is therefore often foolish, but not absurd and preposterous. It is absurd for a man to persuade another to do that which he in like circumstances would object to do himself; it is preposterous for a man to expose himself to the ridicule of others, and then be angry with those who will not treat him respectfully.

Irreligious, Profane, Impious. All men who are not positively actuated by principles of religion are irreligious. Profanity and impiety are, however, of a still more heinous nature; they consist not in the mere absence of regard for religion, but in a positive contempt for it and open outrage against its laws. The profane man treats what is sacred as if it were profane; the impious man is directly opposed to the pious man: the former is filled with defiance and rebellion against his Maker; the latter is filled with love and fear.

Jealousy, Envy, Suspicion. We are jealous of what is our own; we are envious of what is another's. Jealousy fears to lose what it has; envy is pained at seeing others have that which it wants for itself. Suspicion denotes an apprehension of injury, has more of distrust in it than jealousy; the suspicious man is altogether fearful of the intentions of another.

Journey, Travel, Voyage. Journey signifies the course that is taken in the space of a day, or, in general, any comparatively short passage from one place to another. Travel signifies such a course or passage as requires labor, and causes fatigue; in general, any long course. Voyage is now confined to passages by sea.

Joy, Gladness, Mirth. What creates joy and gladness is of a permanent nature; that which creates mirth is temporary: joy is the most vivid sensation in the soul; gladness is the same in quality, but inferior in degree. Joy is awakened in the mind by the most important events in life.

Judgment, Discretion, Prudence. Judgment is conclusive; it decides by positive inference; it enables a person to discover the truth. Discretion is intuitive; it discerns or perceives what is in all probability right. A person who exercises prudence does not inconsiderately expose himself to danger: a measure is prudent that guards against the chances of evil; the impetuosity of youth naturally impels them to be imprudent.

Justness, Correctness. We estimate the value of remarks by their justness, that is, by their accordance to certain admitted principles. Correctness of outline is of the first importance in drawing; correctness of dates enhances the value of a history.

To Keep, Preserve, Save. The idea of having in one's possession is common to all these terms, which is, however, the simple meaning of keep. To preserve signifies to keep with care, and free from all injury; to save, from safe, is to keep laid up in a safe place, and free from destruction.

Keeping, Custody. The keeping amounts to little more than having purposely in one's possession; but custody is a particular kind of keeping, for the purpose of preventing an escape. Inanimate objects may be in one's keeping; but a prisoner, or that which is in danger of getting away, is placed in custody.

To Know, Be Acquainted With. We may know things or persons in various ways; we may know them by name only, or we may know their internal properties or characters, etc. One is acquainted with either a person or a thing only in a direct manner, and by an immediate intercourse in one's own person.

Knowledge, Science, Learning, Erudition. Knowledge is a general term which simply implies the thing known; science is the department of systematized knowledge; learning is that kind of knowledge which one derives from schools, or through the medium of personal instruction; erudition is scholastic knowledge obtained by profound research.

Land, Country. The term, land, in its proper sense, excludes the idea of habitation; the term country excludes that of the earth, or the parts of which it is composed; hence we speak of the land, as rich or poor, according to what it yields; of a country, as rich or poor, according to what its inhabitants possess.

Large, Wide, Broad. A field is said to be wide both from its figure and from the extent of its space in the cross directions. In like manner, a house is large from its extent in all directions; it is said to be wide from the extent which it runs in front. What is broad is in sense, and mostly in application, wide. Large is opposed to small; wide to close; broad to narrow.

Laudable, Praiseworthy, Commendable. Things are laudable in themselves; they are praiseworthy or commendable in this or that person: that which is laudable is entitled to encouragement and general approbation. An honest endeavor to be useful to one's family or oneself is at all times laudable. What is praiseworthy obtains the respect of all men.

To Lay or Take Hold Of, Catch, Seize, Snatch. To lay or take hold of is here the generic expression; it denotes simply getting into one's possession, which is the common idea in the signification of all these terms, which differ in regard to the motion in which the action is performed. To catch is to lay hold of with an effort; to seize is to lay hold of with violence; to snatch is to lay hold of by a sudden effort.

To Lead, Conduct, Guide. One leads by helping a person onward in any manner, as to lead a child by the hand; conduct and guide are different modes of leading, the former by virtue of one's office or authority, the latter by one's knowledge or power, as to conduct an army, to guide a traveler in an unknown country.

To Lean, Incline, Bend. In the proper sense, lean and incline are both said of the position of bodies; bend is said of the shape of bodies. That which leans rests on one side, or in a sideward direction; that which inclines, leans or turns only in a slight degree; that which bends, forms a curvature.

To Leave, Quit, Relinquish. We leave that to which we may intend to return; we quit that to which we return no more; we relinquish it unwillingly: we leave persons or things; we quit and relinquish things only.

Leavings, Remains. Leavings are the consequence of a voluntary act; they signify what is left: remains are what follow in the course of things; they are the residue.

Letter, Epistle. Letter is a term altogether familiar; it may be used for whatever is written by one friend to another, even those which were written by the ancients, as the letters of Cicero, Pliny, and Seneca. In strict propriety epistle is more formal than letter. An epistle is a written message or communication usually of serious import; it is usually applied to the ancient letters of sacred character or of literary excellence, as the epistles of St. Paul.

To Lie, Lay. To lie is neuter, and designates a state. To lay is active, and denotes an action on an object; it is properly to cause to lie. A thing lies on the table; some one lays it on the table.

To Lift, Heave, Hoist. We lift with or without an effort; we heave and hoist always with an effort. We lift a child up to let him see anything more distinctly; workmen heave the stones or beams which are used in a building; sailors hoist the long-boat into the water.

Likeness, Resemblance, Similarity, or Similitude. Likeness respects either external or internal properties; resemblance respects only the external properties; similarity respects the circumstances or properties. We speak of a likeness between two persons; of a resemblance in the cast of the eye; of a similarity in age and disposition. Similitude is a higher term than similarity when used in a moral sense.

To Linger, Tarry, Loiter, Lag, Saunter. To linger is to stop altogether, or to move but slowly forward; to tarry is properly to suspend one's movements: the former proceeds from reluctance to leave the spot on which we stand; the latter from motives of discretion. To loiter is to move slowly and reluctantly. To lag is to move more slowly than others. To saunter is altogether the act of an idler; those who have no object in moving either backward or forward will saunter if they move at all.

Little, Small, Diminutive. What is little is so in the ordinary sense in respect to size; it is properly opposed to great: the small is that which is less than others in point of bulk; it is opposed to the large. The diminutive is that which is less than it ought to be; as, a person is said to be diminutive in stature who is below the ordinary stature.

Living, Benefice. We speak of a living as a resource immediately derived from the parish, in distinction from a curacy, which is derived from an individual; we speak of a benefice in respect to the terms by which it is held, according to the ecclesiastical law.

Lodging, Apartment. A lodging, or a place to

dwell in, comprehends single rooms, or many rooms, or in fact any place which can be made to serve the purpose; apartment respects only suites of rooms.

Look, Glance. We speak of taking a look, or casting a glance.

Look, Appearance. The look of a thing respects the impressions which it makes on the senses, that is, the manner in which it looks; its appearance implies the simple act of its coming into sight.

To Lose, Miss. What is lost is supposed to be entirely and irrecoverably gone; but what is missed may be only out of sight or not at hand at the time when it is wanted.

Madness, Frenzy, Rage, Fury. Madness is a confirmed derangement in the organ of thought; frenzy is only a temporary derangement from the violence of any disease or from any other cause. Rage refers more immediately to the agitation that exists within the mind; fury refers to that which shows itself outwardly: a person contains or stifles his rage; but his fury breaks out into some external mark of violence.

Magnificence, Splendor, Pomp. Magnificence lies not only in the number and the extent of the objects presented, but in the degree of richness as to their coloring and quality. Splendor is but a characteristic of magnificence, attached to such objects as dazzle the eye by the quantity of light, or by the beauty and strength of coloring. Pomp signifies in general formality and ceremony.

To Make, Form, Produce, Create. To make is the most general and unqualified term; to form signifies to give a form to a thing, that is, to make it after a given form; to produce is to bring forth into the light, to call into existence; to create is to bring into existence by an absolute exercise of power.

Malevolence, Maliciousness, Malignity. Malevolence has a deep root in the heart, and is a settled part of the character; we denominate the person malevolent, to designate the ruling temper of his mind. Maliciousness may be applied as an epithet to particular parts of a man's character or conduct; one may have a malicious joy or pleasure in seeing the distresses of another. Malignity is not so often employed to characterize the person as the thing; the malignity of a design is estimated by the degree of mischief which was intended to be done.

Manly, Manful. Manly, or like a man, is opposed to juvenile, and of course applied properly to youths; but manful, or full of manhood, is opposed to effeminate, and is applicable more properly to grown persons.

Manners, Morals. Manners (v. air, manner) respect the minor forms of acting with others and toward others; morals include the important duties of life. By an attention to good manners we render ourselves good companions; by an observance of good morals we become good members of society.

Mark, Trace, Vestige, Footstep, Track. The mark is said of a fresh and uninterrupted line; the trace is said of that which is broken by time: a carriage in driving along the sand leaves marks of the wheels, but in a short time all traces of its having been there will be lost. The vestige is a species of mark or trace caused by the feet of men, or, which is the same thing, by the works of active industry, as the vestiges of buildings. Footstep is employed only for the steps of an individual. The track is made by the steps of many.

Martial, Warlike, Military, Soldier-like. We speak of martial array, martial preparations, martial law, a court martial; but of a warlike nation, meaning a nation, which is fond of war; a warlike spirit or temper, also a warlike appearance, inasmuch as the temper is visible in the air and carriage of a man. We speak of military in distinction from naval, as military expeditions, military movements, and the like. The conduct of an individual is soldier-like or otherwise.

Meeting, Interview. Meeting is the act of coming into the company of anyone; interview is a personal conference, usually a formal meeting for consultation, as an interview with the president. A meeting is an ordinary concern and its purpose familiar; meetings are daily taking place between friends.

Memory, Remembrance, Recollection, Reminiscence. Memory is the power of recalling images once made in the mind; remembrance is the exercise of memory in a conscious agent, and may be the effect of repetition or habit; recollection carries us back to distant periods. Reminiscence is altogether an abstract exercise of the memory, which is employed on purely intellectual ideas in distinction from those which are awakened by sensible objects: the mathematician makes use of reminiscence in deducing unknown truths from those which he already knows.

Mercantile, Commercial. Mercantile, from merchandise, respects the actual transaction of business or a transfer of merchandise by sale or purchase. Commercial comprehends the theory and practice of exchange: hence we speak in a peculiar manner of a mercantile house, a mercantile situation, and the like; but of a commercial education, a commercial people, and the like.

Minister, Agent. The minister gives his counsel, and exerts his intellectual powers in the service of another; but the agent executes the orders or commissions given him: a minister is employed by government in political affairs; an agent is employed by individuals in commercial and pecuniary affairs.

To Mix, Mingle, Blend, Confound. Mix is here a general and indefinite term, signifying simply to put together; but we may mix two or several things. We mingle several objects: things are mixed so as to lose all distinction; but they may be mingled and yet retain a distinction. To blend is only partially to mix, as colors blend which fall into each other. To confound is to mix in a wrong way, as objects of sight are confounded when they are erroneously taken to be joined.

Modesty, Bashfulness, Diffidence. Modesty is a proper distrust of ourselves; bashfulness is a state of feeling which betrays itself in a downcast look or a timid air; diffidence is a culpable distrust. Diffidence altogether unmans a person, and disqualifies him for his duty.

Moisture, Humidity, Dampness. Moisture is used in general to express any small degree of infusion of a liquid into a body; humidity is employed scientifically to describe the state of having any portion of such liquid: hence we speak of the moisture of a table, the moisture of paper, but of the humidity of the air, or of a wall that has contracted moisture of itself. Dampness is that form of moisture that arises from the gradual contraction of a liquid in bodies capable of retaining it; in this manner a cellar is damp.

Money, Cash. Money is applied to everything which serves as a circulating medium; cash is, in a strict sense, used for coin only.

Motion, Movement. We speak of a state of motion as opposed to a state of rest, of perpetual motion, the laws of motion, and the like. On the other hand, we say, to make a movement when speaking of an army, a general movement when speaking of an assembly.

Moving, Affecting, Pathetic. The good or bad feelings may be moved; the tender feelings only are affected. A field of battle is a moving spectacle; the death of a friend is an affecting spectacle. The pathetic applies only to what is addressed to the heart; hence an address is pathetic.

Mutual. This word is often confounded with common. Mutual is used in referring to a thing that belongs to only two people, as, John and I have a mutual dislike; he dislikes me and I dislike him. We cannot say John and I have a mutual dislike for Mary. Common is used with reference to a third object or person, as, Mary is our common friend; she is your and my friend. It is wrong to say Mary is our mutual friend. Dickens's use of this word in "Our Mutual Friend" is condemned by many good authorities.

To Name, Call. Name is employed for distinguishing or addressing one by name. To call signifies properly to address one loudly, consequently we may name without calling, when we only mention a name in conversation; and we may call without naming.

Native, Natural. Of a person we may say that his worth is native, to designate that it is some valuable property which is born with him; that it is natural, as opposed to that which is acquired or otherwise.

Necessity, Necessary. Necessity is the mode or state of circumstances, or the thing which circumstances render necessary; the necessary is that which is absolutely and unconditionally indispensable. Habit and desire create necessities; nature only requires necessaries.

To Neglect, Omit. To neglect is to disregard, to treat with little or no attention or respect; to omit is to leave out, to leave unnoticed or undone. We neglect an opportunity, we neglect the means, the time, the use, and the like; we omit a word, a sentence, a figure, and the line may be omitted or otherwise, as convenience requires.

Neighborhood, Vicinity. Neighborhood is employed in reference to the inhabitants, or in regard to inhabited places, to denote nearness of persons to each other or to objects in general; but vicinity is employed to denote nearness of one object to another, whether person or thing.

New, Novel, Modern, Fresh, Recent. All these epithets are applied to what has not long existed. New expresses this idea simply without any qualifications; novel is something strange or unexpected; the modern is the thing of to-day, as distinguished from that which

existed in former times; the fresh is that which is so new as not to be the worse for use, or that which has not been before used or employed; the recent is that which is so new as to appear as if it were just made or done.

News, Tidings. News is unexpected; it serves to gratify idle curiosity: tidings are expected; they serve to allay anxiety. In time of war the public is eager after news; and they who have relatives in the army are anxious to have tidings of them.

To Nominate, Name. To nominate and to name are both to mention by name: the former is to mention for a specific purpose; the latter is to mention for general purposes. Persons only are nominated; things as well as persons are named: one nominates a person in order to propose him, or appoint him, to an office; but one names a person casually, in the course of conversation, or one names him in order to make some inquiry respecting him.

To Notice, Remark, Observe. To notice is a more cursory action than to remark; we may notice a thing by a single glance, or on merely turning the head. To remark supposes a reaction of the mind on an object. We observe things in order to judge of or draw conclusions from them, as to observe the condition of the weather. We remark things as matters of fact, as to remark the manner of a speaker.

Numeral, Numerical. Numeral, or belonging to number, is applied to a class of words in grammar, as a numeral adjective or a numeral noun; numerical, or containing number, is applied to whatever other objects respect number, as a numerical difference, where there is a difference between any two numbers, or a difference expressed by numbers.

Obedient, Submissive, Obsequious. One is obedient to command, submissive to power or the will, obsequious to persons. Obedience is always taken in a good sense.

To Object, Oppose. To object to a thing is to propose or start something against it; but to oppose it is to set oneself up steadily against it.

Obnoxious, Offensive. In the sense of giving offense, obnoxious implies as much as hateful, offensive little more than displeasing. A man is obnoxious to a party, whose interest or principles he is opposed to; he may be offensive to an individual merely on account of his manners or on account of any particular actions.

To Observe, Watch. We observe a thing in order to draw an inference from it; we watch anything in order to discover what may happen: we observe with coolness; we watch with eagerness.

Occasion, Opportunity. The occasion is that which determines our conduct, and leaves us no choice; it amounts to a degree of necessity. The opportunity is that which invites to action; it tempts us to embrace the moment for taking the step.

Occasional, Casual. Occasional carries with it more the idea of unfrequency, and casual that of unfixedness, or the absence of all design. Our acts of charity may be occasional; but they ought not to be casual.

Offender, Delinquent. Those who go into a prohibited place are offenders; those who stay away when they ought to go are delinquents.

Offspring, Progeny, Issue. Offspring is a familiar term applicable to one or many children; progeny is employed only as a collective noun for a number; issue is used in an indefinite manner without particular regard to number. When we speak of the children themselves we denominate them the offspring; when we speak of the parents, we denominate the children their progeny. The issue is said only in regard to a man that is deceased; his property descends to his male issue in a direct line.

Omen, Prognostic, Presage. The omen and prognostic are both drawn from external objects; the presage is drawn from one's own feelings. The omen is drawn from objects that have no necessary connection with the thing they are made to represent; it is the fruit of the imagination, and rests on superstition. The prognostic, on the contrary, is a sign which in some degree partakes of the quality of the thing denoted.

Opinionated or Egotistic, Conceited, Egotistical. An opinionated man is not only fond of his own opinion, but full of his own opinion; he has an opinion on everything, which is the best possible opinion. A conceited man has a conceit or an idle fond opinion of his own talent; it is not only high in competition with others, but it is so high as to be set above others. The egotistical man makes himself the darling object of his own contemplation; he admires and loves himself to that degree that he can talk and think of nothing else.

Option, Choice. The option or the power of choosing is given; the choice itself is made: hence we say a thing is at a person's option, or it is his own option, or the option is left to him, in order to designate his freedom of choice more strongly than is expressed by the word choice itself.

Orifice, Perforation. These terms are both scientifically employed to designate certain cavities in the human body; but the former respects that which is natural, the latter that which is artificial. All the vessels of the human body have their orifices, which are so constructed as to open or close of themselves. Surgeons frequently make perforations into the bones.

Outward, External, Exterior. Outward, or inclined to the out, after the manner of the out, indefinitely describes the situation; external is employed only in regard to such objects as are conceived to be independent of man as a thinking being: hence, we may speak of the outward part of a building, of a board, and the like; but of external objects acting on the mind, or of an external agency. When we speak of anything which has two coats, it is usual to designate the outermost by the name of the exterior.

To Paint, Depict. To paint is employed either literally to represent figures on paper, or to represent circumstances and events by means of words; to depict is used only in this latter sense, but the former word expresses a greater exercise of the imagination than the latter. It is the art of the poet to paint nature in lively colors; it is the art of the historian or the narrator to depict a real scene of misery in strong colors.

Part, Piece, Patch. Things may be divided into parts without any express separation; but when divided into pieces they are actually cut asunder: hence we may speak of a loaf as divided into twelve parts when it is conceived only to be so; and divided into twelve pieces when it is really so. The patch is that which is always broken and disjointed, a something imperfect: many things may be formed out of a piece; but the patch only serves to fill up a chasm.

Particular, Individual. Particular is much more specific than individual: the particular confines us to one object only of many; the individual may be said of any one object among many.

Peace, Quiet, Calm, Tranquillity. Peace implies an exemption from public or private broils; quiet implies a freedom from noise or interruption. Calm is a form of quiet, which respects objects in the natural or the moral world; it indicates the absence of violent motion as well as violent noise; it is that state which more immediately succeeds a state of agitation. Tranquillity expresses the situation as it exists in the present moment, independently of what goes before or after; it is sometimes applicable to society, sometimes to natural objects, and sometimes to the mind.

Pellucid, Transparent. Pellucid is said of that which is previous to the light, or of that into which the eye can penetrate; transparent is said of that which is bright throughout. A stream is pellucid; it admits of the light so as to reflect objects but it is not transparent to the eye.

Penurious, Economical, Saving, Sparing, Thrifty, Niggardly. To be economical is a virtue in those who have but narrow means. He who is saving when young will be avaricious when old. To be sparing is to use frugally or stintingly; thrifty suggests careful management; penurious means miserly or sparing in regard to the use of money; niggardly is spending or letting go in the smallest possible quantities.

To Perpetrate, Commit. One may commit offenses of various degrees and magnitude; but one perpetrates crimes only, and those of the more heinous kind.

Pillar, Column. The word pillar is the most general in its application to any structure, whether rude or otherwise; the term column, on the other hand, is applied to whatever is ornamental, as the Grecian order of columns.

Piteous, Doleful, Woeful, Rueful. Piteous is applicable to one's external expression of bodily or mental pain; a child makes piteous lamentations when it suffers from hunger, or has lost its way. Doleful applies to those sounds which convey the idea of pain; there is something doleful in the tolling of a funeral bell or in the sound of a muffled drum. Woeful applies to the circumstances and situations of men; a scene is woeful in which we witness a large family of young children suffering under the complicated horrors of sickness and want. Rueful applies to the outward indications of inward sorrow depicted in the looks or countenance.

Pity, Compassion. Pity is excited principally by the weakness or degraded condition of the subject; compassion by his uncontrollable and inevitable misfortunes.

Playful, Gamesome, Sportive. Playful is applicable to youth or childhood, when there is the greatest disposition to play. Gamesome and sportive are applied to persons of maturer years, the former in the bad sense, and the latter in the good sense. A person may

be said to be gamesome who gives in to idle jests, or sportive who indulges in harmless sport.

To Poise, Balance. To poise is properly to keep the weight from pressing on either side; to balance is to adjust or equalize two forces. The idea of bringing into an equilibrium is common to both terms. A thing is poised as respects itself; it is balanced as respects other things.

Poison, Venom. A poison must be administered inwardly to have its effect; a venom will act by an external application: the juice of the hellebore is a poison; the tongue of the adder and the tooth of the viper contain venom.

Politeness, Polish, Refinement. Politeness and polish do not extend to anything but externals; refinement applies as much to the mind as to the body. Rules of conduct, and contact with good society, will make a man polite; lessons in dancing will serve to give a polish; refined manners or principles will naturally arise out of refinement in men.

Position, Posture. The position is that in which a body is placed in respect to other bodies, as the standing with one's face or back to an object is a position; but a posture is that position which a body assumes in respect to itself, as a sitting or reclining posture.

To Pour, Spill, Shed. We pour with design; we spill by accident: we pour water over a plant or a bed; we spill it on the ground. Shed refers to great quantities.

Powerful, Potent, Mighty. Powerful is applicable to strength as well as to power: a powerful man is one who by size and make can easily overpower another; a powerful person is one who has much in his power. Potent is used only in this latter sense, in which it expresses a larger extent of power: a potent monarch is much more than a powerful prince. Mighty expresses a still higher degree of power; might is power unlimited by any consideration or circumstance. A giant is called mighty in the physical sense; genius which takes everything within its grasp is said to be mighty.

To Press, Squeeze, Pinch, Gripe. The forcible action of one body on another is included in all these terms. In the word press this is the only idea; the rest differ in the circumstances. We may press with the foot, the hand, or any particular limb. One squeezes commonly with the hand. One pinches either with the fingers or with an instrument constructed in a similar form; one gripes with teeth, claws, or any instrument that can gain hold of the object.

Presumptive, Presumptuous, Presuming. A presumptive heir is one presumed or expected to be heir; presumptive evidence is evidence founded on some presumption or supposition; so likewise presumptive reasoning. But a presumptuous man, a presumptuous thought, a presumptuous behavior, all indicate an overconfidence in regard to one's own powers; a man is presuming inasmuch as he is disposed to take unwarranted liberties.

To Prevent, Anticipate. To prevent is literally to come beforehand, and anticipate to take beforehand: the former is employed for actual occurrences; the latter as much for calculations as for actions. To prevent is the act of a person toward other persons or things; to anticipate is the act of a being either toward himself or another. In this sense God is said to prevent man by interposing so as to direct his purposes to the right object or in the right direction.

Previous, Preliminary, Preparatory, Introductory. Previous applies to actions and proceedings in general, as a previous question, a previous inquiry, a previous determination. Preliminary is employed only for matters of contract: a preliminary article, a preliminary condition, are what precede the final settlement of any question. Preparatory is employed for matters of arrangement: the disposing of men in battle is preparatory to an engagement. Introductory is employed for matters of science or discussion: remarks are introductory to the main subject in question.

Principle, Motive. The principle lies in conscious and unconscious agents; the motive only in conscious agents: all nature is guided by certain principles; man is put into action by certain motives.

Privacy, Retirement, Seclusion. Privacy is opposed to publicity; he who lives in privacy is one who follows no public line, who lives so as to be little known: retirement is opposed to openness or freedom of access; he who lives in retirement withdraws from the society of others, he lives by himself. Seclusion is the excess of retirement; he who lives in seclusion bars all access to himself, he shuts himself from the world.

Proceeding, Transaction. Proceeding signifies literally going before; and transaction the thing carried through: the former implies, therefore, something that is going forward; the latter something that is already done. We are witnesses to the whole proceeding; we inquire into the whole transaction.

Production, Performance, Work. The term production cannot be employed without specifying or referring to the source from which it is brought forth, or the means by which it is brought forth, as the production of art, the production of the inventive faculty. A performance cannot be spoken of without referring to the individual by whom it has been executed; hence we speak of this or that person's performance. When we wish to specify anything that results from work or labor, it is termed a work: in this manner we speak either of the work of one's hands, or of a work of the imagination.

Profligate, Abandoned, Reprobate. A profligate man has lost all by his vices, and consequently to his vices alone he looks for regaining the goods or the fortune which he has squandered; as he has nothing to lose, and everything to gain in his own estimation, by pursuing the career of his vices, he surpasses all others in his unprincipled conduct. An abandoned man gives up to his passions, which, having the entire sway over him, naturally impel him to every excess. The reprobate man is one who has been reproved until he becomes insensible to reproof, and is given up to the malignity of his own passions.

Prominent, Conspicuous. What is prominent is, in general, on that very account conspicuous; but many things may be conspicuous which are not expressly prominent. Nothing is prominent except that which projects beyond a certain line; everything is conspicuous which may be seen by many.

Promise, Engagement, Word. In promises the faith of an individual is admitted upon his word, and built upon as if it were a deed; in engagements the intentions of an individual for the future are all that are either implied or understood. As a promise and an engagement can be made only by words, word is often used for either, or for both, as the case requires.

Proportionate, Commensurate, Adequate. Proportionate is here a term of general use; the others are particular terms, employed in a similar sense, in regard to particular objects. That is proportionate which rises as a thing rises, and falls as a thing falls; that is commensurate which is made to rise to the same measure or degree; that is adequate which is sufficient to meet the requirements.

To Provide, Procure, Furnish, Supply. Provide and procure are both actions that have a special reference to the future; furnish and supply are employed for that which is of immediate concern. One provides a dinner in the contemplation that some persons are coming to partake of it; one procures help in the contemplation that it may be wanted. We furnish a room, as we find it necessary for the present purpose. One supplies a family with any article of domestic use.

To Publish, Promulgate, Divulge, Reveal, Disclose. To publish is the most general of these terms, conveying in its extended sense the idea of making known; it is in many respects indefinite: we may publish to many or few. To promulgate is always to make known to many. We may publish that which is a domestic or a national concern; we promulgate properly only that which is of general interest; we divulge things intended to be kept secret; we commonly divulge the secrets or the crimes of another; we reveal the secret or the mystery of a transaction; we disclose from beginning to end an affair which has never before been known or accounted for.

To Put, Place, Lay, Set. To put is a general term meaning to bring to a position: we may put a thing into one's room, one's desk, one's pocket, and the like. To place is to put in a specific manner, and for a specific purpose: one places a book on a shelf. To lay and to set are still more specific than place, the former being applied only to such things as can be made to lie, and set only to such as can be made to stand: a book may be said to be laid on the table when placed in a downward position, and set when placed on one end.

Qualification, Accomplishment. The qualification serves the purpose of utility; the accomplishment serves to adorn: by the first we are enabled to make ourselves useful; by the second we are enabled to make ourselves agreeable.

Quarrel, Broil, Feud. Quarrel is the general and ordinary term; broil and feud, including active hostility, are particular terms. The idea of a variance between two or more persons is common to these terms; but the former respects the complaints and charges which are reciprocally made. Broil respects the confusion and the entanglement which arise from a contention and a collision of interests; feud respects the hostilities which arise out of the variance.

Question, Query. Questions and queries are both put for the sake of obtaining an answer. A question may be for a reasonable or an unreasonable cause; a query is mostly a rational question: idlers may put questions from mere curiosity; learned men put queries for the sake of information.

Radiance, Brilliancy. Radiance denotes the emission of rays, and is, therefore, peculiarly applicable to bodies naturally luminous, like the heavenly bodies; brilliancy denotes the whole body of light emitted, and may, therefore, be applied equally to natural and artificial light.

Rapacious, Ravenous, Voracious. Rapacious is the quality peculiar to beasts of prey, or to what is like beasts of prey. A lion is rapacious when it seizes on its prey; it is ravenous in the act of consuming it. The word ravenous respects the haste with which one eats; the word voracious respects the quantity which one consumes. A ravenous person is loath to wait for the dressing of his food; he consumes it without any preparation: a voracious person not only eats in haste, but he consumes great quantities, and continues to do so for a long time.

Rashness, Temerity, Haste, Precipitancy. Rashness is a general and indefinite term, in the signification of which an improper celerity is the leading idea: in the signification of temerity, the leading idea is want of consideration, springing mostly from an overweening confidence, or a presumption of character. Haste and precipitancy are but modes or characteristics of rashness, and consequently employed only in particular cases, as haste in regard to our movements, and precipitancy in regard to our measures.

Ready, Apt, Prompt. Ready is in general applied to that which has been intentionally prepared for a given purpose; prompt is applied to that which is at hand so as to answer the immediate purpose; apt is applied to that which is fit, or from its nature has a tendency to produce effects.

To Reclaim, Reform. Reclaim signifies to call back to its right place that which has gone astray; reform signifies to form anew that which has changed its form: they are allied only in their application to the moral character. A man is reclaimed from his vicious courses by the force of advice or exhortation; he may be reformed by various means, external or internal.

To Recline, Repose. When we recline we put ourselves into a particular position; but when we repose we put ourselves into that position which will be easiest.

To Recover, Retrieve, Repair, Recruit. We repair that which has been injured; we recruit that which has been diminished; we recover property from those who wish to deprive us of it; we retrieve our misfortunes, or our lost reputation.

Recovery, Restoration. Recovery (v. to recover) is the regaining of any object which has been lost or missing; restoration is the getting back what has been taken away, or that of which one has been deprived. What is recovered may be recovered with or without the use of means; the restoration is effected by foreign agency.

Reform, Reformation. Whatever undergoes such a change as to give a new form to an object occasions a reform; when such a change is produced in the moral character, it is termed a reformation: the concerns of a state require occasional reform; those of an individual require reformation.

To Refuse, Decline, Reject, Repel, Rebuff. We refuse what is asked of us, for want of inclination to comply; we decline what is proposed from motives of discretion; we reject what is offered to us, because it does not fall in with our views. To repel is to reject with violence; to rebuff is to refuse with contempt, or with what may be considered as such.

To Relax, Remit. In regard to our attempts to act, we may speak of relaxing our endeavors, and remitting our labors or exertions; in regard to our dealings with others, we may speak of relaxing in discipline, relaxing in the severity or strictness of our conduct, and of remitting a punishment or a sentence.

To Repeat, Recite, Rehearse, Recapitulate. To repeat is to say or utter again; to recite is to repeat in a formal manner; to rehearse is to repeat or recite by way of preparation; to recapitulate is to repeat the chapters or principal heads of any discourse.

To Repress, Restrain, Suppress. To repress is to press back or down; to restrain is to strain back or down: the former is the general, the latter the specific term. We always repress when we restrain, but not vice versa. Repress is used mostly for pressing down, so as to keep that inward which wants to make its appearance. Restraint is an habitual repression by which a thing is kept down. To suppress, which is to keep under, or keep from appearing or being perceptible, is also used in respect to ourselves or others, as to repress one's feelings, to suppress laughter, sighs, etc.

Reproach, Contumely, Obloquy. The idea of contemptuous or angry treatment of others is common to all these terms; reproach is the general term, contumely and obloquy are the particular terms. Reproach is either deserved or undeserved; the name of Puritan is applied as a term of reproach to such as affect greater purity than others. Contumely is always undeserved; it is the insolent resistance to authority. Obloquy is always supposed to be deserved; it is applicable to those whose conduct has rendered them objects of general censure, and whose name, therefore, has almost become a reproach.

To Restore, Return, Repay. We restore upon a principle of equity; we return upon a principle of justice and honor; we repay upon a principle of undeniable right. We cannot always claim that which ought to be restored; but we can not only claim but enforce the claim in regard to what is to be returned or repaid.

To Retard, Hinder. We retard or make slow the progress of any scheme toward completion; we hinder or keep back the person who is completing the scheme: we often retard a person, therefore, by hindering his progress; but we frequently hinder a person without expressly retarding him.

Right, Claim, Privilege. Right, in its full sense, is altogether an abstract thing which is independent of human laws and regulations; claims and privileges are altogether connected with the establishments of civil society. We have often a claim to a thing which is not in our power to substantiate; and, on the other hand, claims are set up in cases which are totally unfounded on any right. Privileges are rights granted to individuals, depending either on the will of the grantor, or on the circumstances of the receiver, or on both; privileges are, therefore, partial rights transferable at the discretion of persons individually or collectively.

Royal, Regal, Kingly. Royal signifies belonging to a king, in its most general sense; regal signifies appertaining to a king, in its particular application; kingly properly signifies like a king. A royal carriage, a royal residence, royal authority, all designate the general and ordinary appurtenances of a king. Regal government, regal state, regal power, denote the peculiar properties of a king; kingly always implies what is becoming a king, or after the manner of a king: a kingly crown is such as a king ought to wear.

Rural, Rustic. Rural applies to all country objects except man; it is, therefore, always connected with the charms of nature: rustic applies only to persons, or to what is personal, with reference to the country; it is, therefore, generally associated with the want of culture.

Safe, Secure. We may be safe without using any particular measures; but none can reckon on any degree of security without great precaution. A person may be very safe on the top of a coach; but if he wish to be secure from falling off, he must be fastened.

Salute, Salutation, Greeting. A salute may consist either of a word or an action; salutations pass from one friend to another: the salute may be either direct or indirect; the salutation is always direct and personal. Guns are fired by way of a salute. Bows are given in the way of a salutation. Greeting is frequently a particular mode of salutation adopted on extraordinary occasions, indicative of great joy or satisfaction in those who greet.

To Satisfy, Please, Gratify. What satisfies is not always calculated to please; nor is that which pleases that which will always satisfy: plain food satisfies a hungry person; it does not please him when he is not hungry. To gratify is to please in a high degree, to produce a vivid pleasure: we may be pleased with trifles; but we are commonly gratified with such things as act strongly either on the senses or the affections.

Seaman, Waterman, Sailor, Mariner. All these words denote persons occupied in navigation: the seaman, as the word implies, follows his business on the sea; the waterman is one who gets his livelihood on fresh water. The sailor and the mariner are both specific terms to designate the seaman: every sailor and every mariner is a seaman, although every seaman is not a sailor or a mariner. The former is one who is employed about the laborious part of the vessel; the latter is one who traverses the ocean to and fro, who is attached to the water, and passes his life upon it.

Secret, Hidden, Latent, Occult, Mysterious. What is secret is known to some one; what is hidden may be known to no one: it rests in the breast of an individual to keep a thing secret; it depends on the course of things if anything remains hidden. The latent is the secret or the concealed, in cases where it ought to be

open: a latent motive is that which a person intentionally, though not justifiably, keeps to himself. An occult science is one that is hidden from the view of persons in general, which is attainable by but few; occult causes or qualities are those which lie too remote to be discovered by the inquirer. The operations of Providence are said to be mysterious, as they are altogether past our finding out.

To See, Perceive, Observe. The eye sees when the mind is absent; the mind and the eye or other senses perceive in conjunction: hence, we may say that a person sees, but does not perceive. We observe not merely by a simple act of the mind, but by its positive and fixed exertion.

To Seem, Appear. Seem is said of that which is dubious, contingent, or future; appear, of that which is actual, positive, and past. A thing seems strange which we are led to conclude as strange from what we see of it; a thing appears clear when we have a clear conception of it.

Sensualist, Voluptuary, Epicure. The sensualist lives for the indulgence of his senses; the voluptuary is devoted to his pleasures, and, as far as these pleasures are the pleasures of sense, the voluptuary is a sensualist. The epicure is one who makes the pleasures of sense his god, and in this sense he is a sensualist and a voluptuary. In the application of these terms, however, the sensualist is one who is a slave to the grossest appetites; the voluptuary is one who studies his pleasures so as to make them the most valuable to himself; the epicure is a kind of voluptuary who practices more than ordinary refinement in the choice of his pleasures.

Sequel, Close. When a work is published in distinct parts, those which follow at the end may be termed the sequel; if it appears all at once, the concluding pages are the close.

Servant, Domestic, Menial, Drudge. In the term servant is included the idea of service performed; in the term domestic, the idea of one belonging to the house or family; in the word menial is included the idea of labor; and in the term drudge, that of wearisome labor.

Shade, Shadow. Both these terms express that darkness which is occasioned by the sun's rays being intercepted by any body: shade simply expresses the absence of light; shadow signifies also the figure of the body which intercepts the light.

Sharp, Acute, Keen. The general property expressed by these epithets is that of sharpness, or an ability to cut. The term sharp, in German scharf, from scheren, to cut, is generic and indefinite; the two others are modes of sharpness differing in the circumstance or in the degree. Acute is not only more than sharp in the common sense, but signifies also sharp-pointed: a knife may be sharp; but a needle is properly acute. Things are sharp that have either a long or a pointed edge; but keen is applicable only to the long edge, and that in the highest degree of sharpness: a common knife may be sharp; but a razor or a lancet is properly said to be keen.

Short, Brief, Concise, Succinct, Summary. We may term a stick, a letter, or a discourse, short. We speak of brevity only in regard to the mode of speech; conciseness and succinctness as to the matter of speech; summary as to the mode either of speaking or of acting. The brief is opposed to the prolix; the concise and the succinct to the diffuse; the summary to the circumstantial or ceremonious.

Show, Exhibition, Representation, Sight, Spectacle. A show consists of that which merely pleases the eye; it is not a matter either of taste or art, but merely of curiosity: an exhibition, on the contrary, presents some effort of talent or some work of genius; and a representation sets forth the image or imitation of something by the power of art. Hence we speak of a show of wild beasts, an exhibition of paintings, and a theatrical representation; sights and spectacles present themselves to view. Whatever excites notice is a sight; a spectacle, on the contrary, is that kind of sight which has something in it to interest either the heart or the head of the observer: processions are sights; battles or bull-fights are spectacles.

Sick, Sickly, Diseased, Morbid. Sick denotes a partial state, sickly a permanent state of the body, a proneness to be sick. He who is sick may be made well; but he who is sickly is seldom really well. Sickly expresses a permanent state of indisposition unless otherwise qualified; but diseased expresses a violent state of derangement without specifying its duration. Sickly and morbid are applied to the habitual state of the feelings or character: a sickly sentimentality; a morbid sensibility. Morbid is used in no other, except in a technical sense.

Sign, Signal. The sign enables us to recognize an object; it is, therefore, sometimes natural: signal serves to give warning; it is always arbitrary.

Simple, Single, Singular. We may speak of a simple circumstance as independent of anything; of a single instance or circumstance as unaccompanied by any other; and of a singular instance as one that rarely has its like.

Simulation, Dissimulation. Simulation is the making oneself like what one is not; and dissimulation is the making oneself appear unlike what one really is. The hypocrite puts on the semblance of virtue to recommend himself to the virtuous; the dissembler conceals his vices when he wants to gain the simple or the ignorant to his side.

Slack, Loose. Slack is said only of that which is tied, or that with which anything is tied; loose is said of any substances, the parts of which do not adhere closely.

To Slant, Slope. Slant is said of small bodies only; slope is said indifferently of all bodies, large and small. A book may be made to slant by lying in part on another book on a desk or a table; but a piece of ground is said to slope.

To Slip, Slide, Glide. To slip is an involuntary, and slide a voluntary, motion: those who go on the ice in fear will slip; boys slide on the ice by way of amusement. To slip and slide are lateral movements of the feet; but to glide is the movement of the whole body, and just that easy motion which is made by slipping, sliding, flying, or swimming: a person glides along the surface of the ice when he slides; a vessel glides along through the water.

To Soak, Drench, Steep. A person's clothes are soaked in rain when the water has penetrated every thread; he himself is drenched in the rain when it has penetrated, as it were, his very body. Steep respects a manner of soaking employed as an artificial process. Soak is, however, a permanent action by which hard things are rendered soft; steep is a temporary action by which soft bodies become penetrated with a liquid: thus salt meat requires to be soaked; fruits are steeped in brandy.

Social, Sociable. Social people seek others; sociable people are sought for by others.

Solicitation, Importunity. Solicitation is general; importunity is particular: importunity is troublesome solicitation. Solicitation is itself indeed that which gives trouble to a certain extent, but it is not always unreasonable. There may be cases in which we may yield to the solicitations of friends, to do that which we have no objection to being obliged to do; but importunity is that solicitation which never ceases to apply for that which it is not agreeable to give.

Solitary, Desert, Desolate. Solitary simply denotes the absence of all beings of the same kind: thus a place is solitary to a man where there is no human being but himself. Desert conveys the idea of a place made solitary by being shunned, from its unfitness as a place of residence. Desolate conveys the idea of a place made solitary, or bare of inhabitants, and all traces of habitation, by violent means.

Sound, Sane, Healthy. Sound is extended in its application to all things that are in the state in which they ought to be, so as to preserve their vitality: thus, animals and vegetables are said to be sound when in the former there is nothing amiss in their breath, and in the latter in their root. Healthy expresses more than either sound or sane: we are healthy in every part, but we are sound in that which is essential to life. He who is sound may live, but he who is healthy enjoys life: sane is applicable to human beings, in the same sense, but with reference to the mind; a sane person is opposed to one that is insane.

To Speak, Say, Tell. To speak may simply consist in uttering an articulate sound; but to say is to communicate some idea by means of words: a child begins to speak the moment it opens its lips to utter any acknowledged sound; but it will be some time before it can say anything. To say is to communicate that which passes in our own minds, to express our ideas and feelings as they rise. To tell is to communicate events or circumstances respecting ourselves or others.

To Spread, Expand, Diffuse. To spread may be said of anything which occupies more space than it has done, whether by a direct separation of its parts, or by an accession to the substance; but to expand is to spread by means of extending or unfolding the parts. A mist spreads over the earth; a flower expands its leaves. To diffuse is to scatter, to cause to spread, as to diffuse information.

Staff, Stay, Prop, Support. Anything may be denominated a staff which holds up after the manner of a staff, particularly as it respects persons: bread is said to be the staff of life. The stay makes a thing secure

for the time being, it keeps it in its place. A prop is usually of a temporary nature, a support is more permanent. Every pillar on which a building rests is a support; the timbers which keep a damaged structure from falling are props. Whatever supports, that is, bears the weight of an object, is a support, whether in a state of motion like a staff, or in a state of rest like a stay or a prop.

To Stain, Soil, Sully, Tarnish. All these terms imply the act of diminishing the brightness of an object, but the term stain denotes something grosser than the other terms, and is applied to inferior objects. Things which are not remarkable for purity or brightness may be stained, as hands when stained with blood. Nothing is sullied or tarnished but what has some intrinsic value. A fine picture or piece of writing may be easily soiled by a touch of the finger. The finest silver is the soonest tarnished: hence, in the moral application, a man's life may be stained by the commission of some gross immorality; his honor may be sullied, or his glory tarnished.

State, Realm, Commonwealth. The ruling idea in the sense and application of the word state is that of government in its most abstract sense; affairs of state may either respect the internal regulations of a country, or they may respect the arrangements of different states with each other. The term realm is employed for the nation at large, but confined to such nations as are monarchical and aristocratical. The term commonwealth refers rather to the aggregate body of men and their possessions, than to the government of a country: it is the business of the minister to consult the interests of the commonwealth.

To Stir, Move. We may move in any manner, but to stir is to move so as to disturb the rest and composure either of the body or the mind.

Story, Tale. The story is either an actual fact or something feigned; the tale is frequently feigned. Stories are circulated respecting accidents and occurrences which happen to persons. Tales of distress are told by many merely to excite compassion.

Stream, Current, Tide. All rivers are streams, which are more or less gentle according to the nature of the ground through which they pass. The force of the current is very much increased by the confinement of any water between rocks, or by means of artificial impediments. The tide is high or low, strong or weak, at different hours of the day; when the tide is high, the current is strongest.

To Strengthen, Fortify, Invigorate. Whatever adds to the strength, be it in ever so small a degree, strengthens; exercise strengthens either body or mind: whatever gives strength for a particular emergency fortifies; religion fortifies the mind against adversity: whatever adds to the strength, so as to give a positive degree of strength, invigorates; morning exercise in fine weather invigorates.

Strict, Severe. He who has authority over others must be strict in enforcing obedience, in keeping good order, and in encouraging attention to duty; but it is possible to be very severe in punishing those who are under us, and yet to be very lax in all matters that our duty demands of us.

Strife, Contention. Strife is mostly used for verbal conflict, in which each person strives against the other by the use of contumelious or provoking expressions. Contention is used for an angry striving with others, either in respect to matters of opinion or matters of claim, in which each party seeks to get the better of the other.

Successive, Alternate. The successive may be accidental or intentional; the alternate is always intentional. It may rain for three successive days, or a fair may be held for three successive days. Trees are placed sometimes in alternate order, when every other tree is of the same size and kind.

To Surround, Encompass, Environ, Encircle. We may surround an object by standing at certain distances all round it; in this manner a person may be surrounded by other persons; a garden is surrounded by a wall. To encompass is to surround in the latter sense, and applies to objects of a great or indefinite extent: the earth is encompassed by the air. To surround is to go round an object of any form, whether square or circular, long or short; but to environ and to encircle carry with them the idea of forming a circle round an object. Thus a town or a valley may be environed by hills, a basin of water may be encircled by trees, or the head may be encircled by a wreath of flowers.

Sympathy, Compassion, Commiseration, Condolence. Sympathy has the literal meaning of fellow-feeling, that is, a kindred or like feeling, or feeling in company with another. Compassion, commiseration, condolence signify a like suffering, or a suffering in company. Sympathy preserves its original meaning in its application, for we laugh or cry because of sympathy. Compassion in altogether a moral feeling, which makes us enter into the distresses of others. We may, therefore, sympathize with others, without essentially serving them; but, if we feel compassion, we naturally turn our thoughts toward relieving them. Commiseration is awakened toward those who are in an abject state of misery. Condolence supposes an entire equality, and is often produced by some common calamity.

Taste, Genius. Taste seems to designate the capacity to derive pleasure from an object; genius designates the power we have for accomplishing any object.

To Tease, Vex, Taunt, Tantalize, Torment. To tease is applied to that which is most trifling; torment to that which is most serious. We are teased by a fly that buzzes in our ears; we are vexed by the carelessness and stupidity of our servants; we are taunted by the sarcasms of others; we are tantalized by the fair prospects which only present themselves to disappear again; we are tormented by the importunities of troublesome beggars.

Tenacious, Pertinacious. To be tenacious is to hold a thing close, to let it go with reluctance; to be pertinacious is to hold it out in spite of what can be advanced against it. A man of a tenacious temper insists on trifles that are supposed to affect his importance; a pertinacious temper insists on everything which is apt to affect his opinions.

Tenet, Position. The tenet is the opinion which we hold in our minds; the position is that which we lay down for others. Our tenets may be hurtful, our positions false.

Thankfulness, Gratitude. Our thankfulness is measured by the number of our words; our gratitude is measured by the nature of our actions. A person who afterward proves very ungrateful may appear very thankful at the time.

Thick, Dense. We speak of thick in regard to hard or soft bodies, as a thick board or thick cotton; we speak of thick in regard to solid or liquid bodies, as a thick cheese or thick milk: we use the term dense mostly in regard to the air in its various forms, as a dense air.

To Think, Suppose, Imagine, Believe, Deem. We think a thing right or wrong; we suppose it to be true or false; we imagine it to be real or unreal. In regard to moral points, in which case the word deem may be compared with the others, to think is a conclusion drawn from certain premises. I think that a man has acted wrongly. To suppose is to take up an idea arbitrarily or at pleasure; to imagine is to take up an idea by accident, or without any connection with the truth or reality. To deem is to form a conclusion; things are deemed hurtful or otherwise in consequence of observation. We think as the thing strikes us at the time; we believe from a settled deduction.

Threat, Menace. We may be threatened with either small or great evils; but we are menaced only with great evils.

Timely, Seasonable. The former signifies within the time, that is, before the time is past; the latter according to the season, or what the season requires. A timely notice prevents that which would otherwise happen; mercy and kindness are seasonable in the time of affliction.

Torment, Torture. Torture is an excess of torment. We may be tormented by a variety of indirect means; but we are mostly said to be tortured by the direct means of the rack, or similar instrument.

To Transfigure, Transform, Metamorphose. Transfigure is to make to pass over into another figure; transform and metamorphose are to put into another form: the former is said only of spiritual beings, and particularly in reference to our Saviour; the other two terms are applied to that which has a corporeal form. Transformation is commonly applied to that which changes its outward form; in this manner a harlequin transforms himself into all kinds of shapes and likenesses. Metamorphosis is applied to the form internal as well as external, that is, to the whole nature.

Trembling, Tremor, Trepidation. Trembling expresses any degree of involuntary shaking of the frame, from the affection either of the body or the mind; cold, nervous affections, fear, and the like are the ordinary causes of trembling. Tremor is a slight degree of trembling, which arises mostly from a mental affection; when the spirits are agitated, the mind is thrown into a tremor by any trifling incident. Trepidation is more violent than either of the two, and springs from the defective state of the mind; it shows itself in the action, or the different movements of the body, rather than in the body.

To Trouble, Disturb, Molest. Trouble is the most general in its application; we may be troubled by the want of a thing, or troubled by that which is unsuitable;

we are disturbed and molested only by that which actively troubles. Pecuniary wants are the greatest troubles in life. Trouble may be permanent; disturbance and molestation are temporary, and both refer to the peace which is destroyed. A disturbance ruffles or throws out of a tranquil state; a molestation burdens or bears hard either on the body or the mind.

Truth, Veracity. Truth belongs to the thing; veracity to the person: the truth of the story is admitted upon the veracity of the narrator.

To Turn, Bend, Twist, Distort, Wring, Wrest, Wrench. We turn a thing by moving it from one point to another; thus we turn the earth over. To bend is simply to change direction; thus a stick is bent, or a body may bend its direction to a certain point. To twist is to bend many times, to make many turns. To distort is to turn or bend out of the right course; thus the face is distorted in convulsions. To wring is to twist with violence; thus linen which has been wetted is wrung. To wrest or wrench is to separate from a body by means of twisting; thus a stick may be wrested out of the hand, or a hinge wrenched off the door.

To Turn, Wind, Whirl, Twirl, Writhe. Turn is to cause to rotate; wind is to turn a thing round in a regular manner; whirl, to turn it round in a violent manner; twirl, to turn it round in an irregular and unmeaning way; writhe, to turn round in convolution within itself.

Unbelief, Infidelity, Incredulity. The Jews are unbelievers in the mission of our Saviour; the Turks are infidels, inasmuch as they do not believe in the Bible: Deists and Atheists are likewise infidels, inasmuch as they set themselves up against Divine revelation. Well-informed people are always incredulous of stories respecting ghosts and apparitions.

Understanding, Intellect, Intelligence. Understanding is employed to describe a familiar and easy power or operation of the mind in forming distinct ideas of things. Intellect is employed to mark the same operation in regard to higher and more abstruse objects. Understanding applies to the first exercise of the rational powers: it is therefore aptly said of children and savages that they employ their understandings on the simple objects of perception. Intellect, being a matured state of the understanding, is most properly applied to the efforts of those who have their powers in full vigor; we speak of understanding as the characteristic distinction between man and brute. Intellect is applied merely to human power, and intelligence to the spiritual power of higher beings, as the intelligence of angels; so, when applied to human beings, it is taken in the most abstract sense for the intellectual power: hence we speak of intelligence as displayed in the countenance of a child whose looks evince that he has exerted his intellect, and thereby has proved that it exists.

Unless, Except. Unless, which is equivalent to if less, if not, or if one fail, is employed only for the particular case; but except has always a reference to some general rule, of which an exception is hereby signified: I shall not do it unless he asks me; no one can enter except those who are provided with tickets.

Unspeakable, Ineffable, Unutterable, Inexpressible. The unspeakable is said of objects in general, particularly of those which are above human conception, and surpass the power of language to describe, as the unspeakable goodness of God. Ineffable is said of such objects as cannot be painted in words with adequate force, as the ineffable sweetness of a person's look. Unutterable and inexpressible are extended in their signification to that which is incommunicable by signs from one being to another: grief is unutterable which it is not in the power of the sufferer by any sounds to bring home to the feelings of another; grief is inexpressible which is not to be expressed by looks, or words, or any sign.

Unworthy, Worthless. Unworthy is a term of less reproach than worthless: the former signifies not to be worthy of praise or honor; the latter signifies to be without all worth, and consequently in the fullest sense bad. There are many unworthy members in every religious community; but every society that is conducted upon proper principles will take care to exclude worthless members.

Usage, Custom, Prescription. Usage is what one has been long accustomed to do; custom (v. custom) is what one generally does; prescription is what is indicated by usage to be done. The usage acquires force and sanction by dint of time; the custom acquires sanction by the frequency of its being done or by the numbers doing it; the prescription acquires force by the authority which prescribes.

To Utter, Speak, Articulate, Pronounce. Utter from out, signifies to put out; that is, to send forth a sound: this, therefore, is a more general term than speak, which is to utter an intelligible sound. We may utter a groan; we speak words only, or that which is intended to serve as words. Speak, therefore, is only a form of utterance; a dumb man has utterance, but not speech. Articulate and pronounce are modes of speaking. To articulate, from articulum, a joint, is to pronounce distinctly the letters or syllables of words; this is the first effort of a child beginning to speak. Pronounce is a formal mode of speaking.

To Value, Prize, Esteem. To value is to estimate the worth, real or suppositious, relative or absolute, of a thing; in this sense men value gold above silver, or an appraiser values goods. Prize and esteem are taken only as mental actions: the former is taken in reference to sensible or moral objects; the latter, only to moral objects. We may value books according to their market price, or we may value them according to their contents: we prize books only for their contents; in this sense prize is a much stronger term than value.

Venial, Pardonable. Venial is applied to what may be tolerated without express disparagement to the individual, or without direct censure; but the pardonable is that which may only escape severe censure, but cannot be allowed: garrulity is a venial offense in old age; levity in youth is pardonable in single instances.

View, Survey, Prospect. We take a view or survey; the prospect presents itself: the view is of an indefinite extent; the survey is always comprehensive in its nature. Ignorant people take but narrow views of things; the capacious mind of a genius takes a survey of all nature. Our prospects are very delusive. Sometimes our prospects depend upon our views, at least in matters of religion. He who forms erroneous views of a future state has but a wretched prospect beyond the grave.

Violent, Furious, Boisterous, Vehement, Impetuous. A man is violent in his opinions, violent in his measures, violent in his resentments; he is furious in his anger, or has a furious temper; he is vehement in his affections or passions, vehement in love, vehement in zeal, vehement in pursuing an object. Violence transfers itself to some external object on which it acts with force; but vehemence respects that manner of violence which is confined to the person himself: we may dread violence, because it is always liable to do mischief. Impetuosity is rather the extreme of violence or vehemence. An impetuous attack is an excessively violent attack; an impetuous character is an excessively vehement character. Boisterous is said of the manner and of the behavior rather than of the mind.

Wakefulness, Watchfulness, Vigilance. Wakefulness is an affair of the body, and depends upon the temperament; watchfulness is an affair of the will, and depends upon the determination. Some persons are more wakeful than they wish to be; few are as watchful as they ought to be. Vigilance expresses a high degree of watchfulness. A sentinel is watchful who on ordinary occasions keeps good watch; but it is necessary for him, on extraordinary occasions, to be vigilant, in order to detect whatever may pass.

To Want, Need, Lack. To want is to be without that which contributes to our comfort, or is an object of our desire; to need is to be without that which is essential to our existence or our purposes. To lack expresses little more than the general idea of being without, unaccompanied by any collateral idea; it is usual to consider what we want as artificial, and what we need as natural and indispensable. What one man wants is a superfluity to another; but that which is needed by one is in like circumstances needed by all.

Wave, Billow, Surge, Breaker. Those waves which swell more than ordinarily are termed billows; those waves which rise higher than usual are termed surges; those waves which dash against the shore, or against vessels, with more than ordinary force, are termed breakers.

Weak, Feeble, Infirm. We may be weak in body or mind; but we are feeble and infirm only in the body: we may be weak from disease, or weak by nature; both equally convey the gross idea of a defect. But the terms feeble and infirm are qualified expressions for weakness: an old man is feeble from age; he may likewise be infirm in consequence of sickness.

Weight, Burden, Load. A person may sink under the weight that rests upon him; a platform may break down from the weight upon it: a person sinks under his burden or load; a cart breaks down from the load.

Whole, Entire, Complete, Total, Integral. Whole excludes subtraction; entire excludes division; complete excludes deficiency. A whole orange has had nothing taken from it; an entire orange is not yet cut; and a complete orange is grown to its full size. Total is the opposite of partial. Integral is applied now to parts or numbers not broken.

Wicked, Iniquitous, Nefarious. It is wicked to deprive another of his property unlawfully, under any circumstances; but it is iniquitous if it be done by fraud and circumvention; and nefarious if it involves any breach of trust.

To Will, Wish. We can will nothing but what we can effect; we may wish for many things which lie above our reach.

Wisdom, Prudence. Wisdom directs all matters present or to come; prudence, which acts by foresight, directs what is to come. Rules of conduct are framed by wisdom, and it is the part of prudence to apply these rules to the business of life.

Wonder, Miracle, Marvel, Prodigy, Monster. Wonders are natural; miracles are supernatural. The whole creation is full of wonders; the Bible contains an account of the miracles which happened in those days. Wonders are real; marvels are often fictitious; prodigies are extravagant and imaginary; monsters are violations of the laws of nature. The production of a tree from a grain of seed is a wonder; but the production of a calf with two heads is a monster.

Work, Labor, Toil, Drudgery, Task. Every member of society must work for his support, if he is not in independent circumstances. The poor are obliged to labor for their daily subsistence; some are compelled to toil incessantly for the pittance which they earn. Drudgery falls to the lot of those who are the lowest in society. A man wishes to complete his work; he is desirous of resting from his labor; he seeks for a respite from his toil; he submits to drudgery. Task is a work imposed by others, and is, consequently, more or less burdensome.

Writer, Author. Writer refers us to the act of writing; author to the act of inventing. There are, therefore, many writers who are not authors; but there is no author of books who may not be termed a writer. Compilers and contributors to periodical works are properly writers, though not always entitled to the name of authors. Poets and historians are properly termed authors rather than writers.

Youthful, Juvenile, Puerile. Youthful signifies full of youth, or in the complete state of youth; juvenile signifies the same; but puerile signifies literally boyish. Hence the first two terms are taken in an indifferent sense; but the latter in a bad sense, or at least always in the sense of what is suitable to a boy only: thus we speak of youthful vigor, youthful employments, juvenile performances, juvenile years, and the like: but puerile objections, puerile conduct, and the like. We expect nothing from a youth but what is juvenile; we are surprised and dissatisfied to see what is puerile in a man.

WORDS AND PHRASES FROM THE CLASSIC AND MODERN LANGUAGES

GREEK AND LATIN

ab extra, From without.
ab incunabilis, From the cradle.
ab initio, From the beginning.
ab origine, From the origin or commencement.
ab ovo, From the egg; from the very beginning.
ab ovo usque ad mala (lit., from the egg to the apples, a term borrowed from Roman banquets, which began with eggs and ended with fruit), From beginning to end; from first to last.
absens hæres non erit (The absent one will not be the heir), Out of sight, out of mind.
absit invidia, Let there be no ill-will; envy apart.
ab uno disce omnes (From one example judge of the rest), From a single instance infer the whole.
ab urbe condita, From the building of the city, i. e., Rome. [A. U. C.]
a capite ad calcem, From head to heel.
a cruce salus, Salvation by or from the cross.
ad arbitrium, At will; at pleasure.
ad calendas græcas, At the Greek calends, i. e., never. (The Greeks had no calends.)
ad captandum vulgus, To attract or please the rabble.
a Deo et rege, From God and the king.
ad extremum, To the extreme; at last.
ad gustum, To one's taste.
ad hominem, Personal; to the individual.
a die, From that day.
ad internecionem, To extermination.
ad libitum, At pleasure.
ad modum, In the manner of.
ad multos annos, For many years.
ad nauseam, So as to disgust or nauseate.
ad patres, Gathered to his fathers; dead.
ad rem, To the purpose; to the point.
adscriptus glebæ, attached to the soil.
adsum, I am present; I am here.
ad summum, To the highest point or amount.
ad unguem, To a nicety; exactly.
ad unum omnes, To a man.
ad utrumque paratus, Prepared for either event or case.
ad vivum, Like life; to the life.
ægrescit medendo, It becomes worse from the remedies employed.
æquabiliter et diligenter, Equably and diligently.
æquo animo, With a calm mind.
ætatis suæ, Of his or her age.
a fortiori, For the stronger reason.
age quod agis, Do what you are doing; attend to your business.
alere flammam, To feed the flame.
alloi kamon, alloi onanto (Gr.), Some toil, others reap the advantage.
alma mater, Kind or benign mother. (Specifically one's college or university.)
alter ego, Another self.
alter ipse amicus, A friend is another self.
alterum tantum, As much more.
amantium iræ amoris integratio, Lovers' quarrels are the renewing of love.
a maximis ad minima, From the greatest to the least.
amicus humani generis, A friend of the human race.
amicus usque ad aras, A friend even to the altar (of sacrifice), i. e., To the last extremity.
amor patriæ, Love of country; patriotism.
anangka d' oude theoi machontai (Gr.), Not even the gods can fight against necessity.
andron epiphanon pasa ge taphos (Gr.), All the world is a burial-place for illustrious men.
aner ho pheugon kai palin machesetai (Gr.), The man who flies shall fight again. (A line said to have been written by Demosthenes as an excuse for his running away and leaving his shield behind him at the battle of Cheronæa, 338 B. C.)
anguis in herba, A snake in the grass; a false friend; an unforeseen danger.
animo et fide, Courageously and faithfully.
anno ætatis suæ, In the year of his or her age.
anno Christi, In the year of Christ. [A. C.]
anno humanæ salutis, In the year of man's redemption. [A. H. S.]
anno salutis, In the year of redemption. [A. S.]
anno urbis conditæ, In the year from the time the city— i. e., Rome — was built.
annus mirabilis, A year of wonders. (Often applied in English History to the year 1666, noteworthy for the war with the Dutch, the Plague, and the Great Fire of London. See Dryden's poem "Annus Mirabilis.")
ante bellum, Before the war.
ante lucem, Before daybreak.
ante meridiem, Before noon.
a posse ad esse, From possibility to reality.
a posteriori, From what follows; from effect to cause.
a priori, From what goes before; from cause to effect.
aplestos pithos (Gr.), A cask that will never fill; an endless job. (The allusion is to the Danaïdes, who, for the murder of their husbands, were condemned to draw water in sieves.)
arbiter elegantiarum, A judge or authority in matters of taste.
arcana cœlestia, Celestial secrets.
arcana imperii, State secrets.
ardentia verba, Words that burn; glowing language.
argumentum ad crumenam, (An argument to the purse), An appeal to one's interests.
argumentum ad invidiam, (An argument to envy), An appeal to low passions.
argumentum ad judicium, An argument appealing to the judgment.
argumentum baculinum, (The argument of the cudgel), An appeal to force.
ariston men hudor (Gr.), Water is the chief of the elements i. e., as being the origin of all things. (In classical mythology, Oceanus and Tethys are regarded as the parents of all the deities who preside over Nature.)
ars est celare artem, True art is to conceal art.
ars longa, vita brevis, Art is long, life is short.
artium magister, Master of arts.
asinus ad lyram (lit., an ass at the lyre), An awkward fellow.
at spes non fracta, But hope is not yet crushed.

audi alteram partem, Hear the other side.
aurea mediocritas, The golden mean.
aut Cæsar aut nullus, Either Cæsar or nobody; either in the first place or nowhere.
aut vincere aut mori, To conquer or die; death or victory.
auxilium ab alto, Help from on high.
a verbis ad verbera, From words to blows.
avito viret honore, He flourishes on the honors of his ancestors.
beatæ memoriæ, Of blessed memory.
bella! horrida bella, War! horrid war.
bella matribus detestata, War, so detested by mothers.
bellum internecinum, A war of extermination.
bene orâsse est bene studuisse, To have studied well is to have prayed well.
bis dat qui cito dat, He gives twice who gives quickly or opportunely.
bis peccare in bello non licet, One must not blunder twice in war.
bis pueri senes, Old men are twice boys.
bona fide, In good faith.
bona fides. Good faith.
brevi manu (With a short hand), Offhand; extempore; summarily.
brevis esse laboro, obscurus fio, If I labor to be brief, I become obscure.
cadit quæstio, The question falls; there is no discussion.
cæca est invidia, Envy is blind.
cætera desunt, The rest is wanting.
cæteris paribus, Other things being equal.
candida Pax, White-robed Peace.
cantabit vacuus coram latrone viator, The penniless traveler will sing in the presence of the highwayman; a man who has nothing has nothing to lose.
cantate Domino, Sing unto the Lord. (The opening words of many Psalms. *Vulgate.*)
carpe diem, Usually explained, according to popular ideas of Epicurean philosophy, as — Enjoy the present day; but capable of higher interpretation — Seize the present opportunity; improve time.
casus belli, A cause justifying war; a ground of war.
causa sine qua non, An indispensable cause.
cedant arma togæ, Let arms yield to the gown; let violence give place to law.
chremat 'aner (Gr.), Money makes the man.
circuitus verborum, A circumlocution.
circulus in probando, A circle in the proof: the fallacy of using the conclusion as one of the premises; a vicious circle.
clarior e tenebris, Brighter from obscurity.
clarum et venerabile nomen, An illustrious and venerable name.
cogito, ergo sum, I think, therefore I exist.
comitas inter gentes, Comity between nations.
commune bonum, A common good.
communibus annis, On the annual average; one year with another.
communi consensu, By common consent.
conditio sine qua non, An indispensable condition.
conjunctis viribus, With united powers.
consensus facit legem, Consent makes the law. (If two persons make an agreement in good faith and with full knowledge, the law will insist on its being carried out.)
consilio et animis, By wisdom and courage.
consilio et prudentia, By wisdom and prudence.
constantia et virtute, By constancy and virtue.
consuetudo pro lege servatur, Custom is held as law. (The English common law is based on immemorial usage.)
contra bonos mores, Contrary to good morals.
copia verborum, A plentiful supply of words; flow of language.
coram nobis, In our presence.
coram non judice, Before a person who is not a judge; not before the proper tribunal.
crambe repetita, Cabbage warmed up the second time; hence used proverbially for any tedious repetition of a truism, an old story, etc.
credat Judæus Apella, Let the (superstitious) Jew Apella believe it; tell that to the marines.
crede quod habes, et habēs, Believe that you have it, and you have it.
credo, quia absurdum, (Corrupted from a passage in Tertullian), I believe it, because it is absurd.
credula res amor est, Love is ready to believe.
crescit amor nummi, quantum ipsa pecunia crescit, The love of money grows as our wealth increases.
crescit eundo, It increases as it goes.
crescit sub pondere virtus, Virtue increases under every oppression.
creta an carbone notandum, To be marked with chalk or charcoal. (The Romans marked lucky days with white, and unlucky ones with black.)
crux, A cross; a difficulty; a stumbling-block; a puzzle; *e. g., crux criticorum, crux mathematicorum, crux medicorum*, The puzzle of critics, mathematicians, physicians.
cucullus non facit monachum, The cowl does not make the monk; don't trust to appearances.
cui bono? (A maxim of Cassius, quoted by Cicero), For whose advantage? Generally used, however, as, What is the good of it?
cui Fortuna ipsa cedit, To whom Fortune herself yields.
culpam pœna premit comes, Punishment follows hard on crime.
cum grano, cum grano salis, With a grain of salt; with some allowance or modification.
cum privilegio, With privilege.
cum tacent, clamant, Although they keep silence, they cry aloud; their silence is more expressive than words.
curiosa felicitas, Nice felicity of expression (applied by Petronius Arbiter, cxviii, 5, to the writings of Horace); happy knack.
currente calamo, With a running pen; offhand.
da locum melioribus, Give place to your betters.
damnant quod non intelligunt, They condemn what they do not understand.
dare pondus fumo, To give weight to smoke; to impart value to that which is worthless; to attach importance to trifles.
data et accepta. Expenses and receipts.
date obolum Belisario, Give an obolus to Belisarius. (It is said that this general, when old and blind, was neglected by Justinian, and obliged to beg. Gibbon treats the story as a fable.)
Davus sum, non Œdipus, I am Davus, not Œdipus. I am no conjurer; I am a bad hand at riddles.
dēceptio visus, An optical illusion.
decori decus addit avito, He adds honor to the ancestral honors.
de die in diem, From day to day.
de gustibus non est disputandum, There is no disputing about tastes.
Dei gratia, By the grace of God. [D. G.]
de jure, By the law; by right.
de lana caprina, About goat's wool; hence about any worthless object.
delenda est Carthago, Carthage must be utterly destroyed. (A phrase with which Cato the Elder urged the Roman people to the destruction of Carthage, which he looked on as a dangerous rival to Rome.)
de minimis non curat lex, The law does not concern itself with trifles.
de mortuis nil nisi bonum, Let nothing be said of the dead but what is good.
de nihilo nihil, in nihilum nil posse reverti, From nothing nothing is made, and nothing that exists can be reduced to nothing. (The doctrine of the eternity of matter.)
de novo, Anew.
de omnibus rebus, et quibusdam aliis, About everything, and something more besides. (Applied ironically to an immature literary production, in which very many subjects are treated.)
Deo adjuvante, non timendum, With the help of God, there is nothing to be afraid of.
Deo duce, With God for a leader.
Deo favente, With the favor of God.
Deo gratias, Thanks be to God.
Deo juvante, With the help of God.
Deo monente, God giving warning.
Deo, non fortuna, From God, not from Chance.
Deo volente, God willing.
de profundis, Out of the depths. (The first words of Ps. cxxix— *Vulg.*)
desinit in piscem mulier formosa superne, A woman, beautiful above, has a fish's tail. (A description of an incongruous style.)
dis krambe thanatos (Gr.), Cabbage, twice over, is death; repetition is tedious.
dii majorum gentium, The gods of the superior houses; the twelve superior gods.
dii penates, Household gods.
disjecta membra, Scattered remains.
docendo discimus, We learn by teaching.
Dominus vobiscum, The Lord be with you. (The words in which the priest blesses the people in the Roman Church.)
domus et placens uxor, Home and the good wife.
do ut des, I give that you may give; the principle of reciprocity.
dramatis personæ, The characters of the play.

dulce est dēsipere in loco, It is pleasant to play the fool at times.
dulce et decōrum est pro patriā mori, It is sweet and glorious to die for one's country.
dum spiro, spero, While I breathe, I hope.
dum vivimus, vivamus, Let us live while we live; i. e., Let us enjoy life.
durante vita, During life.
ecce homo, Behold the man. (Indicative of the giving up of Christ to the people by Pilate.)
e flamma cibum petere, To seek food from the flames; to pick the remnants of food from the funeral pyre; to be reduced to the last extremity.
ego et rex meus, My king and I. (An expression attributed to Cardinal Wolsey, and unjustly made the subject of a charge against him, as if he had written "I and my King.")
eheu! fugaces labuntur anni, Alas! our fleeting years pass away.
elapso tempore, The time having elapsed.
en nukti boule (Gr.), In the night there is counsel; sleep on it.
en oino alētheia (Gr.), In wine there is truth.
eo animo, With that design.
eo nomine, By that name.
e pluribus unum, One out of, or composed of, many. (The motto of the United States of America.)
epulis accumbere divûm, To sit down at the banquets of the gods.
e re nata, According to the exigency.
esse quam vidēri, To be, rather than to seem.
est modus in rebus, There is a middle course in all things.
esto perpetua, Let it endure forever.
esto quod esse videris, Be what you seem to be.
e tan, e epi tan (Gr.), Either this, or upon this; either bring this back, or be brought home, dead, upon it. (The words of a Spartan mother when she gave a shield to her son going on military service.)
et cætera, And the rest.
et id genus omne, And everything of the sort.
et sequentes, et sequentia, And those that follow.
et sic de cæteris, And so of the rest.
et sic de similibus, And so of similar things.
et tu, Brute! And thou also, Brutus. (Usually given as the last words of Julius Cæsar, when he saw Brutus amongst his murderers.)
eventus stultōrum magister, Fools must be taught by experience.
ex abundantia, Out of the abundance.
ex adverso, From the opposite side.
ex æquo et bono, According to what is right and good.
ex animo, Heartily; sincerely.
ex capite, From the head; from memory.
ex cathedra, From the chair or pulpit; spoken with authority; by virtue of office.
excelsior, Higher; more elevated.
exceptio probat regulam, The exception proves the rule. (If the case in point were not an exception, there would be no rule.)
exceptis excipiendis, Due exceptions (or allowances) having been made.
ex concesso, From what has been conceded.
ex curia, Out of court.
ex delicto, From the crime.
exegi monumentum ære perennius, I have reared a monument more lasting than brass. (A prophetic estimate by Horace of the value of his poems.)
exempla sunt odiōsa, Examples are offensive.
exempli gratia, By way of example. [E. G.]
exeunt, They go out.
exeunt omnes, All go out.
ex facto jus oritur, The law arises from the fact. (Till the nature of the offense is known, the law cannot be set in motion.)
exit, He (or she) goes out.
exitus acta probat, The result justifies the deed.
ex mera gratia, Through mere favor.
ex mero motu, Of his own free will.
ex necessitate rei, From the urgency of the case.
ex officio, By virtue of office.
ex parte, On one part or side.
ex pede Herculem, You may judge of Hercules by his foot; the whole by the part.
experientia docet stultos, Experience teaches even fools.
experimentum crucis, The experiment of the cross; a decisive experiment; a crucial test.
experto crede, Believe one who has tried it, or who speaks from experience; *experto crēde Roberto*, Believe Robert, who has tried it, or who speaks from experience.
expertus metuit, Having had experience of it, he dreads it; a burnt child dreads the fire.
ex post facto, After the deed is done; retrospective.
expressis verbis, In express terms.
ex quocunque capite, For whatever reason.
ex tacito, Tacitly.
ex tempore, Off hand; without preparation.
extinctus amābitur idem, This same man will be loved after his death.
extra muros, Outside the walls.
ex ungue leōnem, You may tell the lion by his claws.
faber quisque fortunæ suæ, Every man is the architect of his own fortune; hence, *faber fortūnæ suæ*, a self-made man.
facile est inventis addere, It is easy to improve what has been already invented.
facile princeps, The acknowledged chief; one who stands indisputably first.
facilis est descensus Averni, The descent to hell is easy; it is easy enough to get into trouble.
fac simile, An exact imitation.
fæces populi, fæx populi, The scum of the population.
fama clamosa, A current scandal.
fama nihil est celerius, Nothing travels more swiftly than scandal.
fama semper vivat, May his fame last forever.
fas est et ab hoste docēri, It is right to be taught even by an enemy; you may get a hint from the other side.
fata obstant, The Fates oppose.
fata viam invenient, The Fates will find out a way.
fax mentis incendium glōriæ, The passion for glory is the torch of the mind.
felicitas multos habet amīcos, Prosperity has many friends.
felo de se, One who commits self-felony; a suicide.
feræ naturæ, Of a wild nature; applied to wild beasts.
festina lente, Make haste slowly; don't be impetuous.
fiat experimentum in corpore vilī, Let the experiment be made on a body of no value.
fiat justitia ruat cælum, Let justice be done though the heavens should fall.
fiat lux, Let there be light.
fide et amore, By faith and love.
fide et fiducia, By fidelity and confidence.
fide et fortitudine, By fidelity and fortitude.
fidei coticula crux, The cross is the touchstone of faith.
fidei defensor, Defender of the faith.
fide, non armis, By faith, not by force of arms.
fide, sed cui vide, Trust, but see whom you are trusting.
fides et justitia, Fidelity and justice.
fides Punica, Punic faith; treachery. (Among the Romans the bad faith of the Carthaginians was notorious.)
fidus Achates, Faithful Achates (the companion of Æneas); a true friend.
fidus et audax, Faithful and bold.
fieri facias, A legal paper authorizing execution on the goods of a debtor.
filius nullius, A son of nobody; an illegitimate son. (He has no legal rights as a son in respect to the inheritance of property.)
filius terræ, A son of the earth; one of low origin.
finis coronat opus, The end crowns the work.
flagrante bello, While the war was raging; during hostilities.
flagrante delicto, In the commission of the crime; in the very act.
flamma fumo est proxima, Flame is akin to fire; where there's smoke there's fire.
flecti, non frangi, To be bent, not broken.
flosculi sententiarum, Flowers of fine thoughts.
fœnum habet in cornu, He has hay on his horn (the mark put on a bull to show he was savage); beware of him.
fons et origo malorum, The source and origin of our miseries.
forensis strepitus, The clamor of the forum; "Brawling courts, and dusty purlieus of the Law."
forte scutum salus ducum, A strong shield is the safety of leaders.
fortes fortuna juvat, Fortune favors the brave.
forti et fideli nihil difficile, Nothing is difficult to the brave and faithful.
fortiter et recte, With fortitude and rectitude.
fortiter, fideliter, feliciter, Boldly, faithfully, successfully.
fortiter in re, With firmness in action.
fortuna favet fatuis, Fortune favors fools.
fortunæ filius, A spoiled child of Fortune.
frangas, non flectes, You may break me, but you shall not bend me.
fraus pia, A pious fraud.
fronti nulla fides, There is no trusting the features; don't trust to appearances.
fruges consumere nati, Born to consume the fruits of the earth; born only to eat.
fugit irreparabile tempus, Irrecoverable time glides away.
fuimus Trōes, We once were Trojans; we have seen better days.
fuit Ilium, There once was a Troy; Troy was, but is no more; the place is gone.

fumum et opes, strepitumque Romæ, The smoke, the show, the rattle, of the town (Rome).
functus officio, Having discharged his duties; hence, out of office.
furor arma ministrat, Rage provides arms; one uses any weapon in a rage.
furor loquendi, A rage for speaking.
furor poeticus, Poetical fire.
furor scribendi, A rage for writing.
gallice, In French.
gaudeamus igitur, Therefore, let us rejoice. (The burden of a Macaronic song.)
gaudet tentamine virtus, Virtue rejoices in temptation.
genius loci, The genius or presiding spirit of the place.
gens togata, Applied first to Roman citizens, as wearing the toga, the garment of peace; hence, civilians generally.
glaukas eis Athenas (Gr.), Owls to Athens. (The owl was sacred to Minerva, the guardian divinity of Athens; hence, owls were abundant, so that the proverb is like "to carry coals to Newcastle.")
glossa diplè, A double tongue.
gloria in excelsis Deo, Glory to God in the highest.
gloria Patri, Glory be to the Father.
gnothi seauton (Gr.), Know thyself. (A precept inscribed in gold letters over the portico of the temple at Delphi. Its authorship has been ascribed to Pythagoras, to several of the wise men of Greece, and to Phemonoë, a mythical Greek poetess. According to Juvenal, this precept descended from heaven.)
gradu diverso, via una, The same road by different steps.
gradus ad Parnassum, A step to Parnassus; aid in writing Latin poetry; a work on Latin verse-making containing rules and examples.
gratia placendi, For the sake of pleasing.
gratis dictum, Mere assertion.
graviora manent, Greater afflictions are in store; the worst is yet to come.
graviora quædam sunt remedia periculis, Some remedies are worse than the disease.
grex venalium, A venal throng.
gutta cavat lapidem, non vi, sed sæpe cadendo, The drop hollows out the stone by frequent dropping, not by force; constant persistence gains the end.
haud longis intervallis, At frequent intervals.
he gloss' omomoch', he de phren anomotos (Gr.), My tongue has sworn, but my mind is unsworn; I have said it, but don't mean to do it.
helluo librorum, A devourer of books; a bookworm.
heu pietas! heu prisca fides, Alas! for piety! Alas! for our ancient faith.
hiatus valde deflendus, A gap or deficiency greatly to be deplored. (Words employed to mark a blank in a work, but often used of persons whose performances fall short of their promises.)
hic et ubique, Here and everywhere.
hic jacet, Here lies; SEPULTUS, buried.
hic labor, hoc opus est, Here is labor, here is toil.
hic sepultus, Here [lies] buried.
hinc illæ lacrimæ, Hence these tears; this is the cause of the trouble.
hodie mihi, cras tibi, It is my lot to-day, yours to-morrow. (A line often found in old epitaphs.)
hoi polloi (Gr.), The many, the common people.
homo factus ad unguem, Usually quoted thus, though the proper form is *ad unguem factus homo*. A highly polished, accomplished man. (The expression is borrowed from the practice in sculptors, who, in modeling, give the finishing touch with the nail; or from joiners, who test the accuracy of joints in wood by the nail.)
homo multarum literarum, A man of many letters; a man of extensive learning.
homo solus aut deus aut dæmon, A man to live alone must be either a god or a devil.
homo sum; humani nihil a me alienum puto, I am a man; and I consider nothing that concerns mankind a matter of indifference to me.
hon hoi theoi philousin apothneskei neos (Gr.), (A fragment from Menander.) He whom the gods love dies young.
honores mutant mores, Honors change manners.
honos habet onus, Honor is burdened with responsibility.
horæ canonicæ, Canonical hours; prescribed times for prayers.
horresco referens, I shudder as I tell the story.
hortus siccus, A dry garden; a collection of dried plants; an herbarium.
hos ego versiculos feci, tulit alter honores (Virgil, on the occasion when some verses he had written on the shows at Rome were unjustly claimed by Bathyllus, who was rewarded for them), I wrote these lines, another has borne away the honor.
humanum est errare, To err is human.
hunc tu caveto, Beware of him.
id genus omne, All that class. (A contemptuous expression for the dregs of the population.)
ignorantia non excusat legem, Ignorance is no plea against the law.
ignoratio elenchi, Ignorance of the point in dispute. (The logical fallacy of arguing to the wrong point.)
ignoti nulla cupido, There is no desire for that which is unknown; our wants are increased by knowledge.
ignotum per ignotius, (To explain) a thing not understood by one still less understood.
Ilias malorum, An Iliad of woes; a host of evils. (From the fact that the siege of Troy lasted ten years.)
imitatores, servum pecus, Ye imitators; a servile herd.
immedicabile vulnus, An incurable wound; an irreparable injury.
imo pectore, From the bottom of one's heart.
impari marte, With unequal military strength.
impedimenta, Luggage; the baggage of an army.
imperium in imperio, A government existing within another. (Said of a power set up against constituted authority.)
implicite, By implication.
impos animi, Of weak mind.
in actu, In the very act; in reality.
in æternum, For ever.
in articulo mortis, At the point of death.
in camera, In the judge's chamber; in secret.
in capite, In chief.
in cælo quies, There is rest in heaven.
incredulus odi, Being incredulous, I cannot endure it.
in curia, In court.
inde iræ, Hence this resentment.
in dubio, In doubt.
in æquilibrio, In equilibrium.
in esse, In being.
in extenso, At length.
in extremis, In very bad circumstances; at the point of death.
infandum, regina, jubes renovare dolorem, You command me, O Queen, to revive unspeakable grief.
in flagrante delicto, In the commission of the act.
in forma pauperis, As a poor man.
infra dig., infra dignitatem, Beneath one's dignity.
in futuro, In future; henceforth.
in hoc signo vinces, In this sign thou shalt conquer. (The motto is said to have been adopted by Constantine after his vision of a cross in the heavens just before his decisive battle with Maxentius, A. D. 312.)
in limine, On the threshold; preliminarily.
in loco, In the place; upon the spot; in the place of.
in loco parentis, In the place of a parent.
in medias res, In the very midst of things.
in memoriam, In memory of.
in nomine, In the name of.
in nubibus, In the clouds; hence, undefined, uncertain, vague.
in nuce, In a nutshell.
in omnia paratus, Prepared for all things.
inopem copia fecit, Abundance has made him poor.
in pace, In peace.
in perpetuam rei memoriam, In everlasting remembrance of the event.
in perpetuum, For ever.
in pleno, In full.
in posse, In possible existence.
in propria persona, In one's own person.
in puris naturalibus, In a state of nature; stark naked.
in re, In the matter of.
in rerum natura, In the nature of things.
in sæcula sæculorum, For ever.
inscitia est adversum stimulum calces, It is mere folly to kick against the spur.
in situ, In its proper position.
in statu quo, In its former state.
in suspenso, In suspense.
in te, Domine, speravi (Ps. xxxi, *Vulg.*), In thee, O Lord, have I put my trust.
inter alia, Among other things.
inter arma leges silent, In the time of war the laws are silent.
inter canem et lupum, Between the dog and the wolf; twilight.
interdum vulgus rectum videt, Sometimes the rabble see what is right.
inter nos, Between ourselves.
inter pocula, At one's cups.
in terrorem, In terror; as a warning.
inter se, Amongst themselves.
inter spem et metum, Between hope and fear.
in totidem verbis, In so many words.
in toto, In the whole; entirely.
intra muros, Within the walls.

in transitu, On the passage; in course of transit.
intra parietes, Within the walls; private.
in usum Delphini, For the use of the Dauphin.
in utroque fidelis, Faithful in both.
in vacuo, In a vacuum.
in verba magistri jurare, To swear to a master's words; to accept opinions upon authority.
inverso ordine, In an inverse order.
in vino veritas, In wine there is truth. (When a person is under the influence of wine he shows himself in his true colors.)
invita Minerva, Minerva (Goddess of Wisdom) being unwilling; hence, without genius.
ipse dixit, He himself has said it; a mere assertion.
ipsissima verba, The identical words.
ipso facto, By the fact itself.
ipso jure, By the law itself.
ira furor brevis est, Anger is a brief madness.
ita est, It is so.
ita lex scripta est, Such is the written law.
italice, In Italian characters.
jacta alea est. (The exclamation of Julius Cæsar when he passed the Rubicon.) The die is cast.
jam redit et Virgo, redeunt Saturnia regna, Now the Virgin and the Saturnian age return. (Of the reign of Astræa, the Goddess of Justice, in the Golden Age.)
januis clausis, With closed doors; in secret.
joci causa, For the sake of a joke.
jubilate Deo (Ps. c. 1), O be joyful in the Lord.
jucundi acti labores, The remembrances of past labor is sweet.
judicium Dei, The judgment of God.
judicium parium aut leges terræ (Magna Charta), The judgment of our peers or the laws of the land.
jure divino, By divine law.
jure humano, By human law.
juris peritus, One learned in the law.
juris utriusque doctor, Doctor of both laws, i. e., of canon and civil laws.
jus canonicum, Canon law.
jus civile, The civil law.
jus divinum, The divine law.
jus et norma loquendi, The law and rule of speech.
jus gentium, The law of nations.
jus gladii, The right of the sword.
jus possessionis, The right of possession.
jus proprietatis, The right of property.
jus summum sæpe summa malitia est, Extreme law is often extreme wrong.
kairon gnothi (Gr.), Know your opportunity. (A saying of Pittacus, one of the Wise Men of Greece.)
kat' exochen (Gr.), Pre-eminently.
labitur et labetur in omne volubilis ævum, It glides on, and will glide on for ever.
laborare est orare, Work is prayer.
labor ipse voluptas, Labor itself is a pleasure.
labor omnia vincit, Labor overcomes all difficulties.
laborum dulce lenimen, The sweet solace of our labors.
lapis philosophorum, The philosopher's stone.
lapsus calami, A slip of the pen.
lapsus linguæ, A slip of the tongue.
lapsus memoriæ, A slip of the memory.
lares et penates, Household gods.
lateat scintillula forsan, Perchance some small spark may lie concealed. (The motto of the Royal Humane Society.)
latine dictum, Spoken in Latin.
laudari a viro laudato, To be praised by a man that is praised, i. e., by an eminent man.
laudationes eorum qui sunt ab Homero laudati, Praises from those who were themselves praised by Homer.
laudator temporis acti, One who praises the good old days.
laudum immensa cupido, An insatiable desire for praise.
laus Deo, Praise to God.
lector benevole, Kind, or gentle, reader.
legatus a latere (A legate from the side [of the Pope]), A papal legate.
lex loci, The law of the place.
lex non scripta, The unwritten law; the common law.
lex scripta, The written or statute law.
lex talionis, The law of retaliation.
lex terræ, The law of the land.
licentia vatum, The license allowed to poets.
limæ labor et mora, The labor and delay of the file; the slow and laborious polish of a literary work.
lis litem generat, Strife begets strife.
litem lite resolvere, To settle strife by strife; to end one controversy by another.
lite pendente, During the trial.
litera scripta manet, The written character remains.
loci communes, Common places.
loco citato, In the place quoted.
locus classicus, A classical passage; the acknowledged place of reference.
locus criminis, The scene of the crime.
locus in quo, The place in which.
longo intervallo, By or with a long interval.
lucidus ordo, A perspicuous arrangement.
lucri causa, For the sake of gain.
lupum auribus teneo, I hold a wolf by the ears; I have caught a Tartar.
lupus est homo homini, Man is a wolf to his fellow-man; one man preys on another.
lupus in fabula, The wolf in the fable; talk of the devil and he will appear.
lusus naturæ, A freak of nature; a deformed animal or plant.
magister ceremoniarum, A master of the ceremonies.
magna civitas, magna solitudo, A great city is a great solitude.
magnæ spes altera Romæ, A second hope of mighty Rome. (Any young man of promise.)
magna est veritas et prævalebit, Truth is mighty, and will prevail.
magna est vis consuetudinis, Great is the power of habit.
magnas inter opes inops, Poor in the midst of great wealth.
magnum bonum, A great good.
magnum opus, A great undertaking; the great work of a man's life.
magnum vectigal est parsimonia, Thrift is itself a good income.
mala fide, With bad faith; treacherously.
mali exempli, Of a bad example.
mali principii malus finis, The bad end of a bad beginning.
malis avibus, With unlucky birds, i. e., with bad omens.
malo modo, In an evil manner.
malus pudor, False shame.
manibus pedibusque, With hands and feet; tooth and nail.
manu forti, With a strong hand.
manu propria, With one's own hand.
mare clausum, A closed sea; a bay.
mars gravior sub pace latet, A more serious warfare is concealed by seeming peace.
materiem superabat opus, The workmanship was more valuable than the raw material.
mediocria firma, Moderate things are surest.
medio tutissimus ibis, You will travel safest in a middle course.
mega biblion mega kakon (Gr.), (Adapted from a maxim of Callimachus), A big book is a big nuisance.
megale polis megale eremia (Gr.), A great city is a great solitude.
meden agan (Gr.), Nothing in excess.
me judice, I being the judge; in my opinion.
memor et fidelis, Mindful and faithful.
memoria in æterna, In eternal remembrance.
mens agitat molem, A mind informs the mass. (Used by Virgil in a pantheistic sense of the world; often applied to an unwieldy, dull-looking person.)
mens sana in corpore sano, A sound mind in a healthy body.
mens sibi conscia recti, A mind conscious of its own rectitude.
meo periculo, At my own risk.
meo voto, At my own wish.
metron ariston (Gr.), Moderation is best. (A favorite saying of the philosopher Cleobulus.)
mia chelidon ear ou poiei (Gr.), One swallow does not make a spring.
mihi cura futuri, My care is for the future.
mirabile dictu, Wonderful to relate.
mirabile visu, Wonderful to see.
modo et forma, In manner and form.
modus operandi, The manner of working.
mollia tempora fandi, The favorable moment for speaking.
more majorum, After the manner of our ancestors.
more suo, In his usual manner.
mors janua vitæ, Death is the gate of [everlasting] life.
mors omnibus communis, Death is common to all men.
mos pro lege, Usage has the force of law.
motu proprio, Of his own accord.
multum in parvo, Much in little.
munus Apolline dignum, A gift worthy the acceptance of Apollo.
mutatis mutandis, The necessary changes being made.
mutato nomine, de te fabula narratur, With a mere change of name the story is applicable to you.
nascimur poetæ, fimus oratores, We are born poets, we become orators by training.
natale solum, The land of one's birth.
naturam expellas furca, tamen usque recurret, Though you may drive out Nature with a pitchfork, she will always come back; inborn character is ineradicable.

ne cede malis, sed contra audentior ito, Do not yield to misfortunes; on the contrary, go more boldly to meet them.
necessitas non habet legem, Necessity knows no law.
nec mora, nec requies, Neither delay, nor rest; without intermission.
nec pluribus impar, No unequal match for many. (The motto assumed by Louis XIV. when he planned the subjugation of Europe.)
nec prece, nec pretio, Neither by entreaty nor bribery; neither by paying nor praying.
nec scire fas est omnia, We are not allowed to know all things.
nec temere, nec timide, Neither rashly nor timidly.
nefasti dies, (Days on which judgment could not be pronounced nor public assemblies be held.) Unlucky days.
ne fronti crede, Don't trust to appearances.
nemine contradicente, No one contradicting.
nemine dissentiente, No one dissenting.
nemo fuit repente turpissimus, No man becomes a villain all at once.
nemo me impune lacessit, No one provokes me with impunity. (The motto of the Order of the Thistle.)
nemo mortalium omnibus horis sapit, No man is wise at all times; the wisest may make mistakes.
nemo solus satis sapit, No man is sufficiently wise of himself.
ne (non) plus ultra, Nothing further; the uttermost point; perfection.
ne puero gladium, Do not entrust a sword to a boy.
ne quid detrimenti respublica capiat, Lest the State suffer any injury. (The injunction given to the Dictator when invested with supreme authority.)
nervi belli pecunia, Money is the sinews of war.
ne sutor ultra crepidam, The shoemaker should not go beyond his last. (A Latin version of a rebuke said to have been addressed by Apelles to a shoemaker who pointed out some errors in the painting of a slipper in one of the artist's works, and then began to criticise other parts of the picture.)
ne tentes, aut perfice, Do not attempt, or carry it out thoroughly.
nihil tetigit quod non ornavit, He touched nothing without embellishing it.
nil admirari, To be astonished at nothing.
nil conscire sibi, nulla pallescere culpa, To be conscious of no fault, to turn pale at no accusation.
nil desperandum, There is no cause for despair; never despair.
nil nisi cruce. Nothing but by the cross; no reward without suffering.
nimium ne crede colori, Do not trust too much to your good looks.
nisi Dominus, frustra (Ps. cxxvii, 1. *Vulg.*), Unless the Lord is with us, our labor is vain.
nitor in adversum, I strive against opposition.
nobilitas sola est atque unica virtus, Virtue is the true and only nobility.
nolens volens, Whether willing or not.
noli me tangere, Touch me not.
non cuivis homini contingit adire Corinthum, It is not every man's lot to go to Corinth (the headquarters of luxury and refinement); hence, it is not every man's good fortune to be able to see great cities.
non deficiente crumena, While the money lasts.
non est inventus, He is not found.
non ignara mali, miseris succurrere disco, Not unacquainted with misfortune, I learn to succor the wretched.
non libet, It does not please me.
non multa, sed multum, Not many things, but much.
non nobis solum nati sumus, We are not born for ourselves alone.
non omne licitum honestum, Every lawful act is not necessarily honorable.
non omnia possumus omnes, We cannot, all of us, do everything.
non passibus æquis, Not with equal steps. (Sometimes applied to a person who has been outstripped by another in the race for fame, wealth, etc.)
non quis, sed quid, Not who, but what; measures, not men.
non sequitur, It does not follow; an unwarranted conclusion.
non sibi, sed patriæ, Not for himself, but for his native land.
non sum qualis eram, I am not what I once was.
nosce te ipsum, Know thyself.
noscitur e sociis, A man is known by the company he keeps.
nota bene (N. B.), Mark well.
novus homo (lit., a new man), A mushroom; an upstart.
nudis verbis, In plain words.
nulla dies sine linea, No day without a line, i. e., without something done.
nulli secundus, Second to none.
nunc aut nunquam, Now or never.
nunquam minus solus quam cum solus, Never less alone than when alone.
obiit, He (or she) died.
obiter dictum, A thing said incidentally; an unofficial expression of opinion.
obscurum per obscurius, Explaining an obscurity by something still more obscure.
oderint dum metuant, Let them hate so long as they fear. (A favorite saying of Caligula.)
odi profanum vulgus, et arceo, I hate the vulgar rabble, and drive them away.
odium theologicum, The hatred of theologians.
officina gentium, The workshop of the world.
o fortunatos nimium, sua si bona norint, O more than happy, if they only knew their advantages.
ohe! iam satis, Oh! there is now enough.
omne ignotum pro magnifico, Everything unknown is taken for magnificent.
omnem movere lapidem, To turn every stone; to make every exertion.
omne simile est dissimile, Every like is unlike; if there were not unlikeness there would be identity.
omne solum forti patria est, Every land is a brave man's home.
omne tulit punctum qui miscuit utile dulci, He has gained every point who has mixed the useful and the agreeable.
omnia ad Dei gloriam (1 Cor. x. 31. *Vulg.*), All things for the glory of God.
omnia mors æquat, Death levels all distinctions.
omnia mutantur, nos et mutamur in illis, All things are subject to change and we change with them.
omnia vincit amor, nos et cedamus amori, Love conquers all things, let us too yield to love.
omnia vincit labor, Labor conquers all things.
omnis amans amens, Every lover is demented.
operæ pretium est, It is worth while.
ora et labora, Pray and work.
ora pro nobis, Pray for us.
orate pro anima, Pray for the soul (of).
orator fit, poeta nascitur, The orator is made; the poet is born.
ore rotundo, With loud resounding voice.
o tempora, o mores, Alas for the times and the manners.
otiosa sedulitas, Laborious trifling.
otium cum dignitate, Ease with dignity.
otium sine dignitate, Ease without dignity.
pace, By leave of; with the consent of.
pace tua, By your leave.
pacta conventa, The conditions agreed on.
pallida mors æquo pulsat pede pauperum tabernas regumque turres, Pale Death, with impartial foot, knocks at the cottages of the poor and the palaces of kings.
palmam qui meruit ferat, Let him bear the palm who has deserved it.
par negotiis neque supra, Equal to, but not above his business.
par nobile fratrum, A noble pair of brothers; a well-matched pair.
pars pro toto, The part for the whole.
particeps criminis, A partaker in the crime; an accessory.
parturiunt montes, nascetur ridiculus mus, The mountains are in labor; a ridiculous mouse will be born.
parva componere magnis, To compare small things with great ones.
pater familias, The father of the family.
pater noster, Our father.
pater patriæ, The father of his country. (A title bestowed by the Roman Senate on Cæsar Octavianus Augustus.)
pathemata mathemata (Gr.), One learns by suffering.
patres conscripti, The Conscript Fathers; the Roman Senate. (Often jocularly applied to the members of a town council.)
patris gar esti pas'hin an pratte tis en, Every land where a man is successful is his native land.
pax orbis terrarum, The sovereignty of the world. (A legend of frequent occurrence on Roman coins.)
pax Romana, The Roman Empire.
pax vobiscum, Peace be with you.
peithein dora kai theous logos (Gr.), Gifts persuade even the gods, as the proverb says.
per, By, through, by means of.
per ambages, By circuitous ways; with circumlocution.
per angusta ad augusta, Through trial to triumph.
per aspera ad astra, Through rough ways to the stars; through suffering to renown.
per fas et nefas, Through right and wrong.

perfervidum ingenium Scotorum, The intensely earnest character of the Scotch.
per gradus, Gradually.
periculum in mora, There is danger in delay.
per interim, In the meantime.
per mare, per terras, By sea and land.
per saltum, By a leap; by fits and starts.
per se, In itself; for its own sake.
petitio principii, A begging of the question.
placet, It seems right; it is approved of. (The formula by which the members of an Œcumenical Council or a University senate record affirmative votes. The negative formula is non placet.)
poeta nascitur, non fit, The poet is born, not made.
pondere, non numero, By weight, not by number.
pons asinorum, The bridge of asses.
populus vult decipi, decipiatur, The people wish to be deceived, let them be deceived.
post bellum auxilium, Aid after the war.
post equitem sedet atra cura, Black care sits behind the rich man on horseback; riches and high position bring cares.
præmonitus, præmunitus, Forwarned, forearmed.
prima facie, At the first glance.
principia, non homines, Principles, not men.
principiis obsta, Resist the first advances.
prior tempore, prior jure, First in point of time, first by right; first come first served.
pro aris et focis, For our altars and hearths; for our homes.
probatum est, It is proved.
probitas laudatur et alget, Honesty is praised, and left to starve.
pro bono publico, For the public good.
pro Deo et ecclesia, For God and the Church.
pro forma, As a matter of form.
proh pudor, For shame.
pro memoria. As a memorial.
pro rege, lege, grege, For the king, the law, and the people.
pugnis et calcibus, With fists and heels; with might and main.
punica fides, Punic faith; treachery.
quæ fuerunt vitia mores sunt, What were once vices are now in fashion.
quæ nocent, docent, Things which injure, instruct; we are taught by painful experience; what pains us, trains us.
qualis ab incepto processerit et sibi constet, as he begins, let him go on, and be consistent with himself.
qualis rex, talis grex, Like king, like people.
qualis vita, finis ita, As life is, so will its end be.
quamdiu se bene gesserit, As long as he behaves himself; during good behavior.
quandoque bonus dormitat Homerus, Even good Homer nods sometimes; the wisest make mistakes.
quanti est sapere, How valuable is wisdom.
quantum libet, As much as you like.
quantum meruit, As much as he deserved.
quantum mutatus ab illo, How changed from what he was.
quem dî diligunt adolescens moritur, He whom the gods love dies young.
quid faciendum? What is to be done?
quid nunc? What now? what news?
quid pro quo, One thing for another; an equivalent.
quid rides? Why do you laugh?
qui nimium probat, nihil probat, He who proves too much proves nothing.
qui non proficit, deficit, He who does not advance, loses ground.
quis custodiet ipsos custodes? Who shall keep the keepers?
qui tacet consentire videtur, He who keeps silent is assumed to consent; silence gives consent.
qui timide rogat docet negare, He who asks timidly courts denial.
quoad hoc, To this extent.
quo animo, With what intention.
quocunque jeceris stabit, Wherever you throw it, it will stand. (The motto of the Isle of Man.)
quocunque modo, In whatever manner.
quōcunque nomine, Under whatever name.
quod avertat Deus! God forbid!
quod bene notandum, Which is to be especially noted.
quod erat demonstrandum, Which was to be proved. [Q. E. D.]
quod erat faciendum, Which was to be done. [Q. E. F.]
quod hoc sibi vult? What does this mean?
quod non opus est, asse carum est (a saying of Cato, quoted by Seneca), What is not necessary is dear at a penny.
quod vide [q. v.], Which see.
quo fata vocant, Whither the Fates call.
quo fas et gloria ducunt, Where duty and glory lead.
quorum pars magna fui, Of whom I was an important part.
quos Deus vult perdere, prius dementat (probably altered from a passage in *Euripides*), Those whom God wills to destroy he first deprives of their senses.
quot homines, tot sententiæ, Many men, many minds.
rara avis in terris, nigroque simillima cygno, An extremely rare bird, and very like a black swan (supposed not to exist). The first four words are often used ironically.
ratione soli, According to the soil.
recte et suaviter, Justly and mildly.
rectus in curia, Upright in court; with clean hands.
redolet lucerna, It smells of the lamp. (Said of any labored literary production.)
re infecta, The business being unfinished.
relata refero, I tell the tale as I heard it.
religio loci, The spirit of the place.
rem acu tetigisti, You have touched the matter with a needle; you have described it accurately.
remis velisque, With oars and sails; with all one's might.
requiescat in pace, May he rest in peace.
res angusta domi, Narrowed circumstances at home; limited means.
res est sacra miser, A man in distress is a sacred object.
res gestæ, Things done; exploits.
res judicata, A matter decided; a case already settled.
respice finem, Look to the end.
resurgam, I shall rise again.
ridere in stomacho, To laugh inwardly; to laugh in one's sleeve.
ride si sapis, Laugh if you are wise.
rixatur de lana sæpe caprina, He often quarrels about goats' wool, i. e., trifles.
ruat cœlum, Let the heavens fall.
rudis indigestaque moles, A rude and undigested mass.
rus in urbe, A residence in or near town, with many of the advantages of the country.
rusticus expectat dum dēfluat amnis, at ille lābitur, et labetur in omne volubĭlis ævum, The peasant waits till the river shall cease to flow, but it glides on, and will glide on forever.
sal atticum, Attic salt, i. e., wit.
salvo jure, Without prejudice.
salvo pudore, Without offense to modesty.
sapere aude, Dare to be wise.
sat cito, si sat bene, Quickly enough if well enough.
satis eloquentiæ, sapientiæ parum, Eloquence enough, but too little wisdom.
satis superque, Enough, and more than enough.
sat pulchra, si sat bona, Fair enough if good enough; handsome is that handsome does.
secundum artem, According to the rules of art.
semel abbas, semper abbas, Once an abbot, always an abbot.
semel insanivimus omnes, We have all been mad at some time.
semper avarus eget, The avaricious man is always in want.
semper fidelis, Always faithful.
semper idem, Always the same.
semper paratus, Always prepared.
semper timidum scelus, Crime is always fearful.
sequiturque patrem, non passĭbus æquis, He follows his father, but not with equal steps.
sero venientibus ossa, The bones for those who come late; those who come late get the leavings.
serus in cœlum redeas, May it be long before you return to heaven; long life to you.
servare modum, To keep within bounds.
servus servorum Dei, The servant of the servants of God. (One of the titles of the pope.)
sic eunt fāta hominum, Thus go the destinies of men.
sic itur ad astra, Thus do we reach the stars.
sic passim, So in various places.
sic semper tyrannis, Ever thus to tyrants.
sic transit gloria mundi, So the glory of this world passes away. (An exclamatory phrase used at the installations of the popes.)
sicut ante, As before.
sicut patribus, sit Deus nōbis, May God be with us, as he was with our fathers.
sic volo, sic jubeo, stat pro ratiōne voluntas, Thus I will, thus I command, my pleasure stands for a reason.
sic vos non vobis, Thus do ye, but not for yourselves. (The commencement of each of four verses which Virgil wrote, but left incomplete, on the occasion when Bathyllus claimed some lines really written by the poet, who alone was able to complete the verses, and thus prove their authorship. Used of persons by whose labors others have unduly profited.)

si Deus nobiscum, quis contra nos? If God be with us, who shall be against us?
sile et philosophus esto, Hold your tongue, and you will pass for a philosopher.
simile gaudet simili, Like loves like.
similia similibus curantur, Like things are cured by like. (The principle of homœopathy.)
si monumentum requiris, circumspice, If you seek my monument, look around. (The epitaph of Sir Christopher Wren in St. Paul's Cathedral, of which he was the architect.)
simplex munditiis, Simple, in neat attire; neat, not gaudy.
sine cura, Without care or change.
sine dubio, Without doubt.
sine mora, Without delay.
sine præjudicio, Without prejudice.
sine qua non, Without which, not; an indispensable condition.
si parva licet componere magnis, If it be lawful to compare small things with great.
sit tibi terra levis, May the earth lie light upon thee. (An inscription often found on Roman tombstones; frequently abbreviated to S. T. T. L.)
si vis pacem, para bellum, If you wish for peace, prepare for war.
skene pas ho bios (Gr.), Life is a stage.
solitudinem faciunt, pacem appellant, They make a wilderness and call it peace.
sophen de miso (Gr.), I hate a blue-stocking.
spes sibi quisque, Let each man's hope be in himself; let him trust to his own resources.
speude bradeos (Gr.), Make haste slowly. (A favorite saying of Augustus Cæsar.)
splendide mendax, Nobly untruthful; untrue for a good object. (Often used ironically of an unblushing liar.)
sponte sua, Spontaneously; of one's (or its) own accord.
spretæ injuria formæ, The affront offered to her slighted beauty. (In allusion to the resentment of Juno because Paris gave the golden apple to Venus as the prize of beauty.)
stat magni nominis umbra, He stands the shadow of a mighty name.
stat nominis umbra, An adaptation of the preceding, used by "Junius" as the motto of his *Letters*.
status quo, status in quo, statu quo, The state in which.
status quo ante bellum, The state in which the belligerents were before war commenced.
sta, viator, heroem calcas, Stop, traveler, thou treadest on a hero's dust. (The epitaph inscribed by Condé over the grave of his great opponent, Merci.)
stemmata quid faciunt? Of what value are pedigrees?
studium immane loquendi, An insatiable desire for talking.
sua cuique voluptas, Every man has his own pleasures.
suaviter in modo, fortiter in re, Gentle in manner, resolute in execution.
sub colore juris, Under color of law.
sublata causa, tollitur effectus, The effect ceases when the cause is removed.
sub pœna, Under a penalty.
sub rosa, Under the rose; secretly.
sub silentio, In silence; without formal notice being taken.
sub specie Under the appearance of.
sub voce, Under such or such a word.
sui generis, Of its own kind; unique.
summum jus, summa injuria est, The rigor of the law is the height of oppression.
sumptibus publicis, At the public expense.
suo marte, By his own powers or skill.
suppressio veri, suggestio falsi, The suppression of the truth is the suggestion of a falsehood.
surgit amari aliquid, Something bitter arises.
suum cuique, Let each have his own.
suus cuique mōs, Every one has his own particular habit.
tangere ulcus, To touch a sore; to reopen a wound.
tantæne animis cœlestibus iræ, Can such anger dwell in heavenly minds?
telum imbelle sine ictu, A feeble dart, devoid of force. (Applied, fig., to a weak argument.)
tempori parendum, We must move with the times.
tempus edax rerum, Time the devourer of all things.
tempus fugit, Time flies.
tempus omnia revelat, Time reveals all things.
tenax propositi, Firm of purpose.
teres atque rotundus, A man polished and complete.
terra cotta, (It.), Baked clay.
terra firma, The firm land; the continent.
terra incognita, An unknown land.
tertium quid, A third something (produced by the union of two different things, or the collision of two opposing forces).
teste, By the evidence of.
timeo Danaos et dona ferentes, I fear the Greeks, even when they bring gifts. (Used of distrusting the kindness of a foe.)
to kalon (Gr.), The beautiful.
to prepon (Gr.), What is becoming or decorous.
tot homines, quot sententiæ, So many men, so many minds.
trahit sua quemque voluptas, Each man is led by his own taste.
transeat in exemplum, Let it pass into a precedent.
tria juncta in uno, Three joined in one (the motto of the Order of the Bath).
trium literarum homo, A man of three letters; a thief (*fur* being Latin for thief).
Troja fuit, Troy was; Troy has perished.
Tros Tyriusve mihi nullo discrimine agetur, Trojan or Tyrian shall have the same treatment from me.
truditur dies die, One day follows hard on another.
uberrima fides, Implicit faith.
ubi bene ibi patria, Where one is well off, there is his country.
ubi jus incertum, ibi jus nullum, Where the law is uncertain, there is no law.
ubi mel ibi apes, Where the honey is, there are the bees.
ubi tres medici, duo athei, Where there are three physicians there are two atheists.
ultima ratio regum, The last argument of kings (engraved on French cannon by order of Louis XIV.).
ultimus Romanorum, The last of the Romans. (Used by Brutus of Cassius.)
unguibus et rostro, With claws and beak.
unguis in ulcere, A nail in the wound, to keep it open.
urbem lateritiam invenit, marmoream reliquit, He found the city (Rome) brick, but left it marble.
usque ad nauseam, To disgust.
usus loquendi, Usage in speaking.
ut infra, As stated or cited below.
uti possidetis, As you now possess. (A diplomatic phrase meaning that at the termination of hostilities the contending parties are to retain whatever territory they may have gained during the war.)
ut supra, As stated or cited above.
vade in pace, Go in peace.
væ victis, Woe to the conquered. (Said to have been the exclamation of Brennus, when he threatened to exterminate the Romans.)
valeat quantum valere potest, Let it pass for what it is worth.
Vare, legiones redde, Varus, give back my legions. (A frequent exclamation of Cæsar Augustus when he thought of the defeat and slaughter of Quinctilius Varus with three legions by the Germans. Often used of a commander who has recklessly sacrificed troops, or of a financier who has wasted funds.)
variæ lectiones, Various readings.
varium et mutabile semper femina, Woman is always a changeable and capricious thing.
veluti in speculum, As in a mirror.
venalis populus, venalis curia patrum, The people and the senators are equally venal.
vendidit hic auro patriam, He sold his country for gold.
venenum in auro bibitur, Poison is drunk out of gold; the rich run more risk of being poisoned than the poor.
venia necessitati datur, Pardon is granted to necessity; necessity has no law.
venienti occurrite morbo, Meet the coming disease; take it in time; prevention is better than cure.
venit summa dies et ineluctabile tempus, The last day has come, and the inevitable doom.
veni, vidi, vici, I came, I saw, I conquered. (The laconic despatch in which Julius Cæsar announced to the Senate his victory over Pharnaces.)
ventis secundis, With favorable winds.
vera incessu patuit dea, She stood revealed, an undoubted goddess in her walk.

quien poco sabe, presto lo reza (Sp.), He who knows little soon tells it.
quien sabe? (Sp.), Who knows?
qu'il soit comme il est désiré, Let it be as desired.
qui m'aime aime mon chien, Love me, love my dog.
qui n'a santé, n'a rien, He who has not health, has nothing.
qui va là? Who goes there?
qui vive? Who goes there?
raison d'état, A state reason.
raison d'être, The reason for a thing's existence.
régime, Mode or style of rule or management.
rendezvous, A place of meeting.
répondez s'il vous plaît (r. s. v. p.), Reply if you please.
répondre en Normand, To answer in Norman; to speak evasively.
résumé, A summing up.
rete nuova non piglia uccello vecchio (It.), A new net won't catch an old bird.
revenons à nos moutons, Let us return to our sheep; let us come back to our subject.
rien n'est beau que le vrai, There is nothing beautiful but truth.
rira bien qui rira le dernier, He laughs well who laughs last.
rire entre cuir et chair, rire sous cape, To laugh in one's sleeve.
robe de chambre, A dressing-gown; a morning-gown.
robe de nuit, A night-dress.
rôle, A part in a performance.
rouge, Red coloring for the skin.
ruse de guerre, A military stratagem.
sanan cuchilladas, mas no malas palabras (Sp.), Wounds from a knife will heal, but not those from the tongue.
sans cérémonie, Without ceremony.
sans peur et sans reproche, Fearless and stainless.
sans rime et sans raison, Without rhyme or reason.
sans souci, Free from care.
sauve qui peut, Save yourselves.
savant, A man of science.
savoir faire, Tact.
savoir vivre, Good breeding.
sdegno d'amante poco dura (It.), A lover's anger is short-lived.
séance, A sitting.
selon les règles, According to rule.
sempre il mal non vien per nuocere (It.), Misfortune is not always an evil.
si non è vero, è ben trovato (It.), If it is not true, it is cleverly invented.
Sie sehen gut aus (Ger.), You look well.
soirée, An evening party.
souffler le chaud et le froid, To blow hot and cold.
so viel ich weiss (Ger.), As far as I know.

Sturm und Drang (Ger.), Storm and stress.
table d'hôte, Table of the host.
tâche sans tache, A work without a stain.
tant mieux, So much the better.
tant pis, So much the worse.
tel maître, tel valet, Like master, like man.
tête-à-tête, A conversation between two parties.
tiens à la vérité, Maintain the truth.
tiens ta foi, Keep thy faith.
toujours perdrix, Always partridges; the same thing over and over again.
toujours prêt, Always ready.
tour de force, A feat of strength or skill.
tourner casaque, To turn one's coat; to change sides.
tout-à-fait, Wholly; entirely.
tout-à-l'heure, Instantly.
tout au contraire, On the contrary.
tout-à-vous, Entirely yours.
tout bien ou rien, All or nothing.
tout-de-suite, Immediately.
tout ensemble, The whole.
tout le monde est sage après le coup, Everybody is wise after the event.
traduttori, traditori (It.), Translators are traitors.
trousseau, Wedding outfit.
tutte le strade conducono a Roma (It.), All roads lead to Rome.
Uebung macht den Meister (Ger.), Practice makes perfect.
un bienfait n'est jamais perdu, A kindness is never lost.
un sot à triple étage, A consummate fool.
un "tiens" vaut mieux que deux "tu l'auras," One "take it" is worth two "you shall have it"; A bird in the hand is worth two in the bush.
valet de chambre, An attendant.
vedi Napoli e poi muori (It.), See Naples and then die.
vérité sans peur, Truth without fear.
Viele Händ'machen bald ein End' (Ger.), Many hands make quick work.
vi et armis, By force of arms; by violence.
vigueur de dessus, Strength from on high.
vino dentro, senno furore (It.), When the wine is in, the wit is out.
vis à vis, Face to face.
vive la bagatelle, Success to trifles.
vive le roi, Long live the king.
voilà, See there; there is; there are.
voilà tout, That's all.
voilà une autre chose. That's quite another thing.
voir le dessous des cartes, To see the face of the cards; to be in the secret.
vous y perdrez vos pas, You will have your walk for nothing; you will lose your labor over it.
Was fehlt Ihnen? (Ger.), What is the matter with you?
Wie die Arbeit, so der Lohn(Ger.), As the labor, so the reward.
Zeitgeist (Ger.), The spirit of the age.

WORDS OFTEN MISPRONOUNCED

It is in the delicate but firm utterance of the unaccented vowels with correct sound that the cultured person is most surely distinguished from the uncultured.—*Richard Grant White.*

KEY TO PRONUNCIATION

ä, as in farm, father; *à*, as in ask, fast; *ă*, as in at, fat; *ā*, as in day, fate; *â*, as in care, fare; *a* (unmarked) represents the sound as neutral or obscure, as in final, infant. *ĕ*, as in met, set; *ē*, as in me, see; *ẽ*, as in her, ermine; *e* (unmarked) represents the sound as neutral or obscure, as in novel. *ĭ*, as in pin, ill; *ī*, as in pine, ice. *ŏ*, as in not, got; *ō*, as in note, old; *ô*, as in for, fought; *o͝o*, as in cook, look; *o͞o*, as in moon, spoon; *o* (unmarked) represents the sound as neutral or obscure, as in combine. *ŭ*, as in cup, duck; *ū*, as in use, amuse; *û*, as in fur, urge; *u* (unmarked) represents the sound as neutral or obscure, as in circus.

ü cannot be exactly represented in English. The English sound of u as in *luke* and *duke* resembles the original sound of *ü*. TH, as in the, though. N represents the nasal tone (as in French) of the preceding vowel, as in encore (*äN'-kōr'*). K represents ch as in German ich, ach.

ABBOTSFORD, SCOTLAND, HOME OF SIR WALTER SCOTT

LITERATURE

History and literature are kindred sciences; both are the written story of life which has been lived. History places before us the life of action, and the heroes of history are chiefly pioneers, statesmen, soldiers, merchants, inventors, leaders of industry. Literature presents the inner life of thought and emotion and ideals. Its pages are written for us by historians and novelists and poets and philosophers. Both through deed and word, history and literature reveal to us the life of a nation.

But the life of a nation is not an individual thing. There is an intercourse of nations, as well as an interdependence. Literature, as well as history, reveals the influence of this universal contact. It is only by a survey of all literatures that any single literature can be appreciated or understood. The following tables and discussions present such a survey:

COMPARATIVE VIEW OF ANCIENT ORIENTAL LITERATURES

2000 B. C. TO 1500 B. C.

INDIA. Earliest Vedic hymns in Sanskrit. These Vedic hymns were probably sung or repeated for a thousand years before they were committed to writing.

PERSIA. Earliest metrical hymns.

CHINA. Development of ideo-phonetic writing. Odes, hymns, laws, historic documents preserved by imperial decree.

HEBREW. Age of Abraham and the patriarchs. Book of Job.

BABYLONIA AND ASSYRIA. Cuneiform inscriptions on stone slabs, and on brick and clay tablets, delicate inscriptions on glass and metal. Chaldean account of the deluge compiled about 2000 B. C.

Golden age of Babylonian literature and rise of Assyrian literature.

ARABIA. War-loving tribes roving over the table lands of Arabia produced an oral literature of pastorals, rude songs, and triumphal odes.

EGYPT. Hieroglyphic inscriptions on monuments and papyri. Hermetic books (treatises on alchemy, magic, etc.).

Book of the Dead, Ptah-Hotep's moral treatise.

1500 B. C. TO 1000 B. C.

INDIA. Collection of Vedic hymns, embodying the system of philosophy; The Institutes of Manu, regulating moral and social life.

PERSIA. Age of Zoroaster. Compilation of the Zend, the only existing monument of a once extensive literature.

CHINA. The Five Great Classics of Antiquity; the most important of these is the Book of Changes.

HEBREW. The Age of Moses and the Pentateuch. Hebrew anthems and elegies and wisdom literature, culminating in the psalms of David and proverbs of Solomon.

BABYLONIA AND ASSYRIA. Preservation of records in royal libraries.

Inscriptions elaborately wrought on stone and terra cotta. Chief cities made depositories of royal libraries. Babylonian literature rich in fiction, astrology, law, grammar, history, mathematics, etc.

ARABIA. Inscriptions on walls, tombs, dikes, and bronze tablets.

EGYPT. Great library founded. Golden Age of Rameses. Literature rich in epic poetry, odes, ballads, hymns, romances, fables, history, science, etc.

1000 B. C. TO 500 B. C.

INDIA. Ancient Vedic translations contained in great epics and lyrics. The Ramayana and the Mahabharata are called the Iliad and the Odyssey of the Sanskrit. Dramas, tales, fables, and epigrams abound.

PERSIA. Preservation and enlargement of books of sacred literature. Compilation of the Zend-Avesta.

CHINA. Age of Confucius. A period of great literary activity. Compilation of the sacred learning of the Chinese by Confucius and the introduction of higher ethical ideals.

HEBREW. Songs of lamentation and prophetic books of the period of the captivity. The Idylls of Ruth and Esther.

ASSYRIA. Decline of Babylonia and revival of arts and sciences in Assyria.

ARABIA. Increase of learning among the Arabs. Development of language and literature. Three poets, Amru-el-Kais, Tarafah, and Antar.

EGYPT. Age of decline. Simplified form of writing introduced.

LITERATURE OF INDIA

The literature of India is vast beyond all comprehension. The library of one of the kings is said to have contained so many books that a hundred Brahmans were employed in taking care of it, and a thousand dromedaries were required to convey it from place to place. Literary activity in India is as great to-day as in the past, and vast stores of learning are accumulated there.

The most ancient of Hindu literatures is the Sanskrit, a branch of the Indo-European group of languages, which includes the Persian, Greek, Latin, Teutonic, Slavonic, Celtic, and Scandinavian. The Sanskrit is supposed to bear the closest resemblance to the primitive language, from which all this group of languages sprung. It is the sacred language of the Brahmans, and, although classed to-day among the dead languages, it is kept alive in the conversation and writings of the priestly caste. It has furnished a rich storehouse for European scholars.

Sanskrit appears in its most ancient form in the Vedas, which date, at least, one thousand years before Christ; these Vedic hymns were probably sung and recited many hundred years before they were committed to writing. The history of Sanskrit literature divides into two periods, the Vedic and the classic. These periods partly overlap each other, but the later Vedic works are distinguished by the subjects with which they deal and by their archaic style.

The word Veda means "knowledge," books of knowledge. These sacred books of the Brahmans are divided into four classes: (1) Rig-Veda, or lore of praise (hymns); (2) Yajur-Veda, lore of prayer (sacrificial rites); (3) Sama-Veda, or lore of tunes (chants); and (4) Atharva-Veda, devotional services (incantations), to be used in sacrifices and other religious offices. The last three Vedas are medley extracts from the Rig-Veda. Each Veda is divided into two parts, the first consisting of prayers, and the second of commandments. Six branches of Vedic science are included under the term Vedanga, namely, phonetics, music, grammar, etymology, astronomy, ceremonials. These books also contain legends and philosophical

and scientific discussions, as well as religious teachings, for the Sanskrit literature belongs to an imaginative and creative, as well as to a serious and thoughtful, people.

An ancient Hindu work of great importance is the Code of Manu, dating at least one thousand years before the Christian era. The institutes of Manu regulated the moral and social life of the people, and prescribed punishments. Purity of life was strictly enjoined.

Two interesting epic poems belong to the classic period, the Mahabharata, a semi-historical poem, treating of ancient rivalries and wars, and the Ramayana, a religious poem, describing the incarnation of Vishnu. The later Sanskrit, dating about one hundred before Christ, is varied in its theme; however, it lacks the dignity of thought which characterizes the early Sanskrit.

Many speculative philosophies have had their birth in India, some of them in strict opposition to the teaching of the Vedas. Five centuries before the Christian era a newer and purer religion was taught by a monk of royal birth. He was afterwards known as Buddha, the Enlightened One. He taught his people to live in charity, one with another, to practice truth and morality, to overthrow caste, and to abolish Brahman sacrifices. The sacred books of Buddha are called the Tripitaka; one of them is metaphysical, one disciplinary, and one contains the discourses of Buddha. They are written in a dialect of the later Sanskrit, and are very voluminous, containing more than five times as much matter as in both the New and the Old Testament. The followers of Buddha are said to number over three hundred millions. Buddhism is not only one of the great religions of India, but it has millions of followers in Thibet, China, Japan, Corea, and all the countries of the far East. It would be impossible to acknowledge the full indebtedness of Western literatures to the literary thought of India. We have borrowed from every department, but nowhere have we found richer treasures than in romance and fairy tale. Stories written in far-away India have been the delight of our story-tellers; many of the fairy tales of our nurseries were first written for the joy of some Hindu child. India is rich in literary treasures, and we are richer because we have borrowed from these treasures.

PERSIAN LITERATURE

The earliest language of Persia is the Zend, which is closely allied to the Sanskrit. The Vedic Aryans and the Zend-speaking Aryans originally belonged to one community, and spoke one language. Both language and literature reveal this unity of origin. We find similarities in their cuneiform inscriptions. Like the Sanskrit of India, the earliest literature of Persia is preserved for us in the sacred writings. These are known as the Zend-Avesta, or commentary and text.

The Avesta is among the most important of the sacred writings found in the whole range of Indo-European literatures. These writings are attributed by the Persians to Zoroaster, who lived probably twelve or fifteen centuries before the Christian era. Little is known of Zoroaster, but it is said that like Buddha he was the great teacher who reformed the religious system of his country. The Parsees, or Fire-Worshipers of India and Persia, are to-day the followers of Zoroaster.

The Avesta, though attributed to Zoroaster, is not the work of a single man, but, like the Vedas, is made up from fragments, which had been repeated orally, and thus brought down through generations. It is a collection of professed revelations, instructions concerning ways of living, prayers and confessions made to some Supreme Being and to inferior gods, simple hymns, some of which are grand, both in word and thought. The Avesta recognizes One Supreme Being, and exhorts to a pure way of living. "Forsake the wrong," says Zoroaster, "and choose one of the two spirits, Good or Base; you cannot serve both."

Besides the Zend-Avesta, there are two other sacred books, one a book of prayers and hymns, and the other prayers to the Genii of the days. The religion of Zoroaster prevailed for many years in Persia. The Greeks adopted some of the ideas into their philosophy, and through them its influence was extended over Europe.

When the Greeks under Alexander (331 B. C.) conquered Persia and burned the capital at Persepolis, they destroyed many inscriptions and valuable records in the great library, which had been collected by the Persian kings. After the Greek conquest, the Persian language was forced to give place to the language of their conquerors, first the Greek, and then the Arabic speech of the Mohammedans.

In the Ninth Century, A. D., native dynasties were restored, and from this time dates modern Persian literature, which flourished for nine centuries. But the literature of modern Persia is very unlike that of the ancient Empire. Greek thought, together with the arts and sciences of Arabia and the religion of Mohammed, had transformed the life and spirit of the people, and we find an entirely different literature in this later period. Satires, love ditties, songs, and religious hymns appeared; many names of minstrels who belonged to the Tenth Century are found. The first Persian poet who impressed his stamp upon every form of poetry was Rudagi. About 1000 A. D., Prince Cabus is quoted as the author of the "Perfection of Rhetoric" and also of poems. A generation later Anvari wrote much verse in honor of the king. To these same centuries belong Dakiki and Firdausi, court poets; Tabari, court historian; Sadi, the great moral teacher; Hafiz, the writer of love lyrics and pleasure songs; Omar Khayyam, well known from the excellent translations of his quatrains into English.

CHINESE LITERATURE

The literature of China leads us back to the remotest past in an almost unbroken line of writings. The prose writings of the Chinese philosophers, the plain, grave, and concise rendering of moral maxims, and the primeval poetry, including the oldest temperance ode in the world, were preserved in the Sacred Books, edited by Confucius.

The first published book on record in China is the "Book of Changes," dating originally about 1150 B. C. Little is known of this mysterious book, but it was evidently a treatise on philosophy; centuries later it became the foundation for a book of divination. The "Book of History" is a compilation made by Confucius from old manuscripts, records of years between 2400 B. C. and 700 B. C. The "Book of Rites," the real guide of Chinese life, was also compiled from ancient sources and is said to be the work of a duke living sometime between 1200 B. C. and 1100 B. C. This "Book of Rites" is still the ceremonial which is the soul of the Chinese. These are the most important of the books known as the "Five Classics." Following these are the "Four Books," all by followers and pupils of Confucius. Together they form a body of records or annals, written in brief paragraphs with no literary form; they are simple statements of fact or doctrine. They might be considered mere curiosities of literature, but for their unbounded influence over a great nation. This influence is easily understood upon closer acquaintance for the recorded sayings, or conversations, contain the essence of wisdom. The educated classes committed to memory pages from the Classical Books, while the wise maxims became as familiar to the people as nursery songs. The aim of all these writings was to build lofty principles of thought and action which should govern men in every relation of life. "The Great Learning," based upon the older teachings, shows political knowledge and judgment in its suggestions. These great books directed the people with such words as:

"The ancients, wishing to order the empire, first ordered well their own states. Wishing to order well their states, they first regulated their families. Wishing to regulate their families, they first cultivated their persons. Wishing to cultivate their persons, they first rectified the heart."

"What a man dislikes in his superiors, let him not display in the treatment of his inferiors."

"Learn the past, and you will know the future."

Commentaries by the thousands have been written on these books, and form a great body in Chinese libraries.

Mencius (372 B. C.), the last and greatest apostle of Confucius, has been called the Plato of his nation. He was the first to maintain the goodness of human nature unmolded by education. The spirit inherent in the Chinese classics was, "Walk in the trodden paths and seek wisdom from ancient teachings." Mencius threw his influence into society about him, insisted upon changes in his degenerate age, and used humor and satire to sharpen his discussions.

Printing was invented in China about 600 A. D., and was then chiefly used in publication of chronicles of information or history. Each dynasty has its official chronicle, making a history of the nation from the Third Century B. C. to the middle of the Seventeenth Century.

The system of Chinese education has tended to compress the minds of the students into a narrowness of thought, but this helped observation of detail and may account for the value of their topographical works, which are scarcely equaled in any other literature. Historical and literary encyclopedias are well arranged and have been closely studied by European authors, who speak highly in their praise.

The first great thoughts of this seemingly prosaic and practical people were put in the form of poetry, and their songs and ballads date back beyond any knowledge of authors. In the time of Confucius (551–478 B. C.) there was an official collection of some 3,000 songs, which he arranged, and from which he made his "Book of Odes." The subjects of these odes are from the everyday life and simple ways of antiquity. They are written in rhyme and give most pleasing pictures with delicate touches. Epic poetry, conspicuous in India, is wholly lacking in China, the historical romance taking its place. Dramas abound, but in very primitive form, while didactic poems are common, official documents being sometimes issued in this form.

In China is found the philosophy of Confucius, prominently ethical; the philosophy of Tao, almost purely material; and the philosophy of Buddha, preëminently metaphysical. These seem to hold a joint power over the people; effects of this mixture can be traced in their literature. Many discussions in moral philosophy are popular among Chinese scholars. The Chinese have, also, romances of all kinds, light poetry, and works on history, geography, and travel. They are a reading people. Translators are bringing books out from their hoard of treasures, helped by a well-executed dictionary of the Chinese language.

The countries of Burmah, Siam, and Thibet are related to China by having the same monosyllabic language. To each of these nations belongs, also, a valuable literature, reaching back to antiquity.

HEBREW LITERATURE

Hebrew literature stands first among the literatures of antiquity. A universal significance has been given to it on account of the remarkable influence it has had in forming the thought of Christian and Mohammedan nations. From it we get our Bible, which gives us our revelation of God and our fundamental ideas of worship. Hebrew literature reaches back to remote antiquity. It is the story of a people who believed themselves selected by God to be the conservators of His revelation. It is the marvelous story of a race, which for thousands of years endured captivity, dispersion, wars, and persecution of every kind, and yet preserved its nationality, its peculiarities of worship, its laws and language, traditions and literature. In its deep religious spirit, in its credibility, and in the vigor of its poetry, it far surpasses the literature of any other nation of antiquity. It constitutes a remarkable monument of the early history and spiritual development of the human race. Hebrew law has been studied and imitated by lawmakers of every nation and, like their literature, is unsurpassed in originality and vigor of expression.

Only a small part of the great mass of Hebrew writing has come down to us. Of this, the most important is that contained in the Hebrew

Scriptures. The composition of the books of the Old Testament Scriptures extends from the time of David to the Maccabees, a period of at least 900 years. Before this, like all ancient peoples, the Hebrews by oral tradition handed down their sagas, songs, fragments of history, inscriptions, laws, and priestly registers.

The prevalent idea of Hebrew literature is Monotheism. The Hebrews believe they are a peculiar people, chosen of God, hence their passionate enthusiasm for independence and the preservation of their nationality. While other nations were creating their divinities marred by human passions, and were painting them in the glowing colors of their poetry, as engaged in wars and feasting, sensuous love or hate, revenge or revelry, the Hebrew poets pictured their God in the most sublime language, simple, just, severe. "God is a Spirit, and they that worship Him must worship Him in spirit and in truth." Love and wisdom are His attributes; power and majesty are His, and yet paternal care and wisdom. In this contemplation of Jehovah the Hebrews reached the very source of enthusiasm, which caused their poets so fervently to utter the denunciations and promises of the Eternal in a tone suited to the inspired of God. Under whatever form they wrote, law, prophecy, history, lyric poetry, philosophy, or speculation, God and His providences are their special theme.

The simplest divison of the literature of the Hebrews is into the four following periods:

The first period extends from remote antiquity to the time of David. It includes all the records of patriarchal civilization transmitted by tradition previous to the age of Moses, and contained in the Pentateuch, with the book of Joshua added. The earliest literature belonging to this period seems to have been lyrics and laws circulated from mouth to mouth without the aid of written copies, and thus handed down as oral tradition from generation to generation. As early as the reign of David a scribe was attached to the royal court, and from that time on we have written records.

The second period extends from the time of David to the death of Solomon. To this period we refer the Psalms of David, the Songs of Solomon, the Proverbs, Ecclesiastes, Joshua, Judges, Samuel, Kings, and Chronicles.

The third period extends from the death of Solomon to the return from the Babylonian captivity, and to this age belong the writings of the prophets of the captivity and the book of Esther.

The fourth period extends from the return from the Babylonian captivity to the present time. To this time belong the writings of the New Testament, the writings of Josephus, of Philo of Alexandria, and the rabbinical literature.

The epoch of the captivity marks the beginning of Jewish literature properly so called as distinct from the earlier Hebrew. It is founded on the earlier and more creative Hebrew. It retains the fundamental religious thought, but both language and imagination are modified by contact with Persian, Greek, and Roman civilization, and by the forms of Arabic poetry and scientific study as introduced from Europe.

Since the return from exile, Jewish literature has contributed richly toward the cultivation of the human mind, and in the writings of the Jews, known as rabbinical literature, lie concealed the richest treasures of centuries.

The most important of this later literature is the Talmud. The word Talmud signifies learning; the work itself is a vast storehouse of learning and of speculation. It treats of every conceivable subject and depicts incidents in the life of the people, not only of the Jews, but of other nations as well. There are separate works on civil and criminal law, religious philosophy, psychology, education, mathematics, medicine, magic, gardening, music, astrology, zoölogy, geography, etc. It is enlivened by parables, jests, fairy tales, ethical sayings, and proverbs. It is a great wilderness of themes in the midst of which are precious treasures.

The Talmud is divided into two great divisions, which are kept distinct, (1) the laws and regulations designated as Mishna, and (2) the discussion of the laws designated as Gemara. The language of the Mishna is Hebrew; that of the Gemara, which is of later composition, is Aramaic. The Aramaic, both in Palestine and Babylonia, drove out the Hebrew as the popular speech.

A remarkable correspondence exists between parts of the Talmud and the gospel writings. The authority of the Talmud was long considered second only to the Bible.

It was not until the second century A. D. that the writings contained in the Talmud were systematized into a code. In the Fifth Century, A. D., the Babylonian rabbis composed new commentaries known as the Babylonian Talmud.

Sayings taken from the Talmud:

"Even when the gates of heaven are shut to prayer they are open to tears."

"Turn the Bible and turn it again for everything is in it."

"Teach thy tongue to say, 'I do not know.'"

"Thy friend has a friend, and thy friend's friend has a friend: be discreet."

"The soldiers fight, and the kings are heroes."

During the middle ages rabbinical learning flourished. Schools were established in Spain, Portugal, France, Italy, Germany, to which flocked the scholars of the world. In the Sixteenth Century there was a great revival of interest in the study of Hebrew language and literature, and again in the Nineteenth Century. At the present time there are several schools for the study of rabbinical literature. Among the most celebrated of these schools are the seminaries at Padua, Berlin, and Metz.

BOOKS OF THE BIBLE ANALYZED

BOOKS OF THE OLD TESTAMENT

PENTATEUCH

Genesis. Account of creation, early history of the human race, and story of the patriarchs.

Exodus. Account of the exodus and the giving of the moral law by Moses.

Leviticus. Development of the nation and institution of priestly law.

Numbers. Further development and institution of social and political law.

Deuteronomy. Recapitulation of history and law.

HISTORIC BOOKS

Joshua. Conquest of Canaan, and separation of the tribes.

Judges. History of Israel under the administration of thirteen Judges.
Ruth. An Idyll of Jewish life in the period of the judges.
Samuel. Establishment of the kingdom under Saul and David.
Kings. Political history of the kingdoms of Judah and Israel.
Chronicles. Priestly history of the kingdoms of Judah and Israel.
Ezra. Continuation of Chronicles. Priestly restoration after the captivity.
Nehemiah. Continuation of Ezra. The political restoration.
Esther. A story of the Hebrew captivity.

POETRY

Job. A drama of the soul.
Psalms. Book of hymns.
Songs of Solomon. Hebrew pastoral poems.

DIDACTIC POETRY OR BOOKS OF WISDOM

Proverbs. Practical moral maxims.
Ecclesiastes. Practical moral reflections.

MAJOR PROPHETS

Isaiah. The Messianic prophet.
Jeremiah. The prophet of sorrow.
Ezekiel. The priestly prophet.
Daniel. The apocalyptic prophet.

MINOR PROPHETS

1. Hosea.
2. Joel.
3. Amos.
4. Obadiah.
5. Jonah.
6. Micah.
7. Nahum.
8. Habakkuk.
9. Zephaniah.
10. Haggai.
11. Zechariah.
12. Malachi.

BOOKS OF THE NEW TESTAMENT

Biography. Life of Christ as found in the four gospels, Matthew, Mark, Luke, John.
Historical. History of the Apostolic Church as given in the Acts of the Apostles.
Epistles. Continuation of the history of the Apostolic Church as given in the

PAULINE EPISTLES

Romans,
Corinthians I and II,
Galatians,
Ephesians,
Philippians,
Colossians,
Thessalonians I and II,
Timothy I and II,
Titus,
Philemon,
Hebrews.

GENERAL EPISTLES

James,
Peter I, II,
John I, II, III,
Jude.

Prophetical. The Apocalypse or Book of Revelation.

ASSYRIO-BABYLONIAN LITERATURE

The ancient language and literature of Assyria and Babylonia were rediscovered and opened to modern readers in the 19th century. This achievement was a triumph of devoted scholarship. In 1835 Henry C. Rawlinson, an English officer, found at Behistun, in Persia, a long inscription on the smoothed face of a high rock. The writing was in three languages, old Persian, Elamite, and Babylonian-Assyrian. Although these tongues belong to different families of language, the cuneiform characters were used for all. Rawlinson was able to decipher the old Persian, and during the next twenty years he, with other scholars, penetrated the secrets of the other two inscriptions. Thus we were given the means of studying the culture and literature of Babylonia in its records on rocks, walls, and vast collections of clay tablets.

The cuneiform writing, which consists of wedge-shaped characters placed at various angles and in groups of from two to thirty, was originated by the Sumerians, possibly as early as 7000 B. C. This people is the earliest we know of in the Tigris valley. Their original home is unknown, but at least as early as 4000 B. C. they had developed a high state of civilization. Most of the inscriptions found in the temple libraries at Telloh and Nippur are in the Sumerian language. Education seems to have been widely diffused among these people, both men and women learning to read and write. "He who would excel in the school of the scribes must arise with the dawn," said a Sumerian proverb. The Semitic immigrants, who, during the 4th and the 3d millenium B. C., gradually supplanted the Sumerians and became the Babylonians, continued this tradition of culture. They translated much from the Sumerian language, adapting it especially to the uses of their own religion. For many centuries the two languages survived side by side, and scholars had to be familiar with both.

The great Babylonian period lasted from about the 23d to the 13th century B. C. After this time, the Assyrians, a people of warriors, succeeded to power. With the Assyrians, education was confined to a limited class, and their literary work shows no originality. They copied the Babylonian works and preserved much in libraries, notably that of Sardanapalus II. (668-626 B. C.) at Nineveh, which contained about thirty thousand clay tablets. While these libraries are rich in works on ethics, religion, astrology, astronomy, law, mathematics, language, history, and stories, including fables, their principal literary treasures are the great mythological epics of the Babylonians. One of the most valuable historical documents that have been discovered is the Law Code of Hammurabi, king of Babylonia about 2300 B. C.

Up to the present time, about 150,000 tablets and inscriptions have been discovered in Babylonia. Comparatively few of these have been deciphered.

ARABIAN LITERATURE

The historical period of Arabian literature is very short. There are no traces of written Arabic until the century preceding Mohammed (6th century A. D.), and the great productive use of the language ceased after the 14th century. Yet in this short period Arabic writers produced a large body of poetry and an even larger mass of prose writing in philosophy, science, and history. The *Koran* furnishes the subject matter and the basis for most of this prose writing, for Mohammedans were very diligent during several centuries in gathering together the traditions of the prophet and interpreting the utterances of the *Koran* upon all matters of human conduct and society. Long before the days of written literature the nomad Arabian tribes had their singers and skillful reciters of tribal stories. Their songs and tales were handed down by word of mouth from one singer to another. Many fragments of these early Arabic short poems, satires, and epigrams, praising or condemning the tribe, have survived in collections and works of grammar.

After the time of Mohammed, when cities and courts developed, these early literary forms which had sprung out of wandering tribal life

were for a time retained, but in the atmosphere of the cities they became artificial, so that, in the 8th century, poets began to employ new forms and treat new subjects. In this century Abu Nuwas is the most distinguished name in poetry. The period beginning with the 8th century is rich in the production of verse and prose, frequently of an extravagant and fantastic sort. Arabic writers drew largely upon outside sources. For instance, the fables of Bidpai were translated from the Persian and many stories were drawn from the Indian languages. The usual collection of stories familiar to Western readers as the *Arabian Nights* is a mere fragment of a great body of many hundreds of such stories that were circulated in different versions, no two of which agree either in the titles or the contents of the tales.

From the 10th century to the 15th, Arabia fell under various conquerors and dynasties. But in spite of these conditions diligent Arabic scholars produced works in all branches of learning, and their universities and libraries, scattered all the way from Aleppo to Cordova, were centers of light in a dark world.

A very interesting form of Arabic literature is the rimed prose work called the *Maqama* (assembly), which originated in the scholars' custom of meeting for the purpose of contending in speeches to show their knowledge of the language. The Maqama is, therefore, a combination of legend and story in which the writer tells how in various places he meets a wandering scholar who puts all his rivals to shame. Hamadhani, in the 10th century, is the originator, and Hariri, in the 11th century, is ranked as the most brilliant writer of the Maqama.

Under Turkish rule, Arab literature declined, but the 19th century saw many attempts to revive literary activity and brought an increasingly frequent contact of Arabic and Western writers and thinkers. Beyrout and Lebanon have been important centers in this activity.

EGYPTIAN LITERATURE

The literary remains of ancient Egypt relate chiefly to its history or its religion. Such remains consist of papyrus manuscripts, sculptures, inscriptions, and tablets found in the tombs temples, and in the ruins. The earliest characters used in writing are the hieroglyphic inscriptions. The earliest of these date as far back as twenty-five centuries B. C., and the latest as recent as 250 A. D. Two other simpler forms of writing, the hieratic and the demotic, succeeded the hieroglyphic. The difficulty of reading those ancient symbols made it impossible for modern scholars to study the literature of ancient Egypt, but the discovery of the Rosetta stone, in 1799, furnished a key for the unlocking of these treasures.

Many inscriptions have been deciphered by aid of the Rosetta stone, but from a literary point of view they have disappointed expectations. The variations are meager and broken, and, with a few exceptions, there is very little beauty of language or color to the imagination. There is no progressive development, but a sameness of style pervades all periods up to the age of Rameses II., at whose court Moses was brought up "in all the learning of the Egyptians."

The ancient Egyptians are spoken of by Herodotus as "surpassing all others in the reverence they paid their gods." The most important religious work is the funeral ritual or "Book of the Dead," one of the many sacred books sometimes called the "Hermetic Books." The "Book of the Dead" contains a collection of prayers of a magical character and refers to the future condition of the disembodied soul. Similar to the "Book of the Dead" is the "Book of the Lower Hemisphere." The "Book of the Breath of Life" treats of the resurrection and the subsequent existence of the soul.

One of the most ancient inscriptions, Ptah-Hotep's famous treatise on piety and filial obedience, recalls the proverbs of Solomon. A few hymns to Egyptian deities have been preserved. These are inferior to the Arabic, but have some beauty. There are extant copies of an epic poem by Pentaur, a writer of the age of Rameses II., a papyrus on geometry dated about 1100 B. C., and a few papyri containing medical treatises. "The Tale of Two Brothers," by Enna, dates more than four thousand years ago. It is perhaps the oldest fairy story in the world. Legal documents, letters, histories, biographical sketches, travels, fables, parables, are all found in these fragments of ancient Egyptian literature.

Lived about 300 B. C.	Theocritus,	Lyrics, { Death of Daphnis, Festival of Adonis.

The beginning of the literature of the Greeks is lost in a mass of fables, from their curious habit of personifying every feeling or experience.

Nothing definite is known of their poets before Homer. The most ancient traditional poet was Olen, followed by Linus, Orpheus, and others, but the poems left under their names cannot be relied upon as genuine.

In the poetical legends of the twelve labors of Hercules, the voyage of Theseus and the expedition of the Argonauts are the first traces of historical facts, preserved, distorted, and obscured by fables. The story of Cadmus bringing the alphabet to Greece makes one of the early tales. These stories were a part of Greek education, every one believed them, and they made up the national religion. All this has become a part of the literature of Europe.

The Trojan War was the greatest event of the first, or heroic, age, and this was of more importance to art and poetry than to history. The poems of the first Grecian bards were written to celebrate the heroes of this war, and with these began the Epic age of Greek literature. From this time date the two great poems of Homer, the Iliad and the Odyssey, which have come down to the present day with several hymns and epigrams of which he was author. Writing was unknown; these poems were first circulated orally, and parts of them were committed to memory and recited by wandering singers. Even later, when they had been collected in writing, they were impressed upon the memory and used to excite patriotism, religious feeling, and love for the beautiful.

The poems of Homer became the foundation of all Grecian literature, and after him a class of poets endeavored to connect their work with his, calling themselves the Cyclic poets, and in their works can be found the whole cycle of tradition and mythology. They recite the birth of the gods, the creation of the world, and all the adventures of ancient times. From these poems have come the tales of the Argonauts and of Hercules, the events of the Trojan War, and mythical legends telling the fate of the Greeks after the fall of Troy.

Some authorities make Hesiod contemporary with Homer, others place him two or three generations later. His poetry has nothing of the fancy which lights up the lines of Homer; its object is to give knowledge. His poem, "Works and Days," relates the events of common life in practical fashion, interspersed with moral maxims, and is, in fact, an agricultural poem. His "Theogony" is of great importance, as it contains the religious faith of Greece. Through this poem the Greeks first found a religious code.

Until the beginning of the 7th century B. C. epic poetry was the only form in use except the early songs or hymns, and noble families were charmed by the recital of the deeds of their heroes in these epics. When republican movements began, these families lost something of power and privilege, a development of individuality began, and a poet dared to put his own thoughts or feelings into verse. These poems, at first, took the form of elegy or epigram. The elegies of Solon (638–559 B. C.) were pure expressions of his political feelings.

To add to the pleasures and amusements sought after by the Greeks, lighter poems were written intended to be sung to accompany the lute, hence called lyrics. All lyrical poetry originally consisted in cheerful songs, praises of love and wine, and exhortations to enjoy life. In this style, Anacreon was the most celebrated. In her Odes, a form of lyrics, Sappho became an object of admiration and Alcman roused valor by his martial lines. The culmination of lyric poetry is marked by two great names, Simonides of Ceos and Pindar. Pindar was the greatest of the Greek lyric poets.

Æsop's name appears about 570 B. C., and among his well-known fables have been collected those from other sources. No metrical version of these fables is known to belong to early times.

The philosophers of this time took up practical affairs, and among them were the often quoted Seven Wise Men of Greece. Epimenides of Crete stands high on this list, closely followed by Solon and Thales, and their fame was earned by wise judgment and skill shown in their management of the offices over which they ruled. Their sayings also form the body of many maxims applied to daily practical living. As the nation grew intellectually, a habit of speculative thought also grew, and this became the

period of scientific Greek literature. Thales headed the school of Ionic philosophy which taught the material origin of the Universe. The best-known advocates of this philosophy were Pherecydes, Anaxagoras, and Diogenes of Apollonia.

Pythagoras was the founder of another school known under his name, explaining another origin of all things and wandering far in speculative discussions. Xenophanes, the founder of the Eleatic school, adopted an ideal system in contrast to the principle of the Ionic school, founded on experience. Parmenides, also, belonged to this school; by excluding the idea of creation he fell into pantheism. Zeno, a pupil of Parmenides, was the earliest prose writer among the Greek philosophers.

Toward the end of the Age of Seven Sages, some writers of history appeared, telling of distant times and events; the first Greek to collect a well-written narrative of facts was Herodotus (484–424 B. C.) His work comprehends a history of nearly all the nations of the world at that time. Thucydides, historian of the Peloponnesian War, was also a philosopher, considering all events in a grave manner, and expressing himself in strong condensed sentences. The charming narration of Xenophon stands in strong contrast to this energetic sternness, and in his simple, tranquil style is found the greatest beauty of Greek prose. Of these three historians, Herodotus has been called the first artist in historical writing and Thucydides the first thinker. Xenophon combined the literary with the practical, he wrote of men of the past, and of affairs of his own time. His Anabasis is a modest account of his own leadership of the Ten Thousand in their retreat after the battle of Cunaxa.

Grecian drama was formed from popular festivals at which rustic worshipers, gathering around the altar of some god, sang a hymn in his honor, especially to Dionysius, the God of Wine. Those songs soon developed into dialogue form, making the elements of the drama. Æschylus (525–456 B. C.) is known as the founder of dramatic art; he divided the song, brought skillful actors, and gave to each a part. The three greatest writers of Greek tragedy were Æschylus, Sophocles, and Euripides. Aristophanes holds the highest place as writer of comedy.

In this same period the prose literature of Greece rose to its highest culture. Public speaking had been common in Greece, and, among the orators of Athens, Pericles, aided by the rhetorical studies of the Sophists, exerted great influence upon the Greek mind. Lysias gave the new form of plain style, Isocrates established a school of political oratory, and Demosthenes excelled all, using the common language of his own age and country, and appealing to the feelings and sentiments of his listeners. Æschines was the rival of Demosthenes.

When Socrates came into philosophy he gave it a new direction, taking the study of human nature, or psychology, in place of theories and speculations. He left no written record but his genius worked on his followers and among them Plato best expressed his principles. The writings of Plato still stand first in philosophical literature, showing beauty of diction as well as power in handling thought. Aristotle, a pupil of Plato's, holds a place equal to that of his teacher. His science of reasoning has been taught in all later schools. He put into form the thoughts of Plato and Socrates, and worked out a complete system of philosophy. Epicurus, born about six years after the death of Plato, established what is known as the Epicurean School of Philosophy. He gathered about him a remarkable group of men and women and taught the practical art of living. His followers became rivals of the Stoic School.

The practical mind of the Greeks found expression in mathematics and engineering. In the Third Century B. C., Euclid laid the foundations for our modern geometry, and a generation later Archimedes demonstrated the principles which underlie all engineering.

In 146 B. C., Greece fell under the rule of her conquerors, and her living literature died with her political independence. A few poets continued to sing, and philosophers and historians continued to write, as Menander, Strabo, Plutarch, Epictetus, Lucian; but her glory is in the past, and it is of her early poets, dramatists, philosophers, we speak, when we recall Greek literature.

The first name in Latin, commonly called Roman, literature is that of Livius Andronicus, date about 240 B. C. Some germs of poetry may be found in the traditional songs belonging to a more ancient time, but these had little influence on real literature. The Roman mind turned to practical living and study of science and law. In other nations the first literature has been put in the form of poetry; among the Romans the first literary effort was history. These original historical documents were a simple record of facts with no touch of opinions or sentiments.

The greatest change in the intellectual condition of the Romans came through influence of the Greek captives, who were employed to teach their own language, which soon became a part of the education of a Roman noble. In the year 241 B. C., following the First Punic War, Livius Andronicus, one of the Greek slaves, substituted a drama in place of the medley of songs used in public amusements or games. He made the first Latin translation of Greek in these plays, which he himself wrote and acted. His words became text-books in Roman schools and were used until the time of Virgil. His immediate successor, Nævius, also adapted plays from the Greek, but the tastes of his audience and the condition of the language, developed through business and action, made comedy his choice. After him, Plautus and Terence were the two great comic poets of Rome.

Ennius (239–169 B. C.) is known as the "father of Latin song"; he gave a new direction to Roman literature, closely following Greek models, and, turning from the commonplace to the heroic, he borrowed greatly from Homer. His Annals, a poetical history of Rome, was for two centuries the national poem. Ennius was the inventor of the name, satire, but the sharp, fierce satires of Lucilius, written at this time against the vices and follies of the Romans, were more noted; fragments of them still exist. Not one of these poets was born in Rome.

The name of Cato belongs partly to this same generation, and he represented the pure, native element; prose belonged far more to the genius of Rome than poetry. Cato heads the list of Roman historians whose works belong to literature; his greatest work, "Origines," was a history of all Italy from earliest times. His De Re Rustica was a commonplace book on agriculture and domestic economy, written in rude and unpolished style, but clear in statement and striking in illustration. He filled many high offices, and was known as an able pleader; he was the first to publish his speeches, ninety of which have come down to this day.

The chief representatives of the next age are Cicero, Cæsar, Sallust, Lucretius, and Catullus, whose names still rank among classical writers. Cicero gave a fixed character to the Latin language and through him oratory at Rome took on a new form; he was both orator and critic. To him philosophy also owes much, especially the philosophy adapted to practical application; in his letters he pictures Roman life of his day and with it Roman history. The most important work of Cæsar is his commentaries, sketches made in the midst of action. The histories of Sallust are of more value in an artistic way than as trustworthy narrative, but they rank high as political studies.

An entirely new spirit, arising from the new political life of the nation, entered into the literature of Rome during the time known as the Augustan Age, the most remarkable period of Roman literature. The earliest and greatest poet of this age was Virgil, who idealizes national glory in his Æneid, and the simple, hardy life of Italy in his "Bucolics" and "Georgics." Horace, the second poet of his time, shows the ways of living and of thinking in his "Epistles," "Epodes," and "Satires." The great historical work of Livy is, however, the most systematic record of the national life. Phædrus, in his fables, gave lessons suggested by those times; but with his observations he had little imagination.

In the century following the Augustan Age the antagonisms between the government and the makers of literature gave rise to the satires of Juvenal and to the somber history of Tacitus. In this time we also find Quintilian, the great teacher of rhetoric, Seneca, the author of treatises on ethics, and Pliny the Elder, with his wonderful natural history. The doctrines of the Stoics suited the stern Romans: Seneca studied the Stoic philosophy; but his treatises are records of precepts rather than explanations of principles. To this age, Juvenal, the satirist, belongs. With these names the term classical, signifying pure literature, is lost. The Romans began again to write in Greek, and to this Greek influence was soon added that of foreign nations. Roman literature, as one of the great literatures of the world, ended.

The Latin Fathers of the Church followed the philosophy of Plato, adapting it to Christianity. Among these were Tertullian, St.

Ambrose, and Lactantius, best known by his work "Divine Institutes." St. Augustine (354–430 A. D.), left his record in his "City of God." St. Jerome made a Latin version of the Old Testament.

Legal writers were many, and from them came the "Digest," "Code," "Institutes," etc., the foundation of what is now known as the Roman Law.

SCANDINAVIAN LITERATURE

The scant allusions to Scandinavians found in classical literature refer to the people of Denmark and the southern part of Sweden. The languages of the different countries comprising Scandinavia are closely allied, for the old Scandinavian, or Icelandic, was the literary language of all these lands until about the year 1100.

The northern sea rovers, in the Viking days, had settled along the coasts of the Western Islands; when Iceland was discovered, in the middle of the Ninth Century, these people, headed by a widow of a king of Dublin, became settlers in the new land. From these colonies came a poetry which in beauty and power was not equaled in any Teutonic language for centuries. This poetry took the form of lays, dirges, battle songs, and songs of praise. In the mass are also found genealogical and mythological poems which seem to have been written in honor of one famous family. To a certain shrewdness, plain straightforwardness, and a stern way of looking at life was added a complex form and a regularity of rhythm, caught from the Latin and the Celtic poetry. Scarcely a name among the authors of this poetry is known; the exact dates of the writings cannot be found; but these poems were the result of the spirit of the old Vikings who led lives of wild adventure, in war and storm, coming into contact with the cultivated imagination of the more civilized races. The Saga, or prose epic, was also a form of literary expression in those early days.

It has been said that in Iceland the art of poetry took the place of music and that a mocking or a laudatory verse was common writing. The first generation of Icelandic poets has been likened to the troubadours of other lands; nearly all were of Celtic ancestry; they attached themselves to the kings and earls of neighboring lands, shared their adventures, and made verse in which they praised their victories and recorded their deaths. The Saga was the outgrowth of this verse and is the story of some hero. In its purest form it belongs to the days of the Eleventh Century when the descendants of heroes recited the exploits of their ancestors and of the great kings of Denmark and Norway. The later Sagas show Irish influence. When these had been transmitted orally through two or three generations they were written down and this became the form followed by all scholars. In the Thirteenth Century the Saga was lost in plain biography. A work known as the "Sagas of the Norwegian Kings" gives a connected series of biographies of the kings of Norway to the middle of the Twelfth Century. This was composed by the Icelandic historian Snorri Sturluson(1179–1241),the greatest author known in old Scandinavian literature. During this century the Norwegian kings employed Icelanders in translating the French romances of Charlemagne and of Arthur which made the "Romantic Sagas."

Two remarkable collections in this old literature are known under the title of "Edda," the translation of the word, or title, being "great-grandmother." The "Elder" or poetic "Edda" was collected in Iceland. The poems belong to the Eighth or Ninth Centuries, and treat of the earliest Scandinavian legends. From the "Eddas" comes our knowledge of Scandinavian mythology and ancient religious faith. In the one known as the "Prose or Younger Edda" is a strange sort of history of the gods or mythical kings. This was probably written during the last half of the Twelfth Century, and completed by Snorri Sturluson in the year 1222.

"Annals" are the sole material for the early history of Iceland and these end with the year 1430. Of many theological works the one most noted was "John's Book," written late in the Seventeenth Century, plain in style and much read. Proverbs and folk-tales were plentiful, and have come down to the present day.

Among earlier languages we find no Swedish, and no literature of Sweden existed before the Thirteenth Century. The oldest form in which it is found as a written language is in a series of manuscripts known as the "Common Laws." Another code, "On Conduct of Kings," a handbook of morals and politics, was collected. Both of these belong to the Thirteenth Century. The name of St. Bridget, or Birgitta, an interesting character in history, is found in connection with religious works, the most important being a collection known as "Revelations," a record of her visions and meditations to which her father-confessor added a version of the first five books of Moses. The translation of the Bible was continued by the monk Budde, who died in 1484.

The earliest specimens of Swedish poetry are the folk-songs of uncertain date. The first book printed in the Swedish language appeared in the year 1495. Neither the Renaissance nor the Reformation much influenced literature in Scandinavia. The Carmelite monks, the two brothers Petri, studied theology under Luther and went back to Sweden to teach the new faith. They wrote psalms and plays; Olaus Petri found time to add an historical "Chronicle."

The last half of the Sixteenth Century was a blank save for the literature connected with the University of Upsala, which had been founded in the year 1477; but under the reign of Charles IX. (1604–1611) literature gained life with the general prosperity of the country. Buræus, the royal librarian, studied all known sciences and made a jumble of his own convictions, recording them in several unreadable volumes. Through his patient study, however, he roused interest in a knowledge of Scandinavian language and mythology. The Swedish drama began during these years, the greatest dramatist being Messenius (1579–1636), whose lyrics have something of the charm of the old ballads. His first historical comedy was "Disa," and his first tragedy "Signill." He planned to write the history of his land in fifty plays, but

he finished only six. He later plotted against the government, was sentenced to prison for life, and wrote much while in prison, including a history of Sweden written in Latin. Contemporaneous with Messenius was Stjernhjelm, who has borne the title of "Father of Swedish Poetry." He traveled over Europe, was made a noble by Gustavus Adolphus, and later attached to the court in Stockholm as a sort of poet-laureate. His writings had much influence on the language itself, molding it into smoothness. He left works on philology and wrote out the letter "A" in the first Swedish dictionary. His work shows German influence, and his greatest poem, "Hercules," is an allegory written in musical verse with Oriental phrasing and imagery. He was followed by poets who wrote after French models, but the majority took Stjernhjelm himself as guide and lost all independence.

Gustavus Adolphus (1594–1632) wrote polished prose and his "Speeches" hold an important place in the literature of the Seventeenth Century. In the next age was Rudbeck (1630–1702), a genius in learning, who became famous through all Europe for his discoveries in physiology before he was twenty-five. He also did much toward the practical improvement of the University of Upsala, where he spent most of his life. The object of his great work, "Atland," written in Swedish and Latin, was to prove that the fabled Atlantis had been found in the Swedish nation. It has been said of these volumes that they make "a monstrous hoard or cairn of rough-hewn antiquarian learning, now often praised, sometimes quoted from, and never read."

The Eighteenth Century saw Swedish literature take solid shape. The influence of France and England crowded out German and Italian tastes, and in Dalin, a leader of his time, the effect is plain. His "Swedish Argus" was modeled on Addison's "Spectator," and his "Thoughts About Critics" on the writings of Pope; his epic, "Swedish Freedom," and his comedy, "The Envious Man," show admiration of the French. His songs and shorter poems are specimens of skilled workmanship. The only poet who compared with Dalin at this time was Charlotta Nordenflycht, whose lyrics, collected in 1743 under the title, "The Sorrowing Turtledove," became very popular. She settled in Stockholm, presided over a literary salon, and was called "The Swedish Sappho."

Among other poets are Bellman, a writer of odes, Franzén, who left some noted lyrics, and Wallin, archbishop of Upsala, publisher of the national hymn book.

In the year 1786 the Swedish Academy was formed after the manner of the French Academy, but with eighteen members, instead of forty. In 1811 the younger men of Stockholm founded the Gothic Society, intended for improvement in literary work by means of the study of Scandinavian antiquity. Two great lights in this new school were Tegnér, the famous verse writer, and Geijer, more noted for his prose. Stagnelius has been compared with Shelley and his mysterious death in 1823 gave a romantic interest to his name. Runeberg (1804–1877) divides honors with Tegnér, and King Oscar II. (1829–1907) was a genuine poet. Fredrika Bremer, also a writer of verse, is better known through her stories which have been translated into many languages.

As a historian of Swedish literature, Wieselgren is much quoted. Anders Fryxell (1795–1881) wrote the great history of the country which appeared in parts, taking nearly sixty years in the construction, and Schlyter, born 1795, was the legal historian. Rydberg, belonging a generation later, was author of historical tales. The general revival of letters, coming at the end of the great wars of the world, was slow in Sweden.

1791–1860	Johan Ludwig Heiberg,		Lyrics, Dramas
1791–1862	Neils M. Petersen,	History, etc.	
1798–1870	Henrik Hertz,		Lyrics, Satire, Dramas.
1805–1875	Hans Christian Andersen,	Fairy Tales, Only a Player, etc.	
1809–1876	Frederik P. Müller,		Dramas, Poems.
1813–1842	Salomon Dreier,	Zoölogy.	
1840–1921	T. F. Troels-Lund,	History, Biography.	
1842–	Georg Brandes,	Main Currents, Criticism.	
1857–	Henrik Pontoppidan,	Novels.	Plays.

By the oldest authorities the early Scandinavian language is referred to as the "Danish tongue," and what has been noted as the most precious legacy of the middle ages, historical and poetical, is a collection of some 500 poems known as the Danish ballads. The language in which these poems were preserved is that of the sixteenth and seventeenth centuries, but they are supposed to have been composed between the years 1300 and 1500. The university of Copenhagen was founded in 1479 and the printing press set up in the city in 1490.

Referring back to the earliest days, the "Eddas" are counted on lists of Danish literature, and the story of Iceland is part of the history of Denmark. The years between 1530 and 1680 have been named as the fourth period in the development of the Danish language; here real Danish literature begins and it was the Reformation that first gave to it the living spirit. In this connection was Christian Pedersen, who worked up into their present form some half mythical stories, including that of Ogier, the Dane, and made a translation of the Bible; this work was carried on later by Vedel.

The first original dramatist was Ranch, who wrote some biblical tragedies; Peder Clausen, a Norwegian by birth, left the noted "Description of Norway," and Alfred Hoitfeld made a beginning in historical writing by his "Chronicles of Denmark," printed in ten volumes between the years 1595 and 1604. Anders Arrebo, writer of psalms and hymns, has been called the founder of Danish poetry. Other hymns were written by Kingo, a Scotchman by descent, who applied Scotch vigor to his work; his "Winter Psalter" is considered a copy of fine lyrical writing. Another writer, Brorson, published a psalm-book in 1740, in which he added the best of Kingo's to his own. With these names we reach the end of the seventeenth century.

Holberg, born in 1684, and Oehlenschläger, who dates nearly a century later, were the authors who had the strongest personal influence on Danish writings. Attention was first called to Holberg by the marked style in his "History of the World," and he was soon made professor in the university of Copenhagen. He wrote comedies in prose and verse which still have freshness in matter as well as in style. Oehlenschläger created a new form in writing and roused in the people a sense of their nationality through his treatment of Scandinavian mythology. Between these authors are many noted names—Wessel and Ewald, both men of genius, and the German poet and dramatist, Klopstock, who settled in Stockholm, and had great German influence on Danish letters.

Early in the nineteenth century, the modern fabulist, Hans Christian Andersen, who seems to belong to the world, was born in Denmark. In the year 1835 appeared his first collection of "Fairy Tales" and from that time almost every year until his death, in 1875, he published one or more of these unique stories. He traveled much about Europe and in a series of memoirs

he recorded his interesting impressions. During this century Neils Petersen translated many of the sagas; Molbech edited the first good Danish dictionary; Schouw, an eminent botanist, Dreier and Japetus, well-known zoölogists, wrote on these sciences; Kierkegaard left philosophical works, and Nikolai de Saint Aubain published some charming romances. Georg Brandes, belonging to the last half of the century, stands conspicuous in his country as an advocate of liberal culture and speculation.

Norwegian and Danish literatures are connected in much the same way as the literatures of England and America; there was the same desire of a new nation to express local emotions and condition, though using the old language. The founding of the university in Christiania in the year 1811 and the separation of Norway from Denmark in 1814 led to intellectual as well as political independence. If all Norse writers were taken from Danish literature, the close connection between the two would be more plainly marked, for many of the noted names belong to Norway.

The first book printed in Norway was an almanac brought out in 1643 by a wandering printer who carried types from Copenhagen. The earliest purely Norwegian writer who could claim originality was the wife of the pastor Hardenbech (1634-1716), who wrote several volumes of religious poetry, morbidly devotional, which became very popular. A few real Norwegians were distinguished in science: Gunnerus, the botanist; Schöning, the historian; and Ström, the zoölogist. But these authors also wrote in Latin and Danish. In the year 1772 the Norwegian poets were so strong in Copenhagen that they formed a Norwegian society; there is no notice of anyone counted among Danish authors who was born in Norway since the year 1800. The first independent form taken in Norwegian literature seems to be what was called the poetry of the seventeenth of May, the date on which Norway proclaimed her king.

The acknowledged creator of this new literature was the poet Wergeland (1808-1845), who urged the worth of individual liberty and national independence, but he was imaginative and lacking in knowledge, and his writings were coldly received by critics; a volume of his patriotic poems, however, attracted readers and resulted in making him a power in politics. A more wholesome influence was that of Welhaven (1807-1873), whose first publications were directed against Wergeland, and raised a controversy that became the topic of the day. Welhaven preached conservatism in a collection of satirical sonnets called "The Dawn of Norway;" his advice was soon appreciated and drew attention to a wider field. He did good work both as poet and critic. Contemporary with these poets, but taking no part in the feud, was Andreas Munch. Two of his historical dramas became quite popular. Another poet, Landstad, was employed by the government to prepare a national hymn-book which was published in the year 1861.

The collection of old Norse folk-tales made by Asbjörnsen and Bishop Moe is prominent in Norwegian literature. They began by writing down the stories of the peasants, and publishing at first in form for children's reading. The entire collection was gathered, during many years, from minstrels, boatmen, and wanderers of all sorts, and thus they preserved the ancient and historical legends.

Old Norwegian laws, Runic inscriptions and documents dealing with the mediæval history of the country have also been studied by other writers, who have published the results in different forms.

Ibsen and Björnson were the most prominent writers in their generation, confining their work almost entirely to the drama and the novel. The name of Björnson was made famous by his "Synnove Solbakken," which appeared in 1857, and "Arne" following in the next year. These are romantic and yet realistic stories of life among mountain peasants written in singularly attractive style. He wrote other novels and several dramas, among them a little comedy, "The Newly Married Couple," which gained immediate success, the drama, "Sigurd Slembe," also adding to his fame. Of Ibsen's dramas "Brand" and "Peer Gynt," studies of modern life, and "The Doll's House," "Ghosts," and others are well known. Norway has also historians, theologians, and scientific men, who made their mark in the literary world of the nineteenth century.

1857–	Hermann Sudermann,	Dame Care, Novels	Magda, Dramas.
1862–	Gerhart Hauptmann,	Novels	Before Dawn, Dramas, Poems.

At the beginning of the First Century the Germans had ancient poems relating to their gods and the forefathers of their race. It is also believed that the stories, "Reynard, the Fox," and "Isengrin, the Wolf," may be traced back to those remote times, and were brought by the Teutons from Asia.

When these tribes began to accept Christianity, the Church considered the native German traditions as heathenish monstrosities, and tried to suppress them. Charles the Great was the first to check this movement by putting together the beginnings of a German grammar and by issuing orders for the collection and preservation of old German poetry. The only remnants of this poetry left to us are the Anglo-Saxon "Beowulf," with a fragment of the old high German "Hildebrandslied," and the Icelandic "Edda."

During the reign of Charles the Great and his son, Louis the Pious, learning was zealously cultivated by the monks of Germany; schools were established among them, but the chief subject of their study was scholastic philosophy. One of the monks, who died in the year 1022, wrote original philosophical books and translated works from Italy. As the clergy became the chief support of the government and connected with the daily life of the people, a different class of writings arose. Scenes of actual life were pictured, and the fiction, although it came from the cells of monks and the cloister schoolrooms, was thoroughly realistic. An example is a work known as the first novel of Modern European literature, the "Rolandslied," written by an unknown monk about the year 1130. In the form of a story of love and adventure is given a vivid picture of German life of that day.

There are well-written Latin histories belonging to the Eleventh Century, but the best thought of that age was expressed in architecture rather than in writing.

About the year 1200, the order of knights took the place of the clergy, leading in literature. It was in poetry that Germany gained her highest distinction, and her most important poets at this time were of the knightly class. The crusades had much influence and led to the poetical romances of the twelfth and thirteenth centuries. Among the poets the names of Wolfram von Eschenbach and Gottfried of Strassburg stand first, with Walther von der Vogelweide perhaps the most popular of them all.

A few poets of this age of chivalry took up the legends of their own land, and the most important of them was he who collected and put into shape the ancient ballads which make up the Nibelungenlied. Gudrun is another epic which puts into form a collection of legends. Latin was the speech of scholars and poetry the passion of writers, leaving small chance for the growth of prose. But two great collections of local laws had influence in gaining respect of the Germans for their own language; this was the first serious attempt to secure for German prose a place in literature.

About the middle of the thirteenth century preaching became an agency of great power. The new preaching orders of the Franciscans and the Dominicans were given special privilege to speak on any day and in any place; thus they came in touch with the people and grew wider in thought. Most popular among these preachers was Brother Berthold, an orator and writer of high rank. The next early writer of religious prose, Eckhart, became the founder of the mystic school. The most important writers of the fourteenth and fifteenth centuries are the monks of this school, whose works form the link between the great age of the crusades and the greater age of the Reformation. The well-known "Imitation of Christ," by Thomas à Kempis (died 1471), belongs to this class.

With the sixteenth century begins the modern history and modern literature of Germany. Luther (1483-1546) and the Reformers belonged to the people, and in literature, not less than in religion, Luther was the commanding spirit of his age. His greatest work was his translation of the Bible, simple and strong, and in a language that the nation could understand. Germans instantly felt its charm. Up to this date each author had written in a dialect with which he was familiar. Luther's Bible, for the first time, gave to the nation a literary language and a common speech. The hymns of Luther are noted for vigor of style and high devotional feeling. Melanchthon, Ulrich von Hutten, and Zwingle, with other leaders of the movement, were distinguished scholars. Arnd and Jacob Boehme, theologians, Hans Sachs, the leading poet, Paracelsus and Cornelius Agrippa, mystic philosophers, belong to this century, with Albrecht Dürer, scholar and painter, and Gesner, the naturalist.

Soon after the close of the sixteenth century Germany was desolated by the Thirty years' war (1618-1648). This desolation caused a whole generation to grow up in ignorance, and the religious lyric seemed the only class of literature fitted to the conditions. Hymns took the place of the old ballads. Paul Gerhardt (1606-1675) was the greatest hymn writer with many worthy associates both among the Protestants and the Jesuits. Prose writers of the seventeenth century were generally either artificial or coarse. Among numberless romances, one, Simplicissimus, by Grimmelhausen, has qualities bordering on genius. In form of fiction it is a story of the Thirty years' war.

Under the rule of Frederick the Great, beginning in the year 1740, literature shared in general prosperity. Prose writers on theology and philosophy grew more liberal, and the poets, Klopstock and Lessing, changed the tone of German writing. The influence of Kant (1724-1804) brought a host of philosophical writers and critics with new thoughts. Kant's new ideas embodied in his work, "Critique of Pure Reason," and the doctrines he there taught, or explained, have since been known as the Critical Philosophy. Lessing and Herder were philosophers as well as poets, and Lessing's book, "Education of the Human Race," enlarged the field of historic inquiry in Germany. Herder had a fine enthusiasm for human happiness which lights up both his prose and poetry. Fichte (1762-1814) carried the new doctrines to extremes, teaching that the life of the mind was the only real life; while Schelling, writing a few years later, in his "Philosophy of Identity," modifies this by supposing an intuition and making it superior to reason. The most profound philosophical study may be found in Hazel's "Absolute Thought." This habit of studying into the mysteries of being made the noted German philosophy that has affected literature in all countries.

Herder roused and directed the young genius of Goethe (1749-1832), thus helping to give to Germany the writer who holds place equal to Shakespere in England, and Dante in Italy: Goethe belongs to the world rather than to one country. Late in the eighteenth century Goethe, Schiller, Herder, and Wieland settled at Weimar, making it the center of intellectual life. Goethe's drama "Götz von Berlichingen," had given him place as poet, and his sentimental tale, "The Sorrows of Werther," made him known throughout Europe. During his friendship with Schiller they wrote many ballads and lyrics, but his longer poem, "Hermann and Dorothea," was more successful. "Tasso" and "Faust" are best known among his dramas, and "Wilhelm Meister" as his philosophical prose work. Schiller's tragedy, "The Robbers," was received with enthusiasm, but its revolutionary ardor brought criticism. Among his poems, "Maid of Orleans," "William Tell," and the "Song of the Bell" are the best known. His "Wallenstein" is the greatest drama in the German language. Goethe's narratives of travel, his autobiography, and his scientific works are also much read. The principal prose works of Schiller are "History of the Netherlands" and "History of the Thirty Years' War." In this period belong, also, Voss, author of the poem "Louise," and Bürger, who wrote the well-known "Lenore" and "The Wild Huntsman." Uhland, whose first volume of poems was published in 1815, was one of the best writers of lyrics, and his epic of "Ludwig der Baier" ranks high.

Among other poets are Arndt, author of the national song, "German Fatherland," Rückert, an Oriental scholar, and Heinrich Heine, whose collection of lyrics, "Buch Der Lieder," is known throughout the world of letters.

First among the well-known scientists of Germany stands Humboldt, whose "Kosmos" presents in popular form the results of years of scientific work. Liebig in chemistry, Virchow in biology, Helmholtz in study of sight and sound, and Haeckel with his Darwinian investigations have made their subjects intelligible and interesting to the ordinary reader.

In the list of German historians are the names of Ranke, Niebuhr, and Dahlmann; Häusser, who wrote the elaborate "History of Germany"; Schlosser, author of a universal history; Neander, whose "Life of Christ" holds place with his "History of the Church"; and Mommsen, whose works enrich all literature. Historical fiction closely follows history, for the novel holds an important place in Germany. Tieck, as a writer of romance, first attracted attention by "Bluebeard" and "Puss in Boots." In later novels, he dealt with modern life, and, associated with Schlegel, a literary critic, he finished a German translation of Shakespere, which shows mastery of verse, form, and language. E. T. A. Hoffmann, another novelist, wrote grotesque, ghostly tales; the strange genius of Jean Paul Richter shone out in his prose idyll, "The Years of Wild Oats," and "Selections from the Devil's Papers." "Hesperus," "Titan," and "Flower, Fruit, and Thorn Pieces" are his best, and show striking effects with simplest subjects. Fouqué is noted as author of the little master-piece "Undine"; in later days, Freytag, Auerbach, and Paul Heyse claim attention. Modern Germany is rich in all departments of literature.

1866–	Romain Rolland,	Jean-Christophe, Essays.	Plays.
1868–1918	Edmond Rostand,		Cyrano de Bergerac, Dramas.

The most ancient documents in the French language date from the ninth to the eleventh centuries, but real French literature began much later. There are a hundred of the "Chansons de Gestes," including the famous "Chanson de Roland." Their origin is not known, but they date earlier than the songs of the troubadours. Following these were the epics, "Arthurian Romances," written from the legends of the Round Table, and later the "Romances of Antiquities," also narrative forms, treating of the conquests of Alexander and other classical stories. A fourth form in prose and verse included "Shorter Stories" which cannot be classified. These four divisions make the literature of early France.

In earliest days poetry was used for all literary purposes and French verse is the first in modern European speech. "The Romance of the Rose," a long poem which is really prose, except for the measure of the verse, is an ancient work that gained the attention of the people of France, and no book was ever more popular. This was written by two authors: Guillaume de Lorris, who lived in the first half of the thirteenth century, commenced it; it was continued and finished by Jean de Meung, who died in the year 1320. It is both a love poem and a satire put in the form of allegory. In it are found the characteristics of the later middle age, its mysticism, its chivalry, its science, and its shrewd criticism.

In the tenth or the eleventh century Indian tales were translated into Latin, probably by the monks, and these, with legends from Arabia, brought by the Moors into Spain, became common to all literatures. In France, during the twelfth and thirteenth centuries, tales written in verse, the collection known as "Fabliaux," appeared, and these simple, gay stories are treasures of invention from which other nations have often borrowed. Among these "Reynard the Fox," a poem, or a series of poems, is well known and for two centuries, with its companion, "Isengrin, the Wolf," it formed the basis for an endless variety of songs, poems, and satires, moral applications and generalizings. One of the most interesting of the Fabliaux, "Aucassin and Nicolette," gave the subject for the well-known opera.

It has been claimed that Latin comedy was never lost and was handed on chiefly through the convents; but when the public had forgotten ancient drama an impulse was given to this form of writing in France by the pilgrims returning from the crusades. At the end of the fourteenth century dramas were produced, called the "Fraternity of the Passion" and comprehending the whole history of Christ. In these dramas dialogues of the devils were made to fill in the comic parts. Other dramatic writings followed, based on parables and historical parts of the Bible, or they became pure allegory mingled with farce; there is hardly an abstraction, a virtue, or a vice which did not find place in these compositions. Early in the fifteenth century a comic company brought political and personal satire into their plays and dialogues, made from the fables, and thus began the romantic drama of Europe.

In all literatures of which we have record, prose is later than verse. The document containing copy of the oaths exchanged between Charles the Bold and Louis the German, in the year 842, is probably the oldest French prose. In the Tenth Century some charters were written in French, and in the eleventh the Laws of William the Conqueror. The Twelfth Century shows translation of the Bible and the Romances. History is the first subject in prose writing and is generally recorded in the form of chronicles. Each of these centuries has, in France, one gifted chronicler to describe it. Ville-Hardouin writes of the Twelfth Century, Joinville of the Thirteenth, and Froissart of the Fourteenth. "Froissart's Chronicles," though simple story, forms a history of the different states of Europe from the year 1322 to the end of the century. Phillipe de Comines (1445–1509) has been noted as the last of the quartette of great French mediæval historians. He was an annalist, like Froissart, but he was, also, a political philosopher and an unscrupulous diplomat. He dwells on character rather than on scenes or events in his memoirs.

Standing equal with the early histories in French are the short stories in comic form, and among these is the "Cent Nouvelles Nouvelles," which is the first work of literary prose in the language. The authorship of this collection of tales is not fixed, the themes are the old fables, but this remarkable work, with its simple and straightforward style, had great influence on later writers and was the first of a long series of literary works, romances in miniature, in which French writers excel all others.

The discovery of a new continent, the downfall of Constantinople, and the end of feudalism were the great events of the Fifteenth Century that changed the literary world of France. The invention, or use, of printing made readers in place of listeners. French enthusiasm turned to the study and imitation of the ancient Pagan world and it was this revival of antique learning that took the name "Renaissance." By the beginning of the Fifteenth Century the effect of the Renaissance was nearly lost in Italy, in Germany it had only opened the way to a national literature with little influence in itself, but in France this century was filled with great writers in every line.

Francis Rabelais (1483–1553) holds high rank in the world, as well as in his own country, as a learned philosopher and scholar. The work which brought to him popular fame, however, was the "Lives of Gargantua and Pantagruel," a tale of the adventures of two gigantic heroes, father and son, with a drunken, fighting, swaggering monk and a witty minstrel who played practical jokes. With all this it is a commentary on the thoughts, feelings, and acts of the nation put into attractive literary form, a mirror of the Sixteenth Century. It was the book of the day and went into many editions.

By the side of Rabelais stands John Calvin (1509–1564), and his work, "Institutes of the Christian Religion," has been called the textbook of the Reformation. This book, written first in Latin, then translated by the author, had great influence on future thought and was the beginning of an argumentative prose. Calvin was severe both in logic and doctrine, and turning from this severity, while not believing in the Church policy of that day, many drifted into skepticism. The literature of this skepticism, or doubt, is best represented by the "Essays" of Montaigne (1533–1592). In these essays he undermined all the creeds of the day, but offered nothing in their places. Inquiry and protest had given way to placid contentment in the belief that there was not much to be known on these subjects and that it did not much matter.

The appearance of the "Cid," founded on the Spanish romance, changed the form of dramatic writing and brought fame to the author, Corneille (1606–1684). The dramas of Racine soon followed and Moliere wrote his comedies, in which he assailed the follies of society. The best of these are "Le Misanthrope" and "Tartuffe." To this time belongs the well-known La Fontaine, prince of fable writers, and Perrault, who wrote prose tales. Richelieu, who founded the French Academy in 1635, Colbert and Louis XIV. were patrons of all learning, and the French language, distinguished for its clearness and flexibility, became the language of all literary Europe. In this age Fenelon wrote his famous "Telemaque," which has served as an introduction to the study of French language and literature. Fenelon, with Bourdaloue, Bossuet, and Massillon, were brilliant examples of a pulpit oratory which has never been surpassed in any age or country.

Political and military disasters of the last years of the reign of Louis XIV. checked all literary development, and the beginning of the Eighteenth Century has been named as one of the dead seasons of French literature. Later, a kind of free-thinking optimism arose and showed itself most distinctly in the writings of Voltaire (1694–1778), whose genius gave light to his age. His universal faculty showed itself in both verse and prose, his plays and verse-tales were admirable, and his epistles and satires, the best among their kind, were sufficiently good to bring banishment to their author. After his long exile, spent in England and Germany, he returned to the writing of history and philosophy.

Jean Jacques Rousseau, born early in the Eighteenth Century, had, also, great influence in his literary world. He began with dissertations on music, adding comedies, tragedies, and prose romance. His greatest work, the "Confessions," was finished not many years before his death (1778). In style, or manner of expression, his writings hold absolute fascination; he was a bold and independent thinker, but his sympathy with humanity saved him from the cynicism of Voltaire.

Le Sage, the first great novelist of this century, went to Spain for the subject of his "Gil Blas," and the Spanish inspiration and manner brought popularity. Marmontel, Louvet, and Bernardin de St. Pierre, author of "Paul and Virginia," were also noted novel writers. The brilliant, sparkling letters of Madame de Sevigne gave what has been considered the most complete record of court and social life. Montesquieu belongs to the first half of this century, and his "Spirit of Laws" has taken rank as a

standard work on jurisprudence. Beaumarchais wrote the well-known "Barber of Seville." Among the few lyric poets of the time Lebrun and Chénier stand worthy of mention. Rouget de Lisle, in the "Marseillaise," gave the finest lyric known in the language.

Chateaubriand filled many diplomatic places under the Bourbon rule, but was not free from exile. During his exile he published his first book (in 1797), the "Essay on Revolutions." He found the subject for his "Atala" while among the Indians in America. Madame de Staël spent the years of the French Revolution in England and Switzerland, and while there wrote essays, dramas, and political pamphlets. She is best known by her later romance, "Corinne," and by her "De l'Allemagne." The last brought German literature to the notice of French readers. Béranger is named the first song-writer of France and his songs and ballads are known in all homes. These three writers seem to stand between the days of Voltaire and Rousseau and the beginning of modern French literature.

Volumes of ballads and romance in verse, written by Victor Hugo and Alphonse de Lamartine, belong to later poetry, and with these authors Alfred de Musset claims place. Among dramatists are Gozlan, Delavigne, and Sardou, with others who bear equally distinguished names.

French historical and political writers influence the world, and of these the best known may be Lamartine, Thiers, Michelet, Guizot, and De Tocqueville. Cousin and Comte have offered new views in philosophy; the name Renan is known to all interested in theological questions. Many of these writers hold, also, a place in oratory which has risen to a high position in France.

The influence of later French romance shows in the modern literature of all countries. Balzac (died, 1850) has been considered one of its pioneers. Eugène Sue delights in subjects that call for exciting adventure; his books, "Wandering Jew" and "Mysteries of Paris," have been much read. Alexander Dumas, well known by his "Monte Cristo" and almost numberless semi-historical romances, such as "Three Musketeers," was master in his line; Victor Hugo would stand as a brilliant writer on the merits of his wonderful "Les Miserables" alone. This and various other of his romances have been translated and widely read in different languages. Madame Dudevant, known by her readers as George Sand, was a strikingly original writer of fiction; her "Consuelo," "Indiana," and "André" show a harmony of treatment and simplicity of language that mark them as masterpieces.

ENGLISH LITERATURE

Time	Author	Representative Works

1880–	Noyes, Alfred,	Essays and Criticisms	The Loom of Years, Poems.

When our forefathers went to England in the fifth and sixth centuries, they had no written language but carried with them the love of song. Bards and gleemen accompanied them and they sang the tales of the Northland. The oldest of the old, old songs which have been preserved for us is "The Far-traveler." "Beowulf" is their epic song. When the heathen invaders, after two long centuries of struggle, had become possessed of the land they, in their turn, came under the softening influence of Christianity. Monasteries were built, and in these safe shelters literature had a beginning. The glory of this beginning belongs to Northumbria in the seventh century. For nearly two centuries this was the seat of learning.

The poem "Beowulf" has Teutonic power but it is not native to English soil. Cædmon's "Paraphrase of the Scriptures" is the first great native British poem. With Christianity a new spirit entered into English poetry.

Old English prose also began in the monastery of Northumbria with Bede. His learning was famed over the whole of Europe. It is said that forty-five works written in Latin prove his industry. His last work was a "Translation of the Gospel of St. John."

During the Ninth Century the greater part of England was wasted by the Danes, and literature almost perished. The long battle against these invaders was lost in Northumbria, but was gained for a time by Alfred the Great in Wessex. Learning changed its seat from the north to the south, and as Whitby was the cradle of English poetry in the North, so Winchester became the seat of English prose in the South. Alfred gathered scholars about him and translated the Latin works of Bede, the Chronicles of Orosius, and added an account of the voyages of Othere and Wulfstan. Many other works were added to the English language in Alfred's time. "At Winchester the king took the English tongue and made it the tongue in which history, philosophy, law, and religion spoke to the English people." He also established schools and wrote text-books for these schools, so that every free-born youth might attend to his books till he "could read English writing perfectly."

The next great name in literature after King Alfred is Alfric. He wrote numerous ecclesiastical works and was the first translator of any considerable portion of the Bible. His translation of the Pentateuch, Joshua, Judges, and part of Job, form the best model we possess of the language at the beginning of the Eleventh Century. A long line of Saxon Chronicles continues an unbroken history of the language and literature from Alfred to the death of Stephen in 1154.

The overthrow of Saxon rule in England by William the Conqueror is an event of vast importance in literature as well as in history. For a hundred years after the conquest literature was inert. A foreign king and an aristocracy of a foreign people ruled the land; an alien language and literature had been introduced. A few generations of such domination and then there were signs of returning life. The language could not die while the bulk of the people remained Saxon, but it underwent a great change. England was still to remain the land of the Saxon tongue, but it was to be a language greatly modified by its contact with the Latin of the clergy and the French of the Norman conquerors. For three hundred years after the conquest these languages contended with the Saxon English for supremacy in England. In Edward the Third's reign it had been fully demonstrated that the English were to be the ruling people and parliament enacted important laws making the English the required language in the law courts and in schools.

But the English of King Edward's time was quite unlike the rude Saxon speech of "Beowulf" and "Cædmon," or the later Chronicles. Pure Anglo-Saxon was an energetic language, able to express with vigor the practical common thoughts of every day; but it lacked delicacy and flexibility of expression. The Saxon mind, too, was lacking in quickness of thought and in the creative play of the imagination. It has been well said that in this blending of languages the Saxon furnished the dough and the Norman French the yeast. Out of the combined product we get a strength and flexibility of language that belonged to neither.

The literature of England during the Twelfth Century was almost entirely Latin and French, but we go back to it as a rich source of our story telling. Geoffrey of Monmouth wrote twelve short books in Latin which he called "History of the Kings of Briton." It is a clever putting together of Welsh legends, a source to which we go for some of our King Arthur stories. These stories were afterward translated into French and later brought back into English verse by Laymon in his "Brut d'Engleterre." Later many other stories were added and other cycles of romance were introduced into English literature. There were four of these great romantic cycles: The first, already mentioned, are the King Arthur legends, to which later stories were added, as "Quest of the Graal," "Morte d'Arthur," "Romance of Sir Tristam," etc.; the second, Charlemagne and his twelve peers, containing the stories of "Roland," "Charlemagne," "Otwell," "Siege of Milan," etc.; the third, the "Life of Alexander," romantic wonder stories from the east; fourth, "Siege of Troy," derived from Latin sources. Popular ballads, such as "Robin Hood" and "Robert of Gloucester's Rhyming Chronicles," and lyrics sung among the people, kept the love of poetry alive until the greater burst of song in the Fourteenth Century.

From the Conquest there is very little prose writing in England for the next three centuries, but in the Fourteenth Century there were two prose writers of preëminence, Sir John Mandeville and John Wyclif. Mandeville wrote a most popular book of stories which he styled "The Voiage and Travaile of Sir John Mandeville." This book established the love of story telling. John Wyclif, next to Chaucer, is the greatest literary name of the century. He is the first to give a complete copy of the Scriptures to the English people in their own tongue. The influence of such a translation read by all the people is to raise a dialect to the dignity of a national language. Besides this great work, Wyclif is the author of a large number of sermons and polemical writings. Contemporaneous with these religious tracts which Wyclif distributed so freely was "Piers Plowman" by William Langland. It was a satire in verse upon the evils which had gained a foothold within the Church.

The one name which stands first in the literature of the Fourteenth Century is that of Geoffrey Chaucer. Some critics claim that before him there was no permanent English verse. He is therefore often called the "Father of English poetry." Chaucer's earlier poems are "Romaunt of the Rose," "The Boke of the Duchess," and "Parlement of Briddes." His greatest work is "Canterbury Tales," the plan of which was

suggested by Boccacio's "Decameron." The "Prologue" to the "Canterbury Tales" is one of the finest pieces of description in our language. Before Chaucer's time English was a language of dialects. He wrote in the Midland dialect and made that the language of the nation. Chaucer died in fourteen hundred, just three hundred and thirty-four years after the Norman Conquest. To sum up the most important literary events of these years we note the development of the English language, the translation of the Bible, and the creation in English of one of the world's great masterpieces, the "Canterbury Tales."

There is to be noted a comparative lack of literary progress in the century following Chaucer. There were changing social conditions and intellectual and political unrest. The struggle between the houses of York and Lancaster absorbed men's minds. These are the reasons assigned for the dearth of literature. To them must be added the lack of a literary genius. There was no one great enough to succeed Chaucer.

The greatest prose work of the Fifteenth Century was Malory's "Morte d'Arthur." This is a great prose epic of the deeds of King Arthur and his Knights of the Round Table. Fortunately for the Fifteenth Century it also established the printing press. In 1477, Caxton printed the first book in England. A second complete translation of the Scriptures was made by William Tyndale, early in the Sixteenth Century, and the work of the reformation was furthered. In 1535, Miles Coverdale published the first printed copy of the whole Bible. Certain Italian influences were at work that were changing the form of our poetry. Wyatt and Surrey introduced the Italian sonnet and made use of the Italian blank verse.

The Elizabethan age is marked by features so distinct and so superior that it has been called the "Golden Age in English literature." Two great forces combined to make this the greatest intellectual age, the Renaissance and the Reformation. Men's minds were stimulated and a language completely formed was ready at their hand. There was freedom for thought to express itself and there was variety in life and freshness of experience for the mind to feed upon. The printing press and travel and social intercourse all stimulated intellectual activity. Life was worth enjoying and there was leisure for letters. It was an age of imagination and enthusiasm, and in the midst of it all geniuses were born. What age ever produced two such poets as Shakespere and Spenser, unless it might be the "Golden Age" of Greek splendor?

The non-dramatic poets of the Elizabethan age are Thomas Sackville, Sir Philip Sidney, and Sir Walter Raleigh, who also wrote a most ambitious work in prose, the "History of the World."

Spenser, the only great non-dramatic poet of Elizabeth's reign, has been called the successor of Chaucer. His first great work is the "Shepard's Calendar," divided into twelve eclogues, one for each month. His greatest work, the "Faëry Queen," was also divided into twelve books, but only six books and the fragment of the seventh were ever written. Spenser has been justly called "the poet's poet." He may be wearisome to the general reader who undertakes to study him to-day, but the purity of his imagination, the beauty of his verse, and the music of his rhythm, have furnished models for our later poets.

The dawn of the drama in England is found in "Miracle Plays and Mysteries" which were introduced soon after the Norman Conquest. Following these were the later dramatic recitals, the "Moralities," "Interludes," "Masks," and "Pageants."

As early as the Eleventh Century miracle plays were performed in the monasteries by monks and choristers. Later, companies of professional players traveled about the country and enacted their plays in the yards of inns. In 1575, the Puritans expelled the players from the city and theaters were built outside the limits. Shakespere was born in 1564, and twenty-two or three years later made his way to London where he was attracted by one of these forbidden theaters. Already the English drama had taken form in the great plays of Christopher Marlowe, "Tamburlaine the Great," "Faustus," "The Jew of Malta." The greatest of these plays is "Faustus." Marlowe established the use of blank verse in the English drama, a form of verse which Shakespere adopted.

That Shakespere quickly rose to prominence in his art we may judge from the fact that in 1592, when he had been in London not more than five or six years, he was already writing plays and was the object of a jealous attack by one of his rival playwriters. At the age of forty-nine he was able to leave London with a competence and return to his home at Stratford-on-Avon. This also argues for his success as a dramatist. In 1598, Francis Mere writes of the growing fame of Shakespere and prints the titles of a number of his plays. Ben Jonson, the second dramatist of the age, was his intimate friend. These are facts worth knowing about the personality of the man who is the greatest figure in English literature, perhaps in all literature.

Taking the number from the globe edition of Shakespere's dramas, he wrote thirty-four different plays, counting as one play those which are written in two parts. His dramas may be divided into three classes: comedies, histories, tragedies. The following are a few of the best in each class. Everyone well-read should be familiar with them:

Comedies: "Midsummer Night's Dream," "As You Like It," "Merchant of Venice," "Winter's Tale," "Twelfth Night," "The Tempest."

Histories: "Richard III.," "Henry IV.," "Henry V.," "Henry VIII.," "King John," "Julius Cæsar."

Tragedies: "Hamlet," "Macbeth," "Lear," "Othello," "Romeo and Juliet."

In addition to his dramas, Shakespere also wrote two long narrative poems, and one hundred and fifty-four sonnets. It is said that the measure of Shakespere's greatness is his universality, "not of an age, but for all time." Other

writers have equaled Shakespere in some one quality, but he excels them all in the combination of great qualities.

Ben Jonson wrote three great dramas which will repay reading, "Volpone," "The Alchemist," and "The Silent Woman," and to these three some would add a fourth, "Every Man in His Humor." Jonson failed in his delineation of character. He was a critic of men's follies and he gave a distorted and incomplete picture of life. In his delineation of women, where Shakespere was strongest, Jonson utterly failed.

The decay of the drama began while Shakespere was yet alive. The drama in his hands had been the painting of the whole of human nature, the painting of characters as they were built up by their natural bent, and by the play of circumstance upon them. The drama, in Ben Jonson's hands, was the painting of that particular human nature which he saw in his own age; and his characters are not men and women as they are, but as they may become when they are mastered by a special bias of the mind. In Beaumont and Fletcher, the women are overdrawn and the men are base in thought. Shakespere's men and women are of the types of the noblest characters his age produced.

One of the most remarkable men who adorned the court of Queen Elizabeth was Sir Francis Bacon, the greatest prose writer of the age. As courtier and scholar he adorned both this and the succeeding reign of James I. His political success and his political disgrace are familiar stories in history. His enduring work is in literature. He was both poet and philosopher. His great work in philosophy is magnificent in scope, as may be inferred from the title "Instauratio Magna," or "The Great Institution of True Philosophy." It is a great work designed to be written in six parts, but never finished. The second part, "Novum Organum," the "new instrument," is described as "the science of a better and more perfect use of reason in the investigation of things, and of the true aids of the understanding." It sets forth the methods to be adopted in searching after truth, points out sources of error, and suggests the means of avoiding errors in the future. His entire philosophy is built upon the idea of inductive investigation. Bacon had so little respect for the English language that he wrote his great philosophy in Latin. His "New Atlantis," like Sir Thomas More's "Utopia," pictures in romance an ideal commonwealth, some features of which have been realized in our own republic. The most important among his English works is his volume of essays, clear, concise, practical in observation, of profound wisdom. Sir Walter Raleigh contributed to prose his ambitious "History of the World," and to poetry a few beautiful lyrics.

With the death of Bacon, in 1626, we pass from the glory of the Elizabethan age into the Puritan age. There are some characteristics which sharply separate this age from the preceding. Intense patriotism, peace within the realm, general prosperity, and much worldliness characterized the reign of Elizabeth. The Stuart reign was characterized by controversy in religion and politics, open rupture between king and parliament protracted into the Great Civil War. Puritan standards became triumphant during this period. Literature, which always reflects life, presented the somber tone of the age and was in large part religious. The "King James Version of the Bible" was printed in 1611. It is impossible to overestimate the influence of this translation upon the lives of the people and the language of every day. The study of the Bible became so universal that it colored the imagination and the speech of the common people. Even those who were irreligious in their lives spoke in the language of the Scriptures.

The great literature of the Elizabethan age was in poetry. With one exception, John Milton, the great literature of the Puritan age was in prose. But the prose writers of the Puritan age were not without imagination and delicacy of humor. Bunyan's "Pilgrim's Progress," by some thought to be the crowning work of the imagination, is a product of this age, and during the same period Thomas Fuller brightens his "History of the Worthies of England" by irresistible touches of humor, and Isaak Walton adds delight in nature and rustic pastime in his "Complete Angler"; but for the most part the world was looked upon seriously.

John Milton has been awarded the second place among the great names in English literature. He was born eight years before the death of Shakespere. It may be that Shakespere saw the boy Milton. One likes to think so. Milton's childhood was very happy. His parents trusted him because they realized that he was a boy of high ideals. He had every advantage of a liberal education and of long quiet years of study at his father's home in Horton. This was well for the years of struggle that followed. Milton's literary career may be divided into three periods: that of his youth, his manhood, and his old age. It has been called "a drama in three acts." The first may be stated in years as extending from 1623 to 1640; the second, from 1640 to 1660; and the third, from 1660 to 1674.

The first period, that of his youth, was spent at school and among his family at Horton. During this period he wrote the "Hymn on the Morning of Christ's Nativity," the "Masque of Comus," "Lycidas," "L'Allegro," "Il Penseroso," and a number of his sonnets. Some critics consider "Comus" Milton's finest poem. It is perfect in lyric qualities and as an apotheosis to virtue is lofty in conception. "If virtue feeble were, Heaven itself would stoop to her."

"Lycidas," an elegy on Milton's class-mate, Edward King, ranks as one of the great elegies in our language. "L'Allegro" and "Il Penseroso" are companion poems; one describes the delights of social life, the other the deep enjoyment of the scholar in seclusion. These poems will always remain favorites for their beautiful imagery and their truthful study of the emotions. Milton's sonnets have for their theme such subjects as religion, patriotism, domestic affection; whereas the older poets, Shakespere, Spenser, Sidney, Raleigh, and their imitators, preferred to write sonnets on love. The most remarkable of Milton's minor poems is the "Hymn on the Nativity," written when the

author was only twenty-one, yet nowhere does he excel it in beauty of verse nor in dignity of language.

The second period of Milton's life may be called the time of "storm and stress." Thick darkness was upon him. For twenty years, from 1640 to 1660, his life was filled with religious and political controversy. He was forced to turn from poetry to prose, and lamenting it he says: "I have the use, as I may account it, but of my left hand." His prose works are voluminous. They are upon varied subjects but upon one theme, liberty. He struck heavy blows for liberty in church and state and in all the relations of life. He pled for more freedom of speech and for more liberal ideas in education. His greatest prose work is the "Areopagitica: A Speech for the Liberty of the Press." In 1652, at the age of forty-three, Milton became totally blind; but even in his blindness he served the Commonwealth as Secretary for Foreign Tongues under Oliver Cromwell, the Lord Protector, and continued to write his burning pamphlets against the royalists who were struggling to regain power.

The third period is that which succeeds the Restoration, in 1660. With the return of Charles II., the leaders of the Commonwealth had to flee for their lives. Milton's life was at first endangered and he was concealed by friends. Later, he preferred retirement where he might have leisure to do the great work of his life. Here he wrote "Paradise Lost," "Paradise Regained," and "Samson Agonistes."

The beauty of "Paradise Lost" has been compared to that of a stately temple, the style the loftiest in the whole range of English poetry. Its scenes are laid in Heaven and Earth and Hell, its characters are God and the holy angels, Satan and his legions, and the newly created race of man. It is almost inconceivable how any human mind could have attempted it. "Paradise Regained" and "Samson Agonistes" show a decline of power, though standing alone they would be great. In "Paradise Regained" Christ is tempted in the wilderness and resists Satan. In "Samson Agonistes" we have a choral drama modeled upon the form of the Greek. In the greatness of his work, Milton can be compared only to the great classic writers, Homer and Virgil.

The second great name in the Puritan age is John Bunyan, the prince of prose writers for his time and the prince of story tellers for all times. "Pilgrim's Progress" has been pronounced the greatest of all allegories. Bunyan's preëminence is undoubted. It is not an exaggeration to repeat this estimate of him: "What Shakespere is to English dramatists, what Milton is to English epic poets, that John Bunyan is to writers of English allegory." From extreme poverty and ignorance and years of imprisonment in Bedford jail, he rose to the respected position of pastor over a large church. His biographer says of him, "The fame of his sufferings, his genius as a writer, his power as a speaker, gave him unbounded influence among the Baptists; while the beauty of his character and the catholic liberality of his views secured him universal esteem. His ministrations extended over the whole region between Bedford and London."

Historically, one of the greatest prose works of the century is Samuel Pepys' "Diary." It is a gossipy record of nine years and gives a life-like picture of the gay and profligate portion of society which fell under his observation. The reaction from Puritanism led to an extraordinary state of society among the aristocracy, which we would not like to picture to-day. The great historical work of the age is the "History of the Great Rebellion," by Edward Hyde, the first Earl of Clarendon. A curious coincidence marks the birth and death of Clarendon. Born in 1608 and died in 1674, his life is exactly co-extensive with John Milton, his great opponent in the great civil strife. Clarendon has been called the "Cavalier-prince of historic portrait-painters," and Milton the "Puritan-prince of epic poets."

Chaucer, Shakespere, Spenser, Milton, royal names in English literature, are succeeded by a meager school of artificial poets. Dryden and Pope are the representatives of this school. Dryden died in 1700, just three hundred years after the death of Chaucer. The sweetness and gay and kindly humor and tender sympathies which so illumine Chaucer's poetry, is gone from Dryden's didactic verse. His greatest satire is "Absalom and Achitophel," a bitter arraignment of those who opposed the succession of James, the brother of Charles II., to the English throne. "MacFlecknoe," another satire, is directed against a Whig poet. "All for Love," a drama, is in this same cold, critical vein. He wrote long criticisms in argumentative verse which are utterly lacking in the true spirit of poetry. His "Hind and the Panther" and "Religio Laici" are known to-day only as names. The greatness of poetry cannot be expressed by the critical spirit. Dryden's one really admirable poem, "Ode to St. Cecilia's Day or Alexander's Feast," will be remembered for its lyric qualities. His prose writings are numerous, and the English in which he wrote them has become a standard of good style to all later writers.

The English Revolution of 1688 secured peace for the realm and an opportunity for the development of arts and sciences. The investigations of Newton and the development of philosophy under Locke mark this period.

Alexander Pope is the literary successor of John Dryden, and the representative poet of his time. He was a precocious boy whose body was "one long disease." Before he was twelve years of age he had written an "Ode to Solitude," and reading was his passion. To understand Pope one must remember his deformity and the spirit of the time in which he lived. The first half of the Eighteenth Century is marked by a low standard of morals. Political unrest and political double dealing, coarse social life, dull, unimaginative, brutal, these are the common terms by which it is described. Drunkenness was common and morality laughed at. Out of such conditions Pope and Swift and Steele gathered the material for their satires. Addison alone of this distinguished group of writers kept his genial nature and wrote what was gentle

and mirthful with such grace that satire lost its severity.

The literary faults of this age are lack of moral earnestness and enthusiasm. Form was preferred to matter. The age was molded by classical rules. It delighted in studied regularities. Pope is the great exponent of the classic school. So deficient is he in warmth of feeling for man or nature, so fixed and formal are his lines, that it is often questioned whether Pope was entitled to the name of poet. But whether poet or not, Pope has enriched our language by his epigrammatic couplets which are familiar in our common speech. Pope and Dryden have done much for our English in raising the standard of good speech. Poems of satire the world will forget, but a good laugh is worth preserving. "Gulliver's Travels," by Jonathan Swift, are even more enjoyed to-day than when they were written, for the sharpness of their first intent is forgotten.

The first half of the Eighteenth Century is far more remarkable for its prose than for its poetry. A new and excellent field for essayists was found in the "Tatler," planned by Richard Steele. Periodical papers containing news had existed in England from the time of the Civil War, but this was the first periodical designed to have literary merit and to discuss questions of common, every-day interest, containing lively sketches, anecdotes, humorous discussions. It was succeeded by the "Spectator," which appeared every week-day morning in the shape of a single leaf from March 1, 1711, to December, 1712; after a suspension it reappeared three times a week in 1714, and extended to 635 numbers. The "Guardian" was begun in 1713, but ceased after the 176th number. Steele was the principal contributor to the "Tatler" and "Guardian," and Addison to the "Spectator," but papers were also furnished by Swift, Pope, Berkeley, and Hughes. The essays, especially those of Addison, were often models of grace and delicacy, and were highly influential in correcting and refining the tone of society.

Prose fiction is another development of the Eighteenth Century. Daniel Defoe (1661–1731) first gave to English fiction a simple, direct, matter-of-fact, and human interest, and the narrative of "Robinson Crusoe" has never been excelled. The "Tale of a Tub" and "Gulliver's Travels," by Swift, "The History of John Bull," by Arbuthnot, are satires in the form of fictitious narratives. The writings of Swift are admirable for their vigor and humor. Under his successors the novel became more complex and artistic, embraced greater varieties of character and diversities of treatment, and pictured the artificial refinements and distinctions of society. "Joseph Andrews," "Tom Jones," and "Amelia," by Fielding, and "Pamela," "Clarissa Harlowe," and "Sir Charles Grandison," by Richardson, were published near the middle of the century. "Peregrine Pickle," "Humphrey Clinker," and other novels by Smollett are distinguished for coarse, comic incidents and broad humor. "Tristram Shandy" and "Sentimental Journey," by Sterne, contain passages sparkling with wit and humor, also much sentimentality. The "Vicar of Wakefield," by Oliver Goldsmith, is without doubt the most delightful romantic novel of the century. It is not a book without grave faults, but it combines delicate humor with sweet human emotions. Goldsmith was a writer in every field of invention, but he will be longest remembered because of the Vicar and his family. His "Deserted Village" and his "Traveler" contain passages that cannot be forgotten. So also Gray's "Elegy Written in a Country Churchyard" and Collins' "Odes" and Cowper's hymns belong to immortal verse.

The Eighteenth Century, which gave us the modern essay and the novel, also produced writers of carefully elaborated and finished history: "History of England," by David Hume; "History of the Decline and Fall of the Roman Empire," by Gibbon; and Robertson's histories of Scotland, Germany, and America. There was also noted oratory, Burke, Fox, Pitt, and the philosophy of Berkeley, Paley, and Hume, and the great prose works of Adam Smith and William Blackstone.

In striking personality and in power to make others think, Dr. Samuel Johnson was, without doubt, the foremost man of literary London. He was the central figure around whom all the literary men and women gathered, the Nestor of his age. Dr. Johnson founded and carried on as sole editor two periodicals, the "Rambler" and the "Idler," in the style of the "Spectator" which Addison had made so popular. His most famous work was a "Dictionary of the English Language." His critical estimate of poetry cannot be highly valued and his criticisms are often stilted and overstrained in language. His best prose is his romance, "Rasselas, the Prince of Abyssinia." Johnson is better known because of his biographer, Boswell, than for what he wrote.

The close of the century, so remarkable for its development in prose, adds one great name to the poets already mentioned, Robert Burns, the Scottish prince of lyric verse. Love of nature, feeling for humanity, he has written for us as no other poet ever wrote. The poetic ideal of Gray and Collins and Cowper and Blake and Burns reacted against cold formalities in verse. The joys and sorrows of life they would put into poetry, and as it came from the heart they would have it touch the heart. Man and nature are the chosen themes, and man is always in the foreground with Burns. The songs of Burns minister to every common feeling of the human heart. That he has won his audience is proven by the fact that since the day of his death his audiences have continually grown larger. Those who read and those who do not read are familiar with these songs: "Scots wha hae wi' Wallace Bled," "Auld Lang Syne," "Comin' Through the Rye," "Ye Banks and Braes."

Poetry, at the close of the Eighteenth Century, was simpler than in the preceding generations. There were songs of joy and laughter and tender sympathies. Imagination was given free play and it touched with beauty the familiar scenes of every day.

The opening years of the Nineteenth Century ushered in a brilliant company of nature poets: Scott, Wordsworth, Coleridge, Southey, Byron, Shelley, Keats, together with Cowper and Burns, who died in the closing years of the last century,

belong practically to this group. There was to be noted a change of ideals. The reign of the epic and the drama was past. Classic models gave place to freer expression, more individuality, a deeper appreciation of the beauties of nature, and more value set upon the commonplace. Imagination and a larger sympathy found beauty in that which had been counted low and mean. This was illustrated in the poems of Burns and Cowper. Sir Walter Scott showed this tendency in his romances. His romance poems combine the refinements of modern poetry with the spirit and material of the neglected border minstrelsy. Wordsworth aimed to renew nature by bringing back poetry to truth and nature. His verse is often weak, but his best poems, as "Ode on Immortality" and many of his shorter poems, are exquisite in their simplicity of feeling and truthfulness of delineation. Coleridge's finest poems are "Cristabel" and "Ancient Mariner." They are unsurpassed in their strong, wild music and their splendid imagination. Southey contributed both to prose and verse and displayed extensive learning. Byron was remarkable for strength and passion. Keats and Shelley were instinct with love and intellectual sense of ideal beauty. "The Skylark" and "The Cloud," by Shelley, are perfect in their music and their imagery. Thomas Moore, sometimes called the "Irish melodist," besides his shorter poems, wrote "Lalla Rookh," a volume containing four Oriental stories told with rich imagery and diction. Thomas Campbell wrote "Pleasures of Hope." Humor and pathos are combined in the poems of Thomas Hood: "Song of the Shirt," "Bridge of Sighs," "The Last Man."

The prose of this first half of the century also takes high rank. Scott will always be remembered as the creator of the historical novel, Charles Lamb for his delicate humor and rare use of language. His "Essays of Elia" have been called the finest of their kind in literature. Macaulay's essays give us fine examples of English prose. De Quincey's opium dreams and his "English Mail Coach" are also brilliant specimens of English. Mill, Bentham, Malthus, are the chief contributors to philosophical prose.

In 1837, Queen Victoria ascended the throne. From this date until the present time may be called the Victorian age. This age is not remarkable for the development of any new type of literature but for the quantity and general excellence of literature in every department. Representative names of the Victorian age are Browning, Tennyson, Matthew Arnold, the Rossettis, in poetry; Thackeray, Dickens, George Eliot, Bulwer, in prose fiction; Carlyle, Macaulay, Ruskin, Matthew Arnold, Swinburne, Leslie Stephen, in essay writing; Spencer, Newman, Hamilton, Darwin, Tyndall, Huxley, Faraday, Mill, in philosophy and science; Milman, Grote, Froude, Freeman, Buckle, Green, and Leckey, in history.

Problems of life occupy the minds of the Victorian writers. It is an age of scientific thought and of practical reform. There is a struggle of the masses upward, a striving for better government, for higher moral ideals. Prose and poetry alike are imbued with an ethical purpose. Dickens desired to bring out what he called "the romantic aspect of familiar things," and he began with the study of "vicious poverty." Most of Dickens' novels were inspired by a firm purpose to accomplish some reform. His social creed has been formulated in these words: "Banish from earth some few monsters of selfishness, malignity, and hypocrisy, set to rights a few obvious imperfections in the machinery of society, inspire all men with a cheery benevolence, and everything will go well with this excellent world of ours." While Dickens with inimitable humor and rare optimism was presenting the cause of the submerged poor, Thackeray wrote of the follies of the upper classes of society, and George Eliot pictured the English middle class. These great novelists with their deep human sympathies pictured the interdependence of human beings, the relation that every man bears to his surroundings. Thus fiction has kept in close touch with the social ideas of the time, reflecting not only its mood, but also its important changes, showing thereby that it has life and does not exist as a mere literary form.

The vigor and idealism of the age has been splendidly expressed by Browning and Tennyson. Carlyle was the mouthpiece of the strongly-felt need of heroism. He was by far the greatest of the Englishmen of his time who taught the value of sincerity. Another author who had a great influence upon his contemporaries was John Ruskin. Each generation has its message to deliver. Carlyle and Ruskin in their criticisms, one on life, and one on art, caught the message of their time. They would have men be true and live up to the best that is in them. They spoke as the poets Tennyson and Browning spoke of the larger and truer meaning in life. They believed in growth through evolution and in the possibilities of the individual.

It is impossible in so short an article to select and discuss the individual writers of the Victorian age. They must be characterized, if at all, in groups. Such a book as this affords little space for library lists and selected works of the best authors both in English and American literature and the best known works in foreign literatures, so that the student who wishes to continue his studies or the general reader who wishes the delight of well-selected reading should consult a good outline of English literature. Such names as the following, which belong to every appreciative study of English literature, but an extended notice of which has necessarily been omitted here, will be found well worthy of the careful student of his mother tongue: in poetry—Elizabeth Barrett Browning, Edward Fitzgerald, Arthur Hugh Clough, Jean Ingelow, William Morris, Algernon Charles Swinburne, William Watson, Rudyard Kipling; fiction—Charles Lever, Elizabeth Gaskell, Charles Reade, Anthony Trollope, Charlotte Brontë, Charles Kingsley, Wilkie Collins, Richard D. Blackmore, Dinah Maria Craike, George Meredith, Thomas Hardy, William Black, Robert Louis Stevenson, Mrs. Humphrey Ward, Hall Caine, Rudyard Kipling, George Macdonald; essay and criticism—Leslie Stephens, Algernon Charles Swinburne, Walter Pater, John Addington Symonds.

AMERICAN LITERATURE

Time	Author	Representative Works	
		Prose	Poetry
1586–1647	Hooker, Thomas,	Sermons, Survey of Church, etc.	
1588–1649	Winthrop, John,	History of New England (1630–1649).	
1612–1672	Bradstreet, Anne,		Poems.
1663–1728	Mather, Cotton,	Magnalia (history).	
1703–1758	Edwards, Jonathan,	Freedom of the Will, Original Sin, etc.	
1706–1790	Franklin, Benjamin,	Poor Richard's Almanac, Autobiography, Essays, etc.	
1737–1791	Hopkinson, Francis,		Battle of the Kegs.
1743–1826	Jefferson, Thomas,	Notes on Virginia.	
1752–1832	Freneau, Philip,		Poems (humorous).
1754–1812	Barlow, Joel,		The Columbiad, etc.
1757–1804	Hamilton, Alexander,	State Papers.	
1758–1843	Webster, Noah,	Spelling Book, Dictionary.	
1766–1813	Wilson, Alexander,	Ornithology.	
1770–1842	Hopkinson, Joseph,		Hail Columbia.
1771–1810	Brown, Charles Brockden,	Wieland, Clara Howard, etc.	
1773–1811	Paine, Robert Treat,		Adams and Liberty, Poems.
1775–1863	Beecher, Lyman,	Sermons, Political Addresses.	
1779–1843	Allston, Washington,	Lectures on Art,	Poems.
1779–1845	Story, Joseph,	Commentaries on Cons. of U. S.	
1779–1860	Paulding, James Kirke,	Novels,	Poems.
1780–1842	Channing, William E.,	Essays, Addresses.	
1780–1843	Key, Francis Scott,		Star Spangled Banner, Poems.
1780–1851	Audubon, John James,	Birds of America, Quadrupeds of America.	
1782–1852	Webster, Daniel,	Orations, etc.	
1782–1858	Benton, Thomas Hart,	Thirty Years' View (U. S. Senate).	
1783–1859	Irving, Washington,	Knickerbocker's History of New York, Sketch Book, etc.	
1784–1865	Worcester, Joseph E.,	Dictionary of Eng. Language.	
1784–1868	Allen, William,	American Biographical and Historical Dictionary.	
1785–1866	Pierpont, John,	School Readers,	Lyrics.
1787–1879	Dana, Richard H.,	Lectures on Shakespere,	The Buccaneer.
1788–1866	Campbell, Alexander,	Religious Debates.	
1789–1841	Hillhouse, James A.,		Percy's Masque, Hadad.
1789–1867	Sedgwick, Catherine M.,	A New England Tale, etc.	
1789–1851	Cooper, James Fenimore,	The Spy, Leather Stocking Tales, etc.	
1789–1866	Sparks, Jared,	American Biographies.	
1790–1867	Halleck, Fitz-Greene,		Marco Bozzaris, Poems.
1791–1865	Sigourney, Lydia H.,		Poems.
1791–1871	Ticknor, George,	History of Spanish Literature.	
1791–1875	Sprague, Charles,		The Family Meeting, Poems.
1792–1852	Payne, John Howard,		Home, Sweet Home, etc.
1793–1860	Goodrich, Samuel G.,	Peter Parley Books, etc.	
1793–1868	Hall, James,	History of the Indian Tribes.	
1793–1879	Carey, Henry Chas.,	Principles of Political Economy.	
1793–1868	Thompson, Daniel P.,	Green Mountain Boys, Historical Novels.	
1794–1878	Bryant, William Cullen,		Poems (Thanatopsis), etc.
1795–1820	Drake, Joseph Rodman,		The Culprit Fay.
1795–1870	Kennedy, John P.,	Swallow Barn, Rob of the Bowl, Horse-Shoe Robinson, etc., Memoirs.	
1795–1856	Percival, James G.,		Prometheus, etc.
1796–1865	Wayland, Francis,	Moral Science, Political Economy, Intellectual Philosophy.	
1796–1859	Prescott, William H.,	Ferdinand and Isabella, Conquest of Peru, Conquest of Mexico, etc.	
1796–1828	Brainard, John G. C.,		Poems.
1796–1865	Haliburton, Thomas C.,	Sam Slick.	
1796–1881	Palfrey, John G.,	History of New England.	
1797–1882	Parsons, Theophilus,	Relig. and Phil. of Swedenborg.	
1798–1870	Barnes, Albert,	"Barnes's Notes" (Bible).	
1800–1891	Bancroft, George,	History of U. S. to 1789.	
1802–1864	Morris, Geo. P.,		Lyrics.
1802–1880	Child, Lydia M.,	Mother's Book, Biographies.	
1802–1876	Bushnell, Horace,	Nature and the Supernatural, Moral Uses of Dark Things.	
1802–1870	Prentice, George D.,	Louisville Journal (Ed.),	Poems.
1803–1882	Emerson, Ralph Waldo,	Conduct of Life, Essays, Representative Men, etc.	
1803–1879	Abbott, Jacob,	Rollo Books, etc.	
1804–1864	Hawthorne, Nathaniel,	Twice Told Tales, Blithedale Romance, Scarlet Letter, Wonder Book, Marble Faun, etc.	
1805–1877	Abbott, John S. C.,	Histories, Biographies, etc.	
1806–1870	Simms, William Gilmore,	Novels, Biography, etc.,	Poems.
1806–1867	Willis, Nathaniel P.,	Sketches,	Scriptural Poems, etc.

AMERICAN LITERATURE—Continued

Time	Author	Representative Works	
		Prose	Poetry and Drama
1807–1882	Longfellow, H. W.,	Outre Mer, etc.	Hiawatha, Poems.

1875–	Mackaye, Percy,	Dramatic Essays	Poetic Dramas.
1876-1916	London, Jack,	The Sea Wolf, Novels	

American history and American literature are not contemporaneous terms. American history began with the European settlement of the American continent, but the literature not until generations later, when the life of the new world had created distinctly different ideals. Our intellectual dependence on England has gradually lessened, and as we have gained independence in national affairs, national ideals have grown clearer. This gradual change in national character has been reflected period by period in our literature, but American literature remains today a branch of the great literature of England which binds together the English speaking people.

Periods of American Literature

I. The Colonial Period, 1607-1765.
II. The Revolutionary Period, 1765-1789.
III. The Period of the Republic, 1789-19—.

Colonial Period. It is important to remember that the group of English colonies scattered along the Atlantic coast represented entirely separate communities. There was no national life. The literature of the colonial period had its beginnings in no one center or group of men.

In Virginia education was despised. All were in eager search for ease of life or for gold. The earliest writings in this colony were news letters and descriptions of the new and strange country, written by the settlers to their friends in England. Very little attempt was made at beauty of style. Captain John Smith had printed when he returned to London "A True Relation of Virginia," published in 1608. "We doubt not," he writes, "but by God's gracious assistance, and the adventurous, willing minds and speedy furtherance to so honorable an action in after times, to see our nation enjoy a country, not only exceedingly pleasant for habitation, but also very profitable for commerce in general, no doubt pleasing to Almighty God, honorable to our gracious sovereign, and commodious generally to the whole kingdom." This and other writings of the early Virginia colonists form very valuable historic documents. Certain few attempts at scholarly work were made, such as the translation of Ovid's "Metamorphoses," by George Sandys, treasurer of the Virginia colony. Among the narratives and descriptions of the country were "Good News from Virginia," by Alexander Whitaker, published in London in 1613; and "Leah and Rachel," by John Hammond, published in 1656.

Great importance was attached to education in the New England colonies. Schools, colleges, and the printing press were soon established. Books and pamphlets were published. The first book printed was the "Bay Psalm Book." Among the earliest writings were diaries, histories, and descriptions. The events of the first year of the Plymouth colony were recorded in the "Journal of William Bradford and Edward Winslow," vivid and full of interesting incidents. The "History of Plymouth," by William Bradford, for thirty years governor of the colony, comes down to 1646.

The literature of New England was, throughout the colonial period, of a religious character. The only questions of general interest were questions of theology. The writers of books and pamphlets were men who had fought for their religious opinions. They had exiled themselves that they might be free to worship God according to the dictates of their own conscience. Naturally, the first publications were in defense of their creed. Their only literary object was to explain divine truth as they perceived it. Religious books and pamphlets, therefore, form the great bulk of the publications of the period. Most prominent among the clergy were Roger Williams, the author of many writings in which he boldly stood for liberty of conscience; John Eliot, the "Apostle to the Indians" and a writer of books; and the Mathers, father, son and grandson, men of great mental power who wrote many volumes of sermons.

The three greatest names during the Colonial period were: Cotton Mather (1663–1728), Jonathan Edwards (1703–1758), Benjamin Franklin (1706–1790). The most celebrated book by Cotton Mather was the "Magnalia Christi Americana," or "great things done by Christ for the American people." Jonathan Edwards' principal work is entitled "Inquiry into the Freedom of the Will." The best known of Franklin's works are his Autobiography," "Father Abraham's Speech," and "Poor Richard's Almanac." The early writings of Benjamin Franklin fall within the Colonial period, but his state papers and his later works belong to the Revolutionary period. The first newspaper published in America was "Public Occurrences," in 1690. "The Boston News Letter" was published in 1704; "The Boston Gazette" in 1719.

Revolutionary Period. By the middle of the Eighteenth Century great changes were manifested in the character of the colonies. They had become closer neighbors and they had discovered that they had much in common. The old isolation was broken down, and with united voice they protested against foreign injustice. The character of the writings of the Colonial period was theological, the character of the writings of the Revolutionary period was political. The writers of the day denounced tyranny and proclaimed for liberty and self-reliance and thus laid the foundations for our national literature. Already, for half a century, the weekly newspapers, as well as a few monthly magazines for a decade or more, had been publishing and discussing political news, so that the people of the colonies had been educated to think and write upon such subjects. The American colleges had contributed their share to the spirit of independence, and educated men were ready to act as leaders. It is not strange, therefore, that the state papers of the Revolutionary period form a body of exceedingly able documents. "When your lordship looks at the papers transmitted to us from America," said Chatham, in 1775, "when you consider their decency, firmness, and wisdom, you cannot but respect their cause."

The greatest orator of Massachusetts was James Otis; the greatest orator of Virginia, Patrick Henry. Jefferson, Madison, Monroe, John Jay, Alexander Hamilton, all were able writers. There were some attempts at general literature, history, essay, biography, fiction, and there were a few poets of an inferior sort. The ballad literature of Revolutionary days is said to have attracted the attention of Lord Chatham. The songs current in America during this era are historically interesting and artistically monotonous. They celebrate in rude verse the achievements of native heroes like "Bold Hawthorne"; or ridicule, like "Jack Brag," the British Lion; or, like the "Fate of Burgoyne," the overthrow of vaulting ambition; or, as in "Wyoming Massacre," bewail the fate of the fallen; or, as in "Free America," celebrate the triumph of the good cause. Among the very rude national anthems of the West, "Yankee Doodle" is remarkable as having been an old Dutch catch adapted into an English satirical chant, and adopted, with conscious or unconscious irony, by the American troops. "Hail Columbia" was a somewhat later production, by Joseph Hopkinson; and the "Star-Spangled Banner," by Francis S. Key, is associated with the traditions of the second British War. As inspired with the spirit of the Eighteenth, though belonging in date to the early years of the Nineteenth Century, we may mention the "Pilgrim Fathers" of J. Pierpont; Woodworth's "Old Oaken Bucket"; "Home, Sweet Home," by J. H. Payne; the humorous burlesque of J. G. Saxe, "Miss MacBride"; and the verses of the great painter and romancer, Washington Allston, with the refrain, "We are One." Francis Hopkinson's "Battle of the Kegs"; Joel Barlow's "Hasty Pudding"; the humorous "Wants of Man," by Quincy Adams; the "Conquest of Canaan" and "Columbia," both by Timothy Dwight, are among the finest poems of their time.

Period of the Republic. The best energies of the American people have been concentrated on the development of vast material resources and the building of a great nation. It is not to be expected that a century of such activity would produce a literature equal to that of the Mother Country with her centuries of assimilation and development. American literature has no name that can rank with the highest. She has never produced a Shakespere or a Milton, but her long roll of honorable names who have written prose and verse give promise of the literature that may be produced in America when time has ripened this nation and when the great genius shall be born.

The center of literary production during the last century shifted from place to place along the Atlantic coast. It was first in New York and began with the writers who formed the Knickerbocker school. From 1830 to 1835 the literary center shifted to Cambridge and Concord, where it remained for more than half a century. Since the deaths of Hawthorne, Longfellow, Emerson, Lowell, Holmes, the leaders of the Concord-Cambridge school, there has been no one center of literary preëminence. New writers have arisen in many parts of the country and a general interest in letters has been diffused.

With the first decade of the Nineteenth Century the stress of war and politics was relaxed and the time was favorable for the beginnings of our national literature.

The principal writers during the pioneer period of American literature were Washington Irving, James Kirk Paulding, James Fenimore Cooper, Joseph Rodman Drake, Fitz-Greene Halleck, William Cullen Bryant, Edgar Allen Poe. It was Washington Irving who, by his "Knickerbocker History" and "Sketch Book," removed from us the taunt, "Who reads an American Book?" Cooper invented a new type of novel in his "Leather Stocking Tales," and Bryant gave us poetry of the new world. Edgar Allen Poe created the music of poetry such as had never been sung.

The literary history of New England divides into three periods, represented by three groups of writers. First, the political group, including the great orators; second, the poets and theo-

logians; third, poets, novelists, essayists, critics. Among the orators and statesmen of the first group are Daniel Webster, Edward Everett, Rufus Choate, Wendell Phillips, Charles Sumner, all orators of the anti-slavery days. Contemporaneous with these were the great orators of the South: Henry Clay, Robert Hayne, John C. Calhoun. To the great orators of the nation must be added the name of Abraham Lincoln, who won an enduring place by his Gettysburg speech.

The second New England group includes minor poets as well as the great theologian, William Ellery Channing; the poet and painter, Washington Allston, and Richard Henry Dana, for many years editor-in-chief of the "North American Review." The third group of New England writers includes Emerson, Hawthorne, Longfellow, Whittier, Lowell, Holmes, and to these may be added Bronson Alcott and Louisa M. Alcott, Henry Thoreau, William Ellery Channing, Theodore Parker, George William Curtis, George Ripley, and Margaret Fuller. Notable among historical writers during this half of the century are Richard Hildreth, George Bancroft, Francis Parkman, John Lothrop Motley, William Hickling Prescott, John Fiske, and John Bach MacMaster.

The period since the close of the Civil War has been one of great productiveness in literary fields, and continues to show an increasing rather than a diminishing tendency. To record even the name of every writer who has been thought worthy of favorable notice by competent critics would be impossible in a short review. The importance of the monthly and other magazines and reviews as vehicles for the first publication of all varieties of writing, has wonderfully developed and the success of those periodicals which employ the art of illustration is especially notable. While the greater part of magazine writing has been of a quality to engage chiefly the attention of desultory and uncritical readers, there is now apparent a decided development in the direction of greater thoroughness, sounder scientific method, and a more acute and delicate art. This is especially the case in historical and biographical studies.

With the dawn of the Twentieth Century we have no promise of literature equal in quality to the best that was produced in the middle of the Nineteenth Century, but the number of those who can write well is exceedingly large. American fiction of to-day is realistic and it has utilized freely the large resources of this country. The number of writers of realistic fiction cannot be computed, for among them must be included the writers of short stories with local coloring. Two acknowledged leaders in this field are William Dean Howells and Henry James, Jr. Mr. Howells is a keen observer of social life in our principal cities and has described it in several novels with depressing accuracy. Mr. James has given us a study of the American abroad in what has been called the "international novel." Contemporaneous with these are Thomas Bailey Aldrich and Edmund Clarence Stedman, both of them writers of poetry as well as prose. With the death of Aldrich in 1907 and Stedman in 1908, the last of the old school of American critics may be said to have passed away. Mr. Aldrich and Mr. Stedman were not great literary geniuses, they did not assume to be, but they had fine literary tastes and as editors and essayists they educated the reading public. Other writers of attractive stories are Edward Everett Hale, Frank R. Stockton, Elizabeth Phelps Ward, Mary E. Wilkins Freeman, Sarah Orne Jewett. Among the essayists are Charles Dudley Warner, John Burroughs, Richard Henry Stoddard, Henry Van Dyke, Donald G. Mitchell, Thomas Wentworth Higginson, Richard Grant White, Moses Coit Tyler. Prominent among literary journalists and critics are Barrett Wendell, Parke Godwin, Richard Watson Gilder.

Western writers have added to our literature an original vein of realism and humor; the poems of Riley and the novels of Edward Eggleston with their Hoosier dialect, Maurice Thompson, Eugene Field, Lew Wallace, Helen Hunt Jackson, Cincinnatus Miller ("Joaquin Miller"), Francis Bret Harte, and greatest of all, Samuel L. Clemens ("Mark Twain"), with his inimitable humor, have not only given us a literature of the West but a fund of laughter which is international.

The South, since the close of the Civil War, has awakened to greater intellectual activity. She has a right to be proud of the writers she has already produced and to be hopeful of her future. In these years, when poetry has been so rare and prose essay and the novel have so multiplied, the South has given us two poets with unusual poetic power, Sidney Lanier and Paul Laurence Dunbar. Sidney Lanier was both poet and musician and had the rare power of interpretation. In his "Marshes of Glynn," as he saw and felt them, he has made us see and feel them too. Paul Laurence Dunbar, the poet of the colored race, had the lyric charm that belongs to true poetry. Some of his exquisite poems will be accounted among the best that America has produced. Nowhere is there a finer dialect poem than Dunbar's "When Malindy Sings," a poem written as a delicate tribute to his own mother who was a negro slave. Fiction has been everywhere the favorite form of writing during the last few decades, and the South may well take satisfaction in the fine literary work of such writers as George W. Cable, James Lane Allen, Thomas Nelson Page, Richard M. Johnston, Mary N. Murfree ("Charles Egbert Craddock"), F. Hopkinson Smith, Joel Chandler Harris ("Uncle Remus"), Winston Churchill.

Three stages in American literature have been considered, the Colonial period, lasting two hundred years and more, when literary efforts were confined to feeble imitation of European models; the second, the period of the Revolution, when there was great unrest and no creative literary genius; the third period, that of the Republic, in the midst of which we are to-day working out our ideals, which will appear in future American literature.

TABLE OF ITALIAN LITERATURE

Time	Author	Prose	Poetry and Drama
13th Century	Ristoro d'Arezzo,	Treatise on Astronomy and Geography.	
13th Century	Fra Paolino,	Latin Chronicle.	
13th Century	Fra Guittone d'Arezzo,	Letters	Poems.
1265–1321	Dante Alighieri,		Divina Commedia.

1847–1906	Giuseppe Giacosa,		As the Leaves, Dramas.
1864–	Gabriele d'Annunzio	Il Piacere, etc.	Poems.

The oldest existing libraries have been found in Italy and in that country have been preserved the oldest and most valuable Greek and Latin manuscripts. Among these are the palimpsest, "De Republica," of Cicero, believed to date as far back as the third century, the famous "Codex Vaticanus" of the fourth century, and the equally ancient "Virgil" and "Terence." Italy of the middle ages clung to classical traditions and when at the end of the fifth century the fighting bands from the North conquered the Roman world Latin thought held its power while political Rome was lost. During years that followed the Italians treasured memories of Rome and fought against the encroaching Hohenstaufen empire; from this absorbing interest in political questions they were attracted by positive and practical subjects, especially the study of Roman law. Those who turned toward theology generally went to Paris for study, while in Italy the schools for laymen educated scholars and writers who were masters in grammar and rhetoric, and such poets as Fortunatus. All this kept alive a certain culture in that barbarous age and had great influence on future Italian literature.

When legends, poems, and tales appeared in other countries and among other Latin peoples, Italian writers and students, still interested in history and law, copied these from the French and German, but made the romance of the troubadours into serious history, written in the Latin language. Prosaic lives of the saints, historical chronicles, and translations from Aristotle's philosophy and Marco Polo's travels were gathered into long series of facts. This hindered the literary growth of the new language and there was no real Italian writing before the thirteenth century. Especially in the last half of that century the new literature grew, in the north of Italy chiefly, in the form of religious poems intended to be recited to the people, and in the south in love poems of ideality, feeling, and sentiment. The stirring religious movement of that age, when the two great orders of Saint Francis and Saint Dominic arose, influenced all Italian life and letters. Many poems or hymns have been attributed to Francis of Assisi and others to the poet Jacopone, who was a mystic and a most original writer.

At this time, too, the religious drama began with an old hermit, Fasani, who had come out from his cavern in the year 1258, and suddenly appeared in Perugia. Life was hard in Italy during these years; the never-ceasing quarrels between the Guelphs and the Ghibellines, the frequent interdicts and excommunications from the popes and the tyrannous cruelty of the nobles, added to famines and plagues, kept the people in constant fear. Fasani added to this un-

happy turbulence in Perugia by announcing himself as sent by God to warn the people of terrible visitations shown to him in visions. From these influences many joined together and formed themselves into a society to do penances and their songs, connected with the church liturgy and chanted in dialogue form, grew into the first dramas in the Italian tongue.

The people of Tuscany spoke a dialect closely resembling the Latin and it became the language of literature. Under its democratic government Tuscany was the first province of Italy, politically, and philosophy and science gained a hold in the cities, but prose was scanty during the Thirteenth Century, while poetry in various forms was abundant. The first real prose writing in Italian was a scientific book, a treatise on astronomy and geography by Ristoro. A collection of tales called the "Cento Novelle Antiche" belongs to that time, containing short stories from history, ancient tradition, the Bible, and legends. A number of novels were also written, but they are of little note compared with the rich legendary lore of other countries.

Guittone d'Arezzo is a name that attracts attention in this period; he wrote many poems and some prose, mostly in the form of letters. His love for antiquity, Roman tradition, and the old language was strong; in his researches he went back more than a thousand years and took Seneca for his model, trying to write Italian in the old Latin style. His subjects were moral or religious and his mixed style most extravagant and involved. All this belongs to the age of beginnings.

During this Thirteenth Century the Reformers gained greatly in numbers and about the middle of the century one sect, the Paterini, was nearly destroyed by the Guelphs, led by a Dominican friar. Two columns in the city of Florence still mark the place of the fearful massacre. Not many years later the banished Ghibellines gathered their forces, became conquerors in their turn and would have burned the city but for the determined opposition of Farenato degli Ubertia, whose name Dante afterward made immortal. In the year 1282 the most wealthy guilds of the rich city drew away from all rule and established a government of their own, and this year may be considered the data at which a new period of Italian literature began, the period of development. This period saw, also, the beginning of Italian art in Tuscan lyric poetry.

The poet and philosopher, Cavalcanti, became head of the Ghibellines; and when never-ending brawls wearied the people who sought peace, by banishing the leaders of the rival parties, he was cast out among the rest and died in the year 1300. He wrote in prose on oratory and philosophy, but his poems, especially the love sonnets and short songs, were most noted and were praised by Dante, who was his great friend. Some of these songs were simple and graceful, others were heavy with metaphysical ideas borrowed from the Christian Fathers and ancient philosophers. His "Canzone d'Amore" became popular and was frequently published. In the most noted songs or ballads, probably written during banishment, his melancholy longing for home and his solemn love for the lady of his heart crowded out all subtle philosophy. More than two centuries later his complete poetical works were placed in the libraries of Florence and Venice.

The works of Dante Alighieri (1265–1321), stand as the center of all literature of his time. In his little book of poetry and prose, the "Vita Nuova," are found lyrics, the form and style of which mark all lyrical poetry of that day. In this he idealizes love, making everything heavenly through it as he tells the story of his own love for Beatrice, whom he makes almost divine. The "In Memoriam" of Tennyson has been likened to this work. Dante was the most illustrious of Florentine citizens as well as poets, and was chosen prior of the republic in the year 1300. In his immortal poem, the "Divine Comedy," he has preserved the names and deeds of the great men who made Florence renowned. The parties contending for power took new names at the beginning of the Fourteenth Century, the Bianchi representing the remnant of the old Ghibelline faction while the Guelphs, the nobles or aristocracy, took the name of the Neri. Dante, as one of the Bianchi, was, at last, among the proscribed and his life became a perpetual pilgrimage from one Italian town to another.

The "Convito" or "Banquet" was the work of Dante's manhood as the "Vita Nuova" was the work of his youth. It is made up of three treatises, each forming a commentary, and he planned to compose eleven more, which would have made it a book of universal knowledge. Another work, "De Monarchia," written in Latin in scholastic form, was meant to show that a universal monarchy is necessary to the well-being of the world; this monarchy was to be centered in the Romans. This has been called the creed of Dante's Ghibellinism. Besides his "Divina Commedia" there are numbers of sonnets, ballads, and short songs bearing the poet's name, some of them undoubtedly spurious. The letters of Dante have been counted among the most important material for his biography. He wrote to the government of Florence to complain of his undeserved exile, to Henry VII. urging to some definite plans and to the Italian cardinals pleading for the election of an Italian pope. There are other letters to friends and to people connected with his work.

The contents and scope of the wonderful poem, the "Divine Comedy," are beyond the space of a short notice. From different authorities we may conclude that it was begun about the year 1300, the "Inferno" was finished in 1314, the "Purgatorio" completed in 1318, and the last cantos of the "Paradiso" were probably finished not long before the death of the poet. Dante said of this poem that he called it a comedy because it had a sad beginning and a cheerful ending. He hides an allegorical meaning under the literal one and in this it is connected with mediæval literature, but the merit of the poem lies in the individual art. He took his materials from theology, philosophy, history, and mythology, mingled this with hatred and love, and under his genius the dead became again alive. This

great poem fixed the destiny of Italian literature and began the age of the Renaissance.

Cino da Pistoia (1270–1336), son of a noble family, was also a friend and correspondent of Dante. In literature he continued in some sort the tradition of Dante during the interval between him and his successor, Petrarch. His name is found on all lists of early Italian poets and his love poems are musical and full of sweetness and quoted by critics as being surpassed only by Dante himself. It has been said that in the writings of Cavalcanti, Dante, and Cino da Pistoia "the psychology of love and of sorrow nearly reaches perfection."

In histories of literature Petrarch (1304–1374), is classed as one of the four classical poets of Italy, but he is as well known from his interest in the old Latin writers and his influence in the revival of learning in mediæval Europe. His father was included in the same edict of life-long banishment that sent Dante out of Florence and the boyhood of Petrarch was spent in a little village of Tuscany where he acquired the pure Tuscan idiom that he afterward used with so much skill in odes and sonnets. He lived for many years at Avignon, denouncing the life of the papal court; he traveled much in Europe and in the year 1341 he received the poet's crown in Rome. He wrote works in Latin, the most important being in the form of letters, known as the "Epistolæ," important as a history of his own times as well as an index to his own life and mind. Another work in Latin was a poem, "Africa," in which he recited the wars of Scipio. In the year 1327 he is said to have first met Laura, the object of his life-long devotion and heroine of his poetic writings. That Laura really lived has come to be a belief, but who Laura was cannot be definitely proved; she undoubtedly lived at Avignon. His "Canzoniere" contains poems written during the life-time of Laura, poems written after her death, and a third part which seems to have been planned after the manner of Dante. While these poems show Petrarch to have been a psychologist, he did not, like the poets before him, go into transcendentalism, but kept within human limits. Petrarch had no decided political idea, but he was a most patriotic Italian, and in his mind connected the Italy of his day with the great Rome of the days of Cicero.

Boccaccio (1313–1375) lacked nothing of Petrarch's love for antiquity or his interest in the new Italian literature. Great classical learning shows in his "Genealogia Deorum," where he writes of the Pagan deities, making an encyclopedia of mythological knowledge. He compiled, or perfected, works on geography, he touched upon history and wrote some minor things in Latin, besides his Italian lyrics and longer poems. His famous Italian work was the "Decameron," a collection of a hundred novels related by men and women who had left Florence during a year of plague (1384). In this the rude form used in fable-writing gave place to careful work on classic models and was the beginning of an artistic style in romance. Among authors who wrote collections of tales in imitation of Boccaccio were Fiorentino, Sacchetti. and Sercambi.

A chronicle of events dating between the years 1280 and 1312 was written by Compagni, which is still consulted as important authority for that period of Florentine history. It shows strong feeling and discusses the reasons of the events which evidently came under his own notice. Villani, another chronicler, relates events up to 1347. He traveled in France as well as Italy, and his chronicle includes much valuable knowledge concerning both countries. This was afterwards versified by Antonio Pucci and other versified history was written during this century when every subject was treated under the form of verse. Many minor poets also left political works. In connection with this versification comic poetry was also developed and carried on by Pucci, Orgagna, and their followers. These poems, comical as well as historical, were meant to be recited to the people and in them were the beginnings of the romantic epics of the Sixteenth Century, Ariosto's "Orlando Furioso," Bojardo's "Innamorato," and others.

Lorenzo de' Medici (1449–1492), remembered chiefly as a statesman, was a man of letters, and left poems written in the spirit of Dante and older poets, while he was a man of his own time. As a classical scholar he shows the influence of the Renaissance in Italy. During the Fifteenth Century a kind of literature started in Florence, attached to popular festivals held in honor of St. John, the patron saint of the city. Although this was in the form of popular poetry the names of some of the most important authors are found in connection with it and it became the foundation of the Italian drama. Against this literary and social movement the friar, Savonarola, appeared, arriving in Florence in the year 1489. He took the line of a prophet and preached against much of the reading of the day and against the classical studies. In his struggle with Lorenzo de' Medici he directed his attack against him as a patron of pagan literature rather than against a political tyrant. Savonarola has sometimes been considered as a forerunner of the Reformation, but his preparation of the way for that great German and English religious movement was no part of his plan. He desired a reform of manners, not of doctrine, and had no great merit as a thinker or writer. He left Italian sermons, hymns, and ascetic and political treatises.

Machiavelli (1469–1527) and Guicciardini were leaders in history as a science founded on observation. Machiavelli noted facts, studied other histories and sought out reasons, and his principal works are political rather than historical. His "Principe," the "Prince," called out severe accusations against him, and has since associated his name with unscrupulous politics, but the book seems to have been the result of the civil and moral condition of Italy at that time. His history of Florence is still consulted as standard authority. The "Story of Italy," by Guicciardini, a history of the time from the death of Lorenzo de' Medici to the year 1534, is full of political wisdom, and treats of characters as well as events. Following these were Nardi, Varchi, and Segni, Tuscan historians; Porzio, who wrote histories covering short periods;

Bembo, Paruta, and others, who arranged chronicles or annals of other nations.

The romances of chivalry versified by Pulci and Bojardo became the foundation of the romantic epic formed by the genius of Ariosto (1474–1533). His "Orlando Furioso" made wonders and prodigies appear as truths and facts and his descriptions were marked by grace and beauty. The historical epic was the work of Tasso (1544–1595), who became famous through his poem, "Jerusalem Delivered," the story of the liberation of the Sepulchre by Godfrey of Bouillon in the Eleventh Century. This poem ranks now as the best heroic poem that Italy can show.

Tasso seems to stand between the high development of the Renaissance and the period of decadence in Italian literature that began with the Spanish rule in the middle of the Sixteenth Century. The people of Italy were oppressed, every high aspiration was checked, no freedom of word or thought was allowed, and this continued until the war of the Spanish succession. This one hundred and forty years is known in the history of Italian literature as the Secentismo. During this time, however, some independent thinkers, such as Bruno, Campanella, and Vanini, opened the way for the scientific triumphs of Galileo (1564–1642). He was conspicuous in literature as well as in science, a student of Ariosto, and in his prose is found the poet's ease, clearness, and elegance. The prose of Galileo has been called the best prose ever written in the Italian language.

When freed from Spanish dominion in the Eighteenth Century, civil reforms, resulting from ideas quietly working in many parts of Europe, improved the conditions of life in Italy. The first sign in the literature was in historical and scientific prose. In history Muratori collected the chronicles for the years 500 to 1500, and wrote his Annali d'Italia, and Mazzuchelli turned to literary history preparing for a biography of Italian writers. Everything tended toward improvement and the influence was soon seen in the drama. Metastasio (1698–1782) was one of the most pleasing poets of his day, writing plays, operas and ballets. Goldoni revived comedy and Alfieri (1749–1803) raised tragedy to a high standard. "Saul" is regarded as his masterpiece. Monti and Foscolo were followers, both inspired by patriotism. Silvio Pellico (1789–1854) also wrote tragedies which were good specimens of modern art, but he is most popular as author of "Lie Mie Prigioni," "My Prisons," the story of his ten years' life in the fortress of Spielberg. Manzoni (1785–1873) and Niccolini were also popular writers. Giordani, born in 1774, was the last of the writers known as the classicists.

Scholars in Italy were influenced by the ideas embodied in the movement known as Romanticism, especially strong in Germany at the beginning of the Nineteenth Century. Silvio Pellico, Breme, Berchet, and Manzoni were prominent among them, but the literary reform opposing the classical studies of the past took more the way of realism in Italy. Manzoni was distinguished in this and from his "I Promessi Sposi" the new form is dated. In this the historical novel grew into a work of art, and the genius that created it was first recognized by Gœthe, and placed the author, Manzoni, at the head of Italian literature of the century. Leopardi (1798–1837) shared this honor by putting into his poems most realistic pictures of what he saw and felt. Circumstances had given him a dreary life and his poetry has been quoted as the poetry of despair in which he surpassed even Shelley and Byron. He has also been honored by critics as the first poet since Dante and a most perfect writer of prose. Among his poems are "Passero Solitario," "Sabato del Villaggio," and "Ginestra." "Operette Morali," a volume of discourses and dialogues, was his greatest prose.

Botta (1766–1837) and Colletta (1775–1831) wrote noted histories of their own country and to these Botta added a history of the American Revolution. These were followed by "Vespri Siciliani," a history by Amari, "Storia d'Italia," by Troya, and the "Archivio Storico Italiano," established by Vieusseux, all in the renewed spirit of research. Interest in history was inspired by the noted Italian love of country and patriotism led to literary expression. Among authors connected with the political revolution of 1848 were Guisti with his popular satires, Guerrazzi, writing historical novels, Gioberti in polemics, and Balbo making an epitome of history.

Poetical geniuses of this century were Aleardi, Prati, Carducci, and Zanella. Arnaboldi, also a poet, has been criticised for writing utilitarian verse. Fiction lists carry the names of Barrili Farina, Giovagnoli, and Bersezio, and biography and history have been made richer by the work of Zino, Capponi, Bartoli, Villari, and Berti, with Fiorentino, Trezza, Ferrari, and Cossa in general literature.

Italian fiction has a wide field, description in travels is well done as De Amicis's almost unequaled works show, and through translations Italy holds a place in the reading world.

There is no record of the literature of Spain earlier than the Twelfth Century. The oldest manuscript is a fragment of a play written for the Church of Toledo, the earliest important work the "Chronicle of the Cid." Allusions in later literature suggest that heroic poetry may have been quite rich, but no poems are preserved.

With the heroic poetry, taking subjects from history and legends, there grew up in the Thirteenth Century a religious poetry, written mostly by monks. Among these Gonzalo de Berceo wrote poetical lives of the saints, devotional poems, and religious hymns. To this century belongs also a "Life of St. Mary the Egyptian," translated from the French.

King Alfonso X., who reigned until 1284, was author of the poem, "The Philosopher's Stone," besides several prose works. Under his patronage scientific compilations were made and he was the founder of history written in Spanish. The "Cronica General," composed under his direction, tells of universal history from the creation of the world, in one part, and of national history in another. This last was called "Historia De Espana." The source of the first part was Spanish chroniclers, who wrote in Latin, but whose works were soon translated. In the "Historia De Espana" many legends are found, also the story of the Cid.

King Alfonso's example was followed by other writers on his models. About 1390 a "Chronicle of the Conqueridores" was compiled by command of the grand-master of the Order of St. John of Jerusalem. Special chronicles of each king were also written. Among the writers of these comes Pedro Lopez de Ayala, a man who shows literary culture and knowledge of ancient history, and with him the style of writing is much improved. Besides these chronicles are some biographies of important persons and a very curious book of travels, the story of an embassy sent by Henry III. to Tamur, in 1403, evidently written by one who led the mission.

Other writings in prose in the Thirteenth and Fourteenth Centuries are generally filled with maxims and short moral tales, a few of Eastern origin. The best among these Oriental tales is a collection by Juan Manuel, nephew of Alfonso X. Juan Manuel wrote also graver works on education, domestic economy, and politics.

The principal French romances of the Round Table were translated and imitated in Spain in the first half of the Fourteenth Century, and notice of the "Book of Chivalry," in Spanish literature, shows that Spaniards have long known this romance from France, perhaps through Great Britain.

In the reign of John II. of Castile (1407–1454) there appeared a court poetry, now known as the "Arte de Trobat." This poetry was written in short pieces and in complicated verse form. It was made up of love ditties, debates, repartees, burlesques, and satirical songs. To understand or appreciate these poems they must be read in connection with the history of the time. Mendoza, Marquis of Santillana, stands first among these courtiers and poets, and some of his lighter poems are very graceful and full of melody. Juan de Mena belongs, also, to those days, and his principal works, "The Coronation" and "The Labyrinth," show the effect of Italian influence. They show also the progress of the language in Spain.

As the beginning of Spanish drama during these centuries, dramatic representations had been given at church festivals, with the object of explaining the ritual to the ignorant. Gradually changing, dialogue was added, and about the year 1492 a book appeared, "La Celestina," written by Fernando de Rojas, and this most astonishing novel exhibited, for the first time, persons of all classes, particularly the lowest, talking in harmony with their natural surroundings. This could not have been represented on the stage, but it left its mark on the drama of the nation. It was translated into various

languages, and, with its liberty of thought and expression, was a great success.

Two most noted among dramatic writers, Cervantes and Lope de Vega, were contemporaries. Cervantes, born in 1547, began writing comedies and tragedies; the first, "Galatea," was published in 1584. His great work, "Don Quixote," published in 1605, was immediately translated into all the languages of Europe. "Don Quixote" has been defined as the social romance of Sixteenth and Seventeenth Century Spain. Lope de Vega was a prodigy of learning and imagination. He wrote numberless dramas and detached verses, many of which are collected under the name "Obras Sueltas."

The "Golden Age" of Spanish literature dates from the union of Aragon and Castile and the connection of the House of Austria, which gave unity to the literature of Spain, as well as to Spanish politics. During this age Calderon de la Barca (1600–1681) was the head of the Spanish drama. His plays are of four kinds: sacred dramas from Scriptural sources, historical dramas, classic dramas, and pictures of society and manners. The most celebrated are "The Constant Prince," and "El Magico Prodigioso." Calderon was attached to the court for the purpose of furnishing dramas for the royal theater, and in making his story to hold interest throughout, facts were no obstacles.

With the celebrated Juan de Mariana (1536–1623) a new manner of writing history appeared. In place of the tagging on of one fact after another, with no apparent connection, he wrote a general survey of the history of Spain. Various accounts of more or less important episodes in the history of the country were written by different authors with reports of trans-Atlantic conquests. Gracilasso de Vega, a descendant of the Incas, wrote a history of Florida, based upon the adventures of De Soto. To another historian, Solis, belongs "Conquest of Mexico," a flattering picture, and very successful. Gomana, Oviedo, and Las Casas left records of their adventures in the new world, and on these records all history of early Spanish settlements in America is founded. Letter writers are numerous in Spanish literature, and from collections of letters may be gathered history of the times and secrets of Spanish policy. Among these is Antonio Perez (died 1611), whose letters give much information in a gallant and sprightly fashion.

Philosophy was poorly represented in these centuries, the few thinkers writing in Latin, and the very existence of mathematical science was unknown.

Luis de Leon and Herrera led in lyric poetry during the Sixteenth Century and much of their inspiration came from the Hebrew Scriptures. After these writers ballads grew to be a delight among the people, and no poetry of modern times has been more widely known or influenced so thoroughly all national life. Many of these ballads were by authors who wrote little else; but ballads are also found in the works of all writers who wished for fame, or to become of interest among the Spanish people. The religious poems of Quevedo show beauty, but he is best known by his prose satires.

At the end of the reign of Charles II., in 1700, France had great place in Spanish thought; French customs crept into use and French became the language of the society of the court. Translations from the French took the place of native work and little advance was made.

Charles III. (1759–1788) gave new life by abridging the power of the Inquisition and allowing books to stand by defense of author or publisher. In these years the poems of Moratin, the literary fables of Yriarte, and the "Life of Friar Gerund," by Salazar, were added to the literature.

The return of the Bourbons in 1814, however, made this of small account. During fierce political changes and long civil war the political pamphlet was the only book to attract great attention. José de Larra (1809–1837) was a prose writer of talent, who gained reputation by his "letters" on political subjects. He was better known by the pseudonym of "Figaro."

Among later writers Antonio de Trueba is known by his popular songs and short stories, Lista and Duran as literary critics, and Campoamor and Bequer, poets. In the novel we find the best contemporary Spanish literature. Perez Galdos, a writer of fiction, touches modern thought in the conflicting interests of Spanish life. Juan Valera is the author of "Pepita Jimenez," a famous novel, and the stories of Caballero, though not of equal merit, find translators.

RUSSIAN LITERATURE

Going to the foundations of Russian literature we find, as in most literatures, the oral tradition in the form of poetry. This poetry is not rhyme but poetic in figures, and has a sort of cadence appreciated by the scholar of the language. These tales of old time, known as bilini, are full of interest, many in number, and have been carried by wandering minstrels all through the land, as minstrels have chanted the songs and sagas of so many peoples. Thus we find in Russian literature the division of the oral and the written.

The oral literature of song or tale has been marked by scholars into periods, beginning with that of the old heroes. Songs in this period reach to the bounds of mythology, for the oldest heroes are represented as monstrous beings and might be personifications of the powers of nature. In all these there is also the imagery of popular poetry, the terms "brightest sun" used to designate the hero, "damp earth" in connection with a being of evil propensities, and others like. Giants of the mountains and serpents of the caves are made the subjects, or heroes, of the songs, and are shown guarding their surroundings. The animal natures are prominent, as in the well-known legendary characters, Idolistche Poganskoe, the great glutton, and Solovei Razboinik, the nightingale robber, with his nest in six oaks, who is the terror of travelers.

Fabulous tales or legends centering around the cruel tyrant, their celebrated Prince Vladimir and his introduction of Christianity in connection with the Greek Church, seem to mark the second literary period. The chief hero of these is known as Ilya Murometz, a giant in

form and strength and performing gigantic deeds. Vladimir introduced the forms of Christianity after his connection with the Church at Constantinople, during the last half of the Seventh Century, but no note of its spirit is prominent in the recital of his valorous performances as given in these tales.

The great commercial success of Novgorod, and its influence on the country, seems to mark a period in the history of Russia and a third cycle in the literature. In this are found the stories of Sadko, the great merchant, and of Versilii Buslaevich, of daring ventures and grand results.

The period following belongs to Moscow, which became the capital of the future empire in 1300 A. D., and during these years the literature busied itself with the autocracy and its doings. The destruction of Kazan by Ivan the Terrible, the conquest of Siberia, the iron rule of Ivan, himself, with its cruelty and superstition, are the foundations of the popular traditions which, strangely, show no hatred or call for revenge. Mingling with these in the later years are stories of the Cossacks, which almost make a literature in themselves. The Cossack songs laud the glories of the day, while they also record the sufferings of the people during Turkish invasion, the devastation carried by the Mongols, and the final overthrow of the Cossack republic.

The arrival of Peter the Great on the scene is marked as plainly in literature as it is in history. The spirited poem on the death of Ivan the Terrible, the pathetic story of Xenia, the tale of Yermak, the conqueror of Siberia, were followed by songs in abundance celebrating the wonderful Czar. The religious poems of Russia are numerous, and in them may be found many curious legends with beliefs of the Middle Ages. Many of these poems, with a large department of folk-lore, belong to antiquity and offer a fine field for the student of comparative mythology. Belonging to the more modern period some of these songs rehearse the death of Peter the Great and the deeds of Napoleon. The greater amount of all this poetry was not written, but belonged to oral tradition until an Oxford student, sent as chaplain with an embassy, early in the Seventeenth Century, collected a few old songs and tales and put them into writing.

According to authorities, the earliest specimen of the written literature of Russia is a Codex based on the Slavonic gospels. This was written by order of the Governor of Novgorod, and dates 1056 A. D. About twenty years later is a sort of Russian encyclopedia compiled from the Greek. This bears the name of Prince Sviatoslaff, son of Olga, the first Christian sovereign, and the work was done for him by his diak, or deacon. The style is said to be simple and clear. What seems a strange mixture is found in a work considered one of the best written in the language at that time, known as a "Discourse Concerning the Old and New Testaments" and containing a panegyric on Prince Vladimir. That he was the hero of so much of the popular poetry of Russia in that century, may explain the connection. The noted monk, Theodosius, wrote his "Instructions," discussions concerning the faith of the Church and exhortations to better living. Most of the writing of those years seems to have been done by monks and churchmen, and this confirms the statement so often met, that the "beginnings of Russian literature are contemporaneous with the introduction of Christianity." In this connection are mentioned the missionaries, Cyril and Method.

The earliest Russian code of laws, the "Russkai Pravada," is found in the Chronicle of Novgorod, and was first published during the reign of the son of Vladimir, Yaroslaff, who died in the year 1054. Both form and subject-matter of this code show that Russia then stood on a level in civilization with other European countries. Nestor, who is known as the patriarch of Russian literature, wrote his "Chronicle" during this century, and it proved to be the first of a long series of Russian annals recorded of many towns and written by many authors, mostly by the cloistered monks. These would be as dry reading as the Anglo-Saxon chronicles but for the romantic stories and sagas bountifully included in them. Travelers who visited the Holy Land and India left records of their adventures, and the sermons of Cyril and other bishops, written in allegorical style, are also preserved with many lives of the saints and the Fathers. Some of these have been edited in later years.

At the end of the four dreary centuries, the period of the appanages followed by the yoke of the Mongols, the literature of the country began a slow revival. The "Story of Igor," the manuscript of which was carefully preserved until the burning of Moscow in 1812, has been of much note. It is the story of the early part of the Tenth Century, but it has poetic spirit and holds interest for the general reader. To the time of the terrible Ivan (1530–1584) belongs the curious "Domostroi, the Book of Household Management," which became popular. It is said to be the work of a monk, and it faithfully pictures the ignorance and barbarisms of the time. At this date we also find the "Chetii Minei," which is said to have taken twelve years in compiling from the Greek. It was made up of extracts from writings of the Fathers, arranged for every day of the year.

The printing-press was set up in Moscow in the year 1553, and ten years later the first book was printed. This was called the "Apostel," and contained the Acts of the Apostels and the Epistles of the New Testament. Prince Kurbski was a fluent writer of this time who died in exile. Early in the Seventeenth Century appeared the "Chronograph" of Sergius Kubasoff, a history from the creation of the world to the day of Michael Romanoff (1617 A. D.). But the most important writing of that period was the "Account of Russia" by Gregory Kotoshikhin, who fled to Poland about the year 1664. He wrote his work in Sweden, the manuscript was preserved until 1840 and then printed. These books are considered an important record of Russian life before the time of Peter the Great. Works on philology and other educational subjects were written and the authors generally banished. The patriarch Nikon is well-known through his struggles with the Czar

as well as his remodeling of the sacred books which led to the great religious schism of Russia, a matter of history. The whole of the Seventeenth Century shows influence of Poland, and with these men the old Russian literature seems to have ended. Knowledge of the literature of the West made a new or modern literature for Russia.

Simeon Polotzki (1628–1680) was a sort of connecting link between the old and the modern period. He was tutor to Feoder, son of the Czar Alexis, had been educated at Kieff, then a Polish district, but seems to have known something of French literature. He wrote religious works, dramas, and doggerels. During his time Alexis made additions to the "Code of Laws" and burned the "Books of Pedigrees," which held histories of the different branches of past royal families. Peter the Great, beginning his reign in the year 1689, met the Polish element that had been so great in its influence and made native Russian the language of communication in all business. He found help toward introduction of new literary forms in Propocovich, a scientific scholar, who endeavored to put aside the numberless superstitions of the time by teaching material facts of science. Yavorski, who wrote the "Rock of Faith," opposing Lutherans and Calvinists, and Pososhkoff with his valuable treatise on political economy, under the title "Poverty and Riches," were also of note. The indefatigable writer, Michael Lomonosoff, did much to aid education in Russia by his personal influence as well as by his odes, tragedies, essays, and slight histories.

The plan of Peter the Great to civilize Russia on the model of the nations of the West reached its climax under the ten years' rule of Anna (died, 1740). The influence of her German advisers headed by Biren, was strong in all departments, but the annals of the time show little literary progress.

From the beginning of the reign of her successor, Elizabeth, Russians date a notable advance in letters, the work mainly following French models. Through the influence of Ivan Shuvaloff the University of Moscow, the oldest in the country, was founded in the year 1755, and in the following year the first theater at St. Petersburg was opened with Sumarokoff as director. He was noted for his rhymed comedies and tragedies written in French style. Up to this time only religious plays had been allowed in the country.

Catherine II. (reigned 1762–1796) gathered about her a generation of court poets, most of them poor writers but urged to emulate Horace, Virgil, and Homer. Few of them are now remembered even by name. Kherasoff was author of two lengthy epic poems which are no longer read, and Denis von Visin, evidently of German blood, wrote national comedy. The greatest poet was Gabriel Derzhavin (1743–1816), who has been called Catherine's poet laureate. Of his poems the "Ode to God," "The Nobleman," and "The Taking of Warsaw" are best known. Alexander Radistcheff appeared as writer of "A Journey to Moscow," in which he noted the sad condition of the serfs and for which he was sent to Siberia. The censorship of the press became severe, many foreign books were excluded and for readers, as well as authors, times grew troublous.

The form of allegorical writing, so common in countries under absolute rule, was popular in Russia and a long list of fabulists was headed by Ivan Khemnitzer (1744–1784), who began with translating and afterward wrote original tales. A later author, Ivan Kriloff (1768–1844), proved to be the most popular fable-writer of the nation. He resembled the French La Fontaine in character and in work. Among the earliest of real romances or novel writers in Russia were Zagoskin and Lazhechnikoff, whose books are still read, long narratives of life in their own times. Among them is "Yari Miloslaviski," a tale of the days when the Poles were driven from Russia. Nicholas Gogol (1809–1852), a native of Little Russia, was the first novelist of talent and he described the people and the scenery of his own district in his "Old Fashioned Home" and "Taras Bulba," a story of war between Cossacks and Poles. In a curious tale, "The Demon," he pictured Kieff in the old days. Novels grew popular, and we find the names of Hersen, the exile, Goncharoff, Bulgarin, and Dostoievski. Count Tolstoi, noted for many other works, was also a novelist and the English translation of his "Anna Karenina" has been said to be the longest novel in our language. Most eminent was Ivan Turgenieff, in his own time the author best known outside his own country.

Turgenieff first attracted notice by his interest in the Russian peasant and his best poems and tales find subjects among the serfs. These have been translated and made for the author his reputation in Europe. "Dvorianskoe Gnezedo," or "A Nest of Gentle People," has been noted as one of the most pathetic tales found in any literature. "Nov" (Virgin Soil), and "Mumu," with other minor stories, have been often translated and greatly praised.

While Count Tolstoi has written much and on many subjects, including religion and morals, and become known throughout the reading world, critics have named as the best of his work, early sketches relating to Sebastopol and his great prose epic, "War and Peace." The first Russian play made on the model of Shakespere's dramas was "Boris Godunoff," written by Pushkin, but many have appeared since his time. The impulse that came from abroad, especially through acquaintance with the poetry of Gœthe, Schiller, Shakespere, and later, that of Byron, pushed aside the French models that were so often copied. Besides writing after the models found in other languages, Russian poets have translated much, and the literature of their country is rich in these reproductions.

Both in number and genius the novelists of Russia compare well with other countries. Gogol, the first real novelist, has been followed by a series that continues to the present day. Dostœvskii is quoted in connection with Tolstoi and Turganieff; near them are Goncharov, Pisemskii, and Garshin, called a disciple of Tolstoi; and Korolenko, leader of the optimistic school.

Russia has, also, historians worthy to be known as successors of Karamzin, and who have given more accurate record of fact if not in his brilliant

style. It has been said that Russian historians have been generally satisfied to write the story of their own country; this they seem to have thoroughly investigated. They meet strict censorship whenever they deal with history of recent times. Among these, Kostomaroff (1817–1885) wrote much of note, became obnoxious to the government, and was banished for several years and forbidden to publish anything. After his return in the year 1854 he wrote several works and contributed to leading Russian reviews. Ustrailoff published a good and full history of his own country but it was not as popular as his "Reign of Peter the Great," in which he brought out several documents until then unknown and with them facts of interest. He has been called the ablest Russian historian of his time.

Solovieff (1820–1879) left an unfinished history of great length, which has proved a mine of information for writers and scholars. Others have written up particular periods or subjects. An account of the Polish Rebellion of 1863, which first appeared in a Russian magazine and was afterward published in book form, gave some startling disclosures that caused its circulation to be forbidden. Excavations in many parts of the country, within the last century, have also given light to the pre-historic period.

Good histories of Russian literature have been written; these often include philology and go back to older Slavonic literature. A valuable "Explanatory Dictionary of the Great Russian Language" was published many years ago. Works on ethnology and publications on natural history have attracted attention, but moral and mental philosophy found few interested authors. Scientific subjects, law, and medicine have their share of students; works on these subjects have been translated from foreign languages.

We hear of the literature of White Russia and of Little Russia, which are really Russian dialects. Little Russian literature had no separate existence until the annexation of Poland. It developed in a mass of song and legend with some theological writings, educational works, and annals. In the year 1876, the Imperial Government forbade the publishing of anything in Little Russian; both Poland and Russia had long shown hostility toward this dialect. Its popular poetry is exceedingly rich and interesting. The poet, Shevchenko, gathered the old songs of his land as Burns gathered the lays of Scotland and, like Burns, he was one of the great poets. In his youth he rejoiced in the traditions of his native village as he heard them from the priests; in his poetry he faithfully reproduced the life of the old days. The story of those times is lightened by the charming lyrics that he mixed with his recital. He was banished to Siberia for ten years (1847–1857), and died soon after his return. The great cairn that marks his grave has been called the Mecca of South Russia. The folk tales of Little Russia are still recited by wandering peddlers and by peasants.

In the literature of White Russia is found little besides a few songs, parts of Scripture, and some law papers. The country of this literature is the dreariest in the empire.

JAPANESE LITERATURE

In the Fifth Century letters and the Confucian classics were carried into Japan through Corea, and about the year 550 A. D. Buddhist missionaries settled in the islands. In the Eighth Century Japan copied the Chinese form of centralized government in place of the ancient feudalism; Japanese literature, both prose and poetry, dates from this time. Compilations of historical facts are supposed to have existed at least 100 years earlier; two distinct works are quoted, but neither has been preserved.

The earliest known Japanese writing is the "Kojiki" or "Record of Ancient Matters," dating from the year 711 A. D. The most ancient poetry is the "Manyoshiu" or "Collection of a Myriad Leaves," belonging also to the early part of the Eighth Century. In the preface to the "Kojiki" it is said that the emperor who reigned during the last half of the Seventh Century, trying to preserve all traditions, had all the records then existing carefully examined, corrected, and arranged, but this work was never completely written, and the memory of a member of the imperial household, one Are, became the only authority for future references. About twenty years later one of the ministers of the government compiled the work, mostly from the words of Are, and this, completed, became the "Kojiki." In the year 720 another work, entitled the "Nihongi" or "Japanese Record," was put into shape. The earlier record is largely pure Japanese, preserving the form and the spirit of Japanese antiquity; the other shows Chinese ideas. Both are really ancient histories, going back to the "divine age," and are completely mixed with mythological legend. In them the country itself is named "land of the gods," and the pedigree of the sovereign is traced back to a Sun goddess. These works formed the basis for many later writings and numerous commentaries. A noted edition of the "Kojiki," with an elaborate commentary, was published between the years 1789 and 1822. Many old manuscripts have been published in modern style.

Among later Japanese histories is the "Dai Nihonshi" or "History of Great Japan" in 240 books. This was composed by the second lord of Mito (1622–1700), a noted patron of literature, who collected a large library of old books from temples and shrines, and from among the people. It is said that the lord of Mito had aid from Chinese scholars who had fled to Japan to escape their Manchu conquerors. A doubt of the origin of the imperial dynasty might endanger the very foundations of the throne, and for this reason the national annals of Japan have been most carefully guarded. The purpose of the "Dai Nihonshi" was to call attention to historical facts and thus give new strength to his rightful authority, which was being usurped by the Shogun. The writing of this history had much to do with the revolution that came more than a century later. Following this, an author, Rai Sanyo (1780–1832), wrote the "Guaishi," or "External History of Japan," which was widely read by Japanese scholars. There are many other historical works adapted for popular reading and for scholars.

Works on local geography make a large showing in this literature. As early as the Eighth Century the government ordered careful descriptions of every province and village to be compiled. These are much like the county histories of England and the books growing from them are numberless. They include facts of topography, natural history, origin of names, local legends and traditions, records of industries and commerce, and descriptions of temples, shrines, and monuments; all these, written with minute detail, make works of great length and of much historic interest. Every province in Japan has places noted in history; namely, monuments, castle-towns, temples, and other memorials of past ages. The guide books included in this geographical section of the literature give the traveler a perfect knowledge of his route. Probably no other country is so minutely known by its inhabitants.

Japanese classical poetry has always been a favorite study; there are many volumes written or collected by the old nobles. The "Hiakunin-is-shiu" or "Collection of One Hundred Poems" contains verse written by the emperors themselves. It had long been a custom for scholarly people to gather for the purpose of passing away time in the making of verse. These verses or poems were kept in the original manuscripts, or printed and made up into numberless books of minor poems. Loyalty to country and love of its beauty make many subjects in this verse; most of the short poems are simple, almost explanatory in form, and very difficult of translation into what we would call poetry. Some of the lyrics, however, show quaint ways of thought and happy modes of expression. The editors of "Sunrise Stories" have very cleverly succeeded in translating the peculiar flavor of Japanese verse and in keeping something of Japanese form. There are no great epics or didactic poems in the Japanese language, and the drama does not hold large place. Popular plays, however, are common; they are often stilted in style, often without plot.

Religion and philosophy make a large section in the literature of most countries, but no Japanese book yet read or translated by a foreigner takes the place held by the religious books in European languages. Nothing has thus far undone the work of the early ages, for loyalty, family pride, patriotism, and religion are all one in Japan. The national, or Shinto, faith accounts for its lack of a moral code by teaching that loyal subjects of the emperor need no other moral guidance. The journey to the land of perpetual youth is one of the expressions in their literature on the philosophy of death. The great body of imported literature, the Confucian learning, and Buddhist Books have long been held in high honor by native students.

The "Story of My Hat," probably written seven hundred years ago, is a Japanese classic, which has its great charm from its simplicity of language and its picture of a most simple life. It is full of allusions to nature, telling of the bright moon, the floating cloud, the fireflies, the notes of the wild-bird, etc.; it gives minute descriptions of natural surroundings. Another book, "Tosa Nikki," describing in simplest language the ordinary life of a traveler in the Tenth Century, is also classical. It gives no adventure or romance and no wise maxims. It is simple narration, and is said to have been written by a woman. In the Tenth Century the learned men of Japan wrote only for the well-read and educated class and were deep in the study of Chinese. The women of the court kept up their own language; a large part of the best writings in their literature was the work of women.

Romances and novels are by no means unknown in Japan; their heroes and heroines have thrilling adventures, which are graphically presented. Much of this fiction is mixed with history and the tales date back to one of the numerous wars. Fairy tales abound and are very artistically told, and short-story books are common. These and the books for children often take for their subject some hero of ancient times.

The mental equipment of this nation has been forming for centuries; when the Empire shut its ports and drew away from the rest of the world, it had, within itself, resources of food for its intellectual life. By the opening of these ports Japan was introduced into the affairs of the modern world, taking a stand among the nations. Through the researches of scholars the literature of the West is being enriched by the imagination of the East, and to this literature Japan is giving a generous share, though only a fraction of the books of this modern Oriental nation are yet reached by Western readers. The "Wakan Sansai Dzuye," known to the world as the "Great Japanese Enclyclopedia," is noted as a necessary help to all who seek knowledge of Japanese letters. The fact that such a large work has been compiled and that it is considered an essential part of a student's equipment shows something of the value of Japanese literature.

THE FAMILY LIBRARY

Selecting books for a family library is remarkably like selecting food for a family table,—a very nice art, indeed. The cook must know food values, their preparation and their economic selection, so as to balance one kind of food against another and furnish complete nourishment. Within a narrow range of choice, allowance must be made for individual tastes, and enough provided to satisfy every rational appetite. So it is in the selection of books. What is a good book for one may not be a good book for another. A family library, like a family table, should cater somewhat to individual tastes; but there are common tastes as well, and the well-selected library of even a few books may furnish joy for the whole family.

No one list of books can ever be the best list. It can only be suggestive of the kind of books that belong to every good list. A short list of books for a family library is appended here.

A SMALL HOME LIBRARY

Title	Publisher or Author
A Standard Dictionary.	
A Good Encyclopedia.	
Imperial Atlas of the World,	Rand-McNally.

Title	Publisher or Author
History of the United States,	John B. McMaster.

Selected volumes of Household Poetry.	

BOOKS FOR THE CHILDREN'S LIBRARY

"A wise mother and good books enabled me to succeed in life."— *Henry Clay.*

NOTE.— These books have been carefully selected from children's lists, issued by public libraries, and from lists prepared by school departments. They are all of them good books and children like them, but they are only a few of the many equally good ones which can be found from the same sources.

PICTURE BOOKS AND RHYME BOOKS FOR THE VERY LITTLE ONES

(Children under six years of age.)

Title	Publisher or Author
Babyhood Days,	Dutton.
Little Sunshine,	De Wolf.
Cherry-tree Farm,	Stokes.
Children's Pets,	Dutton.
Little Black Sambo,	Doubleday.
Five Minute Stories,	Richards.
Book of Nursery Rhymes,	Welsh.
Baby Days,	Dodge.
Child Stories and Rhymes,	Poulsson.
Mother Goose: Old Nursery Rhymes,	Warne.
Rhymes and Jingles,	Norton.
Caldicott Picture Books,	Warne.
Songs for Little Children,	Smith.
Sunbonnet Babies,	Rand-McNally.
Lullaby Land,	Eugene Field.

FOR CHILDREN OF THE FIRST AND SECOND PRIMARY GRADES

(From six to eight years of age.)

Title	Publisher or Author
Five Mice in a Mouse Trap,	Richards.
Six Nursery Classics,	Welsh.
Happy Heart Family,	Gerson.
Asgard Stories,	Foster and Cummings.
Stories of the Red Children,	Brooks.
Book of Fables,	Scudder.
St. Nicholas Christmas Book,	Century.
Docas, the Indian Boy,	Snedden.
Grimm's Fairy Tales (2 vols.),	Wiltse.
Stories of Great Americans for Little Americans,	Eggleston.
Book of Fables and Folk Stories,	Scudder.
Fairy Stories and Fables,	Baldwin.
Andersen's Fairy Tales,	Baldwin.
Little Folks of Many Lands,	Chance.
Mother Goose,	Greenaway.
First Jungle Book,	Kipling.
Brownies, their Book,	Cox.
Treasury of Stories, Jingles, and Rhymes,	Humphrey.
Child's Garden of Verses,	Stevenson.
In Sunshine Land,	Thomas.

MYTHOLOGY

The term mythology is now used appropriately for that branch of knowledge which considers the notions and stories, particularly among the Greeks and Romans, respecting gods and demigods, their pretended origin, their actions, names, attributes, worship, images, and symbolical representations.

Gods of the Greeks and Romans. The principal deities of each were common to both, and we can include them all in one system of classification.

"The ancient Greeks believed their gods to be of the same shape and form as themselves, but of far greater beauty, strength, and dignity. They also regarded them as being of much larger size than men; for in those times great size was esteemed a perfection, supposed to be an attribute of divinities, to whom they ascribed all perfections. A fluid named Ichor supplied the place of blood in the veins of the gods. They were immortal, but they might be wounded or otherwise injured. They could make themselves visible or invisible to men, and assume the forms of men or of animals. Like men, they stood in daily need of food and sleep. The meat of the gods was called Ambrosia, their drink Nectar. The gods, when they came among men, often partook of their food and hospitality.

"Like mankind, the gods were divided into two sexes; namely, gods and goddesses. They married and had children. Often a god became enamored of a mortal woman, or a goddess was smitten with the charms of a handsome youth; these love-tales form a large portion of Grecian mythology.

"To make the resemblance between gods and men more complete, the Greeks ascribed to their deities all human passions, both good and evil. They were capable of love, friendship, gratitude, and all affections; on the other hand, they were frequently envious, jealous, and revengeful. They were particularly careful to exact all due respect and attention from mankind, whom they required to honor them with temples, prayers, costly sacrifices, splendid processions, and rich gifts; and they severely punished insult or neglect."

(1) Superior Gods.—Jupiter, Neptune, Apollo, Mars, Mercury, Vulcan, Janus, Saturn, Pluto, Bacchus, Juno, Minerva, Diana, Venus, Vesta, Ceres, Rhea. (2) Inferior Gods.—Cœlus, Sol, Æolus, Plutus, Æsculapius, Pan, Luna, Aurora, Nox, Iris, Latona, Themis, Nemesis, Fortuna, Fama. Several gods peculiar to the Greeks: Enyo, Ergane, Cotytto, etc. Several gods peculiar to the Romans: Priapus, Terminus, Vertumnus, Pomona, Flora, Feronia, Pales, etc. (3) Mythical Beings.—Titans, Giants, Pygmies, Tritons, Sirens, Nymphs, Muses, Graces, Hours, Seasons, Fates, Furies, Harpies, Winds, Genii, Somnus, Mors, Manes, Lares, Penates, Satyrs, Fauns, Gorgons, Amazons, Centaurs, Minotaur, Chimæra, Geryon, Hydra, Pegasus, Scylla, Charybdis, Sphinx, Typhon.

Most of the heroes were at last viewed as sons of gods, and often of Jupiter himself. The veneration for the heroes was, however, less sacred and less universal than the worship of the gods. The heroes received only an annual commemoration at their tombs, or in the vicinity, when offerings and libations were presented to them. Sometimes the respect paid them exceeded these limits, and they were exalted to the rank and honors of the gods. The introduction of solemnities in memory of heroes is ascribed to Cadmus.

(4) Deified Heroes.—Inachus, Phoroneus, Ogyges, Cecrops, Deucalion, Amphictyon, Cadmus, Danaus, Pelops, Minos, Perseus, Hercules, Theseus, Jason, Castor, Pollux, and heroes of the Theban and the Trojan Wars, etc.

Ach'eron. Acheron, Styx, Cocytus, and Phlegethon, are known as rivers of hell. These regions below the earth were considered as the residence of departed souls, where after death they received rewards or punishments according to their conduct upon earth.

Achil'les. The son of Peleus and Thetis. In the Trojan War he was the most distinguished for his strength and bravery. When Achilles was born, Thetis plunged him in the river Styx, which made him invulnerable in every part except the heel, by which she held him. And in this heel he received a fatal wound.

A'cis. The nymph, Galatea, loved Acis, the handsome shepherd, and the monstrous Cyclop, Polyphemus, sued in vain for her favor.

Acris'ius. Son of Abas, King of Argos, grandson of Lynceus, and great-grandson of Danaus. An oracle had declared that Danaë, the daughter of Acrisius, would give birth to a son who would kill his grandfather. For this reason he kept Danaë shut up in a subterranean apartment, or in a brazen tower. But here she became the mother of Perseus, by Zeus, who visited her in a shower of gold.

Actæ'on. Actæon was the son of Aristæus and Autonoë, daughter of Cadmos. He was reared by Chiron, and becoming passionately fond of the chase, passed his days chiefly in pursuit of wild beasts that haunted Mount Cithæron.

Adis'sechen. In Indian mythology the serpent of a thousand heads which hold the universe in place.

Adme'tus. A king of Thessaly, and husband of Alcestis, famous for his misfortunes and his piety. Apollo tended the flocks of Admetus for nine years, when he was obliged to serve a mortal for having slain the Cyclops.

Ado'nis. A beautiful youth, loved by Venus, and slain by a wild boar which he was hunting. Venus was inconsolable at his loss, and at last obtained from Proserpine that Adonis should spend six months on earth with her and six months among the shades. Adonis is also the name given to a Syrian god, who was supposed to be slain by a wild boar in Lebanon, and to revive every year. He is identified with the Greek Adonis, beloved by Venus.

Adram'melech. God of the people of Sepharva'im, to whom infants were burned in sacrifice (Kings xvii, 31). Probably the sun.

Adras'tus. A king of Argos, and the institutor of the Nemean games.

Æa'cus. Son of Jupiter and grandson of the river-god Asopus. Æacus was renowned in all Greece for his justice and piety, and after his death became one of the judges in hades.

Æge'on. One of three brothers, huge monsters, with fifty heads and a hundred arms. According to the most ancient tradition, Ægeon and his brothers conquered the Titans when they made war upon the gods, and secured the victory to Zeus, who thrust the Titans into Tartarus, and placed Ægeon and his brothers to guard them.

Æge'us. King of Athens, and father of Theseus.

Ægir'. God of the ocean, whose wife is Rana. They had nine daughters, who wore white robes and veils. These daughters are the billows, etc.

Æ'gis. The shield of Jupiter made by Vulcan was so called, and symbolized "Divine protection." The shield of Minerva was called an ægis also.

Æ'gle. The mother of the graces. Also the name of one of the sisters of Phaeton.

Ælu'rus. The cat. An Egyptian deity held in the greatest veneration. Herodotus tells us that Diana, to avoid being molested by the giants, changed herself into a cat. The deity used to be represented with a cat's head on a human body.

Æne'as. A Trojan prince, son of Anchises and the goddess Venus. When Troy fell, he quitted the city with his followers, accompanied by his father and son, visited various countries, settled in Latium, and married Lavinia, the daughter of Latinus. To him tradition ascribes the commencement of the Roman Empire.

Æ'olus. Under the name of Æolus both Greeks and Romans worshiped a god and ruler of winds and storms. He was called the son of Jupiter, sometimes of Neptune, and by others, of Hippotes, an ancient lord of the Lipari Isles. From Jupiter he received his authority over the winds, which had previously been formed into mythical persons, and were known by the names Zephyrus, Boreas, Notus, and Eurus, and were afterwards considered the servants of Æolus. He held them imprisoned in a cave of an island in the Mediterranean Sea, and let them loose only to further his own designs or those of others, in awakening storms, hurricanes, and floods. He is usually described by the poets as virtuous, upright, and friendly to strangers. He is represented as a vigorous man supporting himself in the air by wings, and blowing into a shell trumpet like a Triton, while his short mantle is waving in the wind.

Æs'acus. A son of Priam, who was enamored of the nymph Hesperia, and, on her death, threw himself into the sea, and was changed by Thetis into a cormorant.

Æs'cula'pius. The son of Apollo and Coronis, the daughter of a Thessalian King. By his father he was committed to the care of the wise Centaur, Chiron, who taught him botany, together with the secret efficacy of plants. By means of this information, Æsculapius became the benefactor of mankind. In tradition he is noted as having awakened the dead.

Æsir, plural of As or Ása, the celestial gods of Scandinavia, who lived in Asgard (god's ward), situate on the heavenly hills between earth and the rainbow. The chief was Odin.

Æson. The father of Jason and brother of Pelia who seized the kingdom rightfully belonging to Æson.

Æs'tas. The god of summer; he is crowned with corn and generally holds a sickle in his hand. By poets and artists the seasons are all personified. They are frequently seen together on relievi, medals, and gems. The artists have also followed the poets in representing the four ages of life by depicting Ver (spring), as infantile and tender; Æstas (summer), as young and sprightly; Autumnus (autumn), mature and manly; and Hyems (winter), as old and decrepit.

Æta. A king of Colchis, was father of Medea.

Agamem'non. King of Argos, in Greece, and commander-in-chief of the allied Greeks who went to the siege of Troy. Agamemnon married Clytemnestra, the daughter of Tyndareus, by whom he became the father of Iphianassa (Iphigenia). When Helen, the wife of Menelaus, was carried off by Paris, and the Greek chiefs resolved to recover her by force of arms, Agamemnon was chosen their commander-in-chief.

Ag'anip'pe. A fountain at the foot of Mount Helicon, in Bœotia, consecrated to Apollo and the Muses, and believed to have the power of inspiring those who drank of it.

Ah'ri'man. A deity of the ancient Persians, being a personification of the principle of evil. To his agency were ascribed all the evils existing in the world. Ormuzd the principle of good, is eternal, but Ahriman is created, and will one day perish.

A'jax. The son of Telamon, and one of the Greek heroes in Homer's "Iliad." He was of great stature, strength, and courage, but dull in mind. He killed himself out of vexation because the armor of Hector was awarded to Ulysses.

Ak'uman. The most malevolent of all the Persian gods.

Alas'tor. A surname of Jupiter. Among the lesser gods the name Alastor is given to the unforgetting, revengeful spirit, who, in consequence of some crime perpetrated, persecutes a family from generation to generation.

Alces'tis, or Alces'te. A daughter of Pelias, and the wife of Admetus. To save her husband's life, she died in his stead. By request of Apollo, the gods had granted eternal life to Admetus but on the condition, that when the appointed time came for the good king's death, some one should be found willing to die in his stead. This decree was reported to Alcestis, Admetus' beautiful young wife, who offered herself as substitute, and cheerfully gave her life for her husband. But immortality was too dearly bought at such a price; and Admetus mourned until Hercules, pitying his grief, descended into hades, and brought her back.

Alec'to. One of the Furies. She is represented with her head covered with serpents, and breathing vengeance, war, and pestilence.

Alec'tryon. A servant of Mars, who was changed by him into a cock because he did not warn his master of the rising of the sun.

Al'fadur. In Scandinavian Mythology the Supreme Being — Father of all.

Alphe'os and Arethu'sa. The Greek fable says that Alphe'os, the river-god, fell in love with the nymph Arethu'sa, who fled from him in affright. Diana came to her rescue.

Al Si-rat'. A narrow bridge extending from this world to the next over the abyss of hell, which must be passed by every one who would enter paradise.

Althæ'a. Sister to Atalanta, and mother of Meleager. She caused the death of her son and killed herself in remorse.

Am'azons. A nation of women-soldiers who lived in Scythia. Hercules defeated them, and gave Hippolyte, their queen, to Theseus for a wife.

Ambro'sia. The food of the gods; so called because it made them not mortal, i. e., it made them immortal.

Amaci'tia. The goddess of friendship. In Greek

mythology she was represented with her head bare, her dress open near the heart, holding in her left hand an elm, around which a vine clung, filled with clusters of grapes.

Am'mon. One of the names bestowed on Jupiter. As Jupiter Ammon, he was represented as having the horns of a ram.

Amphi'on. Son of Jupiter and Antiope, and brother of Zethus. They were born on Mount Cithæron, and grew up among the shepherds. When they had learned their origin they marched against Thebes, where Lycus reigned, the husband of their mother Antiope, who had married Dirce in her stead. They took the city, and killed Lycus and Dirce, because they had treated Antiope with great cruelty. After they had obtained possession of Thebes, they fortified it by a wall. Amphion had received a lyre from Mercury, on which he played with such magic skill that the stones moved of their own accord and formed the wall.

Ancæ'us. A son of Neptune who, having left a cup of wine untasted to pursue a wild boar, was killed by it, which gave rise to the proverb, "There's many a slip between the cup and the lip."

Anchi'ses. King of Dardanus and father of Æneas. On the capture of Troy by the Greeks, Æneas carried his father on his shoulders from the burning city.

Androm'ache. Daughter of one of the kings of Thebes, and wife of Hector.

Androm'eda. Andromeda, to atone for a crime of which she was guiltless, was to have become the victim of divine anger. The whole country was laid waste with plagues, which, according to the oracle of Jupiter Ammon, were not to cease until Andromeda, swallowed up by a sea-monster, should, by her death, expiate the crime of her mother. Perseus beheld the maiden fastened with chains to a rock, and a monster rising out of the sea ready to devour her; while her parents stood on the shore in despair. Perseus rushed down upon the monster, struck the deadly blow, delivered the fair maiden and obtained her as his wife. After her death she was placed among the stars.

Angurva'del. Frithiof's sword, inscribed with Runic letters, which blazed in time of war, but gleamed with a dim light in time of peace.

Antæ'us. One of the giant sons of Neptune whose home was in Libya. His strength was invincible so long as he remained in contact with his mother earth. Once lifted from the earth and allowed again to touch it his strength increased. One of the exploits ascribed to Hercules was the exhibition of his strength in overcoming Antæus.

Antig'one. In the story of Oedipus, Antigone appears as a noble maiden, with a truly heroic attachment to her father and brothers. When Oedipus had put out his eyes, and was obliged to quit Thebes, he was accompanied by Antigone, who remained with him till he died at Colonus, and then returned to Thebes. After her two brothers had killed each other in battle, and Creon, the King of Thebes, would not allow Polynices to be buried, Antigone buried him by night, against the orders of Creon, for which offense he ordered her to be buried alive. She, however, killed herself on hearing of the sentence. The death of Antigone is the subject of a tragedy written by Sophocles. (See Eteocles.)

Aph'rodite. One of the names under which Venus was worshiped. She was said to be the daughter of Zeus, but later poets frequently relate that she was sprung from the foam of the sea, whence they derive her name.

A'pis. One of the Egyptian gods worshiped under the form of an ox.

Apol'lo. According to both Greeks and Romans, Apollo was the son of Jupiter and Latona, born on the island Delos. He was regarded as the god of the sciences and the arts, especially poetry, music, and medicine. They ascribed to him the greatest skill in the use of the bow and arrow, which he proved in killing the serpent Pytho, the sons of Niobe, and the Cyclops. The last achievement incensed Jupiter, and he was banished from Olympus. During his exile Apollo abode as a shepherd with Admetus, King of Thessaly. All sudden deaths were believed to be the effect of his arrows; and with them he sent the plague into the camp of the Greeks before Troy. As he had the power of punishing men, so he was also able to deliver men, if duly propitiated. From his being the god who afforded help, he is the father of Æsculapius, the god of the healing. As a god of inspiration and prophecy he gave oracles and communicated this gift to other gods and to men. The stories of Apollo in Greek mythology are much the same as the stories concerning Crishna in Hindoo mythology.

Arach'ne. A Mæonian maid, named Arachne, proud of her skill in weaving and embroidery, in which arts the goddess of wisdom had instructed her, ventured to deny her obligation, and challenged her patroness to a trial of skill. Minerva accepted the challenge and they met to try their skill. Arachne produced a piece of cloth in which the amours of the gods were woven, and as the goddess could find no fault with it, she tore the work to pieces. Arachne, in despair, hung herself. Athena loosened the rope and saved her life, but the rope was changed into a cobweb, and Arachne herself into a spider.

Ares. The Greek god of war, known as Mars by the Romans.

Arethu'sa. A wood nymph of Elis, in Greece, who, pursued by the River Alpheus, was changed into a fountain and ran under the sea. The waters of the fountain, mingled with the river, rose again in the fountain of Arethusa in the island of Ortygia, near Syracuse. According to another version of the same legend, it was Diana herself, and not the nymph Arethusa, whom the river-god of the Alpheus pursued; and when this pursuit ended in the island of Ortygia, then arose the fountain Arethusa.

Ar'gonauts. One of the most celebrated enterprises of the heroic ages, one which forms a memorable epoch in Grecian history, a sort of separation-point between the fabulous and the authentic, was the Argonautic expedition. This was a voyage from Greece to Colchis in order to obtain the golden fleece, conducted by Jason, the son of Æson, King of Thessaly. The undertaking was imposed upon him by his uncle Pelias. He invited the most illustrious heros of Greece to unite in the expedition, and among those who joined him were Hercules, Castor and Pollux, Peleus, Pirithous, and Theseus. The vessel built for the purpose was named Argos, which after various adverse events arrived at Æa, the capital of Colchis.

Ar'go. A fifty-oared ship in which Jason and his companions made their voyage to Colchis in search of the golden fleece. This ship was built of pines cut from Mount Pelion, which, although larger than any other previously constructed, moved lightly and easily, and was therefore called the Argo (swift-sailing). From her name, those who embarked in her were called Argonauts. The mast of the Argo was taken from the forest of Dodona, where the oaks were endowed with the power of making predictions; therefore, the ship was regarded as an animated being, in accord with Fate, to which a man might commit himself with confidence.

Ar'gus. A fabulous being of enormous strength, who had a hundred eyes, of which only two were asleep at once, whence he was named Panoptes, or the All-seeing.

Ari'adne. Daughter of Minos, second king of Crete, and Pasiphæ, fell in love with Theseus, who was shut up in the labyrinth to be devoured by the Minotaur. She gave Theseus a clew of thread by which he extricated himself from the windings of the labyrinth.

Ar'ion. A Greek bard, who having thrown himself into the sea to escape from pirates, was taken up by dolphins, and carried on their backs safe to land.

Ar'temis. Artemis, the daughter of Zeus and Leto, or Latona, and twin sister of Apollo, was the goddess of chastity, of the chase and the woods.

As'gard. In Scandinavian mythology Asgard represents the city of the gods, situated at the center of the universe, and accessible only by the bridge Bifrost, i. e., the rainbow.

A'sir. In Northern mythology the most powerful, though not the oldest, of the deities; usually reckoned as twelve gods and twelve goddesses. The gods are — Odin, Thor, Baldur, Niörd, Frey, Tyr, Bragi, Heimdall, Vidar, Vali, Ullur, and Forseti; the best-known of the goddesses — Frigga, Freyja, Iduna, and Saga.

Astar'te. Noticed in the Old Testament under the name Ashteroth, an ancient Syrian deity, who was adored as the goddess of the moon; hence Jeremiah calls her "the queen of heaven." Solomon built her a temple on the Mount of Olives.

Atalan'ta. A maid of Arcadia who was forsaken by her parents and reared in the hills. Found by some hunters she afterward joined in the Calydonian hunt, and at the funeral games of Pelias, she won the prize in wrestling.

Atlan'tis. A mythical island in the west, mentioned by Plato, Pliny and other ancient writers, and said to have sunk beneath the ocean.

At'las. One of the Titans, son of Iapetus and Clymene. Being conquered by Jupiter, he was condemned to the labor of bearing on his head and hands the heaven he had attempted to destroy.

At'ropos. One of the three Parcæ, or Fates; the one that cut the thread of life. As wife of Pluto, and queen of hell, Proserpine presided over the death of mankind; and according to the opinion of the ancients, no one could die if the goddess herself, or Atropos, the minister, did not cut off one of the hairs from the head.

Auge'an Stables. The stables of Augeas, King of Elis, in Greece. In these stables he had kept 3,000 oxen, and the stalls had not been cleansed for thirty years, When Hercules was appointed to cleanse these stables, he caused two rivers to run through them.

Augurs. Men whose principal business was to observe the flight and cry of birds from which they predicted future events. They also explained other omens and signs

Au'ræ. Sylphs, Nymphs of the air, a species of sportive, happy beings, and well-wishers to mankind. they were winged and represented as flying.

Auro'ra. The goddess of the morning, or of the dawn. She is sometimes described as the goddess of day. She is represented as standing in a magnificent chariot, which is sometimes drawn by winged steeds. A brilliant star sparkles upon her forehead; while with one hand she grasps the reins, she holds in the other a lighted torch.

Av'atar. The incarnation or descent of the deity Vishnu, of which nine are believed to be past. The tenth is yet to come when Vishnu will descend from heaven on a white-winged horse, and will introduce on earth a golden age of virtue and peace.

Aver'nus. Properly, a small, deep lake in Campania, occupying the crater of an extinct volcano, and almost completely shut in by steep and wooded heights. The entrance to the infernal regions, called Avernus, is described as having around it a host of dreadful forms: Disease, Old Age, Terror, Hunger, Death, War, Discord, and the Furies, the avengers of guilt.

Aza'zel. According to Ewald, a demon belonging to the pre-Mosaic religion. Another opinion identifies him with Satan, or the devil. Milton makes him Satan's standard bearer.

Az'rael. In the Jewish and the Mohammedan mythology, the name of an angel who watches over the dying, and separates the soul from the body. It means in Hebrew "help of God."

Ba'al. In Hindu mythology, god of the sun. He was worshiped by the Phenicians

Bac'chus. The god of wine.

Baim'wawa. In American Indian folk-lore, the sound of thunder.

Bal'der. The god of peace, son of Odin and Frigga. He was killed by the blind war-god, but was restored to life at the general request of the gods.

Ba'lios. A famous horse given by Neptune to Peleus as a wedding present, and afterwards given to Achilles.

Bal'mung. In Norse mythology, the sword of Siegfried forged by Vulcan.

Ban'shee. The domestic spirit of certain Irish or Scottish families. It was supposed to wail at the death of one of the family. The Banshee is allowed only to families of pure stock.

Bar'guest. A frightful goblin among fairies. It was armed with teeth and claws, and was an object of terror in the north of England.

Bay-tree. The tree of Apollo, hence a shield against lightning. A wreath of bay-leaves was worn as protection during thunder-storms. The withering of a bay-tree was dreaded as an omen of death.

Beel'zebub. A heathen god of evil at the head of nine ranks of demons and second only to Satan. He was also the god of flies.

Befa'na. The fairy of Italian children, who is supposed to fill their stockings with toys on Twelfth Night.

Beller'ophon. A prince who rode the winged horse, Pegasus, controlling him with a golden bridle, the gift of Minerva. By aid of Pegasus, he killed the lion-headed monster, the Chimæra.

Bello'na. Goddess of war. She prepared the chariot of Mars when he was going to war, and appeared in battles armed with a whip and holding a torch.

Bel'phegor. A god of evil, worshiped by the Moabites. He was an archfiend who had been an archangel.

Be'lus. The Chaldean name of the sun.

Bereni'ce. Princess who vowed to sacrifice her hair to the gods, if her husband returned in safety. She suspended her hair in the temple of the war-god, but the winds wafted it to heaven, where it still forms the seven stars near the constellation Leo.

Berg Folk. Pagan spirits doomed to live on the Scandinavian hills till the day of redemption.

Ber'tha. The white lady who guards good German children, but is the terror of the bad, who fear her iron nose and big feet. She corresponds to the Italian Befana.

Bheem. One of the five brotherhoods of Indian demi-gods, famous for his strength

Bi'frost. In Norse mythology, a bridge between earth and heaven, over which none but the gods could travel. It leads to the palace of the Fates.

Bil'skirnir. A wonderful palace built by Thor for the use of peasants after death.

Bladud. A mythical king of England, who built the city of Bath, and dedicated the medicinal springs to Minerva.

Bo'reas. The name of the north wind blowing from the Hyperborean mountains. He was son of Astræus and Aurora.

Bra'gi. The son of Odin and Frigga and the god of poetry and eloquence. He is represented as an old man with flowing white beard.

Brah'ma. The supreme god of the Hindus, represented with four heads and four arms. He is regarded as the creator of the universe, and forms, with Vishnu, the preserver, and Siva, the destroyer, the divine triad.

Briareus. A giant with fifty heads and a hundred hands. He hurled a hundred rocks at Jupiter in a single throw and Jupiter bound him under Mount Ætna with a hundred chains.

Bubas'tis. Name applied to the cat as worshiped among Egyptian gods.

Bukada'win. The god of famine among American Indians.

Caa'ba. Shrine of Mecca, said by the Arabs to have been built by Ishmael, assisted by his father Abraham.

Caco'dæ'mon. An evil spirit consulted by the Greeks.

Ca'cus. A famous robber, son of Vulcan and Medusa. He is represented as a three-headed monster.

Cad'mus. The hero who, having slain the dragon which guarded the fountain of Dirce, in Bœotia, sowed the teeth of the monster. Then a number of armed men sprang up and surrounded Cadmus with intent to kill him. By the counsel of Minerva, he threw a precious stone among the armed men, who, striving for it, killed one another. According to tradition, Cadmus introduced the use of letters into Greece — the alphabet, as introduced by him, consisting of sixteen letters.

Cadu'ceus. A white wand carried by Roman officers when they went to treat for peace. It had two winged serpents entwined round the top.

Cal'chas. The son of Thestor. He was the wisest of the soothsayers among the Greeks at Troy. He died from grief on meeting with a soothsayer who proved wiser than he.

Calli'ope. The Muse who presided over epic poetry and rhetoric. She is generally depicted using a stylus and wax tablets, the ancient writing materials.

Callis'to. A nymph of Arcadia, the mother of Arcas, who was changed into a bear and placed in the heavens as a constellation.

Cal'pe. One of the two pillars of Hercules. The other was named Abyla. These two were originally only one mountain, which Hercules tore asunder; he then poured the sea between them.

Calyp'so. One of the daughters of Atlas. When Ulysses was shipwrecked on her coasts she received him with hospitality, and offered him immortality if he would remain with her, which he refused to do. After seven years' delay he was permitted to depart from the island.

Cama. The god of love and marriage in Indian mythology.

Cam'deo. The Hindu god of love.

Came'næ. Nymphs who prophesied. Roman poets sometimes gave the name to the Muses.

Camil'la. Virgin queen of the Volscians. She was so swift that she could run over a field of corn without bending a blade, or make her way over the sea without wetting her feet.

Cano'pus. The Egyptian god of water. The Chaldeans worshiped fire, and sent all the other gods a challenge, which was accepted by a priest of Cano'pus. The Chaldeans lighted a vast fire. Then the Egyptian deity spouted out torrents of water and quenched it.

Cassan'dra. Daughter of Priam and Hecuba. She was passionately loved by Apollo.

Cassiope'ia. The chief stars of this constellation form the outline of a chair. Cassiopeia boasted that the beauty of her daughter Andromeda surpassed that of the sea-nymphs. The sea-nymphs complained to the sea-god of this affront, and Andromeda was chained to a rock to be devoured by sea-monsters. Perseus delivered her and made her his wife. The mother was taken to heaven and placed among the stars.

Cas'taly. A fountain on Mount Parnassus. Whoever drank of its waters was endowed with the gift of poetry.

Castor and **Pollux.** Brothers, sons of Leda. Mercury carried them to Pallena, where they were educated. As soon as they arrived at manhood they embarked with Jason in quest of the Golden Fleece. Pollux was the son of Jupiter, and Castor of Tyndarus. Hence

Pollux was immortal, while Castor was subject to old age and death, like other men.

Cau'ther. In Mohammedan mythology, the lake of paradise, whose waters are as sweet as honey, as cold as snow, and as clear as crystal; and any believer who tastes thereof is said to thirst no more.

Ce'crops. In mythology is represented with upper part of his body human, the lower part that of a dragon. Cecrops is said to have founded Athens, and to have divided Attica into twelve communities, and to have introduced the first elements of civilized life; he instituted marriage, abolished bloody sacrifices, and taught his subjects how to worship the gods.

Cen'taurs. Monsters, half horse, half human. They are especially celebrated for their contest with the giants in the mountains of Thessaly.

Cer'berus. The three-headed dog that keeps the entrance of the infernal regions. He prevents the living from entering and the shades from escaping. Orpheus lulled Cerberus to sleep with his lyre; and the Sibyl who conducted Æneas through the Inferno, also threw the dog into a sleep with cake seasoned with poppies.

Ce'res. The daughter of Saturn, sister of Jupiter and Neptune. She was the goddess of corn, flowers, and harvest. She is represented as riding in a chariot drawn by dragons and crowned with poppies. She was the mother of Proserpine, who was seized by Pluto while she was gathering flowers. Ceres was the Roman name for mother-earth.

Cha'os. The vacant space which existed before the creation of the world, and out of which the gods, men, and all things arose. Chaos was called the mother of Erebus and Night.

Cha'ron. A god of the infernal regions, son of Nox and Erebus, who conducted the souls of the dead in a boat over the rivers Styx and Acheron.

Charyb'dis. A woman who robbed travelers and was turned by Jupiter into a dangerous gulf on the coast of Sicily, opposite Scylla. Scylla and Charybdis are generally mentioned together to represent alternative dangers.

Che'mos. The god of war among the Moabites.

Chibia'bos. A musician, ruler in the land of spirits, and friend of Hiawatha. Personification of harmony in nature.

Chimæ'ra. A celebrated monster goat, lion, and dragon, which continually vomited flames. It was destroyed by Bellerophon.

Chi'ron. A centaur, son of Philyra and Saturn. He was famous for his knowledge of medicine, and taught mankind the use of plants and herbs. He was placed among the stars and is known as Saggitarius.

Chlo'ris. The goddess of flowers, known as Flora in Greek mythology.

Chou. An Egyptian god corresponding to the Roman Hercules.

Cimme'rians. People living in a land of perpetual darkness.

Cir'ce. A sorceress. Daughter of Sol and Perseis, celebrated for her knowledge of magic and venomous herbs. Ulysses, on his return from the Trojan war, visited her coasts, and his companions were changed by her potions into swine.

Clio. The muse who presided over history.

Clo'tho. The youngest of the three daughters of Jupiter and Themis, was supposed to preside over the moment of birth. She held the distaff and spun the thread of life.

Clu'ricaune. An Irish elf, who guards a hidden treasure. He has an evil disposition and appears as a wrinkled old man.

Clyt'emnestra. A daughter of King of Sparta; married Agamemnon.

Clyt'ie. A water-nymph who loved the sun-god, Apollo, and was changed into a sunflower. In this form, she turns always toward the sun.

Cocy'tus. A river of the infernal regions. The unburied dead wander on its banks for 100 years, and it is known as the river of lamentation.

Col'chis or **Colchos.** A country of Asia famous for the expedition of the Argonauts, and the birthplace of Medea.

Colli'na. The goddess of the hills.

Co'mus. The god of revelry, presiding over feasts.

Concor'dia. The goddess of peace and concord, one of the oldest at Rome. She is represented holding a sceptre budding with fruit, and a horn of plenty. Camillus raised a temple to this goddess, in the capitol.

Consen'tes Dii. The twelve Etruscan gods who formed the council of Jupiter, consisting of six male and six female divinities. Juno, Minerva, Vulcan, Saturn, and Mars were among them.

Con'sus. The god of counsel, a name given to Neptune.

Co'ra. The goddess of vegetation.

Coro'nis. A king's daughter who was transformed into a crow by Minerva when asking for protection from Neptune. Another Coronis was the consort of Apollo.

Cor'ybantes. Priests who served at the worship of the mother of the gods. The name came from their habit of striking themselves in their religious dances.

Cress'ida. Daughter of Calchas, the Greek, beloved by Troïlus, son of Priam. They vowed eternal fidelity, and as pledges Troïlus gave the maiden a sleeve, and Cressida gave the Trojan prince a glove.

Creu'sa. Daughter of Priam and wife of Æneas. She was lost in the city of Troy when her husband escaped from its flames.

Cro'nos. The youngest of the Titans. Cronos also known as the father of Jupiter.

Cu'pid. God of love, son of Jupiter and Venus, is represented as a winged boy, naked, armed with a bow and arrows, and often with a bandage covering his eyes. He shot his arrows into the hearts of both gods and men. Like all the gods, he put on different forms to suit his plans. He became the husband of Psyche.

Cyb'ele. A goddess, daughter of Cœlus and Terra, and wife of Saturn. She is supposed to be the same as Ceres, Vesta, etc. On her birth she was exposed on a mountain, where she was tended and fed by wild beasts, receiving the name of Cybele from the mountain. She is represented on a throne with lions at her side.

Cy'clops. One-eyed giants who forged the thunderbolts of Jove. Homer describes them as wild, insolent, lawless shepherds, who devoured human beings. A later tradition represents them as Vulcan's assistants.

Cyp'aris'sus. A beautiful youth, beloved by Apollo, whose favorite stag he inadvertently killed, and who was metamorphosed into a cypress because of his grief.

Cyre'ne. A water-nymph, the mother of Aristæus. Her residence and the visit of her son are described in the fourth book of Virgil's "Georgics."

Dæd'alus. A great architect and sculptor. He invented the wedge, the axe, the level, and the gimlet, and was the first to use sails. He made himself wings with feathers and wax, and fitted them to his body and to his son Icarus. They sailed in the air, but the heat of the sun melted the wax on the wings of Icarus, and he fell into the ocean, which after him has been called the Icarian Sea.

Dag. In mythology of the North this name is given to the "radiant son of night." The name is also applied to the last of a treacherous race, the Hundings.

Da'gon. A Syrian divinity, who, according to the Bible, had richly adorned temples in several of the Philistine cities. He was a national god of the Philistines, formed in human shape upwards from the waist, and resembling a fish downwards, with a finny tail.

Da'gun. In Indian mythology a god who reconstructed the world when it had been destroyed after creation.

Da'hak. In mythology of Persia the ages of the world are divided into periods of 1,000 years. When the cycle is complete, the reign of Ormuzd will begin, and men will be good and happy; but this event will be preceded by the loosing of Dahak, who will break his chain and fall upon the world, and bring on man the most dreadful calamities.

Dai'koku. A mythical god invoked by Japanese workers. He is represented as holding a full sack which he beats to bring from it all useful articles, and the sack never becomes empty.

Dai'tyas. Among Hindu gods these are powerful to work evil.

Dan'æ. The daughter of Ancrisuis, King of Argos, who became the mother of Perseus. An Italian legend related that Danaë came to Italy, built the town of Ardea, and married Pilumnus, by whom she became the mother of Daunus, the ancestor of Turnus.

Dana'ides. The fifty daughters of Danaus, King of Argos, who married the fifty sons of their uncle, Ægyptus.

Daph'ne. The goddess of the earth. Apollo courted her, but she fled from him, and was, at her own request, turned into a laurel tree.

Daph'nis. A Sicilian shepherd, son of Hermes (Mercury), by a nymph, was taught by Pan to play on the flute, and was regarded as the inventor of bucolic poetry. A Naiad to whom he proved faithless punished him with blindness, whereupon his father, Hermes, translated him to heaven.

Deiph'obus. A son of Priam and Hecuba. After the death of Paris, he married Helen, but was betrayed

by her to the Greeks. Next to Hector, he was the bravest among the Trojans. On the capture of Troy by the Greeks he was slain and fearfully mangled by Menelaus.

De'lius. A name of Apollo, from the island in which he was born. The name Delia has been traced to this origin.

Del'phi. A town on Mount Parnassus, famous for its oracle, and for a temple of Apollo.

Del'phos. The place where the temple was built from which the oracle of Apollo was given.

Deme'ter. The mother of Persephone, who was evidently a goddess of the earth, whom some ancient system married to Zeus, the god of the heavens.

De'mogor'gon. The tyrant genius of the soil or earth, the life and support of plants. He was depicted as an old man covered with moss, and was said to live underground.

Deo. A name sometimes applied to Ceres.

Derce'tis. A Syrian goddess who corresponds to Dagon of the Philistines.

Dian'a. An ancient Italian divinity, whom the Romans identified with the Greek Artemis. Her worship is said to have been introduced at Rome by Servius Tullius, who dedicated a temple to her on the Aventine. At Rome Diana was the goddess of light. She was a daughter of Jupiter, and was born of Latona, or Leto, on the island Delos, at the same time with Apollo. As in Apollo the sun was deified and adored; so was the moon in Diana.

Dictyn'na. A Greek name of Diana. The name is connected with a Greek word meaning hunting-net, and refers to Diana as huntress.

Di'do. She was daughter of the Tyrian King Belus, and sister of Pygmalion, who succeeded to the crown after the death of his father. Dido was married to her wealthy uncle Acerbas, who was murdered by Pygmalion. Dido had vowed eternal fidelity to her late husband, and under pretense of soothing the manes of Acerbas by sacrifices, she erected a funeral pile, on which she stabbed herself in presence of her people. After her death she was worshiped by the Carthaginians as a divinity.

Dike. One of the three guardians of life appointed by Themis, whose names are Eunomia (order), Dike (punishment), Irene (peace). Their office was to promote unanimity by the exercise of equity and justice. They likewise stand around the throne of Zeus, and their regular occupation is to open and shut the gates of heaven, and yoke the steeds to the chariot of the Sun.

Dind'ymus. A mountain in Phrygia, on the frontiers of Galatia, near the town Pessinus, sacred to Cybele, the mother of the gods, who is hence called Dindymēnē.

Di'omed. A Greek hero of the Trojan War, was a son of Tydeus, and became King of Argos. He was a favorite of Minerva, who, according to Homer, encouraged him to attack and wound both Mars and Venus, who were engaged on the side of the Trojans.

Diome'des. The cruel tyrant of Thrace, who fed his mares on the flesh of his guests, was overcome by Hercules, and was given to the same horses as food.

Dio'ne. The youngest of the Titan sisters and reputed mother of Venus. The name has also been poetically applied to Venus, herself.

Diony'sus. Son of Jupiter and Semele, the daughter of Cadmus. He was the god of wine, and is generally represented crowned with vine leaves.

Di'ræ. The avenging goddesses of Furies.

Dis. Contracted from Dives, a name sometimes given to Pluto, and hence also to the lower world.

Discor'dia. A malevolent deity corresponding with the Greek "Eris," the goddess of contention. She was driven from Heaven by Jupiter because she sowed dissensions among the gods. At the nuptials of Peleus and Thetis she threw an apple among the gods, which was the primary cause of the ruin of Troy, and of infinite misfortunes to the Greeks.

Dives. Demons of Persian mythology. According to the Koran, they are ferocious and gigantic spirits under the sovereignty of Eblis.

Dodo'na. The most ancient oracle was that of Jupiter at Dodona, a city of the Molossi, said to have been built by Deucalion.

Do'nar. A name given, sometimes, to Thor, the thunder-god, in Norse mythology.

Door'ga. A goddess worshiped among the Hindoos.

Do'ris. Daughter of Oceanus and Thetis, wife of her brother Nereus, and mother of the Nereides.

Dra'co. One of the hounds of Acteon.

Draup'nir. The marvelous ring belonging to Odin, with which he worked magic. It was burned on the funeral pyre of his son Balder.

Dro'ma. The chain forged for the purpose of binding the Fenris wolf, but which he broke. Hence the proverb, "to dash out of Droma."

Dry'ads. Wood nymphs, believed to be sent from heaven. The Dryads were distinguished from the Hamadryads in this, that the latter were supposed to be attached to some particular tree, with which they came into being, lived and died; while the former had the care of the woods and trees in general.

Duer'gar. Dwarfs who dwell in rocks and hills; noted for their strength, subtilty, magical powers, and skill in metallurgy. They are the personification of the subterranean powers of nature.

Dur'ga. In Hindu mythology, the wife of Siva, represented as having ten arms.

E'acus. Son of Jupiter and Egina, one of the judges of the infernal regions, who was appointed to judge the Europeans.

Eb'lis. Among Mohammedans, name given to the prince of fallen angels who refused to worship the man, Adam.

Echno'bas. One of Actæon's hounds, whose bark rose above all other sounds.

Ech'o. A nymph who engaged the attention of Juno by her never-ceasing talk, allowing Jupiter his freedom, meanwhile. Juno found out her trick and accordingly punished her. Echo loved Narcissus; as her love was not returned, she pined away until nothing remained but her beautiful voice. In Northern mythology, Echo is the sound of the dwarf's talk.

Eck'hardt. In German legends, Eckhardt appears on the evening of Maundy Thursday to warn all persons to go home, that they may not be injured by the headless bodies and two-legged horses which traverse the streets on that night.

Ee'tion. Wife of Hector and mother of Andromeche.

Egeon. A giant sea-god, who assisted the Titans against Jupiter.

Ege'ria. A nymph from whom King Numa Pompilius was fabled to have received his instructions respecting the forms of public worship which he established in Rome.

E'gia. One of the nine beautiful giantesses seen by Odin along the sea shore, known as wave-maidens. Her son became guardian of Bi-frost, the rainbow bridge.

E'gil. The Vulcan of Northern mythology, one of the three brothers who married the swan-maidens. He was a great archer and killed his brother, Völund, by command of the king, and himself later became a peasant.

Egip'ans. Rural deities who inhabited the forests and mountains, the upper half of the body being like that of a man, and the lower half like that of a goat.

E'gis. Part of the armor of Jupiter used by Minerva as a shield.

Ei'ra. An attendant of the goddess, Frigga, and a skillful nurse. She gathered herbs and plants for the cure of both sickness and wounds and taught the science to women.

El'atus. A prominent warrior among the mythical people of Thessaly and the father of Caneus, whom Neptune changed into the form of a man.

El'begast. One of the dwarfs of Scandinavian mythology who dwelt in a magnificent palace under ground, and drew their servants from the bosom of the earth.

El'ber-ich. In the German hero legends a dwarf who aided the Lombard Emperor Otnit to win the daughter of the Soldan of Syria. He is identical with the Oberon of French and English fairy mythology.

Elec'tra. The bright or brilliant one. A daughter of Agamemnon and Clytemnestra, and the sister of Iphigenia. She became the accomplice of Orestes in the murder of their mother.

Elf. The water sprite, known also as Elb, from which the name of the River Elbe is said to be derived. Elves are more properly known as mountain fairies or those airy creatures that dance on the grass or sit in the leaves of trees and delight in the full moon.

Eliva'gar. In Norse mythology, the name of a great stream in Chaos, flowing from a fountain in the land of mist. This stream was much frequented by the elves at their creation.

Ely'sium. The Paradise of the Greeks, known also as the Happyland. Departed mortals were adjudged to Elysium or to Tartarus by the sentence of Minos and his fellow judges in the "Field of Truth." Elysium is described as adorned with beautiful gardens, meadows, and groves; where birds ever warble; where the River Eridanus winds between banks fringed with laurel, and "divine Lethe" glides in a quiet valley; where the air is always pure, and the day serene; where the blessed have their delightful abode.

Em'bla. An elm tree found in human form, by the gods, according to Northern mythology.

Empyre'an. A term used by the ancients to express the highest heaven, where the blessed enjoy the

beatific vision. Its name is derived from its having been supposed to be the region of fire.

Encel'adus. A Titan, son of Terra, and the most powerful of all the giants who conspired against Jupiter, and attempted to scale heaven. He was struck by Jupiter's thunderbolts, and chained beneath Mount Ætna.

Endym'ion, in Greek mythology, is the setting sun with which the moon is in love. One of the many renderings of his story is that Endymion was a beautiful youth who fed his flock on Mount Latmos. One clear night, Diana, the moon, looked down and saw him sleeping. The cold heart of the goddess was warmed by his beauty, and she came down to him, kissed him, and watched over him while he slept. Another story was that Jupiter bestowed on him the gift of perpetual youth united with perpetual sleep. One version of this myth made sleep a reward for piety, while another version made it a punishment for presuming to fall in love with Hera.

Eni'peus. A fabled river in Thessaly. Poseidon assumed the form of the god of this river in order to obtain possession of Tyro, who was in love with Enipeus. She became the mother of Pelias and Neleus.

En'yo. One of the gray-maidens who became the goddess of war, who delights in bloodshed and the destruction of towns, and accompanies Ares in battles.

Eolus. Known in Roman mythology as the god of the winds.

Eos. The Roman name for Aurora.

Ep'aphus. The son of Zeus and Io, born on the river Nile, after the long wanderings of his mother. He became king of Egypt, and built Memphis.

Ep'eus. Noted as builder of the Trojan horse.

Er'ebus. A name applied to the dark and gloomy space under the earth through which the souls of the dead were obliged to pass on their way to Hades. The name also means Tartarus, the prison house into which Jupiter cast the Titans, the adherents of his father, Saturn.

Erga'tis. A name given to Minerva. It means the work-woman, and was given to the goddess because she was credited with having invented spinning and weaving.

E'ris. The goddess of discord; a sister of Mars, and a daughter of Night; the same as the Roman "Discordia."

Erl-king. Name given to the king of the elves, or a spirit of the air. According to tradition, its home is in the Black Forest of Germany and it appears as a goblin, working harm and ruin, especially among children.

E'ros. The Greek name of the deity called "Cupido," or Cupid, by the Romans. He is said to have come forth from the egg of Night, floated on Chaos, and to have inherited arrows with which he pierced all things, thereby giving new life and a torch with which he lighted the world. (See Cupid.)

Erythe'ia. One of the daughters of Night appointed to guard the golden apples in the gardens of the Hesperides.

Erythre'os. The Grecian name of one of the horses of Sol's chariot.

E'thon. One of the horses which drew the chariot of Sol, the sun. The word is Greek and signifies hot.

Eumae'us. The faithful swine-herd of Ulysses, whom Telemachus consulted upon his return to Minerva.

Eumen'ides. A euphemistic name given by the Greeks to the Furies, whose true name of Erinnyes they were afraid to utter. They are represented as the daughters of Earth or of Night, and as fearful winged maidens, with serpents twined in their hair, and with blood dripping from their eyes. They dwelt in the depths of Tartarus, dreaded by gods and men.

Euphor'bus. The son of Panthous, one of the bravest of the Trojans, slain by Menelaus, who dedicated his shield in the temple of Hera (Juno), near Mycenae. Pythagoras asserted that he had once been Euphorbus, and in proof of his assertion took down at first sight the shield from the temple of Hera.

Euphros'yne. One of the three Graces. She specially represented joy, as her sisters stood for splendor and pleasure.

Euro'pa. Daughter of the Phenician King Agenor, or, according to the Iliad, daughter of Phœnix.

Euryd'ice. The wife of Orpheus, who died from the bite of a serpent. Orpheus, disconsolate at her loss, determined to descend to the lower world, and obtain permission for his beloved Eurydice to return to the regions of light. Armed only with his lyre, he entered the realms of Hades, and gained an easy admittance to the palace of Pluto. Orpheus was promised she should return on condition that he looked not back till she had reached the upper world. When the poet got to the confines of his journey, he turned his head to see if Eurydice were following, and she was instantly caught back again into Hades.

Euryl'ochus. One of the companions of Ulysses in his wanderings, and the only one of them who was not changed by Circe into a hog.

Eurys'theus. The King of Argos who appointed the twelve labors of Hercules.

Eury'tos. The god made tutor to Hercules, by Mercury, who taught him the use of the bow and arrows.

Evad'ne. Wife of Capaneus, and mother of Sthenelus. Her husband having been killed at the siege of Thebes, she threw herself upon the funeral pile, and was consumed with him.

Excal'ibar. (Written also Excalibur, Excaliber.) The name of King Arthur's sword. When about to die, he sent an attendant to throw the weapon into a lake near by. Twice eluding the request, the knight at last complied. A hand rose from the water, clutched the sword, and after waving it three times both sank.

Fada. A fée or kobold of the south of France, sometimes called "Hada." These house-spirits, of which, strictly speaking, there are but three, bring good luck in their right hand and ill luck in their left.

Faf'nir. In Northern mythology the eldest son of the dwarf king, Hreidmar. The slaying of Fafnir is the destruction of the demon of cold or darkness who had stolen the golden light of the sun.

Fah'fah. Name given to one of the rivers of Paradise in mythology of the East.

Fa'ids. Name sometimes applied to Druids.

Fane'sii. A mythical Scandinavian tribe far north, whose ears were so long that they would cover their whole body.

Fates. In Greek and Roman mythology the Fates are identical with the Parcæ. They were three sisters, daughters of Night, whom Jupiter permitted to decide the fortune and especially the duration of mortal life. One of them "Clotho," attached the thread; the second, "Lachesis," spun it; and the third, "Atropos," cut it off, when the end of life arrived. They were viewed as inexorable, and ranked among the inferior divinities of the lower world. Their worship was not very general. The Parcæ were generally represented as three old women, with chaplets made of wool and interwoven with the flowers of the Narcissus, wearing long robes, and employed in their works: Clotho with a distaff; Lachesis having near her sometimes several spindles; and Atropos holding a pair of scissors.

Fauni. Rural deities represented as having the legs, feet, and ears of goats, and the rest of the body human. Name of Italian origin.

Fauns. Among the Romans, a class of rural deities corresponding with the Greek "Pan." They were the demi-gods of woods and forests, and hence called "sylvan deities," and are represented with horned heads, sharp-pointed ears, and with their bodies below the waist resembling those of goats. Their festival was celebrated at Rome on the 5th of December.

Fay. A diminutive name applied to a fairy or an elf.

Felic'itas. A symbolical, moral deity of the Greeks and Romans. She was the goddess of happiness and prosperity, and is frequently seen on Roman medals, in the form of a matron, with the staff of Mercury and a cornucopia.

Feng. The name taken by Odin in the capacity of wave-stiller. Under this name he teaches mortals to distinguish between good and bad omens and to know the moods of the winds.

Fenrir or **Fenris.** In Scandinavian mythology, the wolf of sin, meaning the goading of a guilty conscience. The "wolf" was the brother of Hel. When he gapes, one jaw touches earth and the other heaven.

Fero'hers. The guardian angels of Persian mythology. They are countless in number, and their chief tasks are for the well-being of man.

Fero'nia. A goddess of fruits, nurseries, and groves among the Romans. She had a very rich temple and grove specially sacred to her. She was honored as the patroness of enfranchised slaves, who ordinarily received their liberty in her temple.

Fi'des. The personification of faithfulness, worshiped as a goddess at Rome.

Flora. The Romans had a particular goddess of blossoms and flowers, whom they worshiped under the name of "Flora." She is said to have been the same as the Grecian nymph "Chloris."

Fortitu'do. A deification of courage and bravery, was one of the moral deities of the Romans.

Fortu'na. Known also as Fortune and sometimes as the goddess of Chance, to whom was ascribed the distribution and the superintendence of prosperity and adversity in general.

Fortuna'tæ. Known also as "the Islands of the Blessed." The early Greeks, as we learn from Homer, placed the Elysian fields, into which favored heroes passed without dying, at the extremity of the earth, near the River Oceanus. In poems later than Homer, an island is spoken of as their abode; hence when certain islands were discovered in the ocean, off the western coast of Africa, the name of Fortunatæ Insulæ was applied to them. They are now called the Canary and Madeira Islands.

Freki and Geri. The two wolves of Odin. When Odin, seated on his throne, overlooks heaven and earth, his two wolves lie at his feet.

Frey. (Scandinavian mythology.) The god of the sun and of rain, and hence of fertility and peace. He was one of the most popular of the Northern divinities. No weapons were ever allowed in Frey's temple, although oxen and horses were sacrificed to him. His name was connected with the taking of any solemn oath, a heavy gold ring was dipped in the blood of the sacrifice and the oath sworn upon the ring. One of the most celebrated of the temples built to Frey was at Therva in Iceland.

Frey'ja. She was the sister of Frey, and the wife of Odur, who abandoned her on her loss of youth and beauty, and was changed into a statue by Odin, as a punishment. She is known as the Northern goddess of beauty and love; plants were called Freya's hair, and the butterfly, Freya's hen.

Frig'ga. In Scandinavian mythology the wife of Odin, the queen of the gods, and the mother of Baldur, Thor, etc. She sometimes typifies the earth, as Odin does the heavens. The Anglo-Saxons worshiped her as "Frea." The name survives in "Friday."

Fro'di. The son of Frey, a god of peace. Under his direction two giantesses turned a pair of magic millstones which ground out gold according to his wish and filled his coffers. Excited by greed he forced them to labor, allowing rest only long enough for the singing of one verse. When Frodi, himself, slept, the giantesses changed their song and proceeded to grind out an army of troops to invade the land. These troops represent the Vikings.

Furies. Among the divinities of the lower world were three daughters of Acheron and Night, or of Pluto and Proserpine, whose office it was to torment the guilty in Tartarus, and often to inflict vengeance upon the living. The Greeks called them "Furies." They are also known as Erinnyes and Eumenides.

Fylgie. Guardian spirits treated of in Norse mythology. Besides the Norns or Dises, who were regarded as protective deities, the Norsemen ascribed to each human being a guardian spirit named Fylgie, which attended him through life.

Gaéa. Same as Tellus and Terra, a personification of earth. Sometimes written Ge.

Galar. One of the dwarfs who, with his fellow dwarf, Fialar, slew the giant, Kvasir, and drained every drop of his blood.

Ganga. One of the three Indian River goddesses.

Gang'ler. The gate-keeper in Odin's palace who gave the explanation of the Northern mythology that it might be recorded.

Gany'mede. A son of Troas, King of Troy, according to Homer, was the most beautiful of all mortals, and was carried off by the gods that he might fill the cup of Zeus (Jupiter), and live among the immortal gods. Later writers state that Zeus himself carried him off, in the form of an eagle, or by means of his eagle, from Mount Ida.

Garm. A fierce dog that kept guard at the entrance of Hel's kingdom, the realm of the dead. He could be appeased by the offering of a Hel-cake which always appeared in the hand of one who, on earth, had given bread to the needy.

Gauta'ma. The chief deity of Burmah.

Gem'ini. One of the names given to the twins, Castor and Pollux, under which they were transported to dwell among the stars.

Ge'nii. Protecting spirits or gods.

Gerda. Wife of Frey, and daughter of the frost giant, Gymer. She is so beautiful that the brightness of her naked arms illuminates both air and sea.

Ger'yon was a monster, said to be the offspring of Chrysaor and Callirhoe, and to have three bodies and three heads. His residence was in the island of Gades, where his numerous flocks were kept by the herdsman, Eurythion, and guarded by a two-headed dog, called Orthos. The destruction of this monster formed one of the twelve labors of Hercules.

Giall. The infernal river of Scandinavian mythology.

Giallar Bridge. The bridge of death, over which all must pass.

Giallar Horn, The. Heimdall's horn, which went out into all worlds whenever he chose to blow it. According to Northern mythology, he blew a long-expected blast as a rallying call to the battle which ended the reign of the gods, Odin, Frey, and Tyr.

Gian ben Gian. King of the Ginns or Genii, and founder of the Pyramids. He was overthrown by Aza'zil or Lucifer. (Arab superstitions.)

Giants. Earth united with Heaven produced Oceanos and the giants with fifty heads and a hundred hands — by which is meant, the personification of the great powers of nature — as their names signify: Cottos (eruption), Briareos (hurricane), and Gyes (earthquake). In fables the giants are beings of monstrous size, with dragons' tails and fearful countenances. They attempted to storm heaven, being armed with huge rocks and the trunks of trees, but were killed by the gods with the assistance of Hercules, and were buried under Mount Ætna and other volcanoes. In Scandinavian mythology they are described as evil genii of various forms and races, enemies of the gods. They dwelt in a territory of their own, called Giant-land. They had the power of assuming divers shapes, and of increasing or diminishing their stature at will.

Ginun'ga-gap. In Norse mythology, the vast chaotic gulf of perpetual twilight, which existed before the present world and separated the region of fog from the region of heat. Giants were the first beings who came to life among the icebergs and filled this vast abyss.

Glads'-heim. A great hall in the palace of Odin, in which were the twelve seats occupied by the gods when holding council.

Gla'sir. A marvelous grove in the land of Asgard, in which the leaves were all of shimmering rêd gold.

Glendoveer'. In Hindu mythology, is a kind of sylph, the most lovely of the good spirits.

Gnome. One of a class of spirits or imaginary beings which were supposed to tenant the interior parts of the earth, and in whose charge mines, quarries, etc., were left. Rübezahl, of the German legends, is often cited as a representative of the class.

Golden Apples, The. A great treasure which was thought to be altogether unattainable, was the golden apples in the gardens of the Hesperides. These gardens were watched by a monstrous dragon, and to bring the golden fruit to Eurystheus, was one of the tasks which Hercules was to accomplish.

Golden Fleece. Ino persuaded her husband, Athamas, that his son Phryxos was the cause of a famine which desolated the land, and he ordered him to be sacrificed to the angry gods. Phryxos made his escape over sea on a "ram which had a golden fleece." When he arrived at Colchis, he sacrificed the ram to Zeus, and gave the fleece to King Æe'tes, who hung it on a sacred oak. It was afterwards stolen by Jason in his celebrated Argonautic expedition.

Gor'gons. The three Gorgons were hideous monsters whose faces were so fearful that whoever looked on them became "congealed stone." One of these creatures, Medusa, was slain by Perseus, and her head was presented to Minerva, who placed it in her shield, where the face continued to retain its petrifying power.

Graces. To the retinue of Venus belonged the Graces, servants and companions of the goddess. They were said to be daughters of Jupiter and Eurynome, or according to others, of Bacchus and Venus herself, and were three in number: Splendor, Pleasure, and Joy. They were honored, especially in Greece, and had temples in the principal cities. Altars were often erected to them in the temples of other gods, especially Mercury, Venus, and the Muses.

Grid. Wife of Odin and mother of Vidar. She lent Thor her girdle, staff, and glove, warning him to beware of treachery.

Gripir. A horse-trainer, servant of Odin, who could foretell events of the future. He could teach a young hero all that he might need to know. He is compared to Chiron the Centaur.

Groves. The Romans were accustomed, like other ancient nations, to consecrate groves and woods to the gods. As many as 230 sacred groves are enumerated, chiefly within the city of Rome. In Greece, the particular tract of land, situated between Athens and Megara, was consecrated to Ceres and Proserpine, and trees were also set apart and with ceremony consecrated to some god.

Gyes. One of the hundred-handed giants. (Also written Gyges.)

Ha'des. The Greek god of the nether world, the son of Saturn and Rhea, and the brother of Jupiter and Neptune. He is the same as Pluto. In ordinary life he was usually called Pluto (the giver of wealth), because people did not like to pronounce the dreaded name of Hades. His wife was Persephone (Proserpine), the

daughter of Demeter, whom he carried from the upper world. In the division of the world among the three brothers, Hades obtained the abode of the shades, over which he ruled. Of all the gods he was most hated by mortals. The ensign of his power was a staff, with which, like Hermes, he drove the shades into the lower world. He possessed a helmet which rendered the wearer invisible, and which he sometimes lent to both gods and men. The Furies are called his daughters; the nymph Mintho, whom he loved, was metamorphosed by Persephone into the plant called mint; and the nymph Leuce, whom he likewise loved, was changed by him after death into a white poplar. Being the king of the lower world, Pluto is the giver of all the blessings that come from the earth; hence he gives the metals contained in the earth.

Ham'adryads. Nymphs of the woods who were born and died with particular trees. They possessed the power to reward and punish those who prolonged or abridged the existence of their special tree.

Harmo'nia. A daughter of Mars and Venus, and wife of Cadmus. Harmonia received a present of a necklace, which afterwards became fatal to all who possessed it.

Haroe'ris. The Egyptian god, whose eyes are the sun and moon.

Harpies. Robbers or Spoilers, described by Homer as carrying off persons, who had utterly disappeared. Hesiod represents them as fair-locked and winged maidens; but subsequent writers describe them as disgusting monsters, birds with the heads of maidens, with long claws, and faces pale with hunger.

He'be. The goddess of youth, was daughter of Zeus and Hera. She was employed by her mother to prepare her chariot, and harness her peacocks, and was cupbearer to all the gods.

Hec'ate. A mysterious divinity known as the goddess that troubles the reason of men; the goddess that presides over nocturnal ceremonies, and consequently over magic; hence her identity with Diana in Grecian mythology, and with Isis in Egyptian.

Hec'tor. The prominent hero of the Trojans in their war with the Greeks, was the eldest son of Priam and Hecuba, and the husband of Andromache. He fought with the bravest of the Greeks, and slew Patroclus, the friend of Achilles. The death of his friend roused Achilles to the fight. The other Trojans fled before him into the city. Hector alone remained without the walls, but when he saw Achilles, his heart failed him, and he took to flight. Thrice he ran round the city, pursued by Achilles, and fell, pierced by Achilles' spear. Achilles tied Hector's body to his chariot, and thus dragged him into the camp of the Greeks. At the command of Zeus, Achilles surrendered the body to the prayers of Priam, who buried it at Troy with great pomp. Hector is one of the noblest conceptions of the poet of the "Iliad."

Hec'uba. The second wife of Priam, King of Troy, and the mother of Paris and Hector. After the fall of Troy, she fell into the hands of the Greeks as a slave, and, according to one account, threw herself in despair into the sea.

Heim'dal. In Northern tales a god, who lived in the celestial fort Himinsbiorg, under the farther extremity of the bridge Bifrost, and kept the keys of heaven. He is the watchman or sentinel of Asgard, sees even in sleep, can hear the grass grow, and even the wool on a lamb's back. Heim'dal, at the end of the world, will wake the gods with his trumpet.

Helen. A daughter of Jupiter and Leda, and the wife of Menelaus, King of Sparta. She was the most beautiful woman of her age, and chose Menelaus among many suitors. She afterward eloped with Paris, her husband's Trojan guest, and thus brought on the war between the Greeks and Trojans. After the fall of Troy she was restored to Menelaus.

Hel'enus. Son of Priam and Hecuba, celebrated for his prophetic powers.

Hel'ice. A maid beloved of Jupiter, and by jealousy of Hera changed into a she-bear.

Hel'icon. A mountain in Bœotia sacred to the Muses, from which place the fountain Hippocrene flowed. It is also known as the Muses' Mount. It is part of the Parnassus, a mountain range in Greece.

He'lios. The Greek sun-god, who rode to his palace in Colchis every night in a golden boat furnished with wings. This god gives light both to gods and men. He sees and hears everything, and discovers all that is kept secret.

Hel'le. Daughter of Athamas and Nephĕle, and sister of Phrixus. When Phrixus was to be sacrificed, Nephĕle rescued her two children, who rode away through the air upon the ram with the golden fleece, the gift of Hermes; but Helle fell into the sea. The episode gave the name of the Hellespont to the part of the sea where Helle was drowned. It is now called the Dardanelles.

Hel'len. The son of Deucalion and Pyrrha, and father of Æolus, Dorus, and Xuthus. He was King of Phthia in Thessaly, and was succeeded by his son Æolus. He was the mythical ancestor of all the Hellenes.

Hell Shoon. In Icelandic mythology indispensable for the journey to Valhalla as the obolus for crossing the Styx.

Helmet of Hades. A helmet worn by Perseus, rendering him invisible and which, with the winged sandals and magic wallet, he took from certain nymphs, who held them in possession. After he had slain Medusa he restored them again, and presented the Gorgon's head to Minerva, who placed it in the middle of her shield.

He'ra. Greek name for the wife of Jupiter, known among Romans as Juno. Hera was worshiped in many parts of Greece, but more especially at Argos, in the neighborhood of which she had a splendid temple, on the road to Mycenæ. She had also a temple in Samos. Hera was usually represented as a majestic woman of mature age.

Heracli'dæ. Name given to the descendants of Hercules, who, in conjunction with the Dorians, conquered the Peloponnesus eighty years after the destruction of Troy, or B. C. 1104, according to mythical chronology. This legend represents the conquest of the Achæan population by Dorian invaders, who henceforward appear as the ruling race in the Peloponnesus.

Her'cules. Of all the Grecian heroes, no other obtained such celebrity as Hercules, son of Jupiter and Alcmene. Wonderful strength was ascribed to him even in his infantile years. Eurystheus imposed upon him many difficult enterprises, which he carried through with success; particularly those which are called the "twelve labors" of Hercules. These were: to kill the Nemæan lion; to destroy the Lernæan hydra; to catch alive the stag with golden horns; to catch the Erymanthean boar; to cleanse the stables of Augeas; to exterminate the birds of Lake Stymphalus; to bring alive the wild bull of Crete; to seize the horses of Diomedes; to obtain the girdle of Hippolyta, Queen of the Amazons; to destroy the monster Geryon; to plunder the garden of Hesperides, guarded by a sleepless dragon; and to bring from the infernal world the three-headed dog, Cerberus. Many other exploits were ascribed to him, by which he gave proof of his extraordinary strength and exhibited himself as an avenger and deliverer of the oppressed. Such were: his slaying the robber, Cacus; the deliverance of Prometheus, bound to a rock; the killing of Busiris, and the rescue of Alceste from the infernal world. His last achievement was the destruction of the centaur, Nessus. Nessus, dying, gave his poisoned tunic to Deianira; Hercules afterwards receiving it from her, and putting it on, became so diseased that he cast himself in despair upon a funeral pile on Mount Æta. The worship of Hercules became universal, and temples were erected to his honor.

Hercu'lean Knot. A snaky complication on the rod or caduceus of Mercury, adopted by the Grecian brides as the fastening of their woolen girdles, which only the bridegroom was allowed to untie.

Her'la. A mythical king, the supposed leader of The Wild Hunt of Scandinavian mythology. This was known as the Raging Host in Germany and as Herlathing in England, from the name, Herla.

Her'mes. A Greek name of the god Mercury.

Hermi'one. The beautiful daughter of Menelaus and Helen. She had been promised in marriage to Orestes before the Trojan War, but Menelaus, after his return home, married her to Neoptolemus (Pyrrhus).

Hesper'ides. The Hesperides are called daughters of Night, because their origin and existence are veiled in darkness. Their names were Ægle, Erytheia, and Arethusa;— and they were appointed to guard the golden apples, which were the gift of Earth to Juno on her wedding day. The celebrated gardens of the Hesperides abounded with fruits and were carefully guarded by a dragon, which never slept.

Hes'perus. A supposed son or brother of Atlas enrolled among the deities after death, and made identical with the Evening Star.

Hes'tia. The Greek name for Vesta. She was the goddess of the domestic hearth.

Hippocre'ne. The Muses were entertaining themselves in the mountain with song and lyre, in so gay a manner that all could hear them. Poseidon sent up Pegasus, charging him to limit the mirth and noisy merriment. On arriving at the top of the mount,

Pegasus had only to paw the ground to bring all quiet; and from beneath his foot arose that well-known fountain which, from its origin, is called Hippocrene.

Hippol′yta. Queen of the Amazons, and daughter of Mars. In classic fable, her sister Antiope married Theseus. Hippolyta was famous for a girdle given her by her father, and it was one of the twelve labors of Hercules to possess himself of this prize.

Hippoly′tus. Son of Theseus and Hippolyte; he was killed by a fall from a chariot, but was raised to life again by Diana, or by Æsculapius.

Hippom′enes. Son of Megareus, and great-grandson of Poseidon (Neptune), conquered Atalanta in a foot-race. He had three golden apples, which he dropped one by one, and which she stopped to pick up. By this delay she lost the race.

Hofvarp′nir. The fleet steed of Ina, in Scandinavian legend, which traveled through fire and air and enabled this messenger of the gods to see all that was happening on the earth.

Hobomok′o. An evil spirit known among American Indians.

Ho′de-ken. A famous German kobold, or domestic fairy servant; so called from wearing a little felt hat pulled down over his face.

Ho′dur. In Norse mythology, a blind god who destroyed his brother, Baldur, at the instigation of Loki, without meaning to do so. He is the type of night and darkness, as Baldur is of light and day.

Ho′nir. In Asgard tales, name given to the god of mind or thought.

Ho′ræ. Daughters of Zeus and Themis, the goddesses of the order of nature and of the seasons, who guarded the doors of Olympus, and promoted the fertility of the earth.

Ho′rus. The Egyptian god of the sun, who was also worshiped in Greece and at Rome.

Hu′gin. One of Odin's two ravens, who carried him news from earth, and who, when not thus employed, perched upon his shoulders. The personification of thought or intellect.

Hu′go′. A kind of evil spirit in the popular superstition of France — a sort of ogre made use of to frighten children.

Hundred-eyed. Argus, in Greek and Latin fable. Juno appointed him guardian of Io, but Jupiter caused him to be put to death; whereupon Juno transplanted his eyes into the tail of her peacock.

Hy′acinthus. A youth beloved by Apollo, and accidentally slain by him while playing at quoits. From his blood sprang the flower which bears his name.

Hy′ades. A class of nymphs commonly said to be seven in number.

Hy′dra. Name of a monstrous serpent in the Lake Lerna, with numerous heads. When one of these heads was cut off, another or two others immediately grew in its place, unless the blood of the wound was stopped by fire. The destruction of the Hydra was a labor assigned to Hercules, which he accomplished by the aid of Iolaus, who applied lighted brands or a heated iron as each head was removed. The arrows of Hercules, being dipped in the Hydra's blood, caused incurable wounds.

Hygei′a. The goddess of health, and a daughter of Æsculapius, though some traditions make her the wife of the latter. In works of art she is represented in a long robe, feeding a serpent from a cup.

Hy′men or **Hymenæ′us.** One of the imaginary companions of Venus. He presided over marriage.

Hy′mir. In mythology of Northern lands, the frost-giant who owned the great kettle called "Mile-deep."

Hyperbo′reans. A fabulous people, supposed to live in a state of perfect happiness, in a land of perpetual sunshine.

Hype′rion. Son of Cœlus and Terra. The model of manly beauty, synonymous with Apollo. The personification of the sun. Hyperion was the father of the Sun, Moon, and Dawn. He is, therefore, the original sun-god, and is painted with splendor and beauty.

Iac′chus. The solemn name of Bacchus in the Eleusinian mysteries, whose name was derived from the boisterous song called "Iacchus." In these mysteries Iacchus was regarded as the son of Zeus and Ceres, and was distinguished from the Theban Bacchus (Dionysus), the son of Zeus and Semele.

Iap′etos. The father of Atlas and ancestor of the human race, called the progeny of Iapetos. By many considered the same as Japheth, one of the sons of Noah.

Ic′arius. An Athenian, who hospitably received Dionysus in Attica, and was taught the cultivation of the vine.

Ic′aros. Son of Dæ′dalos, who flew with his father from Crete; but the sun melted the wax with which his wings were fastened on, and he fell into the sea, hence called the Ica′rian.

Ida. A mountain range of Mysia, in Asia Minor, celebrated in mythology as the scene of the rape of Ganymede and of the judgment of Paris. In Homer the summit of Ida is the place from which the gods watch the battles in the plain of Troy. It is an ancient seat of the worship of Cybele. A mountain in Crete, known as Mount Ida, was closely connected with the worship of Jupiter.

Idæ′an Mother. Cyb′ele, who had a temple on Mount Ida, in Asia Minor.

Idom′eneus. He led the Cretans against Troy, and was one of the bravest heroes in the Trojan War. He vowed to sacrifice to Poseidon whatever he should first meet on his landing, if the god would grant him a safe return. This was his own son, whom he accordingly sacrificed. As Crete was thereupon visited by a plague, the Cretans expelled Idomeneus, who went to Italy.

Idun′a or **Idun′.** Daughter of the dwarf Svald, and wife of Bragi. She kept in a box the golden apples which the gods tasted as often as they wished to renew their youth. Loki on one occasion stole the box, but the gods compelled him to restore it. Iduna seems to personify that part of the year when the sun is north of the equator. Her apples indicate fruits generally. Loki carries her off to Giant-Land, when the Sun descends below the equator, and he steals her apples. In time, Iduna makes her escape, in the form of a sparrow, when the Sun again rises above the equator; and both gods and men rejoice in her return.

I′fing. In Scandinavian mythology the great stream between the earth and the sacred lands, whose waters never froze.

In′achus. One of the river-gods, a son of Oceanus and Tethys, and father of Phoroneus and Io, was the first King of Argos, and said to have given his name to the river Inachus.

In′dra. In Hindu mythology, the ever youthful god of the firmament, and the omnipotent ruler of the elements. He is a most important personage in Indian fable. In the Vedic period of the Hindu religion, he occupied a foremost rank, and, though degraded to an inferior position in the Epic, he long enjoyed a great legendary popularity. In works of art, he is represented as riding on an elephant.

I′o. The daughter of Inachus, first King of Argos, beloved by Zeus, and metamorphosed, through fear of Hera, into a heifer.

Iola′us. The son of Iphicles and Automedusa. Iphicles was the half-brother of Hercules, and Iolaus was the faithful companion and charioteer of the hero.

I′ole. The daughter of Eurytus of Oechalia, beloved by Hercules, who tried to gain her in marriage for himself. Eurytus promised his daughter to the man who should conquer him and his sons in shooting with the bow. Hercules defeated them; but Eurytus and his sons, with the exception of Iphitus, refused to give Iole to him, because he had murdered his own children.

I′on. The fabulous ancestor of the Ionians, son of Xuthus and Creusa, or of Apollo and Creusa, grandson of Helen. According to some traditions he reigned in Attica.

Iphigeni′a. A daughter of Agamemnon and Clytemnestra, and sister to Orestes. Iphigeneia was to have been sacrificed on entering upon the expedition against Troy; but was rescued by Diana, who carried her to Tauris, where she became a priestess in her temple. She was afterwards recognized by her brother, Orestes, and enabled to save him with his friend, Pylades.

Ire′ne. The Roman goddess of peace, and daughter of Zeus and Themis, and one of the Horæ.

I′ris. Name given among the Greeks to the rainbow, as personified and imagined a goddess. Her father was said to be Thaumas, and her mother Electra, one of the daughters of Oceanus. Her residence was near the throne of Juno, whose commands she bore as messenger to the rest of the gods and to mortals. Sometimes, but rarely, she was Jupiter's messenger, and was employed even by other deities.

Irus. The beggar of gigantic stature, who kept watch over the suitors of Penel′ope. His real name was Ar′neos, but the suitors nicknamed him Irus because he carried their messages for them. Ulysses, on his return, felled him to the ground.

I′sis. In Egyptian mythology, the sister-wife of Osiris. She was originally the goddess of the earth, and afterwards of the moon.

Isme′ne. Daughter of Œ′dipus and Jocasta. Antig′one was buried alive by the order of King Creon, for burying her brother Polynices. Ismene declared that

she had aided her sister, and requested to be allowed to share the same punishment. Denied of this, she is said to have died from grief. The story is told by Sophocles, and the modern artist, Teschendorf, has made a noted picture of the two sisters.

Is'rafil. Known among Arabians as the angel of music, who possessed the most melodious voice of all God's creatures. This is the angel who is to sound the Resurrection Trump, and make music for the saints in Paradise. Israfil, Gabriel, and Michael were the three angels that warned Abraham of Sodom's destruction.

Ith'aca. In mythology, the island-kingdom of Ulysses. The city of Ithaca, the residence of Ulysses was situated on a precipitous, conical hill, now called "eagle's cliff," occupying the whole breadth of the isthmus. Ithaca was also the home of Penelope.

Ithu'riel. One of the angels commissioned by Gabriel to search for Satan, who had effected his entrance into Paradise.

Ixi'on. A fabled king of Thessaly, who became father of the Centaurs. The story by which he is most noted runs: When Deïoneus demanded of Ixion certain gifts he had promised, Ixion treacherously invited him to a banquet, and contrived to make him fall into a pit filled with fire. Ixion, as a punishment, was chained by Hermes with his hands and feet to a wheel, which is described as winged or fiery, and said to have rolled perpetually.

Jamshid'. King of the Genii, famous for a golden cup full of the elixir of life. This cup, hidden by the genii, was discovered while digging the foundations of Persep'olis.

Ja'nus. One of the superior gods of the Romans. The myths represent him as reigning over the earliest inhabitants of Italy, in the time of Saturn. It was to Janus that Saturn fled, and under them was the "golden age," a period of peace. To Janus, Romulus dedicated that celebrated temple, which was always open in time of war, and was closed with much solemnity, whenever there was general peace in the Roman Empire; a thing which happened but three times during 700 years. From this deity the month of January was named, and the first day of the month was sacred to him.

Ja'son. He was a shoot of the herioc stem of Æolus, but not the son of a god; and Juno, while she persecuted the sons of Jupiter, took him under her especial protection. His father, Æson, who reigned at Iolcus, was deprived of the kingdom by his half-brother Pelias, who attempted to take the life of the infant Jason. He was saved by his friends, and intrusted to the care of the Centaur Chiron. When he had grown up he came to Iolcus, and demanded the kingdom, which Pelias promised to surrender to him, provided he brought the golden fleece, which was in the possession of King Æetes in Colchis, and was guarded by an ever-watchful dragon. The greatest feat recorded of him is his voyage in the Argo to Colchis to obtain the golden fleece, which, aided by Juno, he succeeded in doing. He married Medea, daughter of the King of Colchis, who was a magician, and on Jason having vowed eternal fidelity to her, she gave him charms to protect him from danger.

Jinn. A sort of fairies in Arabian mythology, the offspring of fire. They are governed by a race of kings named Suleyman, one of whom "built the pyramids." Their chief abode is the mountain Kâf, and they appear to men under the forms of serpents, dogs, cats, monsters, or even human beings, and become invisible at pleasure. The evil jinn are ugly, but the good are beautiful. According to fable, they were created from fire two thousand years before Adam was made of earth.

Jord. Daughter of Night and mother of Thor. In Scandinavian mythology the name given to primitive earth.

Jove. Known in classical mythology as the god of thunder. The name Jove is but another appellation, rarely given to Zeus or Jupiter.

Juggernaut or **Jaggernaut.** A Hindu god. The temple of this god is in a town of the same name in Orissa.

Ju'no. The wife and sister of Jupiter, daughter of Saturn and Rhea, and as wife of Jupiter mistress of gods and men. Her birthplace was assigned by the Greeks to Argos, or the Island Samos, and to other spots in Greece, although her story and her worship were rather of Phenician origin. The chief peculiarities of her character were love of power and jealousy. The worship of Juno was far spread, and the number of her temples and festivals was very great. The same goddess was worshiped among the Greeks under the name of Hera.

Ju'piter. The highest and most powerful among the gods. By this god was originally represented nature in general; and finally the supreme existence. The worship of Jupiter was universal, and numerous temples were erected to his honor. The largest and the most celebrated in Greece was that in Olympia, remarkable for its own magnificence, and for its statue of Jupiter wrought by Phidias, and for the Olympic games held in its vicinity. His oracle in the grove of oaks at Dodona was renowned, and considered the most ancient in Greece. In Rome the capitol was specially dedicated to him, and he had in that city many temples. Among the Greeks he was known as Zeus.

Kama. The Hindu god of love. His wife is Rati (voluptuousness), and he is represented as riding on a sparrow, holding in his hand a bow of flowers and five arrows, each tipped with the bloom of a flower supposed to conquer one of the senses. His power is so much exalted that even the god Brahma is said to succumb to it.

Ka'mi. The gods of ancient Japan. The name, in modern times, designates any spiritual saint and may also be applied to a prince.

Kaswa. The camel admitted into Moslem paradise, the favorite camel of Mahomet which fell on its knees in adoration when "the prophet" delivered the last clause of the Koran to the assembled multitude at Mecca.

Kelpie. In mythology of Scotland, a spirit of the water seen in the form of a horse. Each lake has its Kelpie.

Kobold. A house-spirit in German superstition. In northern lands the name is sometimes used in place of elf or dwarf representing an under-ground spirit. Probably the same as the Scotch brownie.

Koppelberg. The hill which miraculously opened to receive the children who followed the Pied Piper. This belongs to mythology, as people in the Middle Ages considered Odin as the leader of disembodied spirits, and from this came the Pied Piper. The rats were the restless souls of the dead, which the Pied Piper released by drowning.

Krish'na. In Hindu mythology, the eighth incarnation of Vishnu. According to some authorities he is considered distinct from all the Avatars, as these had only a portion of the divinity, and Krishna was Vishnu himself in form of "the Black One."

Kro'nos. Kronos (Time) was the youngest of the Titans, and as the heavens measure out time to us, and earth is considered its beginning, he is said to be born of Uranos and Ge. He was generally worshiped under the name of Saturn.

Kuve'ra. In Hindu mythology, the god of riches, represented as frightfully deformed, and as riding in a car drawn by hobgoblins.

Lach'e-sis. One of the three fates; the one that spun the thread of life.

Ladon. The dragon who guarded the apples of the Hesperides, and was slain by Hercules. Ladon is also the name of the father of Daphne and Metope.

Læ'ding. In Norse mythology the strong chain with which the wolf, Fenris, was bound. He easily broke the chain and from this legend has grown the saying, "to get loose out of Læding." A stronger chain was known as Droma.

Lær'tes. Mythical King of Ithaca and father of Ulysses. Lærtes took part in the Calydonian hunt, and in the expedition of the Argonauts. He was still alive when Ulysses returned to Ithaca, after the fall of Troy. During the absence of Ulysses he had withdrawn to the country in grief and bowed with age, and Penelope, the wife of Ulysses, is represented as weaving the shroud of her father-in-law, the work with which she put aside her many suitors.

La'ius. King of Thebes, son of Labdacus, husband of Jocasta, and father of Oedipus, by whom he was slain.

La'mia. A monstrous specter, which was believed to devour human beings.

Laoc'oon. Son of Priam and priest of Apollo. He opposed the reception of the Wooden Horse into Troy, thinking it some artifice of the deceitful Greeks. He and his two sons were killed by two monstrous serpents which came from the sea. The people believed that they were struck by the gods because of their interference. The death of Laocoon is the subject of one of the most magnificent and celebrated works of ancient sculpture still in existence; it was discovered in 1506 at Rome, and is now preserved in the Vatican. It is a single block of marble, and was the work of Agesander of Rhodes and two other sculptors.

Laodam'a. The wife of Protesilaus, who was slain before Troy. She begged to be allowed to converse with her dead husband for only three hours, and her request was granted. Hermes (Mercury) led Protesilaus back to the upper world; and when Protesilaus died a second time, Laodama died with him.

Laom'edon. The king who built the walls of Troy assisted by Neptune and Apollo, who had displeased

Jupiter and were sent to work for wages. Neptune built the walls of Troy, while Apollo tended the king's flocks on Mount Ida. When the two gods had done their work, Laomedon refused the reward he had promised and expelled them from his dominions. Neptune sent a sea-monster to ravage the country; and a maiden, chosen by lot, was from time to time sacrificed to propitiate it.

Lap'ithæ. A mythical people of Thessaly, noted for their defeat of the Centaurs.

La'res. Inferior gods at Rome, and known as domestic Lares and public Lares. There was in every house their proper sanctuary (lararium) and altar. They seem to have been viewed as the spirits of the departed ancestors, the fathers and forefathers of the family, who sought the welfare of their descendants. The Lares and the Penates are often confounded, but were not the same. "The Penates were originally gods, the powers of nature personified. The Lares were originally themselves human beings, who, becoming pure spirits after death, loved still to hover round the dwelling they once inhabited; to watch over its safety, and to guard it as the faithful dog guards its master."

Lati'nus. A king of Latium, son of Faunus and the nymph Marica, brother of Lavinius, husband of Amata, and father of Lavinia, whom he gave in marriage to Æneas. Italy was so called from Lavinia, daughter of Lati'nus and wife of Æneas. Æneas built a town which he called Lavin'ium, capital of La'tium. According to one account, Latinus, after his death, became Jupiter Latiaris, just as Romulus became Quirinus.

Lat'mus. A mountain in Cairia. It was the mythological scene of the story of Selene (Luna) and Endymion.

Lato'na. Daughter of Cœus, a Titan, and Phœbe, and by Jupiter, the mother of Apollo and Diana. The love of the king of the gods procured for her the hatred of Juno.

Lavin'ia. The daughter of Latinus and Amata, betrothed to Turnus, but married to Æneas. Æneas founded the town of Lavinium, called after Lavinia, the daughter of Latinus.

Le'da. The mother of Helen. Jupiter visited her in the form of a swan, and "Leda and the Swan" has been a favorite subject with artists. Correggio and Michael Angelo have both left paintings of the same subject.

Lepra'caun. The fairy shoemaker of Ireland, so called because he is always seen working at a single shoe.

Les'trigons. A mythical race of giants who lived in Sicily. Ulysses sent two of his men to request that he and his crew might land, but the king ate one and the other fled. The Lestrigons assembled on the coast and threw stones against Ulysses and his crew. Ulysses fled with much loss.

Leth'e. The river that separates Hades from the Elysian fields. The Greeks believed in a magical power of the waters of this river, which the souls of all the dead are obliged to taste, that they may forget everything said and done in the earth.

Li'ber. A name frequently given by the Roman poets to the Greek Bacchus or Dionysus. But the god Liber and the goddess Libera were ancient Italian divinities, presiding over the cultivation of the vine and the fertility of the fields. Hence they were worshiped in early times in conjunction with Ceres. The vine and ivy and the panther were especially sacred to him. Goats were usually offered in sacrifice to him, because they are particularly injurious to the vine.

Li'bertas. The goddess of liberty, to whom several temples were erected at Rome. Libertas is represented in works of art as a matron, with the pileus, the symbol of liberty, or a wreath of laurel. Sometimes she appears holding the Phrygian cap in her hand.

Lib'issa. Queen of fays and fairies.

Libiti'na. An ancient goddess of Rome, who presided over the burial of the dead. At her temple at Rome everything necessary for funerals was kept, and persons might there either buy or hire such things. Hence a person undertaking the burial of a person (an undertaker) was called "libitinarius," and his business "libitina."
